LITTELL'S

LIVING AGE.

CONDUCTED BY E. LITTELL.

E PLURIBUS UNUM.

"These publications of the day should from time to time be winnowed, the wheat carefully preserved, and the chaff thrown away."

VOL. X.

JULY, AUGUST, SEPTEMBER, 1846.

BOSTON:

PUBLISHED BY WAITE, PEIRCE & COMPANY.

PHILADELPHIA, M. CANNING & Co., 272 Chesnut Street.

NEW YORK, WILLIAM TAYLOR, Astor House.

PARIS, O. RICH & SONS, 12 Rue Pot de Fer.

STEREOTYPED BY GEORGE A. CURTIS.

INDEX TO VOL. X. OF LITTELL'S LIVING AGE.

Anderson's Annals of the English Bible,	18	Dutton's South Australia,	327	Mann, Horace, Educational Tour of,	105
Ages, The,	46	Dogs, Affection of,	334	Mulgrave Family,	123

LITTELL'S LIVING AGE.

From the New Quarterly Review.

Men of Letters of the time of George the Third.
By LORD BROUGHAM. London: Colburn, 1846.

WE are again indebted to the kindness of Lord Brougham for the proof-sheets of the work before us. It commences with the life of Dr. Johnson. No greater life does the period of George the Third contain; and, whether viewed as moralist, poet, critic, biographer, or lexicographer, Johnson is the most distinguished man of his day. Many may hesitate to assign him the second of these wreaths; but however slight in quantity, his poetry has in it a pith and vigor that well indicates to what points he had the power to ascend, had not the stern realities of existence destroyed the imaginative, and compelled him to fix his attention on the real and practical objects in which lay his bread. Few things affect the mind more than the desolation of poverty that visited most of the illustrious wits of that period: from it the Titan of the age was not exempt; and this moral and beneficent Prometheus, while pouring consolation to others, was heart-devoured by the vulture of care and anxiety preying on the immortal liver. Johnson was born on the 18th of September, 1709, at Lichfield. His father was a bookseller. After a somewhat desultory education, he entered, at nineteen years of age, Pembroke College, Oxford. While there he was in great pecuniary difficulty, and ultimately left it without a degree, though he continued to the close of life to honor his Alma Mater, and spent many of his happiest days in college society. It must, however, be noted, that Johnson never assumed the title of Doctor, which was tardily bestowed upon him after the publication of his dictionary, but wrote himself, on his card, "Mr. Johnson" to the last.

That morbid, or rather moribund, affection that at times superinduced a torpor of faculties, began at an early period of even his college life; and this giant in intellect always labored under the fearful impression that he should become insane. It is more than probable, that the religious tendency of Johnson's mind alone prevented him from suicide; for religion in a strong mind produces that requisite balance of the feelings that is essential to the right use of them, subduing the intellectual and imaginative within due limits, and educating the moral, reflective, and spiritual faculties. "Law's Serious Call to a Holy Life," (a work the writer has found of admirable influence, notwithstanding its quaintness,) has the honor of convincing the judgment of Johnson of the necessity for religion. He came to it to scoff, and remained to pray. It is not every book that brings a Johnson to his knees. The extent of Johnson's classical acquirements as a Latin versifier was certainly not equal to Milton's; but the suffrage of Pope on this question weighs with us but triflingly, since the brilliant bard knew but indifferently either Greek or Latin in a critical sense. Johnson became at first one of that unfor-

tunate class, an usher at a school, a walk of life he quitted in disgust. "Lobo's History of Abyssinia" is among his early literary works: it is a translation. In 1734, after quitting this employ, he marries a widow, a person of no personal recommendations, but one of more than ordinary mental powers, and one who succeeded in obtaining complete rule over his heart and affections for sixteen years, and after whose decease he ever kept the day of her death as a fast, and offered up prayers for her soul. We have witnessed a singular adherence to this habit of praying for the dead in many exalted minds. We trust they were personally benefited by it; but the souls of the dead are fixed in the bodements of glory or gloom, from which no prayer can rescue.

In the spring of 1737 Johnson came to London, and commenced a literary life. Amid a mass of other matters he published his "London" and "The Vanity of Human Wishes." Pope generously expressed his admiration of the "London." This period was, however, one of fearful struggle with him for the means of livelihood, as the correspondence with Cave sadly indicates. Johnson "impransus," was the signature to one letter, while he was translating "Fra Paolo." The story of the "Rasselas," written in the evenings of the week of his mother's death, to defray her funeral expenses and debts—that sacrifice to filial duty, which God remembered well, produced the sad and suffering son only one hundred pounds! The terrible affliction of his life preying on him with the deeper affection of the heart. We have to direct the attention of our readers to the beautiful notice Lord Brougham has taken of this affection, and the comparison of an analogous instance at p. 16.

"Great wits to madness sure are near allied,
And small partitions do their bounds divide,"

is too true in the morbid tendency remarkable in Collins, Johnson, and Newton. Among the contributions of Johnson to the *Gentleman's Magazine*, were the debates in parliament. Johnson never designed that these should be considered as actual reports of the proceedings in the house, but many persons have viewed them in that light. The acquaintance with Savage during his first five years in London, was in all respects unfortunate for Johnson. Few, however, can do other than sympathize with the generous defence of Savage when dead, or feel other than astonished at the daring attack on his unfeeling mother. Lady Macclesfield was seventy years of age when the life of Savage appeared, and the chief scandal of that life had been fifty years previous; so that we fully concur with Lord Brougham, that the escape of Johnson from action for libel is somewhat marvellous. The aged mother was therefore probably too conscious of the truth, if not of all, of much, that Johnson had written; still so aged a woman is not the light in which, from that life, we are prepared to regard Sayage's mother.

The miscellaneous character of Johnson's labors, as enumerated by Lord Brougham, is quite astounding during the twenty-five years of his London life, but we doubt not is far below the truth. Yet how inadequate the remuneration. "The Vanity of Human Wishes" produced him fifteen guineas! The "Irene" failed from want of dramatic interest; and it is curious to see Johnson and Goldsmith both experiencing the vanity of dress in no moderate degree. The author of "Irene," Samuel Johnson, in a scarlet and gold-laced waistcoat and gold-laced hat, fancying himself induing the fitting costume for a dramatic author. The "Rambler" appeared in 1750 and 1751. It will live in some of its papers while the language lasts. The "Idler" saw the light in 1758 and 1759. They were nearly all Johnson's own papers, unsupported, as Addison was in his "Spectator," by numerous friends. He announced the Dictionary in 1747. His dispute with Lord Chesterfield at its outset is not favorable to Johnson's amenity of disposition, a faculty in which he did not abound; nor if the story of a small pecuniary gift from the earl be true, which he neglected to acknowledge, in all respects to his seldom impeached veracity. The stipulated price was £1575; but the expenses of amanuenses for a long period of time, left him but a small gainer by it.

In 1759 he lost his mother; in 1752 his wife. He then entered on that singular line of conventional existence with Miss Williams, Mrs. Desmoulines, and Mr. Levett, an apothecary, all of whom were materially aided by his benevolence, and the second only survived Johnson. His lines on his humble companion, Levett, show both affection and imagination. Johnson had struggled on unstained by any act of meanness, subserviency, or dishonesty to fifty-four years of age. At this period Lord Bute incurred the rancor of the "North Briton" to no small extent, by conferring on the first of English lexicographers a pension from the crown of £300 per annum. How fearful an influence does party exercise! Men like Wilkes and Churchill grudging the veteran Johnson this £300 per annum, which, given earlier, had enriched England with many a noble and matured production, and enabled Johnson to write something nearer to the perfect model of an English dictionary. Wilkes did not fail to turn upon him the full force of his own definitions of a pensioner—"a slave of state paid to obey a master," and a pension, "pay, given to a state hireling for treason to his country." Both are as erroneous and prejudiced as possible, and certainly conduce in no respect to the credit of the writer of a dictionary, who ought to be unimpassioned. It is to us no sufficient answer to say, that the twenty-two years of his life that followed after the grant of the pension did not produce the same relative portion of high literary performance with the preceding twenty-five. Johnson had worked too hard to work long; his malady, too, gained on him. The "Lives of the Poets," however, his master-piece, was produced, and over this period his two pamphlets, "Taxation no Tyranny," and "On the Falkland Isles." In 1765 he commenced his intimacy with Mrs. Thrale. The circumstances of this intimacy, and the marriage with Piozzi of this lady, are not dwelt upon by Lord Brougham with the same degree of bitterness that many persons have evinced. Of the character of Mrs. Piozzi and of her subsequent passion, we presume we must call it, for Conway, the actor, and of the deception

reputed to have been practised on him relative to the disposal of her property, Johnson would probably have approved much less: but surely he could not have loved Mrs. Thrale, to which cause Lord Brougham, and we own with some appearance of justice, appears to have assigned his irate feelings on her marriage with Piozzi. But we entertain little doubt that Madame Piozzi continued to sink lower and lower in the scale of society by her marriage, and at length found herself almost entirely surrounded by mimes and musicians. We are far from insinuating that some of the highest minds of our era are not to be found among these; but the general class is unmixedly bad and frivolous, and mere pretenders to intellectuality. The life of Johnson grew more pleasant and conventional during his latter years, and tours in various parts enabled him to obtain deeper insight into mankind, which the "Rasselas" and many other of his works fail to exhibit. In 1783, when 74, he suffered from a paralytic stroke. Under this affliction he was still himself in a wonderful degree. Conscious of the blow, from a confusion and indistinctness in his head for half a minute, he prayed for the preservation of his faculties, and then turned his devotions into Latin verse, to see that he was equal to an effort of order. How similar to the death of Wollaston, who, hearing his friends speak of him as dead, motioned for a pencil, and continued to mark strokes on the paper fainter and fainter, until he expired! He recovered from the immediate effects of this first blow, but did not get his speech until the second day. For a year he remained in a weakly state, but not, however, without seeing his friends, and going out at times, but died on the 18th December, 1784, "having suffered," says Lord B., "far less from apprehension of the event than his former habit of regarding it with an extreme horror might have led us to expect." The following observations of Lord Brougham on his understanding are as sound as comprehensive:—

"The prevailing character of his understanding was the capacity of taking a clear view of any subject presented to it, a determination to ascertain the object of search, and a power of swiftly perceiving it. His sound sense made him pursue steadily what he saw was worth the pursuit, piercing at once the husk to reach the kernel, rejecting the dross which men's errors and defects of perspicacity or infirmity of judgment had spread over the ore, and rejecting it without ever being tempted by its superficial and worthless hues to regard it with any tolerance. Had he been as knowing as he was acute, had his vision been as extensive as it was clear within narrow limits, he would only have gained by this resolute determination not to be duped, and would not have been led into one kind of error by his fear of falling into another. But it must be allowed, that even in his most severe judgments he was far oftener right than wrong; and that on all ordinary questions, both of opinion and of conduct, there were few men whom it was more hopeless to attempt deceiving, either by inaccurate observation, by unreflecting appeals to the authority, whether of great names or of great numbers, by cherished prepossessions little examined, or by all the various forms which the cant of custom or of sentiment is wont to assume. Out of this natural bent of his understanding arose as naturally the constant habit of referring all matters, whether for argument or for opinion, to the decision of plain common sense. His reasonings were short; his topics were homely;

his way to the conclusion lay in a straight line, the shortest between any two points; and though he would not deviate from it so as to lose himself, he was well disposed to look on either side, that he might gather food for his contemptuous and somewhat sarcastic disposition, laughing at those whom he saw bewildered, rather than pitying their errors. To the desire of short and easy proof, and the love of accuracy when it could be obtained, and to which he sometimes sacrificed truth by striving after exact reasoning on subjects that admit not of it, we may ascribe this great fondness for common arithmetic, one of the very few sciences with which he was acquainted. With the vices of such an understanding and such a disposition he was sufficiently imbued, as well as with its excellencies. He was very dogmatical—very confident, even presumptuous; not very tolerant. He was also apt to deal in truisms, and often inclined, when he saw through them himself, to break down an argument, sometimes overwhelming it with the might of loud assertion, sometimes cutting it short by the edge of a sneer. Seeing very clearly within somewhat narrow limits, he easily believed there was nothing beyond them to see; and fond of reducing each argument to its simplest terms and shortest statement, he frequently applied a kind of reasoning wholly unsuited to the subject matter, pronounced decisions of which the dispute was not susceptible, and fell into errors which more knowing inquirers and calmer disputants, without his perspicacity or his powers of combining, would easily and surely have avoided."

The remarks on the style, the well-known Roman, of our great lexicographer, we should scarcely have been led to anticipate from a writer so close to the model of Addison and Robertson as Lord Brougham.

"The peculiarities of his style may be traced to the same source—the characteristic features of his understanding and disposition. What he perceived clearly, he clearly expressed. His diction was distinct; it was never involved; it kept ideas in their separate and proper places; it did not abound in synonymes and repetition; it was manly, and it was measured, despising meretricious and trivial ornament, avoiding all slovenliness, rejecting mere surplusage, generally throughout very concise, often needlessly full, and almost always elaborate; the art of the workman being made manifest in the plainly artificial workmanship. A love of hard and learned words prevailed throughout; and a fondness for balanced periods was its special characteristic. But there was often great felicity in the expression, occasionally a pleasing cadence in the rhythm, generally an epigrammatic turn in the language as well as in the idea. Even where the workmanship seemed most to bias the material, and the word craft to be exercised needlessly, and the diction to run to waste, there was never any feebleness to complain of, and always something of skill and effect to admire. The charm of nature was ever wanting, but the presence of great art was undeniable. Nothing was of the careless aspect which the highest of artists ever give their master-pieces—the produce of elaborate but concealed pains; yet the strong hand of an able workman was always marked; and it was observed, too, that he disdained to hide from us the far less labor which he had much more easily bestowed."

We perfectly agree with Lord Brougham that

the weight of a style like Dr. Johnson's is somewhat oppressive, and that little meaning is at times concealed under pompous expression: still, even this style without matter is better than that fearful negation of both that so many modern writers exhibit. The facility of Johnson's composition may be gathered from the fact, that he composed forty-eight printed pages of the life of Savage in one night. On these matters of facility of composition, persons must necessarily rely on the testimony of personal friends of one another. The following remarks on Johnson, who was a stiff and uncompromising Tory and a Jacobite, may not, however, be far from truth.

"Yet he so greatly loved established things, so deeply venerated whatever had the sanction of time, that he both shut his eyes to many defects in his view consecrated by age, and unreasonably transferred to mere duration the respect which reason itself freely allows to whatever has the testimony of experience in its favor.

"The established church, the established government, the established order of things in general, found in him an unflinching supporter, because a sincere and warm admirer; and giving his confidence entirely, he either was content to suspend his reason in a great majority of instances, or, at least, to use it only for the purpose of attaining the conclusion in favor of existing institutions, and excluding all farther argument touching their foundations."

His prejudices were certainly strong, both with respect to the French and Americans. His horror of infidels we like, and wish only that the feeling were more general. Johnson did not possess any knowledge of the exact sciences; hence in his criticism on Newton, whom he undertook to review, he only indicated his own ignorance. His Dictionary, however faulty, and it is most remarkably so in etymons, and faulty where we should least have anticipated it, even in Latin and Greek derivations, is—withstanding the Anglo-Saxon deficiencies, which are still greater—a work of wonderful merit.

We have stated our high opinion of the "Lives of the Poets." The omission of Goldsmith is certainly singular; and we quite agree with the noble lord before us in assigning very high merit to that of Pope, of Dryden, and of Cowley. He is also, all things considered, wonderfully impartial in his judgment on Milton. With regard to personal character and habits, we think there is mingled matter of praise and censure. Dogmatic he most assuredly was, and often dogmatically wrong; as often insufferably right, repeatedly judicious, firm, and strenuous in opinions. Benevolence he possessed in a remarkable degree; and though his morals exhibited much to regret, from that feverish knowledge he ever appeared to possess, to investigate the feelings at heart of even the most depraved, and which often led him into that society, still was he sound at heart, and regretted that, knowing his duty well, his knowledge and practice were not equal. Lord Brougham to us does not appear, in the main, to have liked Johnson, who was certainly a hearty hater; but the concluding paragraph of his life is as generous as it is just.

"He was friendly, and actively so, in the greatest degree; he was charitable beyond what even prudential considerations might justify; as firmly as he believed the Gospel, so constantly did he practise its divine maxim, 'that it is more blessed

to give than to receive.' His sense of justice was strict and constant; his love of truth was steady and unbroken in all matters, as well little as great; nor did any man ever more peremptorily deny the existence of white lies: for he justly thought that when a habit of being careless of the truth in trifling things once has been formed, it will become easily, nay, certainly applicable to things of moment. His habitual piety, his sense of his own imperfections, his generally blameless conduct in the various relations of life, has been already sufficiently described, and has been illustrated in the preceding narrative. He was a good man as he was a great man; and he had so firm a regard for virtue, that he wisely set much greater store by his worth than by his fame." (p. 85.)

The next life before us is Adam Smith. After a brief summary on economical science, commencing with Antonio Bandini, of Sienna, who in the year 1737 recommended to the Grand Duke of Tuscany a free trade in corn, and reviewing De Gournay, De Quesnay, and others, we have Adam Smith introduced: he was born in 1723. Smith, having received the rudiments of education in Scotland, entered Balliol College, Oxford. He remained at that university seven years. Oxford did not, however, rise higher in his estimation by residence, and probably, as Lord Brougham remarks, inhibiting him from reading Hume's "Treatise on Human Nature" did not much mend his dislike. In 1748 he removed to Edinburgh, and then became acquainted with most of the celebrated men of the day. Glasgow offered him the Professorship of Logic; but he soon exchanged it for that of Moral Philosophy. He taught moral philosophy for twelve years; but of these discoveries we have no remains. He was a contributor to the Edinburgh Review in 1755. His "Theory of Moral Sentiments" made its appearance in 1759, and to this was appended a "Dissertation on the Origin of Languages." He resigned his professorship in 1763, to attend the Duke of Buccleuch upon his travels. On this tour he made the acquaintance of various learned continental scholars; and among others, one whose pursuits were analogous to his own, Quesnay. He returned to England; and in 1766 his celebrated work, "The Inquiry into the Nature and Causes of the Wealth of Nations," made its appearance. Hume lived to see it, and to approve it. He became shortly after a Commissioner of Customs—an appointment certainly by no means suited to him, and ill chosen. In 1788 he was elected Rector of the University of Glasgow. That university conferred on him, in 1762, the degree of LL.D. The duties of his office in the Customs were extremely laborious; and no doubt the influence of these dull details affected the powers of a mind that might otherwise have produced a work to rival his "Opus Magnum." He died in 1790, and the account given in Hutton of his last interview with his friends is highly interesting. Great men mislike to see their immature productions outlive them, and Adam Smith made his friends promise that his should not survive their author; and consequently all his other writing, comprising eighteen folio volumes of MS., were destroyed, excepting his "Speculative History of Astronomy."

Lord Brougham's general summary of his character and acquirements is extremely fair.

"The true picture of the great author's intellectual character is presented by his writings; and of the depth, the comprehensiveness, the general

accuracy of his views on the various subjects to which his mind was bent, there can be but one opinion. His understanding was enlarged, and it was versatile; his sagacity, when he applied himself deliberately to inquiry or to discussion, was unerring; his information was extensive and correct; his fancy was rich and various; his taste, formed upon the purest models of antiquity, was simple and chaste. His integrity was unimpeachable, and the warmth of his affections knew no chill, even when the languor of age and the weight of ill-health was upon him; his nature was kindly in the greatest degree, and his benevolence was extensive, leading him to indulge in acts of private charity, pushed beyond his means, and concealed with the most scrupulous delicacy towards its objects. Stern votaries of religion have complained of his deficiencies in piety, chiefly because of his letter upon the death of his old and intimate friend, Mr. Hume; but no one can read the frequent and warm allusions, with which his works abound, to the moral government of the world, to reliance upon the All-wise Disposer, to the hopes of a future state, and not be convinced that his mind was deeply sensible to devout impressions. Nay, even as to his estimate of Mr. Hume's character, we are clearly entitled to conclude that he regarded his friend as an exception to the rule that religion has a powerful and salutary influence on morals, because he has most forcibly stated his opinion, that whenever the principles of religion which are natural to it are not perverted or corrupted, 'the world justly places a double confidence in the rectitude of the religious man's behavior.'" (p. 120.)

Few persons were more opposite than Johnson and Smith. Johnson loved argument—engrossed conversation. Smith sat and watched. He was one of the most absent men conceivable; few more abstracted from common objects.

The "Theory of Moral Sentiments" contains much beautiful writing; and Lord Brougham has selected some of the choicest *morceaux*. We own the notice which we subjoin rather amused us, when we read it.

"How well has he painted the man of system, and how many features of this portrait have we recognized in Mr. Bentham, and others of our day! 'He is apt to be very wise in his own conceit, and is often so enamored with the supposed beauty of his own ideal plan of government, that he cannot suffer the smallest deviation from any part of it. He goes on to establish it completely, in all its parts, without any regard either to the great interests or to the strong prejudices which may oppose it. He seems to imagine that he can arrange the different members of a great society with as much ease as the hand arranges the different pieces on a chess-board. He does not consider that the pieces upon the chess-board have no other principle of motion beside that which the hand impresses upon them; but that in the great chess-board of human society, every single piece has a principle of action of its own, altogether different from that which the legislature might choose to impress upon it. If these principles coincide and act in the same direction, the game of human society will go on easily and harmoniously, and is very likely to be happy and successful. If they are opposite or different, the game will go on miserably, and the society must be at all times in the highest degree of disorder.' 'For a man to insist upon establishing, and upon establishing all at once and in spite of all

opposition, anything which his own idea of policy and law may seem to require, must often be the highest degree of arrogance. It is to erect his own judgment into the supreme standard of right and wrong. It is to fancy himself the only wise and worthy man in the commonwealth, that his fellow-creatures should accommodate themselves to him, and not to them." (p. 129.)

We know well that Bentham looked on Brougham as his neophyte; and great indeed was his astonishment when he discovered that his lordship's truly great and original mind was not one to be merged in his own Crambo-system, or to be deceived in the conclusions from it. We know the aged man had the vanity to imagine that the Chancellor of England would exhibit Benthamism even in the courts of highest jurisdiction; we know also he was disappointed to find the chains broken, and the intellectual giant enlarged to his full dimension; and we further know, that the whole of that school and tribe has never ceased to abuse and vilify him whom they could not pen down in their Cimmerian Owlet cavern. He broke from them, for he was not of them.

Many passages of this work of Lord Brougham contain curious confessions. His lordship freely owns they hit his former party hard. We give the following:

"The leaders of the discontented party seldom fail to hold out some plausible plan of reformation, which they predict will not only remove the inconveniences and relieve the distresses immediately complained of, but will prevent in all coming time any return of the like inconveniences and distresses. They often propose on this account to remodel the constitution, and to alter in some of its most essential parts that system of government under which the subjects of a great empire have enjoyed perhaps peace, security, and even glory, during the course of several centuries. The great body of the party are commonly intoxicated with the imaginary beauty of this ideal system, of which they have no experience, but which has been presented to them in all the most dazzling colors in which the eloquence of their leader could display it. The leaders themselves, though they may originally have meant nothing but their own aggrandizement, become many of them in time the dupes of their own sophistry, and are as eager for this great reformation as the weakest and foolishlest of their followers. Even though the leaders should have preserved their own heads, as indeed they commonly do, free from this fanaticism, yet they dare not always disappoint the expectations of their followers; but are often obliged, though contrary to their principles and their conscience, to act as if they were under the common delusion." (p. 131.)

The mighty work, however, of Adam Smith is, as we have mentioned, the "Wealth of Nations." Of this we have a complete analysis placed before us. On this work political economy may be said to depend as a science. Dr. Smith's great deduction and distinction between *productive* and *unproductive* labor we always thought questionable; and Lord Brougham impeaches his conclusion. Common sense will completely confirm the reasoning so ably set forth by his lordship in the appendix to this life.

"All the branches of useful industry work together to the common end, as all the parts of each branch coöperate to its particular object. If you say that the farmer feeds the community, and produces all the raw materials which the other classes

work upon; we answer, that unless those other classes worked upon the raw materials, and supplied the farmer's necessities, he would be forced to allot part of his labor to this employment, while he forced others to assist in raising the rude produce. In such a complicated system, it is clear that all labor has the same effect, and equally increases the whole mass of wealth. Nor can any attempt be more vain than theirs who would define the particular parts of the machine that produces the motion, which is necessarily the result of the whole powers combined, and depends on each one of the mutually connected members. Yet so wedded have those theorists been to the notion, that certain necessary kinds of employment are absolutely unproductive, that a writer of no less name than Dr. Smith, has not scrupled to rank the capital sunk in the public debt, or spent in warfare, in the same class with the property consumed by fire, and the labor destroyed by pestilence. He ought surely to have reflected, that the debts of a country are always contracted, and its wars entered into, for some purpose, either of security or aggrandizement; and that stock thus employed must have produced an equivalent, which cannot be asserted of property or population absolutely destroyed. This equivalent may have been greater or less; that is, the money spent for useful purposes may have been applied with more or less prudence and frugality. Those purposes, too, may have been more or less useful; and a certain degree of waste and extravagance always attends the operations of funding and of war. But this must only be looked upon as an addition to the necessary price at which the benefits in view are to be bought. The food of a country, in like manner, may be used with different degrees of economy; and the necessity of eating may be supplied at more or less cost. So long as the love of war is a necessary evil in human nature, it is absurd to denominate the expenses unproductive that are incurred by defending a country; or, which is also the same thing, preventing an invasion, by a judicious attack of an enemy; or which is also the same thing, avoiding the necessity of war by a prudent system of foreign policy. And he who holds the labor of soldiers and sailors and diplomatic agents to be unproductive, commits precisely the same error as he who should maintain that the labor of the hedger is unproductive because he only protects and does not rear the crop. All those kinds of labor and employments of stock are parts of the system, and all are *equally* productive of wealth." (p. 212.)

A variety of curious and original letters follow; but we shall not extract from them, as this would be scarcely fair in an unpublished work, and we pass to the next life, the celebrated Lavoisier.

This eminent chemist and philosopher was born at Paris in 1743. He was of opulent parents, and being placed in the Collège Mazarin, attained a high classical proficiency. His taste, however, conducted him to science, and to its severer forms in mathematics and astronomy. Botany soon obtained his attention. He then extended his view to other subjects, and attained such proficiency in various points of scientific investigation, that he was enabled to enter the academy at twenty-five years of age. Geology, then in its infancy, (what is it now!) occupied his attention. He published his earliest paper on the "Analysis of Gypsum." Chemistry soon began to command his sole attention. In 1758 and 1759 he experimented largely with a view to ascertain that water may, by re-

peated distillations, be converted into earth; and he endeavored to determine whether or not there was any foundation for the opinion that water can, by repeated distillations, become so elastic and aeriform as to escape through the pores of vessels.

The former opinion had been held by Bonde, and Margraaf and others; the latter by Stahl. He negatived both propositions; so that to this philosopher belongs the triumph of separating the component parts of earth and water, and proving that they are not mutually convertible; and the elasticity of water was equally determined by him. The young students of chemistry in England ought to bear in mind, that Lavoisier was occupied for one hundred and one days on one of these experiments. For a short period at this time of his life the attempt to supply Paris with water occupied much of his attention. He soon resumed his chemical pursuits. Black, Cavendish, and Priestley had made numerous discoveries on the nature of gases; and Lavoisier was at this period directing his attention to the calcination of metals. He drew from his experiments the inference, that calcination is caused by the union of air with the metal, and not by the loss of any body, as phlogiston combined with it. He, by this course, negatived again the Stahlian theory. Lavoisier stood on the verge of two important discoveries, Lord Brougham justly remarks, at this period—the composition of the atmosphere and oxygen; both, however, were reserved for Priestley. Equally near was he to the discovery that the diamond is identical with pure carbon. The destruction of the diamond by fire, as Lavoisier expressed it, or the action of heat upon it, he knew well. Newton, from an opposite process of reasoning, had inferred the combustibility of the diamond; and Macquer had proved that it could be converted into charcoal. Lavoisier arrived at the inference, that the air produced during the combustion of the diamond was fixed air. How close he was on the great discovery that the diamond is pure carbon, will appear from the following words: "We should never have expected," he says, "to find any relation between charcoal and diamond, and it would be unreasonable to push this analogy too far; it only exists, because both substances seem to be properly ranged in the class of combustible bodies; and because they are of all these bodies the most fixed, when kept from the contact of air." He adds: "It is far from being impossible, that the blackest matter should come from surrounding bodies, and not from the diamond itself."

One step would have shown him that the diamond and the pure carbonaceous matter were identical, and he had before him the discovery of Black, that fixed air was produced by the combustion of charcoal. In 1773 he made some very accurate experiments on calcination, and he proved from them that the whole mass of air and metal after calcination weighed exactly the same as before the operation, and that the metal had gained what the air had lost—a most important discovery; but an inference appended to it is very remarkable for various reasons. He adds, that the atmosphere is composed of two gases, one, in the words of Lord Brougham, "capable of supporting life and flame, and of combining with metals in their calcination; the other incapable of supporting either life or flame, or of combining with metals." This was not just to others, as we

shall show. His paper was to have been read at Martinmas, 1774, and was "remis" to the 10th of May, 1777. He says, that he had a letter from Beccaria, 12th of November, 1774, but that his own memoir was then drawn up, and that an extract only was read at the November session. He does not say that the important point of the gases was then inserted, nor how long before 1777 it was added. He also omits to state a remarkable communication that Priestley made to him in October, 1774, of his great discovery of oxygen. Nor does he mention that Priestley received, in 1771–3, the Copley medal from the Royal Society, for the discovery of azote in 1772. The printed paper of Priestley is extant in the Philosophical Transactions. Lavoisier's experiments on tin in 1770, and on minium and calcination of metals in 1771, could not have given it to him. It is therefore perfectly clear, that the experiments of our countryman led him to the inference on the atmospheric gases. He says, in the "*Elémens de Chimie*," "Cet air (oxygen gas) nous avons découvert presque en même temps, Dr. Priestley, M. Scheele, et moi." The precise time of Dr. Priestley's discovery is quite apparent. Scheele, ignorant of the doctor's discovery, made the same in 1775. Priestley and Scheele then did not discover it, "presque en même temps," far less Lavoisier. In eight separate papers, printed between 1772 and 1780, not a hint of Lavoisier's claim to this discovery is apparent. It was only in 1782 he claimed to be a co-discoverer with Priestley; but even then he admits the experiments that led to it were performed in February, 1775, and Priestley had announced it in 1774. He also added in that paper, at first, the remarkable point that Priestley had discovered oxygen at nearly the same time as himself, *and he believes a little earlier*: "et je crois même avant moi." But he ungenerously omits, after a lapse of many years, to give Priestley the benefit of his own previous confession, not inserting in the "*Elémens de Chimie*," the words previously given in his paper read to the academy in 1782. Priestley's own account of the discovery of oxygen is as follows. It is extracted from his work on Phlogiston:—

"The case was this. Having made the discovery of oxygen some time before I was in Paris in the year 1774, I mentioned it at the table of M. Lavoisier, when most of the philosophical people of the city were present, saying that it was a kind of air in which a candle burnt much better than in common air, but I had not then given it any name. At this all the company, and Mr. and Mrs. Lavoisier as much as any, expressed great surprise. I told them I had gotten it from *precipitate per se*, and also from *red lead*. Speaking French very imperfectly, and being little acquainted with the terms of chemistry, I said *plombe rouge*, which was not understood till Mr. Macquer said I must mean *minium*. M. Scheele's discovery was certainly independent of mine, though, I believe, not made quite so early."

We believe Lord Brougham's inference to be irrefutable; and it is only fair to his lordship to say, that the above reasoning is borrowed from the facts elicited by himself, and published in the work before us, viz., that Priestley discovered oxygen in 1774; Scheele in 1775; Lavoisier neither in 1774 nor 1775. It was to this discovery, however, that his theory of combustion is due. Having learnt from the discoverer of oxygen its exist-

ence, he arrived at the important generalization that it is the acidifying principle, and he named his great rival's discovery oxygen in consequence. At this period, while Lavoisier was occupied on generalizing, as Lord Brougham felicitously observes, the phenomena of other discoverers, but not materially adding to the store of facts from his own, two important points were determined in England, the composition of water and of the nitrous acid. Mr. Cavendish is the undisputed discoverer of the latter; of the former, Cavendish made the great experiment upon which it rests; but Mr. Watt, from less elaborate processes, had drawn out before him the inference that water was not a simple element, but a combination of oxygen with hydrogen gas. A passage in the *New Quarterly*, vol. v., p. 451, may possibly not convey a sufficiently balanced judgment on this question, leaving it a divided point between these great men; but the merit of drawing out the inference *first*, is assuredly Mr. Watt's. Here again, we regret to say, Lavoisier claimed to himself the discovery of other men. But when Lavoisier and Laplace, before several academicians, performed the experiment on which the French claim to this discovery is made, Sir C. Blagden, who was present, told them that Mr. Cavendish had already performed the experiment, and obtained water from the combustion of the two gases. In the summer of 1783 he communicated this discovery to Lavoisier, but he found him incredulous of the fact until he had ascertained it by experiment. This wish of the French chemist is perfectly natural to claim to himself something of the light of the numerous discoveries in his art made in England and elsewhere; but still it is hardly fair, when but at the best reflecting, like a satellite, light from more luminous bodies, to claim to be the source of that light himself. Nay, he was even so ungenerous as not to mention Black in his excellent paper, "On the Combination of Fire with evaporable Fluids, and on the formation of Elastic aeriform Fluids." The author of the "Theory of Latent Heat" is not even named, and every student to whom the papers were read would necessarily infer that the theory was the invention of Lavoisier. He was also well acquainted, we repeat, with the illustrious discoverer of "latent heat," which adds to the offence. After 1784 Lavoisier's labors were principally confined to forming the new nomenclature, and, in conjunction with Seguin, to investigations on the nature of respiration and transpiration. In 1776 he had materially aided Turgot, who had requested him to superintend the manufacture of gunpowder, by increasing the explosive force of the compound one fourth. In 1791 the national assembly consulted him, and he drew up his treatise on the "Richesse Territoriale de France." Being appointed a commissioner of the treasury, he introduced some admirable arrangements. His house at Paris and all his costly apparatus were open twice a week to scientific men, and he was a generous patron of youthful merit. Surely, from public services, for the national honor simply, such a man of science ought to have been saved amid any commotions; but it was not so. The Triumvirate of 1794 seized him with twenty-seven others, whose real crimes were their possessions, and imprisoned them. Lavoisier had escaped; but learning that M. Paulzé, his father-in-law, had been arrested, he gave himself up, and was confined with the rest. He had long foreseen that his property

would make him obnoxious, and when sentenced, simply asked for a few days' respite to witness the result of some experiments which he had conducted in his confinement; but the tribunal, by the mouth of one of their body, replied, that "the republic had no need of philosophers," and he was executed in May, 1794, with one hundred and twenty-three others. Carnot might and ought to have saved him; Fourcroy was bound to do so: one only citizen, M. Hallé, had the courage to read a detailed account of the discoveries of Lavoisier and his services to his country. Carnot and Fourcroy said nothing, and the latter always labored, as Cuvier says in his memoir of him, "under the torment of the imputation of promoting the death of his rival, Lavoisier." If anything could read the nations a lesson on the advantages of fixed government, the horrors enacted by the French revolution in the case of Lavoisier and others would impart it. Learning, science, nobility, art, order, government, age, sex, all lost sight of in the pell-mell of anarchy. This was a power on the Carlyle system certainly, but it was a demon power. Lavoisier left behind him a remarkable person in his wife, who took upon herself the engraving of the plates to the "Elements." She survived him, and late in life married Count Rumford, whom she also outlived. We regret extremely that our limits will not permit us to give the analysis of Lavoisier's discoveries appended to his life. This paper will be found well worthy of deep consideration. We simply extract Lord Brougham's opinion of his merit in the closing paragraph.

"After all the deductions, however, which can fairly be made from his merits, these stand high indeed, and leave his renown as brilliant as that of any one who has ever cultivated physical science. The overthrow of the phlogistic theory, and the happy generalizations upon the combinations of bodies, which we owe to his genius for philosophical research, are sufficient to place him among the first, perhaps to make him be regarded as the first reformer of chemical science, the principal founder of that magnificent fabric which now fills so ample a space in the eye of every student of nature."

We now proceed to the last life we shall be enabled to treat—Gibbon. This great historian was descended from an ancient Kentish family. His grandfather was a man of large fortune, but it was confiscated from his share in the South Sea Company. From this, however, he recovered, and obtained again a large fortune before his death, in 1736. He left behind him the historian's father, his son, and two daughters. One of these married Mr. Elliot, of Cornwall, afterwards Lord Elliot. Edward was born April 27, 1737. His father sat for Southampton, and continued in Parliament until 1747. Gibbon's childhood was sickly; but he went to Oxford, notwithstanding, before he was fifteen. His early taste for history had already developed itself. He arrived at Oxford, he says, "with a stock of erudition that might have puzzled a doctor, and a degree of ignorance of which a school-boy ought to have been ashamed." Here, singular to say, the historian of the "Decline and Fall" embraced Romanism, but it is quite evident on much such imperfect grounds as many graduates there have lately done, for he was not in a state from his acquirements to form a sound conclusion. He was accordingly compelled to quit Oxford, and his father sent him to *Lausanne*. The

following remarks of Lord Brougham are both forcible and just :—

"In contemplating the account given both by Smith and Gibbon of the great university in which both resided without being instructed, the friend of education feels it gratifying to reflect that the picture which both have left, and the latter especially, finds no resemblance in the Alma Mater of the Hollands, the Cannings, the Carlises, the Wards, and the Peels. The shades of Oxford under the Jacksons, the Wetherells, the Coplestones, (friendly, learned, honored names, which I delight to bring into contrast with the neglectful tutors of Gibbon,) bear no more resemblance to that illustrious seat of learning in his time, than the Cambridge of the Aireys, the Herschells, the Whewells, the Peacocks, the Gaskins, offers to the Cambridge in which Playfair might afterwards, with justice, lament that the '*Mécanique Céleste* could no longer find readers in the haunts where Newton had once taught, and where his name only was since known." (p. 284.)

At Lausanne he embraced the Protestant faith, influenced by M. Pavilliard. The five years there spent were of great value to him. French literature occupied much of his attention at that period. He was also most sedulous in his classical pursuits, carefully perusing the whole of the great Latin authors by the aid of their commentators. He read the whole of Cicero, for example, with the Variorum notes of the folio edition of Verburius. This curriculum of classic study occupied him twenty-seven months. Few preparations for distinction have been more ample. Here he became enamored of Mademoiselle Curchod, afterwards the wife of the celebrated Necker. His father, however, objected to this match, and he resigned his claim to her hand. The story is somewhat ludicrous of his declaration of love to this lady inducing the bold experiment of throwing himself at her feet; of his inability to rise, from his bodily weakness, from that position; the lady equally unable to assist him in the dilemma from his immense weight, added to her own emotions we presume, and that the bell was resorted to as a matter of necessity to summon the servants to aid the lovers in their delicate dilemma. At Lausanne he added friendship to love, in the acquaintance of Deyverdun. He returned to England in 1769.

In 1751 he published his essay "*Sur l'Etude de la Littérature*." The composition of this work evinces his knowledge of French by composing fluently in that language; but "*literature*" is, as Lord Brougham remarks, somewhat too vague a term, and has not definitiveness enough about it. The production is aimless. About this time, June, 1759, he joined the Hampshire militia, of which his father was major, and for two years and a half was compelled to follow this irksome life to a scholar. He then paused whether he should betake himself to the study of mathematics or classics; but the latter gained the preëminence. He consequently applied himself to Greek, and the work of the father of poetry, which Scaliger had read in twenty-one days, occupied him as many weeks. He read, however, the whole of the "*Iliad*" twice in one year, with some books of the "*Odyssey*" and "*Longinus*." He had frequently meditated an historical work, and at one time contemplated a history of Florence. Before determining the ultimate subject on which he should concentrate his attention, and anterior to

going to Italy, he studied the best classic authors, Italian topography and geography, medals, &c., and went carefully through a long series of archaeological writers. In the spring of 1764 he set out for Italy, traversed the principal cities, but remained longest at Rome. The plan of his history first struck him on the 15th of October, while he sat musing in the ruins of the capitol, and barefoot friars were singing vespers in the Temple of Jupiter. He then determined to write the noble story of Rome's decay. We own the association of ideas, from its very mournfulness, would have deterred us from the attempt; but it appears to have been differently felt by Gibbon. In Italy he made the acquaintance of his friend, Lord Sheffield. Like Gibbon's other friends, this nobleman retained a great affection for him to the last. In June, 1765, Gibbon returned to England, and became lieutenant-colonel commandant of the militia. His father died about 1770, when Gibbon resigned his commission. He enjoyed, from the misfortunes, in later life of his father, simply ease and comfortable circumstances. His time was wholly his own, and it was principally spent in his library at Buriton, or in the best society in London. Yet he deeply regretted the want of a profession. He at this period planned, in conjunction with Deyverdun, the history of Switzerland. The two friends also planned an annual literary review, and published it in 1767 and 1768. Warburton's hypothesis on the 6th *Æneid* received a caustic reply from Gibbon at this period. We extract the following description of his restlessness during this period :—

"Thus there was no want of either study or literary labor to diversify the learned leisure which yet he found so irksome. The contrast is surpassingly remarkable which his description presents to the account which D'Alembert has left us, of the calm pleasures enjoyed by him as long as he confined himself to geometrical pursuits. Shall we ascribe this diversity to the variety of individual character and tastes; or to the difference in the nature of those literary occupations; or, finally, to the peculiarities of French society—affording, as it does, daily occupation too easy to weary, and pleasing relaxation too temperate to cloy? Perhaps partly to each of the three causes, but most of all, to the absorbing nature of the geometrical studies. It seems certain, however, that no life of mere literary indulgence, of study unmingled with exertions, and with continued, regular exertion, can ever be passed in tolerable contentment; and that if the student has not a regular and, as it were, a professional occupation to fill up the bulk of his time, he must make to himself the only substitute for it, by engaging in some long and laborious work. Gibbon found by experience the necessity of some such resource; and we owe to his sense of it, the '*Decline and Fall of the Roman Empire*.'"

Three years were bestowed upon this work, which was delayed by his return to parliament for Liakard in 1774. In 1776 the first volume appeared. The style drew down both praise and condemnation. The public voice confirmed the favorable judgment of his friends on its broad merits, and the first edition of 1000 was exhausted in a few days. Bishop Watson appeared among his opponents, and certainly gained the praise of success in his condemnation of the principles embodied in the work. Gibbon published, however, a splendid vindication, of which the Rev. Mr. Milman

says justly, "This single discharge from the ponderous artillery of learning and sarcasm laid prostrate the whole disorderly squadron of rash and feeble volunteers who filled the rank of his enemies, while the more distinguished theological writers of the country stood aloof." The second volume followed in two years from the publication of the first. In 1779 he accepted the sinecure post of a lord of trade. In 1780 he lost his seat; but Lord North put him into Lymington, a seat he retained until 1784. The Board of Trade being then abolished, he again retired to Lausanne. After the publication of the third volume, he hesitated whether or not he should terminate his work at that stage. At Lausanne, however, he continued it. He also hesitated whether he should follow "the chronological order of events," or "group the picture by nations," and adopted the latter course. He began his work with spirit, finished the fifth volume in two years, the sixth and last in thirteen months. We give again his oft-cited description of the close of his toil.

"It was, he says, on the day, or rather the night of the 27th June, 1787, between the hours of eleven and twelve, that I wrote the last lines of the last page in the summer-house in my garden. After laying down my pen, I took several walks in a berceau, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The air was temperate, the sky was serene, the silver orb of the moon was reflected from the waters, and all nature was silent. I will not," he adds, "dissemble the first emotions of joy on the recovery of my freedom, and perhaps the establishment of my fame. But my pride was soon humbled and a sober melancholy was spread over my mind, by the idea that I had taken an everlasting leave of an old and agreeable companion, and that whatever might be the future date of my history, the life of the historian must be short and precarious." ("Life," ch. x.)

He returned to England to superintend the publication of the last two volumes, and was fully aware, before he left, that both the indecency and irreligion of his work would produce numerous opponents. On his return to Lausanne, Deyverdun was smitten with apoplexy, and died in one year after. Gibbon missed his friend severely. Lausanne, however, was visited by numerous distinguished persons at various intervals—Fox among others—who spent two entire days with Gibbon. He describes him thus:

"He seemed to feel and to envy the happiness of my situation, while I admired the powers of a superior man as they are blended in his attractive character with the softness and simplicity of a child. Perhaps no human being was ever more perfectly exempt from the taint of malevolence, vanity, and falsehood."

Lord Brougham suggests the insertion of pride for vanity in this picture, or else the omission of both substantives. Gibbon, however, felt that the recklessness of all morality and decency of Fox deserved severe censure, and he does not in the "Correspondence" spare him. The French revolution soon filled Lausanne with emigrants, among others, M. Necker. It did not find Gibbon among its advocates; on the contrary, when Burke attacked it he says of him, "I admire his eloquence, I approve his politics, I adore his chivalry, and I can almost excuse his reverence for church establishments." So little did the movement enlist Gibbon's sympathies, that he argued in favor

of the Lisbon inquisition, saying, "he would not at that moment give up any old establishment." Lord Brougham justly remarks, if he censured Burke at times for his excesses, the chivalric orator might well have returned the compliment after this declaration. Gibbon stayed out the chance of the revolutionary troubles reaching Switzerland; nor would he have quitted Lausanne, had not his friend, Lord Sheffield, written to him for consolation and support, in consequence of the death of his wife. Of the truest source of obtaining these, the brilliant Gibbon was not cognizant; but to do him justice, he was never wanting in human sympathy. He was a great sufferer from severe indigestion. Erysipelas had affected his legs; gout also had attacked him, and besides this, he had an unwieldy rupture, which, singular to say, he had not mentioned to any one. Sheffield-house received him, despite all this, in as short a time as he could reach it. Immediately on his arrival he found it necessary to obtain medical aid, for he had both hydrocele and hernia. An operation for the first was performed, and four quarts of fluid removed. The water formed again: a second operation was necessary; it was performed. A third operation relieved him of six quarts; but he survived it little more than a week. He never believed himself in danger, and spoke of the continuance of his life for many years; and the world is not possessed of Gibbon's last thoughts or words under the contemplation of impending dissolution. He was buried in the vault of the Sheffield family, at Hitchin, in Sussex, and Dr. Parr contributed the Latin epitaph to his tomb. It is admirably descriptive of the style of the great historian, which, however meretricious at times, we think Lord Brougham rates somewhat too low. "*Copiosum, splendidum, concinnum orbe verborum, et summo artificio distinctum orationis genus, recondite exquisitæque sententiæ.*"

In the personal character of Gibbon we have to remark, that, except in the fearful use of irony, which always destroys the amenity of the tone of conversation, he was in mode a finished gentleman—and in feeling a kind-hearted man. Politely patient, he bore—unruffled we dare not say, but still apparently unmoved—the various attacks of his opponents, and had the candor to honor the noblest of them by special mention. It is wonderful that, with his strong conversational powers and research, he never ventured on a speech in the house. How many must have risen in fearful apprehension from his vicinity. His personal appearance must have been almost repulsive. Large head, bad and slender figure when young, and of small stature, ultimately he became a misshapen mass in form and feature. Let us, lastly, look at him as an historian. Here the picture of the inner man changes, for nothing can exceed the finished contour that many of his descriptions give to objects. Still we always thought that the title of his history was not quite correct. It cannot be considered Roman in its specialty. Its oriental portion is the worst part, singular to say, though the leaning of the writer to every robber Kurd, murderous Arab, vile Türkomaun, apostate Christian, or Muhammedan monster of any kind, made that portion a labor of love. The crusaders, the Christians, and the martyrs, fade under his fearful pencil. Athanasius alone stands out, despite of his historian, in his own bright hues. The oriental authorities do not bear out many parts of his narrative, even in the chronicle of his favorite sub-

ject, their own acts. Still is he often fair in judgment, especially in summation of the evidence for the destruction of the workmen who attempted to build the temple. Nor does his bitterness lead him to discredit Warburton on Julian, any further than a fair censure on his dogmatism and speculation. His attempt to subdue the force of the unprejudiced evidence of Ammianus Marcellinus, is subject to very different questioning. The sagacity of Gibbon, in the judgment he forms on conflicting accounts, is great; but certainly no one can think that he enters satisfactorily into details. His best efforts always seem to us a sketch of a part, but never a view of the whole. Nothing, for example, can be more unsatisfactory than his brief account of Timur; and Von Hammer supplies innumerable deficiencies even on his favorite subject, the virtues of the Ottoman. To impugn, however, the great extent of his acquirements, would be as unjust as untrue. Still Gibbon does not show much philological acuteness; and although his implicit confidence in the events of early Roman history may be carried to an excess, still, for our parts, we confess we are weak enough yet to credit Livy in preference to Niebuhr. As to the visible prejudice against Christianity, which he scarcely thinks it worth while to conceal, we repeat, that we are ignorant from what source it arose; but certainly Voltaire, Rousseau, and Hume united, did her less harm than the covert attacks of the historian of the "Decline and Fall,"

"Sapping a solemn creed with solemn sneer."

Lord Brougham justly censures the account of Cyprian, and of the persecution of that emperor that mowed down the church of God, Diocletian, also the foul indecency of various passages that elicited the indignant censure of even one not remarkable for very rigid chastity of expression—Porson. And here we close our remarks on Gibbon. The next lives, in sequence, are Sir Joseph Banks and D'Alembert; the former, we believe, like Robertson, both the friend and relation of Lord Brougham, who has enjoyed kindred with the noblest of the earth, the men immortalized in the undying annals of fame. They may well be proud of their descendant, and look on his multi-fold acquirements with deep marvel and astonishment; for he is not a man of a single speech, or a single subject, or a single book; but one fitted to direct senates, to digest immense materials into succinct form, and to add in each successive year fresh pearls of larger brilliancy and beauty to the chaplet he has already strung of the statesmen and men of letters of England.

From the North British Review.

Annals of the English Bible. By the Rev. CHRISTOPHER ANDERSON. Two Vols. 8vo. London, 1845.

THE noontide of Papal dominion extends through the thirteenth century. Rome was then once more mistress of the world, and kings were her vassals. "The superiority of ecclesiastical to temporal power, or, at least, the absolute independence of the former, may be considered," says Hallam, "as the key-note which regulates every passage in the canon law." No bond, however sacred, was allowed to stand in the way of this church power. Promissory oaths were frequently annulled, especially when made by sovereigns to their people, as in the case of the English kings,

with reference to the Great Charter. Dispensations from the marriage vows rendered divorce and even polygamy matters of ordinary occurrence in high life. Unreasonable restrictions led indirectly to unbounded laxity and demoralization. Marriages were forbidden not merely within the limits which Nature prescribes, but as far as the seventh degree of collateral consanguinity; and in addition to this came innumerable degrees of affinity, arising out of the sacraments of baptism and matrimony. Hence "history is full of dissolutions of marriage, obtained by fickle passion or cold-hearted ambition, to which the church has not scrupled to pander on some suggestion of relationship."

Not only the appointment of bishops, but, to a great extent, the patronage of inferior benefices, was assumed by the Pope, till, "as in the history of all usurping governments, time changed anomaly into system, and injury into right." Provisions, reserves, taxation of the clergy, enormously swelled the coffers of the Roman court. Gregory IX. preached a crusade against the Emperor Frederick, in a quarrel which only concerned his temporal principality, and the Church of England was taxed by his authority to carry on this holy war. After that, no bounds were set to such exactions. "The usurers of Cahors and Lombardy, residing in London, took up the trade of agency for the Pope, and in a few years he is said, partly by levies of money, partly by the revenues of benefices, to have plundered the kingdom of no less than fifteen million pounds sterling of our money. Pillaged on every slight occasion, without law and without redress, even the clergy came to regard their once paternal monarch as an arbitrary oppressor. All writers of the thirteenth and following centuries complain in terms of the most unmeasured indignation, and seem almost ready to reform the general abuses of the church."

At length the nations began to feel restive under the galling yoke. None had been so heavily burdened as England, "obsequious beyond all other countries to the arrogance of her hierarchy; especially during the Anglo-Saxon period, when the nation was sunk in ignorance and effeminate superstition." This characteristic she retained for ages after the Conquest.

Excommunication was the lever by which the clergy moved the world. Monarchs were dethroned—dynasties changed—kingdoms given away—and national rights trampled in the dust. Invasions were encouraged, and the banner of conquest was formally and solemnly blessed, as in the memorable cases of William the Conqueror and Henry II. of England, on condition that the Pope should share the spoil; and for this even the ancient national saints and their holiest shrines were desecrated—their names, whether Saxon or Celtic, cast out as evil and profane!

"There is a spell wrought by uninterrupted good fortune, which captivates men's understanding, and persuades them against reasoning and analogy, that violent power is immortal and irresistible. The spell is broken by the first change of success. We have seen the working and the dissipation of this charm with a rapidity to which the events of former times bear as remote a relation as the gradual processes of nature to her deluges and volcanoes. In tracing the Papal empire over mankind, we have no such marked and definite crises of revolution. But slowly, like the retreat of waters, or the stealthy paces of old age, that

extraordinary power over human opinion has been subsiding for five centuries."

There grew up, by slow degrees, a conviction of "that sacred truth, which superstition and sophistry have endeavored to eradicate from the heart of man—that no tyrannical government can be founded on a Divine commission. Literature, too long the passive handmaid of spiritual despotism, began to assert her nobler birthright of ministering to liberty and truth." And when she came to prepare the way for their joint triumph at the Reformation, the art of printing appeared, to add an hundred fold to her power.

But long before the Reformation, the Papacy had to contend with a foe far mightier and more unrelenting; for literature might be bribed, and learning might be set up against learning. It had to encounter the resistance of *conscience*, roused and guided by the Word of God.

During many ages of profound ignorance, our forefathers "slept the sleep of orthodoxy," seldom disturbed by the lights of reason, or the sounds of dissent. But from the twelfth century this was no longer the case. "An inundation of heresy broke in that age upon the church, which no persecution was able thoroughly to repress, till it finally overspread half the surface of Europe." This "heresy," so called, was intimately connected with the reading of the vernacular Scriptures. As on this point the testimony of a learned and liberal layman will be accepted by some, more readily than that of an ecclesiastical writer, we shall quote a few more sentences from Mr. Hallam, who deals with religious movements in those times, merely in their relation to the progress of society.

"The ecclesiastical history of the thirteenth and fourteenth centuries teems with new sectaries or schismatics, various in their aberrations of opinion, but all concurring in *detestation of the Established Church*. They endured severe persecution with a sincerity and firmness, which in any cause ought to command respect.

Considered in its effect on manners, the preaching of this new sect (the *Lollards*) certainly produced an *extensive reformation*.

Fostered by the general ill-will towards the Church, Wycliffe's principles made *vast progress* in England; and, unlike those of earlier sectaries, were embraced by men of rank and influence. Notwithstanding the check they sustained by the sanguinary law of Henry IV., it is highly probable that multitudes secretly cherished them down to the era of the Reformation."

It is to this era chiefly that Mr. Anderson has devoted his investigations in the volumes before us. He has had the rare good fortune to produce a work that was much wanted on a most important subject, and just at the right time. It evinces great learning and industry, and must have cost him vast labor. It contains an interesting and most instructive portion of English history, never before so fully or so clearly written, casting light on many obscurities, and developing some principles of vital moment in the present day—all going to prove, in a very remarkable manner, that the Book of God is not only the book of truth and salvation, but also, preëminently, the Book of Freedom; and that it has won its victories, not by the power or patronage of princes and prelates, but by

the zeal, energy, and fidelity of the people, whom they always persecuted, unless when some selfish policy withheld their hand. Such is the great and encouraging lesson which this book teaches.

We are not disposed to criticise this important work. Ours is the more grateful, though more difficult, task of presenting, as far as possible in so brief a sketch, the results of the learned and philanthropic author's elaborate investigations, and thus promoting the object which he has most at heart. We hope, however, that many of our readers may be led to seek for themselves more ample information in Mr. Anderson's own pages.

In very early times, portions of Scripture had been translated into the Saxon language. But before the thirteenth century nothing effectual was done for the English people in this department. JOHN WYCLIFFE, a native of Yorkshire, was born in 1324, and came into public view as a reformer at the age of thirty-six, maintaining a conspicuous position for twenty-four years, which were devoted to incessant labor in the cause of truth, learning, and godliness, of which he was the brightest example in that age. We have the most satisfactory evidence that his translation of the Bible told powerfully on the community, and was the principal cause of that "extensive reformation" of *manners* spoken of by Mr. Hallam.

Knighton, a contemporary, complained bitterly that "this Master John Wycliffe translated the *Gospel* out of Latin into English, and thus laid it more open to the laity, and to women who could read, than it had been formerly even to the most learned of the clergy." The jewel of the church, said he, "is turned into the sport of the people, and what was hitherto the principal gift of the clergy and divines, is made forever common to the laity." Animated by similar feelings, an English council, in 1408, decreed that "the translation of the text of Holy Scripture out of one tongue into another is a dangerous thing." Therefore, translation was forbidden by them "under pain of the greater excommunication."

Notwithstanding such threats, the word of God grew and multiplied. The term "Lollard," indeed, was applied to many who did not embrace all the doctrines of Wycliffe, though they echoed his complaints against the hierarchy. In the year 1382, Knighton states that their number had very much increased, and that "every second man in the country was a Lollard," i. e. *Protestant*. He states, moreover, that their teachers always pretended to have a great respect for "Goddiss Law," to which they declared themselves strictly conformed both in their opinions and their conduct. They were also "mighty in words," and both men and women were distinguished by the same modes of speech, and "by a wonderful agreement in the same opinions."

It was not by books only that the reformed doctrines were then propagated. There was a body of itinerant preachers called "*Poor Priests*," who proclaimed the Gospel throughout the land in churches and churchyards, in the midst of fairs and markets, or wherever multitudes were convened. They were denounced by the authorities, and cited to the tribunals, because, "by their subtle and ingenious words, they contrived to draw the people to their sermons, and to maintain them in their errors." Supported in their home mission by the liberality of the faithful, they were free to fly from city to city when persecuted "by the clerks of Antichrist, as Christ biddeth and the Gospel!"—"com-

* See Hallam's *Europe during the Middle Ages*, chap. 7.

ing and going after the moving of the Holy Ghost, and not being hindered from doing what is best by the jurisdiction of sinful men." These preaching priests would not take benefices, lest they should thereby countenance the iniquity of patronage, commit the sin of simony, or be tempted to live in idleness, misspending honest folk's money.*

As to the translation of Wycliffe, it is true that he was ignorant of Greek and Hebrew, which some of the priests, 150 years after, regarded as languages newly invented by the Reformers, or by the devil. Such being the utter ignorance, in those ages, of the originals of Scripture, Mr. Anderson thinks that a translation, in the first instance, from Greek and Hebrew, would not have harmonized with the intentions of divine Providence. Latin was the language of learning, of the church, and of the authorized Bible. Against what was manifestly contained in the Vulgate nothing could be said. It was therefore fitting that, as a preliminary step, the translation should be made from that standard version. For this task Wycliffe was eminently qualified.

He did not perform it in vain. The people, even the soldiers, read it with avidity. "Dukes and earls," also, "his powerful defenders and invincible protectors," were busily engaged in transcribing and studying its precious contents. The translator, conscious that he had done a great work, frequently expressed himself in the boldest terms. "The authority of Scripture," said he, "is independent on any other authority, and preferable to every other writing." "Among his latest acts," says Dr. Vaughan, "was a defence in Parliament of the translation of the Scriptures into English. These he declared to be the *property of the people*, and one which no party should be allowed to wrest from them."

It is a singular circumstance that this translation has never been printed! The New Testament, it is true, was printed 300 years after it was finished; but the entire Bible, now 464 years old, has never been committed to the press. That it was extensively read, however, is evident from the virulent opposition it excited. "Mere gleams of light, obtained from the Sacred Word, were sufficient," says our author, "to bring down the wrath of the oppressor. During the fifteenth century, various cases of abjuration and burning for heresy had occurred. Particular periods are then to be marked as *seasons of persecution*."

It is plain, from what has been already stated, that there can be no greater mistake than that so generally committed, of ascribing the British Reformation to continental influences. It sprang from the seeds of truth, sown in the native soil long before Luther was heard of. The *written* (i. e. manuscript) Word of God in English was the grand instrumentally employed. In this respect, as we shall see hereafter, England and Scotland owed even less to their rulers than to the German reformers.

At the fall of Constantinople, in the middle of the fifteenth century, Europe was seized with a sort of literary *mania*. Crowds of learned Greeks, bearing with them the classical treasures of antiquity, settled in Italy, which became the chief point of attraction to all the learned of the west. The highest ecclesiastical authorities were so enthusiastic, that the discovery of an unknown manuscript was regarded almost as the conquest of a kingdom.

Rome was then little aware that she was furnishing to Europe polished weapons for the warfare which was to issue in the destruction of her own power, and which would be first wielded effectually by one of her own most celebrated sons—Erasmus.

While Constantinople was being stormed, and while the "brief-men" of Italy were busy with their pens transcribing the classics, Gutenberg, the inventor of printing, aided by John Fust, a goldsmith, who advanced the money, finished at Mentz, the first great work of the Press—the *Latin Bible*. Thus the earliest homage of this art—the parent of so many bloodless revolutions—was paid to the Sacred Volume. This Bible, in 2 vols. folio, consisted of 1282 pages, finely executed, by a process that was a profound secret to all except the artists employed in the work. While the wise men of Paris were ascribing it to the operation of magic and the black art, it found the warmest welcome in the city of the *Index Expurgatorius*, and its most admiring patron in the Pope. Before the close of the fifteenth century, the different works, published in Rome alone, amounted to 1000. Other cities in Italy and Germany were equally busy. Panzer has reckoned up 198 printers in Venice, and before the close of the century they had put forth 2980 distinct publications, among which were more than twenty editions of the Latin Bible. Thirty years after this glorious invention, there were more than 1000 printing-presses at work in 220 different places throughout Europe.

Such was the state of things when WILLIAM TYNDALE, the first translator of the Bible from the original languages into English, commenced his labors. The parentage of illustrious characters is sometimes involved in an obscurity which baffles all research; and it is amusing to see how biographers puzzle their brains to connect their heroes with some respectable genealogy. Mr. Anderson, with all his Christian philosophy, is not free from this—shall we call it—weakness? And, accordingly, he searches diligently and vainly in Gloucestershire for the paternal mansion of the martyr—Tyndale.

Tyndale, however, was the name of a good old stock; and our translator was *probably* the son of Thomas Tyndale, by Alicia Hunt, of North Nibley in Gloucestershire, and was born in 1484–5 or 6. He was educated at Oxford, where he was distinguished by his attainments in the classics and his knowledge of the Scriptures, which he labored to inculcate on the minds of his fellow-students. This zeal was offensive to his superiors; and though there is no reason to think he was expelled, yet says Foxe, "spying his time, he removed to the University of Cambridge, where he likewise made his abode a certain space." About 1520 he used often to preach in Bristol, and in various towns and villages in the neighborhood of Little Sodbury Manor, where he was a tutor in the family of Sir John Walsh.

There he had debates with abbots and other clergy who frequented the house; for Sir John "kept a good ordinary;" and the tutor had an opportunity of occasionally discussing "God's matters" with well-beneficed dignitaries. Once Sir John and his lady were at a banquet, given by those great doctors, "where they talked at will and pleasure, uttering their blindness and ignorance without resistance or gain-saying." Their arguments being repeated to Tyndale, he refuted them from Scripture.

"Well," said Lady Walsh, "there was such a doctor there as may dispense £100 a year, and

* Vaughan's *Life of Wycliffe*, vol. ii., p. 163.

another £200, and another £300; and what! were it reason, think you, that we should believe you before them?"

It was in this house that Tyndale conceived the purpose of translating the Scriptures.

"As long," said he, "as the clergy can keep the Scripture down, they will so darken the right way with the mist of their sophistry—with arguments of philosophy, and with wordly similitudes, and apparent reasons of natural wisdom, and with wresting the Scriptures unto their purpose—that though thou feel in thine heart, and art sure how that all is false that they say, yet could'st thou not solve their subtle riddles. *Which thing only moved me to translate the New Testament.* Because that I had perceived, by experience, how that it is impossible to establish the people in any truth, except the Scripture were plainly set before their eyes in their mother tongue."

A rumor soon spread abroad that he was tainted with heresy, and owing to secret accusations, he was summoned before the Chancellor of the diocese, "who threatened him grievously, reviled him, and rated him as though he had been a dog." Having escaped from the hands of this man, he was soon after in discussion with a learned divine, who, when forced into dilemma, exclaimed, "we were better without God's law than the Pope's." To this ebullition, so characteristic of the times, Tyndale replied, "I defy the Pope and all his laws, and if God spare my life, ere many years, *I will cause a boy that driveth the plough, to know more of Scripture than you do.*"

Finding the Italian diocese of Worcester too hot for him, and fearing that he should fall into the unmerciful hands of the spirituality, he set out for the metropolis, bringing with him an introduction to Tunstal, Bishop of London, the future burner of the New Testament. It was his first and last attempt to procure a patron, for his whole life was distinguished by a love of independence, very rare in those days even among Reformers. No public character ever evinced more noble self-reliance—none ever trusted princes less, or Providence more. He was told by the great man that his house was full—he had more than he could well find. Tyndale abode almost a year in the city, studying the church and the world at head-quarters. "I understood," said he, "at the last, not only that there was no room in my lord of London's palace, to translate the New Testament, but also, that there was no place to do it in all England."

He therefore embarked for the Continent, and remained in Hamburg about a year, busy at his translation, being supported chiefly by the liberality of a London merchant. It has been generally supposed that he went at once to Luther, and was leagued with him in this work. But this is a mistake—he never set foot in Saxony before the publication of his New Testament. From Hamburg he removed to Cologne on the Rhine in 1525, accompanied by his amanuensis, William Roye. There he committed to the press, the New Testament, in the form of a quarto volume. But the printers had not proceeded far, when the work was interdicted. They managed, however, to secure the printed sheets, and sailed with them up the Rhine to Worms, where they resumed their task in safety, and with renewed zeal. When Cochleus, an indefatigable defender of the "Old Learning," discovered, by intoxicating the printers, that the "two apostate Englishmen, learned, skilful in languages, and fluent," were actually printing

three thousand copies of the New Testament in English, with the design of "making all England Lutheran," he was "moved with fear and wonder," and induced the authorities to interpose. He also wrote to Henry VIII. and Cardinal Wolsey, "that they might, with the greatest diligence, take care, lest that most pernicious article of merchandise should be conveyed into all the ports of England."

Mr. Anderson has shown clearly, that "the undivided honor of translating the New Testament remains with Tyndale alone;" but on the value of the work as a version, he has not said so much as we could have wished—having noticed it, indeed, but slightly, and only in passing. Yet a critical examination of all our English translations, as they have been printed side by side by Mr. Baxter, so as to trace to its sources the language of our venerable standard Bible, would be interesting and instructive; however, the theme is too large to be even touched on by us at present.

"The incontrovertible proof of Tyndale's erudition, whether as a Greek or Hebrew scholar, is to be found in the *present* version of our Bible, as read by millions. The circumstance of its being a *revision*, five times derived, is an advantage altogether peculiar to itself; while, notwithstanding this fivefold revision of the Greek and Hebrew original, large portions of Tyndale's translation remain untouched, or verbally as the translator first gave them to his country. It is, indeed, extraordinary, that so many of Tyndale's correct and happy renderings should have been left to adorn our version, while the terms substituted in other instances still leave him the palm of scholarship. When the incorrect, not to say injurious sense in which certain terms had been long employed, is duly considered, the substitution of *charity* for love, as Tyndale translated, of *grace* for favor, and *church* for congregation, certainly cannot be adduced as proofs of superior attainment in the original Greek."—*Annals*, i. p. 27.

"Tyndale's prose has been read in Britain ever since, and that, too, 'every Sabbath-day;' for, notwithstanding all the confessed improvements made in our translations of the Bible, large portions in almost every chapter still remain verbally the same as he first gave them to his country. In this, it is true, he was merely a translator, but then the *style* of his translation has stood the test of nearly ten generations. It has been their admiration all along, and it will continue to be admired while the language endures."—p. 245.

The New Testament arrived in England in January, 1526. The history of this importation of "pernicious merchandise" is full of romantic incidents, and "if only the half were told, would be one of the most graphic stories" in our annals. "No siege by sapping and mining which England has ever since achieved, could furnish a tenth part of the incident, or evince half the courage by which she was herself assailed."—*Annals*, i. p. 88.

Think of the tremendous forces that were acting in combination against the introduction of the printed Scriptures into England in the native language. Henry's royal honor was staked to vindicate his proud title of Defender of the Faith, which he had won in controversy against *Lutheranism*, the opprobrious designation now employed towards all the friends of the English Testament. His chancellor, Wolsey, was next to him in power—a man of vast wealth and inordinate ambition—

an intriguing aspirant to the Papal chair, and virtually Pope of England, both from his political influence, which enabled him to dictate to the Court of Rome, and his new office as Vicar. He had just established Cardinal College in Oxford, designed to make that University the most glorious in the world; which college he amply endowed with the revenues of several small monasteries, and filled with the most talented young men he could find, in order expressly to counteract the new learning, and maintain the old faith in its integrity.

It is well known that he was unfortunate in all his high-flying schemes. His diplomacy about the Popedom, enforced by immense sums of money, utterly failed, and injured his influence; his office of Vicar-General (as well as his college and his splendid brazen statue) was assumed by the king, and became the origin of the spiritual supremacy which has ever since attached to the English crown. He also gave Henry the fatal precedent of the confiscation of small monasteries, which led the way to the seizure of them all. And moreover, many of the well-selected advocates of the "old learning" in Cardinal College became the most devoted champions of the new.

Wolsey, roused by a personal satire against himself, commenced the work of persecution by instituting a secret search for books. It was found that Garret, a curate in London, had been in the habit of conveying large quantities to "a little flock" in Oxford. He and all suspected of receiving the books were cast into prison. Among these were a number of the students of Wolsey's own college. They were immured in a dungeon, where, getting no food but salt fish for five months, four of them died.

Dr. Barnes having, in a sermon, ridiculed the cardinal's golden shoes, golden cushions, and red gloves, was called upon to "abjure or burn." After painful suspense, he was persuaded to abjure, and Wolsey had triumphant revenge. In St. Paul's, on Sabbath-day, he sat enthroned in state, and clothed in purple, surrounded by thirty abbots, mitred priors, and bishops, while Fisher preached against the "heretics," and then baskets full of books were thrown into a fire kindled without. Barnes and his fellow-abjurers were obliged to carry fagots round the fire three times before they cast them in, and the whole ended by proclaiming an Indulgence to the spectators.

Thus the work of exterminating the Scriptures went on; but it was not confined to England. In obedience to Wolsey's instructions, the English ambassador not only visited Antwerp, Barrow, Zealand, and other places for this purpose, but he made "privy inquisitions" after books at Ghent and Bruges, Louvaine, &c. He made some "good fires" of the New Testaments; but in an attempt to punish the printer of them at Antwerp, he received an effectual check from the free government of that place, which presented a happy contrast to the slavery of England. It was this ambassador, Hacket, who first suggested the idea of buying up the New Testament in order to burn it. So greatly were the bishops alarmed at the prospect of its circulation, that Warham, Archbishop of Canterbury, spent £664 thus, on part of Tynsdale's first edition, and called on the bishops to contribute their share of the money, which they did, and thanked him cordially for this "glorious and blessed deed."

In 1528, persecution raged fiercely against the readers and venders of the Scriptures, till it was

providentially interrupted by the fearful epidemic, called by foreigners, "*Sudor Anglicanus*," as it attacked only the English, and seized on them wherever it found them.

"It seemed the genial air,
From pole to pole, from Atlas to the East,
Was then at enmity with English blood;
For, *but* the race of England, all were safe
In foreign climes; nor did this fury taste
The foreign blood that England then contained."

In two months 40,000 were affected in London alone, of whom 4000 died. Both the king and his chancellor made their wills, and confessed daily, that they might be ready for this terrible visitant.

It is worthy of remark that Wolsey and Bishop Gardiner were the zealous agents of Henry VIII. in trying to procure the divorce from Queen Catherine; and from what we have already stated about Dispensations, it is easy to infer, that whatever stood in the way at Rome, it certainly had nothing to do with scruples about the legality of the proceeding. The Pope would have gratified Henry's wish—for a due consideration, of course—without a moment's hesitation, only that Charles V., whom he dared not offend, was the Queen's nephew.

In January, 1529, Wolsey despatched Gardiner to Rome secretly, with orders, if necessary, to threaten that England would withdraw her obedience unless the Holy See consented to be the instrument of cutting the knot that could not be untied. To this new idea of the king's supremacy in spiritual matters, the cardinal was quickly sacrificed on the pretext that he had obtained bulls from Rome without the royal license. He had raised himself by talents, judgment, and policy from humble rank to the highest degree of wealth, power, and dignity ever enjoyed by an English subject. In an age of *power*, his tables were covered with gold and silver plate—the highest nobility were his household servants, waiting upon him in white robes, as in the king's palace. His master cook was arrayed in damask satin, with a gold chain about his neck. There were one hundred individuals daily in attendance on the person of this successor of the apostles. In his "poor house of Westminster," as he was accustomed to style his gorgeous palace, "there was of all sorts of arras, velvets, carpets, &c. &c., enough to have set up many a substantial tradesman, *besides* completely a nobleman's palace! He had ruled England, and powerfully influenced the politics of Europe for twenty years, during which he had been courted and caressed by the kings of the civilized world.

But in one day all this glory vanished! The king frowned, and the honors which were so thick upon him withered in a moment. "I have been to see the Lord Cardinal," said the French ambassador, Bellay, on that very day—"and he has shown me his case with the most deplorable rhetoric I ever saw; for both his heart and his spirit entirely failed him. I can say nothing more striking than his *face*, which has lost half its proper size." Upon his departure to the country by water, a thousand boats were on the river, crowded with people, expecting the pleasure of seeing him going to the Tower. "He died not merely in obscurity, but in disgrace; and though the charge of high treason hung over him unrefuted, with his last breath he enforced persecution." Yet on this point he should be judged in the light of the age in which he lived. He was not as bad as his

prosecutors; for one count of the indictment against him, presented to the king by the lords of parliament, with Sir Thomas More at their head, was, that he had been "the impeacher and disturber of the due and direct correction of heresies."

There lived in Wolsey's household a man who was said to be the son of a blacksmith, at Putney, near London. He had resided on the continent, visited Rome, had gathered wisdom from travel, and was now one of the cardinal's confidential servants. Two days before the parliament met that was to ruin his master, he said to a fellow-servant, "I intend, God willing, this afternoon, when my lord hath dined, to ride up to London, and so to the court, where I shall either make or mar, or I come again." This was Thomas Crumwell, the abolisher of the monasteries. He advised Henry to become himself "Head of the Church," by which means he could at once rescue his "princely authority" from the "spirituality"—"accumulate to himself great riches," and—get married. Thus he cleverly appealed to Henry's three dominant passions, the love of power, of money, and of Ann Boleyn. The spiritual authority now transferred to the king's person, was delegated to this creature, for a season, and Crumwell became president of the convocation, as Vicar-General of England. Lodge human power over the conscience where you will, it is the abomination that maketh desolate set up in the holy place; and so Britain found to her cost during all the time of the Tudors and the Stuarts!

Who does not mourn over the weakness of our nature when he finds the illustrious author of Utopia the abettor of persecution, extorting confessions of heresy by torture, and consigning men to the stake for their conscientious opinions, adding the bitterness of a defeated controversialist to the bigotry of a prerogative lawyer! How few have had sufficient virtue to rise up from the wool-sack the same men!

"As soon," says Burnet, "as More came into favor, he pressed the king much to put the laws against heretics in execution," as the best mode of conciliating the Court of Rome. Therefore, a proclamation was issued, the penal laws were ordered to be executed, books were seized, and reformers were cast into prison. Thus unhappily advised, Henry made *heresy* and *treason* convertible terms—a pernicious confusion of things civil and things sacred, whose effects remain to the present day. It was now ordained that no man should preach, teach, or keep a school, "contrary to the determination of Holy Church." The bishop was authorized to imprison all such offenders at his discretion; all secular officers were to aid in the execution of his sentence, and all state functionaries were sworn to "give their whole power and diligence to put away, and make utterly cease, and destroy, all errors and heresies commonly called *Lollardies*." The importation of religious books was also forbidden, and among these was, first and chief, Tyndale's New Testament.

In his Utopia, More had spoken against capital punishment, and inculcated perfect toleration—now, as Lord Chancellor of England, he wrote thus concerning "heretics":—"The prelates ought *temporarily* to destroy those ravenous wolves!" They were to be visited with "grievous punishments," and the "sparkle" was to be "well quenched."

The notion common among Catholics, that Henry VIII. became a *Protestant* when he cast off

the authority of the pope, and that *he* was the author of the reformation in England, is founded on the grossest ignorance of history. Reform was, from first to last, the work of the people, carried on in the face of royal persecution. The best thing that Henry, or any of his successors, ever did, even for the Bible, was to *cease to hinder*—to let it alone. How well it was doing its work in 1530, is shown in a letter from the aged Bishop of Norwich.

"If," said he, "these erroneous opinions continue any time, I think they shall UNDO US ALL. The gentlemen and the commonality be not greatly infected, but merchants, and such that hath their abiding not far from the sea."

Now, therefore, the rulers take counsel together, and here is their determination. Having selected upwards of a hundred "errors" out of "Tyndale and Fryth," they say:—

"All which great errors and pestilent heresies being contagious and damnable, with all the books containing the same, with the *translation* also of Scripture *corrupted* by William Tyndal, as well in the Old Testament as in the New, and all other books in *English* containing such errors—the *King's Highness present in person*—by one whole advice and assent of the prelates and clerks, as well of the universities as of all other assembled together, determined utterly to be repelled, rejected, and put away out of the hands of his people, and not to be suffered to get abroad among his subjects."

But they could not bind the word of God. They might burn the books in which it was written, and even the hearts on which it was engraved; but truth cannot be consumed in the flames—it "endures forever." When the Bishop of London, in May this year, had the New Testaments which he had bought piled up and burned in St. Paul's churchyard, the people were indignant, and filled with a greater love for the Scriptures and hatred to the clergy than ever. Afterwards, the New Testaments printed with the money got for those now burned, "came thick and threefold into England;" so that the bishops were informed that, if they wished to stop the supply, they must buy the *stamps* too!

While Tyndale was diligently laboring for the salvation of his country, he was in constant apprehension of his life from her ungrateful rulers, whose spies were dogging his steps, intruding into his privacy, and worming themselves into his confidence, in order to betray him. On one occasion, in a secret interview with our ambassador, Vaughan, whom he almost converted to his opinions, he uttered an emphatic sentence, which affectingly betrays at once the heart of an exile and the spirit of a martyr:—

"As I now am," said he, "very death were more pleasant to me than life, considering men's nature to be such as can bear no truth."

It was first an object with Crumwell to have him inveigled into England, in the hope of getting him to abjure in view of the fagots; but finding, from Vaughan's reports, that this was a vain hope, he instructed the latter not to try to bring him over, "because," said Crumwell, "if he were present, by all likelihood he would shortly do as much as in him were, to infect and corrupt the *whole realm*." Strange that this poor exile should so trouble the realm of England! What gave him all this power! Truth! He had ably exposed the *Practice of Prelates*, and triumphantly an-

answered the controversial writings of the Lord Chancellor, and all lovers of freedom were on his side.

Yet was he a loyal man and a true patriot, full of yearning affection for his native land, which he was never to see again. Vaughan thus describes the effect on him of some false assurances of Henry's pity and goodness:—

"I perceived the man to be exceedingly altered, and to take the same very near to his heart, in such wise that water stood in his eyes; and he said, 'What gracious words are these! I assure you,' said he, 'if it would stand with the king's most gracious pleasure to grant only a bare text of the Scripture to be put forth among the people, like as is put forth among the subjects of the emperor in these parts, and of other Christian princes, I shall immediately make promise never to write more, but most humbly submit myself at the feet of his royal majesty, offering my body to suffer whatever pain or torture, yea what death his grace will, so that this be obtained. And till that time I will abide the asperity of all chances, and endure my life in as much pain as it is able to bear and suffer."

Influenced, no doubt, by this noble spirit, Vaughan remonstrated against the cruel policy of the English court with much earnestness.

"Let his majesty," said he, "be further assured that he can, with no policy, nor with no threatenings of tortures and punishments, take away the opinions of his people, till his grace shall fatherly and lovingly reform the clergy of his realm. For there springeth the opinion—from thence riseth the grudge of his people."

But neither Henry nor his vicar thought of anything but their own power and profit. Truly has Mr. Anderson observed, that "in the persons of her rulers at this period, no nation upon earth had surpassed Britain in her opposition to divine truth." (i., 314.)

Queen Anne was favorable to Tyndale and his cause. In 1534 he presented her with a copy of the New Testament, beautifully printed on *velum*, with illuminations, bound in blue morocco, and the name, *Anna Regina Anglie*, in large red letters outside on the margins, but without any dedication or compliment; for Tyndale, an honest and a true man, knew too well what was due to the sacred volume and its Divine Author, to flatter any mortal within its covers. At this time the Scriptures came freely into England, and were eagerly read by many without any molestation from the authorities.

At length, in 1535, the translator was betrayed by two hired spies from England, and cast into a prison at Vilvorde, where he labored on till the day of his martyrdom, which he endured with a calm heroism; his last words, uttered from the flames with fervent zeal and a loud voice, being—"Lord, open the eyes of the King of England!"—a prayer which, alas, seems to have been never answered. Thus died William Tyndale.

Cranmer made a fruitless attempt to get the bishops to prepare a new translation, and even sent them their several parts. "I marvel," said Stokesley of London, "what my Lord of Canterbury meaneth, that he thus abuseth the people, in giving them liberty to read the Scriptures, which doth nothing else but infect them with heresy. I have bestowed never an hour on my portion, and never will!"

Crumwell had brought Henry in about one mil-

lion and a half of our money, with £400,000 of annual revenue, from the confiscation of the monasteries—and, as Catherine had recently died, the friends of the old learning thought these spoliation might be stopped, and the church greatly served if Anne could be got out of the way. Her enemies were well aware, that the eyes of the capricious tyrant had begun to wander to other objects—and that, as the death of Catherine had removed all canonical difficulties out of the way of another marriage, he might still have an heir to the crown free from any charge of illegitimacy. There is scarcely any reason to doubt, that such thoughts suggested the plot against Queen Anne, of which Henry instantly availed himself to gratify his vile passions, and which he developed with his usual craft and callousness of feeling. A commission was appointed "to make up facts"—all but her father—whose name was brutally added to save appearances—being her bitter enemies, and the natural consequence was, that she must be found guilty and executed. She was first "cruelly handled" by the council; then tried in the Tower, without a single person being allowed to plead her cause, or show the least interest in her favor. Notwithstanding the efforts to exclude the public from this mock trial, it was everywhere muttered abroad, that "the queen had cleared herself in a most noble speech."

The shriek of anguish which burst forth from the people when her head was struck off, was quickly drowned in a discharge of artillery! Whence this savage accompaniment? Where was her royal husband!

"The oak is still standing in Epping Forest under which the king breakfasted that morning, his hounds and his attendant train waiting around him. He listened, it has been said, from time to time, with intense anxiety. At length the sound of this artillery boomed through the wood. It was the preconcerted signal, and marked the moment of execution. 'Ah, ah! it is done!' said he, starting up, 'the business is done! Uncouple the dogs, and let us follow the sport!' On the day of the execution he put on white for mourning, as though he would have said, 'I am innocent of this deed—and the next day he was married. Could he have given more powerful testimony of the innocence of the departed, and of his own guilt? After this, few will doubt the saying of Sir James Mackintosh, 'Henry, perhaps, approached as nearly to the ideal standard of perfect wickedness as the infirmities of human nature would allow.'"

Such was the holy prelude to the royal pope's first council or convocation, in which Crumwell, as vicar-general, was seated above all the bishops. In this assembly there arose much discussion and confusion between the parties of the old learning and of the new, the latter being led by Crumwell and Cranmer, who was generally willing to do right when he dared, for he labored under great constitutional timidity, which had been beaten into him by his first schoolmaster. When the tumult was at its height, down came certain "articles" from the king, "to establish Christian quietness and unity among us, and to avoid contentious opinions." These articles were subscribed by Crumwell, the two archbishops, sixteen bishops, forty abbots and priors, and fifty archdeacons and procurators.

While Henry was thus asserting his headship, the word of God was spreading among the people.

From 1525 to 1530, there had been six impressions of the Scriptures in English. From that to the year of Tyndale's martyrdom, there had been seven or eight editions; and during that year nine or ten more issued from the press, all opposition proving confessedly futile. The martyr had not finished the Old Testament, when he died, but it was completed by his friend John Rogers, and published under the name of Thomas Matthews.

And moreover, in 1535, there was a complete translation of the Bible published by MILES COVERDALE, employed for the purpose by persons in authority, who bore the expense. He was a competent scholar, and did his work respectably, but he followed too much the Latin version, retaining *penance for repentance, &c.* It was printed with the king's license, to whom there was a flattering dedication, in which Queen Anne also was mentioned with honor—an awkward circumstance; for after the printing, and before the publishing, she had been beheaded as a traitor. In some copies they altered her name with the pen into *Jane*.

Although the existing circumstances in high places were so favorable to this version, it was soon superseded by Tyndale's, the name of the translator being suppressed, as obnoxious to the authorities. Cranmer was much pleased with this Bible, (Matthews' so called) and used his influence earnestly, through Crumwell, to get the royal license for the printing of it—which was obtained, and which, he said, gratified him more than if he had got a thousand pounds. Thus Providence unexpectedly and wonderfully overruled all parties, the king, Crumwell, and the bishops—to adopt the work of the man whom they had so hated, denounced, and persecuted!

The fluctuations of state policy and royal caprice gave the old learning party the ascendancy in the king's councils once more; and it being expedient that Henry should retain on the continent his character for orthodoxy, he listened to the abettors of persecution. Having decided, infallibly of course, that baptism was necessary to salvation—and being informed that there were some Germans in the country who did not believe this dogma, and who had come hither to escape persecution, he resolved to seize on so good an opportunity of signalizing his zeal. A commission was appointed "to execute the premises, notwithstanding part of them might be contrary to the customary course and form of law." The result was, that two men and a woman were obliged to bear fagots at St. Paul's Cross, and two others were burned at Smithfield.

Another man who had committed himself by writing against Transubstantiation, appealed to the king—when Gardiner artfully suggested that he might win golden opinions on the continent, and silence all insinuations as to his being a favorer of "heretics," by proceeding, in this case, "solemnly and severely." Accordingly he summoned his nobles and prelates to London. Seated on his throne, the bishops on his right, and the peers on his left, the lawyers in scarlet robes behind, the Royal Head of the Church was arrayed in white, as the emblem of spotless orthodoxy and unsullied sanctity. Several bishops in succession labored in vain to convince Lambert, the confessor, that Christ is corporeally present in the sacrament. He was burned to ashes, amidst circumstances of peculiar barbarity, exclaiming at the stake—"None but Christ! none but Christ!"

Crumwell, describing this scene to the English

ambassador in Spain, spoke of the princely and excellent gravity in which Henry discharged "the very office of supreme Head of the Church of England," declaring that the bloated and blood-stained tyrant, who knew no law human or divine but his own foul and furious will, was "the very mirror and light of all the other kings and princes of Christendom!"

At this time printing was executed much better at Paris than London; and owing to a singular conjunction of circumstances, Crumwell got a license for Grafton and Whitchurch to print the Bible *there*. Little could Tyndale, with all his faith, foresee that in less than twenty years his translation should be reprinted at a Parisian press, at the request of his own sovereign, and with the sanction of the persecuting French king himself! The work was, however, interrupted by the Inquisition, when not only the sheets, but the types and printers were carried to England, to the great improvement of the art there. The Bible was soon finished, and a copy of it ordered to be set up in every church in the kingdom; and the priests were forbidden to hinder the people from reading it there, on pain of deprivation. Thus did God bring to nought the counsels of the wicked, and thus mightily did the word of God prevail. And thus were fulfilled the words of Tyndale the martyr, when he said, "If God spare my life, ere many years, I will cause a boy that drives the plough to know more of the Scriptures than you do."

"It was wonderful," says Strype, "to see with what joy this book of God was received, not only among the learner sort, but generally all England over, among all the vulgar and common people; and with what greediness God's Word was read, and what resort to places where the reading of it was! Everybody that could, bought the book, or busily read it, or got others to read it to them, if they could not themselves. Divers more elderly people learned to read on purpose; and even little boys flocked among the rest, to hear portions of the Holy Scriptures read."

Mr. Anderson judiciously adds,—

"The modern reader may now very naturally exclaim—'Oh, could these men in power then have only been persuaded to have let such people alone! Could they have only understood the doctrine of noninterference?' Yes, and instead of encumbering a willing people with help, or tormenting them by interposition, have stood aloof in silence, and permitted these groups or gatherings to have heard the unambiguous voice of their God, and to have gazed upon the majesty and the meaning of Divine Truth!"—*Annals, &c.*, ii. 41.

Since the edition of 1539, partly printed in Paris, there were four others of the large Bible, printed at an expense of £30,000 of our money, which was advanced by Antony Marler, a citizen of London, who obtained an order to have them set up in the churches. The price was fixed by authority at £7, 10s., and for the bound copies £9. The king, however, advanced no money, but rather made some by the fines which were levied on those who neglected to have them in the churches.

In 1543, the parliament enacted a preposterous law, forbidding all women, except *gentle-women*—all artificers, apprentices, journeymen, yeomen, husbandmen, or laborers, to read the Bible or New Testament to themselves or any other, on pain of one month's imprisonment. But the fierce despot

died at last, and the nation began to breathe freely. The brief reign of Edward was marked by non-interference with the Bible, the people were left to themselves, and the demand for the Scriptures greatly increased; and with it flourished the art of printing. It was, of course, the interest of those engaged in this business to supply the popular demand, and that demand emphatically expressed itself in favor of the work of the poor hunted exile. During this reign, Tyndale's Bible was printed more than thirty times, while of that with Cranmer's revision, only half the number was called for.

Mary ascended the throne, and hastened to undo the work of reformation as far as in her lay, and had it been the work of her predecessors, she might have succeeded. But it was divinely planted, and too deeply rooted in the soil to be seriously affected by any changes of earthly sovereigns or dynasties. The storm of persecution, however, blew fiercely. From 800 to 1000 learned Englishmen, as well as multitudes of others, were obliged to fly to the continent. A Lasco, with 157 Poles and Germans, Italians and Spaniards, French and Scotch, all of one faith, left the Thames, and arrived off the Danish coast; but they were not suffered to land, though driven by stress of weather, because they had not signed the *Lutheran Confession of Faith*!

At home, the new queen, unchastened by adversity, let slip Bishops Gardiner and Bonner, who began to lap blood greedily. "Men and women, of whatever character or condition, even the lame and blind, from the child to the aged man, who had any conscientious opinions, not in harmony with the old learning—all were appointed unto death." In less than four years, it is calculated, that 318 persons perished either by fire, or starvation, or slow torture, or confinement in noisome dungeons. This mortality was greatest in places where the Scriptures were most read. Sometimes a lot of human beings, in one instance to the number of thirteen, was consumed on the same pile! The surrounding population assembled in thousands "to strengthen themselves in the profession of the gospel, and to exhort and comfort those who were to die." Any persons having books containing "heresy, sedition, or treason," and not immediately burning them, were, "without delay, to be executed according to martial law." At a burning in London, when proclamation had been made, strictly commanding that no one should speak to, or pray for the martyrs, or say, "God help them," a heroic minister cried out—"Almighty God! for Christ's sake, strengthen them!" Immediately with one voice, the whole multitude loudly responded, "Amen! Amen!"

Such dreadful deeds passed not without retribution, even in this life. During Mary's reign the Bench of Bishops had put to death five of their own number, including Cranmer. But, in a little more than the same time, thirty of themselves died "by the visitation of God;" and such was the mortality among the priests generally, that "in divers parts of the realm, no curates could be gotten for money."

In 1568, the tenth of Elizabeth, the first edition of the Bible, superintended by Parker, Archbishop of Canterbury, was published. It was revised from the preceding versions by him, in conjunction with certain brethren of the bench and others, and hence called "the Bishops' Bible." "It was a decided improvement on the whole. The copy

presented to the queen was by far the most splendid that had ever been published." It is quite clear, from the circumstances connected with this publication, that it was not undertaken by royal command, and that Elizabeth had no property in it whatever. It did not cost her a shilling, nor was the printing of the sacred volume any exclusive privilege in the crown printer for the time being.

The history of the Bible-printing patent is not the least curious or valuable part of Mr. Anderson's work.

Elizabeth was economical in her expenditure, and unwilling to call often on the commons for supplies; but, in order to have money to reward her favorites, or rather to put them in the way of getting it themselves, she hit upon the unfortunate expedient of granting monopolies by patent to certain parties, who then farmed or sold them. This evil grew to such an extent that parliament was obliged to interfere. Salt, coal, leather, cloth, steel, lead, tin, glass, Spanish wool, and Irish yarn, were thus converted into monopolies for the benefit of individuals. Sir Thomas Wilks was the first who obtained a patent as queen's "printer of the English tongue."

This naturally alarmed the Stationers' Company, who complained, "that it would be the overthrow of the printers and stationers within the city, in number 175, besides their wives, children," &c., causing "an excessive price of books, and false printing of the same;" and farther, "John Jugge, besides the being her Majesty's printer, hath gotten the privilege for the printing of Bibles and Testaments, the which was common to all the printers."

On the 28th September, 1577, one Barker obtained the extensive privilege of printing the Old and New Testament, of whatever translation, with all notes and comments! In eighteen months, this gentleman expended £30,000 on issues of the Scriptures, so great was the demand. From 1560 to 1603, there were 130 distinct editions of Bibles and Testaments. All this time, the crown did nothing except impose a heavy tax on the purchaser of the Word of God.

We have now arrived at the accession of James, who became the first king of "Great Britain." Before noticing his connexion with the English Bible, we may as well glance for a moment at the progress of the cause in Scotland.

This country came in for its share of the early importation of Tyndale's New Testament, through the instrumentality of "divers merchants." As usual, the printed word was soon followed by the living voice. Nowhere were the laity more ready to receive the truth, and nowhere was the hierarchy more embittered against it. Hence a series of persecutions, whose history is full of the deepest interest, but so well known that we need not attempt to detail any portion of it here, even if our space allowed. The last words of Patrick Hamilton at the stake were—"How long, O Lord, shall darkness cover this realm! How long wilt Thou suffer this tyranny of man!"—He did not suffer it long. In 1535, the Scottish parliament passed an act, requiring all persons having the Scriptures to give them up to their ordinary, under the penalty of confiscation and imprisonment. The prohibition was renewed by proclamation in May, 1536. But parliaments, however chosen, must ultimately obey the popular voice. A few more martyrdoms, and Scotland will be free.

On the 1st of March, 1539, the inhabitants of

Fife and Mid-Lothian saw a large fire blazing on the esplanade of the castle of Edinburgh. Five of the best subjects in Scotland were then consumed in that fire, in the presence of their king, solely because they had read "the book of heresy," which, as one of their executioners said, had "made all the din in the kirk." But Beaton and his party labored in vain that "the New Testament in the vulgar tone should not go abroad;"—for in 1543, the parliament enacted "that the Scriptures might be read by all, without any limitation," the prelates, of course, protesting, since they could do no more.

It is remarkable, that "no Bible even so convenient as that of an octavo size, had been printed in Scotland till 107 years after Tyndale's New Testament had been first imported." The Bible, printed on Scottish ground, was not published till seven years after the death of John Knox.—(It is little more than sixty years since the first Bible was printed in America.)—The first *Scottish* edition of the Scriptures was published at £4, 13s. 4d., and yet the Bible was in *almost every house*! The fact was, that the English monopoly led to constant importations from Holland; and the superiority of those printed there, is attested by no less an authority than Laud. He said, "the books which came from thence were better *print*, better *bound*, better *paper*, and for all the charges of bringing, better *cheap*." Such was the working of the patent!

James' characteristic progress from Edinburgh to London, furnished no favorable omen of the spirit in which he was about to assume the awful responsibilities of his office as the vicegerent of God in church and state; in which light he himself regarded it. He hunted most of the way, conferring honors so profusely, that when he reached the capital, he had dubbed 150 knights. During the ensuing summer, the plague broke out, and 6385 persons died in London alone; and ere the year ended, the mortality reached 30,000. Yet James and his merry party kept hunting all the time, and as he and his retainers proceeded from place to place, they brought the plague with them wherever they came.

The king's expenses were extravagant in the extreme. His journey to London and coronation cost £30,000, an immense sum in that day. He spent £40,000 in feasting ambassadors; and though he sold a number of peerages for considerable sums, and created an order of hereditary baronets, for which he got £1000 a piece, yet he was plunged so deeply in debt, that the very shopkeepers would not give credit to the palace. "My lord-treasurer was much disquieted to find money to supply the king's necessities, and protested he knew not how to procure money to pay for the king's diet!" In these circumstances, his majesty was not likely to advance funds for the translation of the Bible.

He has, however, the merit of acceding to the proposal for a fresh revision of the Bible, made by Dr. Rainolds, a man of high character, and the most eminent for learning in the kingdom; with whom also, and *not* with the king, originated the determination to exclude marginal notes from the new version. His majesty approved also of the selection that had been made of translators, and ordered the bishops to promote the poorest of them to livings as soon as they could, and also to contribute money for the expenses of the work;—which last request they *all* totally neglected! Neither

the king nor the bishops paid anything for the accomplishment of this great work. Forty-seven of the most learned men in the kingdom were engaged on it four years; the revision of the translation by twelve of their number, occupied them nine months more; and the sheets were two years in passing through the press. The twelve revisers had 30s. a week each while at work in London; but "before they had nothing."

The AUTHORIZED BIBLE was finished and first issued in 1611.

"This venerable translation," says Greenfield, "which has been universally admired for its general fidelity, perspicuity, and elegance, was corrected, and many parallel texts added, by Dr. Scatrigood in 1683; by Bishops Tenison and Lloyd in 1711; and afterwards by Dr. Paris at Cambridge. But the latest and most complete revision is that made by Dr. Blayney in 1769, in which the errors found in former editions were corrected, and the text reformed to an unexampled standard of purity."

The cost of the revision in 1611 was £3500, which was paid neither by the church nor the state, but by Barker, the patentee, whose family and their offspring enjoyed this vast monopoly for 132 years, down to the 8th of Anne in 1709, during which time they had a pecuniary interest in every copy of the Word of God printed in England. Thus the public were heavily taxed, with the disadvantage of bad and incorrect printing into the bargain. In a number of impressions they left the word "*not*" out of the seventh commandment, for which they were fined by Laud.

The monopoly, however, has been defended by lawyers, and even judges, on the plea that the copyright of the Bible was in the crown; because, as they alleged, the translation was made at the king's expense; which notion Mr. Anderson has shown to be a pure historical fiction. The present admirable, though not perfect version, made its way without any act of parliament, proclamation, or canon in its favor; and, in about forty years, gradually superseded all others. This result was accomplished by no human authority, no king, parliament, church, sect, or party. To none of these does the Bible belong. "It is the property of the people"—their book. Royal authority, whether for or against it, has proved utterly impotent. God himself worked with it, and none could effectually hinder. Even the London Polyglot, "the most complete collection of the Scriptures ever published, and far surpassing all former works of the kind, was published *by the people* and *for the people*."

The number of Bibles and Testaments printed in English from 1800 to 1844 has been estimated as follows:—

The British and Foreign Bible Society has issued	9,400,000
Printed in Scotland independently,	4,000,000
General sales besides these,	9,000,000
Or, in round numbers, 22 millions.	

The British and Foreign Bible Society, up to May, 1844, received £3,083,436, 18s. 3d., and expended £3,036,698, 0s. 3d.

Since the year 1800, four millions sterling have been spent on the sacred volume in the English tongue. It appears now that nearly one million of this has gone into the pockets of the privileged printers, over and above the fair profits of their trade! When the patent expired in Scotland, Bibles became very cheap, and the British and

Foreign Bible Society found it expedient to reduce their prices. But this, in six months, involved them in a loss of £13,000!

"Meantime, the free trade prices in the North could not remain a secret, and before the close of the year the people of England were paying for their English Bible from 150 to 200 per cent. more than in Scotland!"

What did the London committee now do? Of course they agitated the country, and petitioned parliament to save their constituents, and the Christian public at large, from such an enormous tax on the Bread of Eternal Life, of which they were the official guardians; and availed themselves of their extensive organization and metropolitan position to do the work of reform effectively. Nothing of the kind. The secretaries came forward, and begged "most distinctly to say that *they would not touch the question of the monopoly at all!*" Why not? Did not the monopoly touch the society? Did it not raise the price of the Scriptures 150 to 200 per cent., for the benefit of private individuals, to the great detriment of the cause of truth? Yet, strange to say, the auxiliary societies were equally apathetic. Not one in London, Dublin, or Edinburgh moved.

The society was not to have the glory of this great reform. They were "too many" for God to work by. In perfect harmony with the whole history of the English Bible, marked all along by independence on official authorities or institutions, the monopoly was brought down by three private individuals! These were—Mr. Childs of Bungay, Dr. Thomson of Coldstream, and Dr. Campbell of London. The latter gentleman threw all his characteristic energy into the movement, and by his accurate calculations, and powerful appeals through the press, contributed largely to rouse the public mind. Monopoly was compelled to capitulate, and the patentees suddenly reduced their prices to less than one half.

Now the press sends forth of copies of the Scriptures in English, "19,000 every week, 3000 every day, 300 every hour, or five every minute of working time!" When this fact is considered in connexion with the increasing predominance of the English language throughout the civilized world, the vast extent of our empire, the rapid growth of our colonies, and the probability that many of them will yet become independent nations, it is fitted to awaken deep solicitude in the Christian mind—to produce an almost overwhelming sense of responsibility, and to call forth the most strenuous exertions, that wherever the accents of our noble language are heard, there the English Bible may be known and valued as the Rule of Faith.

"Not one hour of the twenty-four," says Richardson, "not one round of the minute hand of the dial is allowed to pass, in which, on some portion of the surface of the globe, the air is not filled with accents that are ours. They are heard in the ordinary transactions of life; or in the administration of law—in the deliberations of the senate-house, or council chamber—in the offices of private devotion, or in the public observance of the rites and duties of a common faith."

Be ours the endeavor that the volume which contains the inspired record of this faith, shall not only be maintained in its supreme authority at home, but borne on the tide of emigration to every land, till it do for the new and rising nations of the west and south still greater things than it has done for Britain!

TRUTH AND BEAUTY.

BEAUTY and Truth, in Heaven's congenial clime,
Inseparable seen beside the Almighty throne,
Together sprung, before the birth of time,
From God's own glory, while he dwelt alone;—
These, when creation made its wonders known,
Were sent to mortals, that their mingling powers
Might lead and lure us to ethereal bowers.

But our perverse condition here below
Oft sees them severed, or in conflict met;
Oh, sad divorce! the well-spring of our woe,
When truth and beauty thus their bond forget,
And Heaven's high law is at defiance set!
'Tis this that good of half its force disarms,
And gives to evil all its direst charms.

See truth with harsh austerity allied,
Or clad in cynic garb of sordid hue;
See him with Tyranny's fell tools supplied,
The rack, the fagot, or the torturing screw,
Or girt with bigotry's besotted crew;
What wonder, thus beheld, his looks should move
Our scorn or hatred, rather than our love!

See beauty, too, in league with vice and shame,
And lending all her light to gild a lie;
Crowning with laureate-wreaths an impious name,
Or lulling us with syren minstrelsy
To false repose when peril most is nigh;
Decking things vile or vain with colors rare,
Till what is false and foul seems good and fair.

Hence are our hearts bewildered in their choice,
And hence our feet from virtue led astray;
Truth calls imperious with repulsive voice
To follow on a steep and rugged way;
While Beauty beckons us along a gay
And flowery path, that leads, with treacherous
slope,

To gulfs remote from happiness or hope.

Who will bring back the world's unblemished
youth;

When these two wandered ever hand in hand;
When truth was beauty, beauty too was truth,
So linked together with unbroken band,
That they were one; and man, at their command,
Tasted of sweets that never knew alloy,
And trod the path of duty and of joy!

Chiefly the poet's power may work the change;
His heavenly gift, impelled by holy zeal,
O'er truth's exhaustless stores may brightly range,
And all their native loveliness reveal;
Nor e'er, except where truth has set his seal,
Suffer one gleam of beauty's grace to shine,
But in resistless force their lights combine.

Blackwood.

LORD, My voice by nature is harsh and untunable, and it is in vain to lavish any art to better it. Can my singing of psalms be pleasing to thy ears, which is unpleasant to my own? yet though I cannot chant with the nightingale, or chirp with the blackbird, I had rather chatter with the swallow, yea rather croak with the raven, than be altogether silent. Hadst thou given me a better voice I would have praised thee with a better voice. Now what my music wants in sweetness, let it have in sense, singing praises with understanding. Yea, Lord, create in me a new heart (therein to make melody,) and I will be contented with my old voice, until, in thy due time, being admitted into the choir of heaven, I have another, more harmonious, bestowed upon me.—*Fuller.*

CHANGING CARS.

JEAMES ON THE GAUGE QUESTION.

MR. PUNCH has received from that eminent railroad authority, Mr. Jeames Plush, the following letter, which bears most pathetically upon the present Gauge dispute :—

"You will scarcely praps reckonize in this little skitch the haltered liminints of I, with woos face the reders of your valluble mislry were once similiar—the unfortnt Jeames de la Pluche, fomly so selabrated in the fashnabble suckles, now the pore Jeames Plush, landlord of the Wheel of Fortune public house. Yes, that is me; that is my haypun which I wear as becomes a publican—those is the checkers which hornymment the pillows of my dor. I am like the Romin Genral, St. Cenatus, equal to any emodgency of Fortun. I, who have drunk Shampang in my time, aint now abov droring a ½ pint of Small Bier. As for my wife—that Angel—I've not ventured to depight her. Fanny her a sittn in the Bar, smilin like a sunflower—and, ho, dear Punch! happy in nussing a deer little darlint tosaywotay of a Jeames, with my air to a curl, and my i's to a T!

"I never thought I should have been injuiceed to write anything but a Bill agin, much less to edress you on Railway Subjix—which with all my sole I *obass*. Railway letters, obligations to pay hup, ginteal inquirys as to my Salissator's name, &c., &c., I dispiase and scorn artily. But as a man, an ushad, a father, and a freebon Brittn, my jewty compels me to come forwoode, and igspress my opinion upon that *nashnal neosance*—THE BREAK OF GAGE.

"An interesting ewent in a noble family with which I once very nearly had the honor of being kinected, acurd a few weex sins, when the Lady Angeliina S——, daughter of the Earl of B——res, presented the gallant Captng, her usband, with a Son & hair. Nothink would *entassfy* her Ladyship but that her old and atacht *fandy-chamber*, my wife Mary Han Plush, should be present upon this hospicious occasion. Captng S—— was not jellus of me on account of my former attachment to his Lady. I cumented that my Mary Hann should attend her, and me, my wife, and our dear babby acawdingly set out for our woable friend's residence, Honeymooa Lodge, near Cheltenham.

"Sick of all Railroads myself, I wisht to poast it in a Chay and 4, but Mary Hann, with the hobstenacy of ber Sex, was bent upon Railroad travelling, and I yealded, like all hushinds. We set out by the Great Westa, in an eavle Hour.

"We didnt take much luggitch—my wife's things in the ushal handboxes—mine in a potmancho. Our dear little James Angelo's (called so in compliment to his noble Godmamma) cradle, and a small supply of a few 100 weight of Topsanbawtems, Farinashious food, and Lady's fingers, for that dear child who is now 6 months old, with a *perdidgus appatite*. Likewise we were charged with a bran new Medsan chest for my lady, from Skivary & Moris, containing enough rewbub, Daffy's Alixir, Godfrey's, with a few score of pargles for Lady Hangelina's family and owsehold. About 2000 spessymins of Babby linnng from Mrs. Flummary's, in Regent Street, a Chayny Cressng bowl from old lady Bareacres (big enough to immus a Halderman,) & a case marked 'Glass,' from her ladyship's ineddicle man, which were stowed away together; had to this an ormylew

Craddle, with rose-colored Satting & Pink lace hangings, held up by a gold tuttle-dove, &c. We had, ingluding James Hangelo's rattle & my umbrellow, 73 packidges in all.

We got on very well as far as Swindon, where, in the Splendid Refreshment room, there was a galaxy of lovely gals in cottn velvet spencers, who serves out the soop, and 1 of whom maid an impresshn upon this Art which I shoold n't like Mary Hann to know—and here, to our infantit disgust, we changed carriages. I forgot to say that we were in the secknd class, having with us James Hangelo, and 23 other light harticles.

"Fast inconvenience; and almost as bad as break of gage. I east my hi upon the gal in cottn velvet, and wanted some soop, of coarsie; hut seasing up James Hangelo (who was layin his dear little pors on an Am Sangwidg) and seeing my igspresshn of hi—'James,' says Mary Hann, 'instead of looking at that young lady—and not so *very* young, neither—be pleased to look to our packidges, & place them, in the other carriage.' I did so with an evy Art. I eranged them 23 articles in the opait carriage, only missing my umbrella & baby's rattle; and jest as I came back for my bayon of soop, the beast of a bell rings, the whizzling injians proclayms the time of our departure—& farewell soop and cottn velvet. Mary Hann was sulky. She said it was my losing the umbrellla. If it had been a *cotton velvet umbrellla* I could have understood. James Hangelo sittn on my knee was evidently unwell; without his coral: & for 20 miles that bleesid habby kep up a rawring, which caused all the passangers to simpithize with him igceedingly.

"We arrive at Gloster, and there fanny my disgust at bein ableged to undergo another change of carriages! Fanny me holding up noughis. tip-pits, cloaks, and baskits, and James Hangelo rawring still like mad, and pretending to shuperintend the carrying over of our luggage from the broad gage to the narrow gage. 'Mary Hann,' says I, rot to desperation, 'I shall throttle this darling if he goes on.' 'Do,' says she—'and go into the *refreshment* room,' says she—a snatchin the babby out of my arms. 'Do go,' says she, 'youre not fit to look after luggage,' and she began lulling James Hangelo to sleep with one hi, while she looked after the packets with the other. 'Now, Sir! if you please, mind that packet!—pretty darling—easy with that box, Sir, its glass—pooooty poppet—where's the deal case, marked arrowroot, No. 24!' she cried, reading out of a list she had.—And poor little James went to sleep. The porters were bundling and carting the various harticles with no more ceremony than if each package had been of cannon-ball.

"At last—bang goes a package marked 'Glass,' and containing the Chayny bowl and Lady Bareacres mixture, into a large white handbox, with a crash and a smash. 'It's My Lady's box from Crinoline's!' cries Mary Hann; and she puts down the child on the bench, and rushes forward to inspect the dammdige. You could hear the Chayny bowls clinking inside; and Lady B.'s mixture (which had the igreck smell of cherry brandy) was dribbling out over the smashed handbox containing a white child's cloak, trimmed with Blown lace and lined with white satting.

"As James was asleep, and I was by this time uncommon hungry, I thought I *would* go into the Refreshment Room and just take a little soop; so I wrapped him up in his cloak and laid him by his

mamma, and went off. There's not near such good attendance as at Swindon.

"We took our places in the carriage in the dark, both of us covered with a pile of packages, and Mary Hann so sulky that she would not speak for some minutes. At last she spoke out—

"Have you all the small parcels?"

"Twenty-three in all," says I.

"Then give me baby."

"GIVE YOU WHAT?" says I.

"Give me baby."

"What have n't y-y-yoooo got him?" says I.

"O Mussy! You should have heard her squeak! We'd left him on the ledge at Gloster."

"It all came of the break of gage."—*Punch*.

GOVERNESSES' BENEVOLENT INSTITUTION.

In furtherance of the objects of this most useful charity, it is in contemplation to establish a school, for the purpose of preparing young ladies destined to be governesses, for the situations they are intended to fill. The necessity of teaching those who are to be teachers, and of instructing the governess how to govern, is obvious; the pupils, accordingly, will learn all the modern languages and accomplishments—geography, astronomy, the use of the globes, and so much of moral philosophy as includes the true principles of education. But as the social position of a governess is a peculiar one, being, as a novelty, rather uncomfortable, though, like a certain process to which eels are subjected, nothing when anybody is used to it, one great object of this school will be to familiarize the pupils with the life they may expect to lead. Its arrangements will therefore comprise a system of training calculated for the inculcation of an amount of practical as well as moral philosophy adequate to this purpose.

To the institution will be attached a servants' hall, wherein, at stated times, will attend a number of footmen and other menials, to intercourse with whom the future governess may be habituated, and whose insults and impertinences she may learn betimes to put up with. A nursery will also be connected with it, in order to exercise her patience in the management of refractory children, at which probation the students will take turns. The children will be selected from the most proud families, and their mammas will drop in every now and then, daily, and reprimand and find fault capriciously and unjustly with their preceptress, so as to inure her to such treatment. Some charitable ladies of great style in the vicinity of Russell Square, have volunteered their services in this particular. One of these ladies will, moreover, preside regularly at dinner to teach the language of looks, that the learner may understand, from a glance, when she is to refuse wine, or to decline another helping.

Evening parties will be given occasionally, in the schoolroom, and to them will be invited a number of agreeable men, that the "young persons" may know how to behave in society; that is, to hold their tongues and sit still. For the due enforcement of these proprieties, one of the ladies aforesaid will also be present, accompanied by her daughters, by whom the scholars are to be studiously snubbed, by way of a lesson to them in meekness under contumely. The novices, during leisure hours, are to sit in separate apartments, accessible to all the servants, who, however, will

not be allowed to wait upon them, or bring them any refreshment, if hungry from the insufficiency of their meals. Their dresses are to be such as a young lady can afford upon twenty pounds a year, finding herself in everything but her victuals, and not having, by half, as much of those as she can eat.

Thus, it may be hoped, will governesses be provided with qualifications high enough, wants few enough, and spirit humble enough, to meet the views of any lady in the land.—*Punch*.

MUSICAL BEDS.

THERE is a paragraph in the *Nonconformist*, which states, that some genius has invented a musical bed, that begins to play a tune directly you lie down, and can be wound up to play another tune when you are desirous of waking.

There is one advantage about a bed of this description, namely, that you can always rely on having it well aired by means of the favorite airs of some of the most popular composers. We should think, however, that there must be some tact required in adapting the musical compositions to the required purposes. It would be very injudicious, for instance, to attempt to send any one to sleep with a quadrille of Musard, while to try and wake any one up with a bit of Sebastian Bach, or a *morceau* of Juvenile-England classicality, would be equally preposterous. The invention certainly opens quite a new field to many of those long-haired and turn-down-collar composers, who will now have a splendid chance of bringing their composing talents to bear upon those who are soliciting the sometimes-obstinate Morpheus. There are several rising young men, who have been rising for the last twenty years, who are admirably adapted to the task of setting four-posts and French bedsteads to somniferous music. We presume that the idea has been taken from the Chamber concerts, which have recently become popular.

Considering the awful infliction it is, to be compelled to hear the music of certain persons whom we could but will not name, the addition of their music to a bed might turn it into a regular *hit de justice*, or shocking instrument of cruelty.

The arrangement by which one is to be woken up at any hour, comprises a march, with drum and cymbal accompaniments. Such a *charivari* might not be always very welcome when it came; for, though one often goes to bed with a very valiant determination to get up very early, it is extremely natural to alter one's mind by the morning. If we often get angry with the person calling us, and disturbing our rest, what should we say to the drums and cymbals going through a regular march, at a most unreasonable hour? For our own parts we should muffle the drums at once with our bolster, and suffocate the cymbals with our goose-feather bed. We should recommend that, if the principle is carried out, the airs chosen should be appropriate to the kind of beds they might be adapted to. "Oh rest thee, babe, rest thee, babe," would do very well for an infant's cot, while "Rise, gentle Moon," would be suited to the purpose of waking a celebrated alderman.—*Punch*.

A CHEAP TRIP.—Upwards of 7,000 tons of gravel have been shipped from New York since September last for the purpose of beautifying the parks and gardens of London. According to this, a Yankee domiciled in London would be able to tread again his native soil without going any further than Hyde Park.—*Punch*.

From Chambers' Journal.

USAGES OF SOCIETY

A CORRESPONDENT, a great stickler for etiquette, hands us the following hints; a knowledge of which, however commonplace, he thinks may be useful to those not up to the mark in this weighty subject.

"I shall begin with calls. When you call at the house of an acquaintance, or indeed call anywhere, and do not happen to find the party at home, you should leave your card. Leaving your name will not do; because names left verbally are seldom correctly delivered, if delivered at all, and your call may be said to go for nothing. Your card is the enduring evidence of your visit. The card is one of the most useful things in modern society. All are supposed to carry a small stock of these paste-board representatives about with them, and the giving of one is very handy on many occasions. For example, in visiting, instead of sending in your name by a servant, hand in one of your cards, and then you may be sure there will be no mistake.

"Having either seen your acquaintance, or left your card, it is now the duty of your acquaintance (supposing it is a call of ceremonial intercourse) to return the call within a reasonable time. If he do not call, you do not repeat your visit. And why so? Because it may be his wish to drop your acquaintance, and your continuing to call on him may be disagreeable. Knowing that such is the rule, a second call from you seems like forcing yourself on his notice—a determination that he shall not rid himself of you. The rule of call for call, therefore, is on the whole not a bad one. It affords every one an opportunity of dropping an acquaintance when his society is no longer wanted. In good society, no one ever complains that an acquaintance has not returned a call—the thing is silently dropped.

"Calls of ceremony, which are not usually performed till past one or two o'clock, are seldom expected to last more than ten or fifteen minutes, and, as everybody knows, are performed in a plain walking-dress. Gentlemen, in making forenoon calls, or attending soirées, do not lay down their hat in the lobby, but carry it in their hand into the room, and never let it go, however long they stay. This is a very odd piece of etiquette, that has often amused me. I frequently see gentlemen walking about a drawing-room for hours, each cuddling his hat below his arm, as if it were a crime to part with it even for a moment. A man might as conveniently carry about a child's drum under his arm; yet he cannot well escape from the annoyance. If left in the hall at large parties, and worth the stealing, the unfortunate hat will in all probability be never more seen by its owner; for there appears to be nothing like conscientiousness in the matter of hats. How far the dread of losing the hat led to the practice of parading about with it under the arm, is of little consequence. The modern custom of keeping fast hold of it during short or extempore visits, is considered to indicate that you do not intend to stay any great length of time, nor expect an invitation to remain to dinner, or any other meal; in short, that it is your design to vanish after a little friendly chit-chat. Thus, laughable as it seems, there is really a meaning, and not a bad meaning either, in the practice. A host who wishes you to remain, or at least not to go in a hurry, will beg to relieve you of your incumbrance.

"Next as to invitations. When you ask a per-

son to dinner, let it, if possible, be done a week or ten days in advance; because, to ask a person only a day or two days before, looks as if you had been disappointed of somebody else, and had asked him as a mere stop-gap. A short invitation is only allowable for off-hand parties, or with strangers who are passing through a town.

"When you invite a person to dinner, or any other party at your house, specify only one day. Don't say you will be glad to see him on either of two days, as Tuesday or Wednesday next. And why? Because this person may not wish to dine with or visit you at all; and so far from a choice of days being thought an act of kindness, it may be considered one of servility, if not rudeness. Always state only one day; and let the invitation, like the answer, be unequivocal.

"Invitations for several weeks in advance are almost as bad as invitations for alternative days; because long invitations convey the impression that the inviter is desperately ill for guests, and wishes to insure a number at all risks. The person invited is also apt to feel that it is not *his* pleasure or convenience that is consulted; and to raise a feeling of this kind is anything but consistent with true politeness.

"The receiver of an invitation has a duty to perform as well as its giver. It is incumbent on him to say *yes* or *no* at once—not to allow a post or a day to elapse before answering. The reason is obvious: a delay on his part looks as if he were waiting for a better invitation before he made up his mind. Not to send a speedy reply, therefore, is one of the worst pieces of breeding of which a man can be guilty. It is also not using the inviter well: for a dinner party usually consists only of a certain number; and if you cannot accept the invitation, say so, in order that time may be allowed to invite another person in your place. Let the answer also be distinct: no uncertainty is allowable: and if the invitation be accepted, let it be kept.

"The answer to an invitation should be directed to the lady of the house.

"I now come to the fulfilment of the engagement. Some time ago it was fashionable to be rather late—twenty minutes after the hour being considered a fair thing. Now, prompt to the hour is the rule, which is a great improvement. In attending two or three dinners lately, I found that all had assembled within the space of ten minutes.

"A drawing-room is the domain of ladies, and on entering, you first make your obeisances to the lady of the mansion, who is of course ready to receive you. Leading the ladies down stairs to the dining-room is a simple affair; yet one may be a novice in this as well as in everything else. The rule is, for the lady you take down to sit on your right hand, if that can be managed conveniently. But when you take down the lady of the house, you sit on her right hand—that is, you have the seat of honor. It will not do for any guest to rush forward to offer his arm to the lady of the house. The honor of leading her down, if not assigned by the host to a favored guest, is taken by the most elderly gentleman, or by the party of highest rank present. To save all doubt on this point, the host always asks one of the party to be so good as take Mrs. So-and-so down stairs. Where the party are generally strangers to each other, it is customary for the host to make a similar request to the other gentlemen as respects the other ladies. The host selects the lady of greatest consequence, and leads

her off first. The hostess waits to go down last—sees all go down before her.

"In going down stairs, the lady should have the widest side, supposing the stair to have a narrow and a wide side, as is the case with winding-stairs. Better, however, take the wrong side, than make any fuss about correcting so small an error.

"A custom, lately come in, seems to be deservedly gaining ground: instead of sitting at the top and bottom of the table, the host and hostess sit opposite each other at the middle; by which means they are more at ease, more in the centre of their guests, and better able to communicate with each other. George IV. adopted this practice twenty years ago: it is followed by the present queen. According to this arrangement, two persons can be accommodated at each end of the table—not a bad point where there is limited accommodation.

"A dinner-party usually lasts four hours. If you go at six, you may order your carriage at ten: if at seven, it may come at eleven; and so on. What dinner hours are by and by to come to, I cannot tell. Not many years ago, dinner at five o'clock was thought mighty genteel; then we had half-past five; next came six, and six and a half—both of which are now general; but seven is also far from uncommon. That the fashionable dinner hour will be pushed on to eight, to nine, or to ten, is what we may reasonably expect. When it comes to this pass, will dinner bound back to its ancient hours, or will it be extinguished as a formal meal?

"So much for dinners: now for a little about personal decoration: and here I address myself chiefly to ladies. In giving a dinner or evening party, take care to dress somewhat less elegantly than any of your expected guests; because, were you to dress much more elegantly, it might be supposed that you invited the party only to astonish them with your finery, or at least to show them that you could afford to dress better than they—a thing not likely to be agreeable to their feelings. As under-dressing may be considered disrespectful to guests, it is equally to be avoided with over-decoration. Good taste will suggest the proper medium.

"I must say a word on tokens of sympathy. 'If you wish me to weep, you must weep with me,' says the Roman poet. Quite reasonable this. If you wish to condole with a friend, you must at least employ the emblems of woe. In calling on an acquaintance who is in mourning, put on a little mourning also—don't go in flashy attire, out of character with the occasion. If your correspondent seals his letters with black, seal your replies with black also. These may be trifles, but if they tend to give any one gratification, why not practise them? A thousand comforts in life depend on what are intrinsically trifles.

"The prompt answering of letters is considered an unequivocal mark of a gentleman and a man of business. Why is delay the reverse? Because not to answer a letter (supposing it deserves to be answered) is the same thing as not answering when you are spoken to; and everybody knows that that is bad enough. Yet some people, who mean nothing wrong, but are only ignorant of what is due to

the feelings of others, are most remiss in the answering of letters, and will allow days and weeks to elapse before despatching a reply. When letters are conceived in an impertinent or intrusive spirit, it is of course allowable and reasonable to let them remain unanswered. Persons of notoriety, for example, who are pestered with letters on all sorts of frivolous subjects, frequently for no other purpose than to get hold of their autograph, may very excusably take some latitude in regard to this rule.

"In asking after the health of a person's relations, give each his or her proper name and title, unless it be a child. Ask for Mrs. —, or Miss —, and so on: never say, 'How is your wife?' 'I hope your daughter is well,' &c. Any such mode of address is intolerably over-familiar, and is almost certain to give offence. Calling persons 'My dear sir,' or 'My good fellow,' in speaking to them; also holding them by the button—an offence denounced by Chesterfield—are, for the same reason, objectionable."

COURT CIRCULAR FOR THE FRENCH.

THE French are a polite nation; therefore we expect that they will return a compliment very largely paid them in this country. We allude to the adoption of cant terms borrowed from their language by British journalists, in order to denote the things and transactions of high-life. As, by calling the most fashionable sort of people the *élite* or *ton*, and speaking of a dancing tea-party as a *thé dantant*; whereas it is the party that dances, not the Hyson; and the tea is quite distinct from the caper.

Also, by describing a person of dignified demeanor as *distingué* instead of dignified, a rout as a *soirée*, and a meat-breakfast as a *déjeuner à la fourchette*, just as if everybody does not use a fork who has a Yarmouth bloater for that meal. If we, out of admiration for the French language, employ it when we might full as well talk plain English, the French ought surely to reciprocate the civility, particularly since we go out of our way in deference to them, often using a phraseology which is at the same time Frenchified and nonsensical. Accordingly, in their fashionable journals, we shall expect to find such announcements as the following:—

Hier au soir *came off*, à sa maison, dans la Rue St. Honoré, le grand *hop* de MADAME LA COMTESSE DE VANILLE. La compagnie était ornée par presque tous les *swells* les plus *tip-top*.

Aujourd'hui, M. DE FRICANDEAU donnera, à son hôtel, un *spread* magnifique; où plusieurs *nobs* de la première distinction se trouveront autour de son *mahogany*.

On dit qu'il y a sur le Kidderminster une alliance nuptiale entre un Marquis bien connu parmi les *crack* cercles, et une demoiselle de *fin*, héritière à un millionnaire Anglais,

Au plein *tog* et *fancy ball* de MADAME DE PAPILLOTE, assisteront une foule de *first-rate* gens. L'affaire était extrêmement *spicy*.

Our neighbors must really consent to a free interchange, amongst other commodities, of fashionable slang, or we shall never believe in the *entente cordiale* that they talk about.—Punch.

From the *Columbian Magazine*.

THE NEIGHBOR IN LAW.

BY L. MARIA CHILD.

Who blesses others in his daily deeds,
Will find the healing that his spirit needs;
For every flower in others' pathway strewn,
Confers its fragrant beauty on our own.

"So you are going to live in the same building with Hetty Turnpenny," said Mrs. Lane to Mrs. Fairweather. "You will find nobody to envy you. If her temper does not prove too much even for your good nature, it will surprise all who know her. We lived there a year, and that is as long as anybody ever tried it."

"Poor Hetty!" replied Mrs. Fairweather, "she has had much to harden her. Her mother died too early for her to remember: her father was very severe with her; and the only lover she ever had, borrowed the savings of her years of toil, and spent them in dissipation. But Hetty, notwithstanding her sharp features, and sharper words, certainly has a kind heart. In the midst of her greatest poverty many were the stockings she knit, and the warm waistcoats she made, for the poor drunken lover whom she had too much sense to marry. Then you know she feeds and clothes her brother's orphan child."

"If you call it feeding and clothing," replied Mrs. Lane. "The poor child looks cold and pinched, and frightened all the time as if she were chased by the east wind. I used to tell Miss Turnpenny she ought to be ashamed of herself, to keep the poor little thing at work all the time, without one minute to play. If she does but look at the cat, as it runs by the window, Aunt Hetty gives her a rap over the knuckles. I used to tell her she would make the girl just such another sour old crab as herself."

"That must have been very improving to her disposition," replied Mrs. Fairweather, with a good-humored smile. "But in justice to poor Aunt Hetty, you had ought to remember that she had just such a cheerless childhood herself. Flowers grow where there is sunshine."

"I know you think everybody ought to live in the sunshine," rejoined Mrs. Lane; "and it must be confessed that you carry it with you wherever you go. If Miss Turnpenny has a heart, I dare say you will find it out, though I never could, and I never heard of any one else that could. All the families within hearing of her tongue called her the neighbor in law."

Certainly the prospect was not very encouraging; for the house Mrs. Fairweather proposed to occupy, was not only under the same roof with Miss Turnpenny, but the buildings had one common yard in front. The very first day she took possession of her new habitation, she called on the neighbor in law. Aunt Hetty had taken the precaution to extinguish the fire, lest the new neighbor should want hot water, before her own wood and coal arrived. Her first salutation was, "If you want any cold water, there's a pump across the street: I don't like to have my house slopped all over."

"I am glad you are so tidy, neighbor Turnpenny," replied Mrs. Fairweather; "It is extremely pleasant to have neat neighbors. I will try to keep everything as bright as a new five cent piece, for I see that will please you. I came in merely to say good morning, and to ask if you could spare little Peggy to run up and down stairs

for me, while I am getting my furniture in order. I will pay her sixpence an hour."

Aunt Hetty began to purse up her mouth for a refusal; but the promise of sixpence an hour relaxed her features at once. Little Peggy sat knitting a stocking very diligently, with a rod lying on the table beside her. She looked up with timid wistfulness, as if the prospect of any change was like a release from prison. When she heard consent given, a bright color flushed her cheeks. She was evidently of an impressible temperament, for good or evil. "Now mind and behave yourself," said Aunt Hetty; "and see that you keep at work the whole time; if I hear one word of complaint you know what you'll get when you come home." The rose color subsided from Peggy's pale face, and she answered, "Yes, ma'am," very meekly.

In the neighbor's house all went quite otherwise. No switch lay on the table, and instead of, "mind how you do that. If you don't I'll punish you," she heard the gentle words, "There, dear, see how carefully you can carry that up stairs. Why, what a nice handy little girl you are!" Under these enlivening influences, Peggy worked like a bee, and soon began to hum much more agreeably than a bee. Aunt Hetty was always in the habit of saying, "Stop your noise, and mind your work." But the new friend patted her on the head, and said, "What a pleasant voice the little girl has. It is like the birds in the fields. By and by, you shall hear my music-box." This opened wide the windows of the poor little shut-up heart, so that the sunshine could stream in, and the birds fly in and out, carolling. The happy child tuned up like a lark, as she tripped lightly up and down stairs, on various household errands. But though she took heed to observe all the directions given her, her head was all the time filled with conjectures what sort of a thing a music box might be. She was a little afraid the kind lady would forget to show it to her. She kept at work, however, and asked no questions; she only looked very curiously at everything that resembled a box. At last, Mrs. Fairweather said, "I think your little feet must be tired by this time. We will rest awhile, and eat some gingerbread." The child took the offered cake, with a humble little courtesy, and carefully held out her apron to prevent any crumbs from falling on the floor. But suddenly the apron dropped, and the crumbs were all strewn about. "Is that a little bird?" she exclaimed eagerly. "Where is he? Is he in this room?" The new friend smiled, and told her that was the music box; and after a while she opened it and explained what made the sounds. Then she took out a pile of books from one of the baskets of goods, and told Peggy she might look at the pictures, till she called her. The little girl stepped forward eagerly to take them, and then drew back, as if afraid. "What is the matter?" asked Mrs. Fairweather; "I am very willing to trust you with the books. I keep them on purpose to amuse children." Peggy looked down with her finger on her lip, and answered, in a constrained voice, "Aunt Turnpenny won't like it if I play." "Don't trouble yourself about that. I will make it all right with Aunt Hetty," replied the friendly one. Thus assured, she gave herself up to the full enjoyment of the picture books; and when she was summoned to her work, she obeyed with a cheerful alacrity that would have astonished her stern relative. When the labors of the day were con-

cluded, Mrs. Fairweather accompanied her home, paid all the hours she had been absent, and warmly praised her docility and diligence. "It is lucky for her that she behaved so well," replied Aunt Hetty; "if I had heard any complaint, I should have given her a whipping, and sent her to bed without her supper."

Poor little Peggy went to sleep that night with a lighter heart than she had ever felt, since she had been an orphan. Her first thought in the morning was whether the new neighbor would want her service again during the day. Her desire that it should be so soon became obvious to Aunt Hetty, and excited an undefined jealousy and dislike of a person who so easily made herself beloved. Without exactly acknowledging to herself what were her own motives, she ordered Peggy to gather all the sweepings of the kitchen and court into a small pile, and leave it on the frontier line of her neighbor's premises. Peggy ventured to ask timidly whether the wind would not blow it about, and she received a box on the ear for her impertinence. It chanced that Mrs. Fairweather, quite unintentionally, heard the words and the blow. She gave Aunt Hetty's anger time enough to cool, then stepped out into the court, and after arranging divers little matters, she called aloud to her domestic, "Sally, how came you to leave this pile of dirt here? Did n't I tell you Mrs. Turnpenny was very neat? Pray, make haste and sweep it up. I would n't have her see it on any account. I told her I would try to keep everything nice about the premises. She is so particular herself, and it is a comfort to have tidy neighbors." The girl, who had been previously instructed, smiled as she came out, with brush and dust-pan, and swept quietly away the pile, that was intended as a declaration of frontier war. But another source of annoyance presented itself, which could not be quite so easily disposed of. Aunt Hetty had a cat, a lean scraggy animal that looked as if she were often kicked and seldom fed; and Mrs. Fairweather also had a fat, frisky little dog, always ready for a caper. He took a distaste to poor poverty-stricken Tab the first time he saw her, and no coaxing could induce him to alter his opinion. His name was Pink, but he was anything but a pink of behavior in his neighborly relations. Poor Tab could never set foot out of the door, without being saluted with a growl, and a short sharp bark, that frightened her out of her senses, and made her run in the house, with her fur all on end. If she even ventured to doze a little on her own door step, the enemy was on the watch, and the moment her eyes closed, he would wake her with a bark and a box on the ear, and off he would run. Aunt Hetty vowed she would scald him. It was a burning shame, she said, for folks to keep dogs to worry their neighbors' cats. Mrs. Fairweather invited Tabby to dine, and made much of her, and patiently endeavored to teach her dog to eat from the same plate. But Pink sturdily resolved that he would be scalded first; that he would. He could not have been more firm in his opposition, if he and Tab had belonged to different sects in Christianity. While his mistress was patting Tab on the head, and reasoning the point with him, he would at times manifest a degree of indifference, amounting to toleration; but the moment he was left to his own free will, he would give the invited guest a hearty cuff with his paw, and send her home spitting like a small steam engine. Aunt Hetty considered it her own peculiar privilege to cuff the

poor animal, and it was too much for her patience to see Pink undertake to assist in making Tab unhappy. On one of these occasions, she rushed in to her neighbor's apartments, and faced Mrs. Fairweather, with one hand resting on her hip, and the forefinger of the other making very wrathful gesticulations. "I tell you what, madam, I won't put up with such treatment much longer," said she; "I'll poison that dog; you'll see if I don't; and I shan't wait long, either, I can tell you. What you keep such an impudent little beast for, I don't know, without you do it on purpose to plague your neighbors."

"I am really sorry he behaves so," replied Mrs. Fairweather mildly. "Poor Tab!"

"Poor Tab!" screamed Miss Turnpenny. "What do you mean by calling her poor? Do you mean to sling it up to me that my cat don't have enough to eat?"

"I did not think of such a thing," replied Mrs. Fairweather. "I called her poor Tab, because Pink plagues her so that she has no peace of her life. I agree with you, neighbor Turnpenny; it is not right to keep a dog that disturbs the neighborhood. I am attached to poor little Pink, because he belongs to my son, who has gone to sea. I was in hopes he would soon leave off quarreling with the cat; but if he won't be neighborly, I will send him out in the country to board. Sally will you bring me one of the pies we baked this morning? I should like to have Miss Turnpenny taste of them."

The crabbed neighbor was helped abundantly, and while she was eating the pie, the friendly matron edged in many a kind word concerning little Peggy, whom she praised as a remarkably capable industrious child.

"I am glad you find her so," rejoined Aunt Hetty; "I should get precious little work out of her if I did not keep the switch in sight."

"I manage children pretty much as the man did the donkey," replied Mrs. Fairweather. "Not an inch would the poor beast stir, for all his master's beating and thumping. But a neighbor tied some fresh turnips to a stick, and fastened them so that they swung directly before the donkey's nose, and off he set on a brisk trot, in hopes of overtaking them."

Aunt Hetty, without observing how very closely the comparison applied to her own management of Peggy, said, "that will do very well for folks that have plenty of turnips to spare."

"For the matter of that," answered Mrs. Fairweather, "whips cost something, as well as turnips; and since one makes the donkey stand still, and the other makes him trot, it is easy to decide which is the most economical. But, neighbor Turnpenny, since you like my pies so well, pray take one home with you. I am afraid they will mould before we can eat them up."

Aunt Hetty had come in for a quarrel, and she was astonished to find herself going out with a pie. "Well, Mrs. Fairweather," said she, "you are a neighbor. I thank you a thousand times." When she reached her own door, she hesitated for an instant, then turned back, pie in hand, to say, "Neighbor Fairweather, you need n't trouble yourself about sending Pink away. It's natural you should like the little creature, seeing he belongs to your son. I'll try to keep Tab in doors, and perhaps after a while they will agree better."

"I hope they will," replied the friendly matron: "We will try them a while longer, and if they

persist in quarreling, I will send the dog into the country." Pink, who was sleeping in a chair, stretched himself and gaped. His kind mistress patted him on the head, "Ah, you foolish little beast," said she, "what's the use of plaguing poor Tab?"

"Well, I do say," observed Sally, smiling, "you are a master woman for stopping a quarrel."

"I learned a good lesson when I was a little girl," rejoined Mrs. Fairweather. "One frosty morning, I was looking out of the window into my father's barn yard, where stood many cows, oxen, and horses, waiting to drink. It was one of those cold snapping mornings, when a slight thing irritates both man and beast. The cattle all stood very still and meek, till one of the cows attempted to turn round. In making the attempt, she happened to hit her next neighbor; whereupon, the neighbor kicked, and hit another. In five minutes, the whole herd were kicking and hooking each other, with all fury. My mother laughed and said, 'See what comes of kicking when you're hit.' Just so I've seen one cross word set a whole family by the ears, some frosty morning. Afterward, if my brothers or myself were a little irritable, she would say, 'Take care, children. Remember how the fight in the barn yard began. Never give a kick for a hit, and you will save yourself and others a deal of trouble.'"

That same afternoon, the sunshiny dame stepped into Aunt Hetty's rooms, where she found Peggy sewing, as usual, with the eternal switch on the table beside her. "I am obliged to go to Harlem, on business," said she; "I feel rather lonely without company, and I always like to have a child with me. If you will oblige me by letting Peggy go, I will pay her fare in the omnibus."

"She has her spelling lesson to get before night," replied Aunt Hetty. "I don't approve of young folks going a pleasuring, and neglecting their education."

"Neither do I," rejoined her neighbor; "but I think there is a great deal of education that is not found in books. The fresh air will make Peggy grow stout and active. I prophesy that she will do great credit to your bringing up." The sugared words, and the remembrance of the sugared pie, touched the soft place in Miss Turnpenny's heart and she told the astonished Peggy that she might go and put on her best gown and bonnet. The poor child began to think that this new neighbor was certainly one of the good fairies she read about in the picture books. The excursion was enjoyed as only a city child can enjoy the country. The world seems such a pleasant place, when the fetters are off, and Nature folds the young heart lovingly on her bosom! A flock of real birds and two living butterflies put the little orphan in a perfect ecstasy. She pointed to the fields covered with dandelions, and said, "See, how pretty! It looks as if the stars had come down to lie on the grass." Ah, our little stunted Peggy has poetry in her, though Aunt Hetty never found it out. Every human soul has the germ of some flowers within, and they would open, if they could only find sunshine and free air to expand them.

Mrs. Fairweather was a practical philosopher in her own small way. She observed that Miss Turnpenny really liked a pleasant tune; and when winter came, she tried to persuade her that singing would be excellent for Peggy's lungs, and perhaps keep her from going into a consumption.

"My nephew, James Fairweather, keeps a singing school," said she; "and he says he will teach her gratis. You need not feel under great obligation; for her voice will lead the whole school, and her ear is so quick, it will be no trouble at all to teach her. Perhaps you would go with us sometimes, neighbor Turnpenny? It is very pleasant to hear the children's voices."

The cordage of Aunt Hetty's mouth relaxed into a smile. She accepted the invitation, and was so much pleased that she went every Sunday evening. The simple tunes, and the sweet young voices, fell like the dew on her dried-up heart, and greatly aided the genial influence of her neighbor's example. The rod silently disappeared from the table. If Peggy was disposed to be idle, it was only necessary to say, "When you have finished your work, you may go and ask whether Mrs. Fairweather wants any errands done." Bless me, how the fingers flew! Aunt Hetty had learned to use turnips instead of the cudgel.

When spring came, Mrs. Fairweather busied herself with planting roses and vines. Mrs. Turnpenny readily consented that Peggy should help her, and even refused to take any pay from such a good neighbor. But she maintained her own opinion that it was a mere waste of time to cultivate flowers. The cheerful philosopher never disputed the point; but she would sometimes say, "I have no room to plant this rose bush. Neighbor Turnpenny, would you be willing to let me set it on your side of the yard? It will take very little room, and will need no care." At another time she would say, "Well, really, my ground is too full. Here is a root of lady's delight. How bright and pert it looks. It seems a pity to throw it away. If you are willing, I will let Peggy plant it in what she calls her garden. It will grow of itself, without any care, and scatter seeds, that will come up and blossom in all the chinks of the bricks. I love it. It is such a bright, good-natured little thing." Thus, by degrees, the crabbed maiden found herself surrounded with flowers; and she even declared, of her own accord, that they did look pretty.

One day, when Mrs. Lane called upon Mrs. Fairweather, she found the old weed-grown yard bright and blooming. Tab, quite fat and sleek, was asleep in the sunshine, with her paw upon Pink's neck, and little Peggy was singing at her work as blithe as a bird.

"How cheerful you look here," said Mrs. Lane. "And so you have really taken the house for another year. Pray, how do you manage to get on with the neighbor in law?"

"I find her a very kind, obliging neighbor," replied Mrs. Fairweather.

"Well, this is a miracle!" exclaimed Mrs. Lane. "Nobody but you would have undertaken to thaw out Aunt Hetty's heart."

"That is probably the reason why it never was thawed," rejoined her friend. "I always told you that not having enough of sunshine was what ailed the world. Make people happy, and there will not be half the quarrelling, or a tenth part of the wickedness there is."

From this gospel of joy preached and practised, nobody derived so much benefit as little Peggy. Her nature, which was fast growing crooked and knotty, under the malign influence of constraint and fear, straightened up, budded and blossomed, in the genial atmosphere of cheerful kindness.

Her affections and faculties were kept in such

pleasant exercise, that constant lightness of heart made her almost handsome. The young music teacher thought her more than almost handsome, for her affectionate soul shone more beamingly on him than on others; and love makes all things beautiful.

When the orphan removed to her pleasant little cottage, on her wedding-day, she threw her arms round the blessed missionary of sunshine, and said, "Ah, thou dear good aunt, it is thou who hast made my life Fairweather."

WHO STOLE THE BIRD'S NEST?

BY MRS. L. M. CHILD.

To whiff! to whiff! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made!

Not I, said the cow, Moo-oo!
Such a thing I'd never do,
I gave you a whisp of hay,
But did 'nt take your nest away.
Not I, said the cow, Moo-oo!
Such a thing I'd never do.

To whiff! to whiff! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made!

Bob-a-link! Bob-a-link!
Now what do you think?
Who stole a nest away
From the plumb tree to-day!

Not I, said the dog, bow wow,
I would n't be so mean, I vow,
I gave hairs the nest to make,
But the nest I did not take.
Not I, said the dog, bow wow!
I would n't be so mean, I vow.

To whiff! to whiff! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made!

Bob-a-link! Bob-a-link!
Now what do you think?
Who stole a nest away
From the plumb tree to-day!

Coo coo! coo coo! coo coo!
Let me speak a word too,
Who stole that pretty nest
From the little yellow breast?

Not I, said the sheep, oh no,
I would n't treat a poor bird so,
I gave the wool to line,
But the nest was none of mine.
Baa baa! said the sheep, oh no,
I would n't treat a poor bird so.

To whiff! to whiff! to whee!
Will you listen to me?
Who stole four eggs I laid
And the nice nest I made!

Bob-a-link! Bob-a-link!
Now what do you think?
Who stole a nest away
From the plumb tree to-day!

Coo coo! coo coo! coo coo!
Let me speak a word too,

Who stole my pretty nest
From the little yellow breast!

Caw! caw! cried the crow,
I should like to know,
What thief stole away
A bird's nest to-day!

Cluck! cluck! said the hen,
Don't ask me again,
Why I haven't a chick
Would do such a trick.

We all gave her a feather,
And she wove them together!
I'd scorn to intrude
On her and her brood.
Cluck, cluck, said the hen,
Don't ask me again.

Chirr-a-whirr! chirr-a-whirr!
We will make a great stir!
Let us find out his name,
And all cry for shame!

I would not rob a bird,
Said little Mary Green;
I think I never heard
Of anything so mean.

'Tis very cruel too,
Said little Alice Neal;
I wonder if he knew
How sad the bird would feel!

A little boy hung down his head
And went and hid behind the bed;
For he stole that pretty nest,
From the poor little yellow breast;
And he felt so full of shame,
He did n't like to tell his name.

ON THE YOUNG AND BEAUTIFUL COUNTESS PLUTER,

Who organized and commanded a troop in the late Polish Revolution; and when the independence of Poland was finally crushed, died of a broken heart.

THE missile with resistless fury sent,
Though fragile be its nature, in that flight
Gains fresh endurance and unwonted might,
Through all opposing strength to force a vent;
But that new nature, for the purpose lent,
Enduring only till its task is o'er,
It then resumes the same it owned before,
And falls and shivers as its power is spent;
Thus was a woman's heart, for Poland's sake,
Inspired with energy before unknown,
And armed with strength and firmness not its own.

Thus did that heart, its trial ended, break,
To prove, when all that made it move was past,
That it was still but woman's at the last.

R. F.

From Chambers' Journal.

MY NEPHEW THE LAIRD.

THE prophetic doubts of my good aunt, the captain's shrewd-judging lady, did not fail in time to be very painfully realized. Though widely separated from my Highland kindred, I had kept up a correspondence with the principal members of my brother's family, sometimes hearing from himself of some new golden project, now and then from his wife—latterly to complain of an increasing dullness in the neighboring society—and very constantly from the elder children, to whom I had had the extreme comfort of sending a young woman, of superior understanding, as their governess. About the time that my two eldest nephews came to England, to a public school, rumors of my brother's embarrassments began to be current around him. Without any very expensive habits, he and his lady got through large sums of money, which even the better resources of their improved management failed to supply. Besides their hospitable summers, there were winter visits to Edinburgh, Dublin, and sometimes London; with no farm at hand to aid in house-keeping, when some ready money being of absolute necessity, it had often to be raised at ruinous interest. Then came the system of long credits, bills renewable, a trust-deed—all vain attempts to stave off, for some indefinite period, the crash, which every expedient to avert tended but to aggravate the weight of. It came at last, and it was overwhelming. The trustees entered upon the administration of the property, and my brother had to remove with his family, to live where he pleased, on a very slender annuity.

At first they went abroad, but the continent not suiting either himself or his wife, principally from their ignorance of modern languages, they were advised to fix at Cheltenham, to which they were the more inclined, as we were enabled to lend them a house there. Our Indian uncle, the colonel, had bought a villa on the outskirts of what was then a pretty village, and this his widow had lately left to me. Soon after the completion of this arrangement, our younger brother, who had gone out early in life to Madras as a writer, returned home a wealthy man; and he too settling at Cheltenham, to be near the "laird"—for never has he been heard to call his elder brother by any other name—and also with a view to the happiness of his wife, who was of a Gloucestershire family, he gathered his scattered children from their various homes, and, applying to the "laird" for advice in every circumstance of the life equally novel to both, the old age of two men, used to the most active habits in totally dissimilar spheres, where each had commanded, is gliding away, I believe, in quiet happiness. I had feared that my brother "the laird" would have felt very painfully his descent in position: but no; his seems to be a mind which accommodates itself without effort to events. He considers himself the victim of philanthropy; and, persuaded that his patriotic attempts to improve his place and people were the sole cause of the ruin brought on him and them, he hardly even regrets it. It was the consequence of good intentions; and the schemes in the Highlands failing, he has begun another series in the south, not so costly at any rate, being principally confined to his study, where his fertile brain and ready pen occupy him very profitably,

as he writes for several of the higher-toned periodicals.

My sister-in-law is certainly more in her natural sphere where she is. She does not affect to conceal that the change is agreeable to her. The perpetual little party-giving is quite to her mind; so are the dressing, the morning calls, the card-playing: her taste for this mode of getting through part of her time having rather increased as more youthful inclinations have declined. Unluckily for my brother, the too she so much delighted in was not always limited; but years had brought some degree of prudence along with them, and her gains are beginning to preponderate over her losses. She was still a fine-looking woman when I last saw her: ten years at least younger in appearance than her real age. She had latterly devolved the management of her household on her eldest daughter, who has been taught by adversity the prudence ordinarily the result of half a life's experience. The second daughter, who, from the more intellectual expression of her countenance, surpassed even her mother's early beauty, had married just as the family were leaving the Highlands. She had married greatly—the young "master" of the neighboring noble domain, who discovered, at the prospect of parting, that he had been cultivating the society of the brothers for the sister's sake. Though the bride was portionless, she was received with affection, and parted with without elation: like sought like. There was nothing the Highlanders considered uncommon in an accident which we, more worldly-minded, thought so fortunate.

My brother's eldest son, he more peculiarly the subject of my present sketch, had been educated, while at school, with my own boys, passing, too, the most of his holidays with us. Before his college days, the funds were wanting to complete what had been begun: he studied one year only at Edinburgh. The two following he spent at a German university, which he left to accompany his family home, upon their tiring of the continent. We thought him anything but improved by his foreign travels, and we fancied his character still further deteriorated by a couple of seasons at Cheltenham, where, as a handsome beau—à moustaches—he lounged away the mornings, with other idlers, in the High Street, or in the billiard-rooms, or on the cigar benches, while at the evening balls he was the coveted partner of every fair exhibitor, unchecked in his advances by any maternal frowns; it being well known that the Highland estate was entailed, and of course redeemable. His mother rather encouraged his numerous flirtations, almost glorying in his easy conquests: his father, occupied in his study, knew little of what was going forward: the gentle rebuke of his sister he only laughed at. Suddenly he vanished: he joined a party to shoot in the Highlands, and returned no more. He had ventured to his own glen; he wrote his sister word; and he meant to remain there on a visit to my old friend the forester. The next thing we heard of him was, that he was in Edinburgh at college again; then domesticated in some farmer's house in the Lothians; next back to the Highlands; and then came a joint letter from the trustees to announce that, being dissatisfied with the gentleman hitherto charged with the management of the property, they had relieved him from his duties, and had appointed in his stead the person most interested in the retrieval of its difficulties, and, in their esti-

mation, best qualified for a task of such delicacy, from the high testimonials he had brought forward both as to character and abilities. In short, the new manager was my nephew, who, awakened to the value of all he was well-nigh losing, had been fitting himself to attempt the recovery of his birth-right. We regretted his next step; for, after a year or two, he married a wife of high degree, brought up in a home of luxury—a daughter of the noble house into which his sister had been adopted. Years passed on, and when events brought my nephew into prominent notice again, the measures he was carrying through necessitated my brother's revisiting Scotland, from whence he returned indeed landless—having made over his whole inheritance to one sole trustee, his son, forever; who took upon himself every existing debt, and commenced his reign of undivided authority by doubling the annuity paid by the estate to his father.

All the news that ever reached us from the north indirectly, told of the wonderful improvements my nephew the laird had been successfully carrying on there. But a few appeals had been made directly to the old laird concerning the consequences of certain of his son's changes, which had filled his affectionate heart with grief. In some cases whole families, whose existence upon the lands had been coeval with our own possession of them, having been deprived of their small holdings, had emigrated to America; others had abandoned their homes to settle in the burgh town, or to seek their precarious fortunes elsewhere; while a few lingered on where they were born, loath to leave scenes that were dear to them, though without any means of subsistence beyond the charity of their relations. My brother felt some delicacy in interfering with a son who had acted so generously to himself, while he was distressed at the idea of abandoning the interests of those over whom Providence had once placed him as their protector. From my nephew having passed so much of his boyhood in my family, he knew that he had an old affection for me, and that I had some influence over him; so he thought it would be of considerable use to all parties if I could make up my mind to pay a visit to the glen. It was not altogether an agreeable duty; but it was one which seemed to have been thrown in my way, and from which, therefore, I did not feel it right to shrink; so I consented.

My former journey north had occupied nearly a fortnight: we were five days on the road between London and Edinburgh, and five more between Edinburgh and the glen, with a rest in Edinburgh, much needed. On the present occasion we landed at my nephew's door on the third evening after leaving town, travelling by railway to Liverpool, by steamboat along the coast, and up the lochs to the new pier, built out near the promontory where stands the church, just concealed by a bank of weeping-birch from the castle. A thriving village had risen round the pier, in which was a good inn, several shops, and a post-office—the mail now going regularly across that part of the country which was formerly termed the new road; besides two coaches—one daily, the other thrice a week—and an omnibus, for tourists only, who engaged it for the trip, which always occupied the same number of days, and embraced the same round of scenery. A road really new to me turned up from this village through the glen, passing the old castle, and stretching up across part of the forest

to meet another new line of road, connecting districts hardly known before. The castle was in high preservation, the pleasure-grounds much extended, and beautifully kept; while the wide meadow on either side the stream lay in large level fields, bearing the most luxuriant crops, far up into the birch wooding. My nephew did not live there. It was let, with the shooting, to an English millionaire; who paid nearly as much for his six weeks' amusement as supported my poor brother's diminished state at Cheltenham. My nephew lived in the new house, as it was still called; for the captain and his worthy lady were both dead. The widow had indeed been living when my nephew first returned to the glen; and he had gone, at her desire, to visit her—a visit which never ended, for they remained together till her death, when he inherited all her worldly goods, all the gatherings of her later savings, all the labors of her busy years, with the various heirlooms of the family, carefully collected and treasured up by this last of the old race. I had expected improvements to have been made at the mansion, but I was quite unprepared for their extent. The bare moor had become a perfect garden; large fields lay around, intersected by belts of plantations almost to the door, from which they were separated by a shrubbery, enclosing a perfect gem of a little flower-garden, with a small conservatory attached to the house. One of the square wings was gone, its materials having assisted in the erection of a commodious set of offices behind, to which all the straggling sheds of former days had also contributed. The other wing had had its front wall carried up to a gable end, its two narrow casements below altered into one large bay-window, the terraced roof of which, filled with flowers, served as a balcony to the two enlarged casements above. A wide porch had been added to the doorway, covered with creeping plants. And this in a wild Highland glen!—wild no longer. The mountain range around, and the little foaming river, now scantily fringed with birch, were all that remained of the rude Highlands.

The change within was even greater. My mother's parlor and bedroom, thrown into one long room by the help of supporting pillars, was fitted up as a library, and was the sitting-room of the family. In the recess of the bay-window was placed a large, round table, covered with books and writing-materials; in the side-wall, doors of glass opened into the conservatory; at the farther end a pianoforte, a violoncello-case, and a high stand full of music, denoted the happy employment of many an evening hour; near the fire was the old cornered chair, new-covered with needle-work, exactly copied from the faded, worn original: all my mother's chairs found places, too, as stationaries, intermixed with some of a lighter make; the little tea-table, with its egg-shell china, was set before a side window, opening on a small courtyard at the back of the greenhouse appropriated to pet birds. The whole thing spoke of home-occupations and home-happiness, to increase which, every memorial of the past appeared to have been studiously introduced; and it affected me even to tears when I found myself alone there, after walking up from the steamboat a mile and a half or more, unnoticed by any one; for we had not been expected—they had not looked for us till the next boat, not reckoning on our timing our changes of conveyance so accurately. By the

advice of the governess, who shortly made her appearance with the younger part of her happy-looking charge, I occupied the time that must be passed before the return home of my nephew and niece with their elder children, in taking a review of the pretty cottage into which the old house had been metamorphosed. Taste and comfort were happily blended throughout all the arrangements, united with the most economical simplicity. Nothing my good Aunt Nelly had left was missing, though there were many additions suited to modern refinement. The old dining-room had been shortened, to give my nephew not a study, but an office; for it was plain that business was in earnest pursued here. The back "jamb" had been extended indefinitely as part of a range of farm-offices, evidently superintended by a lady's eye. The entrance-hall alone looked feudal; for in it were neatly arranged upon the walls my father's swords, the captain's pistols, and some old battle-axes, leathern shields, old claymores, and such-like antiquities, intermixed with stags' horns and stuffed otters, which my nephew had fallen upon in the garrets when remodelling his residence. I was particularly touched with this careful preservation of every object connected with the olden time; for even the flower-case and the filigree box of my poor old French governess remained in their own place, though the drawing-room did duty now as the children's study. Where the Grecian and Egyptian curiosities had taken refuge, I know not: probably in the bedrooms of the castle; for no remains of them were to be seen in the cottage, and the millionaire had entirely refurnished his reception-rooms in what he called the Highland style—all tartan, dirks, broadswords, and bog oak.

I was warmly welcomed by my nephew and niece; made of the family at once; consulted, and employed, and appealed to as another of themselves; where all big and little, master and servant, parent and child, seemed to have but one common interest. We were early up, early to bed, busy all day; and we enjoyed our short evening as only those can enjoy the hours of relaxation who have earned them by daily duties well performed. We did not live alone. Several of the nearer landed proprietors, whose pursuits were beginning to assimilate in some degree with my nephew's, with the addition, occasionally of the family retainers, formed an agreeable society, amongst whom no formalities existed, and who seemed to enjoy the easy intercourse prevailing in their unceremonious visits to one another all the more, that display was altogether unthought of as a mode of entertainment. Higher sources of enjoyment have opened upon the rising generation than were ever dreamt of by their ancestors. Conversing with my nephew on his wonderfully altered habits, he told me that he dated the change from the time that a sense of duty dawned upon him. He had awakened from the follies of a frivolous existence to see the inheritance of his family passing from them; the people, whose interests had been delegated to his care, suffering from his desertion. His pride of birth, first humbled, was then aroused, and the keen desire to redeem his station took entire possession of his very energetic mind. Encouraged by the forester, stimulated and assisted by the captain's widow, he first fitted himself for the serious task he had undertaken; and then beginning by managing for others' he proved himself to have become the best manager for all. His character had won him his wife. Her little fortune, and her

father's influence, had been of considerable use to him in assisting plans he still pursued as a trustee. He lived upon the allowance he received as manager, grudging no outlay on the estate that would afterwards pay, yet restricting even that to a certain annual sum, while faithfully, year after year, relieving the property of its heavy encumbrances. He had no factor, managing all his own affairs himself. He had two working grieves and a forester, who received their daily orders, and had their labors daily inspected; and he had a book-keeper, chosen, like his other assistants, not for his kindred or his destitution, but for his efficiency in his particular department. His farms were models; and he had many—for here it was that the young laird had offended. The good of the property was his aim so exclusively, that he never permitted private feelings to interfere with what he thought essential to it. He said that where he had found it possible, he had left all the old people in their old places; but that the change of manners had necessitated many removals. He required no band of idlers round him; therefore some were thrown out of bread, whose former dependent existence had quite unfitted them for regular work. A few he had quite reclaimed; some partly; some were not to be reclaimed, and they had either hung on at home, living on more industrious relations, or they had enlisted or emigrated, often assisted by himself, as he owed them help, and was willing to give it. He had had most trouble with his class of small tenants—honest, respectable men, living poorly enough on the few acres their ancestors for centuries back had tilled, much in the same style, too, with their own slovenly system of management; for they were proud, idle, poor, and doggedly opposed to any innovations on the habits of their forefathers. These continued to live in the smoky turf-huts, and to lie in the airless box-beds: they called trees big weeds, and thought flowers an encumbrance; and the better crops, and the increasing comforts of their more docile neighbors, all so many preparations for expediting the approach of the day of judgment. With such thorough men of the old school, it had been extremely difficult to deal. It was these principally who had emigrated to the new world rather than conform to the times in their old places; and some of them, despite their obstinacy, I could not but regret; for from amongst them, when thrown by different accidents into the current of the world, had sprung men who left these lowly roofs to rise, by their own exertions, to the highest honors of the state. But my nephew was not of an age or a temperament to believe there would ever be any want of force to fill the vacancies: to him these sturdy fathers of the great were so many obstinate old men, who were predetermined never to try to extract its full value from the soil; and therefore, in his eyes only encumbering it, he joyfully seized every opportunity of assisting in their removal.

He was opposed to the whole system of jobbing. He said it had hitherto been the ruin of the country, as we might see in our own family, and in that of my poor Aunt Grace, the last of whose descendants, the boy she brought over the lake to see me on my former visit to the north, having just started for Australia, after parcelling out what was once a fine property amongst a whole bevy of small purchasers. He would put none into situations they could not honestly fill; he would help the unfortunate to the best of his ability; but he would leave no land with Black Donald's son, or

any other body's son, who would not or could not improve it; nor should old Bell's grandson mismanage a saw-mill, had the old woman been foster-sister to a score of lairds. The factor, our cousin's son, need not have bristled up at the ill usage he met with in being passed over for a stranger. He required no factor: the stranger bookkeeper did what the cousin could not do—work; to which he had been bred, and for which he was well fitted. With these sentiments all in active operation, the glen had indeed made strides. Three or four large farms, managed by my nephew's advice, were in the hands of young scions of some of the old stocks; the rest he superintended himself, and cultivated to the utmost—large, level, well-fenced, thorough-drained fields, bearing crops that were a marvel in the Highlands. Still I, like the old useless retainers, felt some regret. A wise writer has remarked, that the actual living present has little interest for the bulk of mankind; that the young are looking hopefully forward to the unknown future; while the elderly return in thought to the sadly-cherished past, where the melancholy which forms the tenderest part of memory mingles with all recollections. It must have been this natural inclination of the mind which made me, in thinking of my native glen, pass over its present flourishing condition, and revert to it as I knew it in my youth, during the summer I spent among its beauties when my brother was the laird. The people were then just beginning to arouse from the sleep of ages; new ideas and new wants were just dawning upon the rising race, while the old feelings, and habits, and prejudices, were still the creed of their fathers. It was this that made them so interesting, so unlike the world we left when we came to visit them in the recesses of their mountains; and this was wearing gradually away before the advance of more useful business habits. I could never reconcile myself either to the smoke, and the fizzing, and the racket of the steamboat rushing over our once secluded lake, or to the bustle of the village on its shore. I missed too, through the glen, all the pretty crofts, stolen, as it were, from the birch-woods: they were all gone, the timber of their hanging banks cut and stacked for sale, the heights and hollows levelled, and all the little wild paths through this once graceful wooding, leading from one little sheltered farm to another, existed now only in the memory of such as I, who had loved to linger the long summer hours among scenes so quietly beautiful.

In the forest too, we no longer came upon the solitary woodman felling and barking his tree, or on a half-ruined saw-mill with its leaking water-course, offering itself to the pencil with all its picturesque infirmities—the sawyer lazily reading, while the tardy log moved on. All this had vanished. A small part of the forest was cut down in rotation yearly, immediately enclosed, and left to nature to replenish. One band of active workmen felled, another barked, another stacked; all roots were raised; horses for the purpose carried the logs to the only mill, an immense building, with a large artificial supply of water, and a yard attached, where the wood was sorted. The thorough air of business interested me here in spite of myself: the regularity astonished me; as did the amount of work done, by which no one, however, seemed oppressed—method making all easy, even to Highlanders. With his workmen my nephew was a favorite, nor can I say that he was out of favor

with any, even of those drones whom he would banish from the hive. He was forgiven much, on account of his position—acting, as they insisted, for my brother; redeeming his father's property at his own risk—and they excused his stern utilitarianism, on account of the several disadvantages he had labored under. A foreign mother, a foreign nurse, latterly a foreign education, they could not expect his heart to be all Highland. The wiser among them were beginning, too, to be quite sensible of the substantial benefits his rule had brought with it; money, with all the comforts it can buy, being no longer scarce with the industrious. They had regular pay, good houses, shops in the village at hand, a market at their door for their produce, help in sickness, a good minister, and a good school. It was in these latter departments that my nephew's wife most interested herself.

My niece was scarcely handsome, being fair and slight, and wanting height; yet she grew on me as beautiful, from her sweet, cheerful temper, her goodness, her activity, and her cleverness; all these resources of her mind, too, called forth solely by her love of home. It was to enliven her home that he produced her accomplishments, to improve her home that she exerted her various talents; regulating her household so quietly, pursuing her various employments so steadily, associating her elder children with all her works. She was really a help-meet for her husband, beloved throughout his whole estate, the support and the solace of all around her. No "lady" had ever yet so truly possessed the affections of the people. She was of ancient Highland blood too, and understood their ways, and shared most of their feelings. The young laird owed more of the respect he met with than he was at all aware of to the "gentle Lady Anne." The employment which, next to her home duties, appeared the most particularly to interest her, was her charge of the newly-founded schools, where she taught daily, not as in the old times of birch rods and Latin grammar, but according to the improving views of the age upon this most important subject. Then she had a school of industry upon a plan of her own, where all of any age got work, if they wished for it, with a small magazine where their labors were sold. A dispensary was under the care of an hospital assistant, whose practice was directed by the weekly visit of the doctor from the neighboring town, and who received a small salary from the laird to compensate for the low price of his advice and medicines. A soup-kitchen and a linen store belonged to the institution, carefully superintended by my active niece. And all this was done so easily, so cheaply, time being much more abundantly bestowed than money.

Such is the glen as my nephew has made it—changed by the progress of years, aided by the energies of one powerful mind. He has taught his people to help themselves; he has altered their blind submission into a reasonable attachment; and though, from circumstances as much as from character, he may have been a little rigid in the straight course, the end was certain, and worth achieving at any price. Though the poetry of the connexion between the laird and the vassal has undoubtedly suffered by the tie to the *race* being broken, yet affection for the *man*, always given when deserved, may be a higher and a surer bond between them. With such thorough business habits, it will not be supposed that he much en-

couraged the gaieties formerly so essential to the happiness of the Highlander. He kept up the ball and supper at harvest-home, the dinner at Christmas, and the feast in the hill at the sheep-shearing; but there was no whisky admitted to the entertainments, and they were early over. He discountenanced in every way the expensive funerals, the noisy weddings, the numerous excuses for gatherings, which seldom ended in the good of the younger part of the company. Indeed, the tastes of the people were outgrowing the mirth raised by the punch-bowl; a tone of higher enjoyment was gradually expanding over their feelings, which was assiduously fostered, and wisely directed.

The minister was another of my nephew's lucky hits—a truly well-educated man, anxious for the morals of his flock, proving by his own habits the worth of the Christian precepts he inculcated. He was neither kith nor kin to our family. He preached well, visited his flock unceasingly, abounding in the works of truly gospel charity. His congregation was large, and extremely attentive, but by no means so interesting to me as that of former days. The young men in their fashionable attire did not look half so well as in the plaid. The smart caps, or the very finely-trimmed bonnets of the younger women, were frightful to me, whose thoughts returned to the glossy snood-bound hair of their comely mothers. Old age was less marked, youth was less picturesque; there were few high caps, no groans, no dogs; and the psalms, skillfully sung in parts by the children of my niece's schools, had no resemblance to the line-by-line-delivered noises of the ancient precentor, taken up in every key and every tune guessed at by the congregation.

The world has reached the glen; every-day life now meets us there: the romance of the Highlands is gone; they will soon offer few distinctive peculiarities. Another generation will very faintly trace the remains of the manners of their primitive forefathers, and the records of scenes I have lived in will be as Robin Hood's tales to my grandchildren.

I took leave of my nephew with sorrow. At seventy odd years, old ladies, even in these days of steaming comfort, travel uneasily. I felt, when I quitted the glen, that its beauties, except in memory, had closed on me forever.

From the Tribune.

CAROLINE.

THE other evening I heard a gentle voice reading aloud the story of Maurice, a boy who, deprived of the use of his limbs by paralysis, was sustained in comfort, and, almost, in cheerfulness, by the exertions of his twin sister. Left with him in orphanage, her affections were centred upon him, and, amid the difficulties his misfortunes brought upon them, grew to a fire intense and pure enough to animate her with angelic impulses and powers. As he could not move about, she drew him everywhere in a little cart, and, when at last they heard that sea-bathing might accomplish his cure, conveyed him, in this way, hundreds of miles to the seashore. Her pious devotion and faith were rewarded by his cure, and (a French story would be entirely incomplete otherwise) with money, plaudits, and garlands from the bystanders.

Though the story ends in this vulgar manner, it is, in its conduct, extremely sweet and touching,

not only as to the beautiful qualities developed by these trials in the brother and sister, but in the purifying and softening influence exerted by the sight of his helplessness and her goodness on all around them.

Those who are the victims of some natural blight, often fulfil this important office, and bless those within their sphere more, by awakening feelings of holy tenderness and compassion, than a man, healthy and strong, can do by the utmost exertion of his good will and energies. Thus, in the East, men hold sacred those in whom they find a distortion or alienation of the mind, which makes them unable to provide for themselves. The well and sane feel themselves the ministers of Providence to carry out a mysterious purpose while taking care of those who are thus left incapable of taking care of themselves, and, while fulfilling this ministry, find themselves refined and made better.

The Swiss have similar feelings as to those of their families whom cretinism has reduced to idiocy. They are attended to, fed, dressed clean, and provided with a pleasant place for the day, before doing anything else even by very busy and poor people.

We have seen a similar instance in this country of voluntary care of an idiot, and the mental benefits that ensued. This idiot, like most that are called so, was not without a glimmer of mind. His teacher was able to give him some notions both of spiritual and mental facts, at least she thought she had given him the idea of a God; and though it appeared by his gestures that to him the moon was the representative of that idea! yet he certainly did conceive of something above him, and which inspired him with reverence and delight. He knew the names of two or three persons who had done him kindness, and, when they were mentioned, would point upward as he did to the moon, showing himself susceptible, in his degree, of Mr. Carlyle's grand method of education—hero-worship. She had awakened in him a love of music, so that he could be soothed in his most violent moods by her gentle singing. It was a most touching sight to see him sitting opposite to her at those times, his wondering and lack-lustre eyes filled with childish pleasure, while in hers gleamed the same pure joy that we may suppose to animate the looks of an angel appointed by Heaven to restore a ruined world.

We knew another instance in which a young girl became to her village a far more valuable influence than any patron saint who looks down from his stone niche, while his votaries recall the legend of his goodness in days long past. Caroline lived in a little quiet country village, quiet as no village can now remain, since the railroad strikes its spear through the peace of country life. She lived alone with a widowed mother, for whom, as well as for herself, her needle won bread, while the mother's strength and skill sufficed to the simple duties of their household. They lived content and hopeful, till, whether from sitting still too much, or some other cause, Caroline became ill, and soon the physician pronounced her spine to be affected, and to such a degree that she was incurable.

This news was a thunderbolt to the poor little cottage. The mother, who had lost her elasticity of mind, wept in despair, but the young girl who found so early all the hopes and joys of life taken from her, and that she was left seemingly without any shelter from the storm, had, even at first, the

faith and strength to bow her head in gentleness and say, God will provide. She sustained and cheered her mother.

And God did provide. With simultaneous vibration the hearts of all their circle acknowledged the divine obligation of love and mutual aid between human beings. Food, clothing, medicine, service, were all offered freely to the widow and her daughter.

Caroline grew worse, and was at last in such a state that she could only be moved upon a sheet and by the aid of two persons. In this toilsome service, and every other that she needed for years, her mother never needed to ask assistance. The neighbors took turns in doing all that was required, and the young girls, as they were growing up, counted it among their regular employments to work for or read to Caroline.

Not without immediate reward was their service of love. The mind of the girl, originally bright and pure, was quickened and wrought up to the finest susceptibility by the nervous exaltation that often ensues upon affection of the spine. The soul, which had taken an upward impulse from its first act of resignation, grew daily more and more into communion with the higher regions of life permanent and pure. Perhaps she was instructed by spirits which, having passed through a similar trial of pain and loneliness, had risen to see the reason why. However that may be, she grew in nobleness of view and purity of sentiment, and, as she received more instruction from books also, than any other person in her circle, had from many visitors abundant information as to the events which were passing around her, and leisure to reflect on them with a disinterested desire for truth, she became so much wiser than her companions as to be, at last, their preceptress and best friend, and her brief, gentle comments and counsels were listened to as oracles from one enfranchised from the films which selfishness and passion cast over the eyes of the multitude.

The twofold blessing conferred by her presence, both in awakening none but good feelings in the hearts of others, and in the instruction she became able to confer was such that, at the end of five years, no member of that society would have been so generally lamented as Caroline if death had called her away.

But the Messenger, who so often seems capricious in his summons, took first the aged mother, and the poor girl found that life had yet the power to bring her grief, unexpected and severe.

And now the neighbors met in council. Caroline could not be left quite alone in the house. Should they take turns and stay with her by night as well as by day?

"Not so," said the blacksmith's wife. "The house will never seem like home to her now, poor thing, and 't would be kind of dreary for her to change about her 'nuses' so. I'll tell you what; all my children but one are married and gone off; we have property enough. I will have a good room fixed for her and she shall live with us. My husband wants her to as much as me."

The council acquiesced in this truly humane arrangement, and Caroline lives there still; and we are assured that none of her numerous friends dread her departure so much as the blacksmith's wife.

"Tant no trouble at all to have her," she says; "and if it was, I should n't care; she is so good and still, and talks so pretty. It's as good to be with her as goin' to meetin'."

De Maistre relates some similar passages as to a sick girl in St. Petersburg, though his mind dwelt more on the spiritual beauty, evinced in her remarks, than on the good she had done to those around her. Indeed, none bless more than those who only stand and wait. Even if their passivity be enforced by fate, it will become a spiritual activity, if accepted in a faith higher above fate than the Greek gods were supposed to sit enthroned above misfortune.

VISIT TO THE CROCODILE CAVES.*

ON a fine sunny morning, with a light wind, my boat floated quietly down the Nile, its broad waters reflecting village after village, and grove after grove of date-trees. Long lines of pelicans edged the sand-banks: they did not move for us. I mused on the same, with my constant friend by my side—my pipe: all was tranquillity. I could but lament that, in a few short weeks, I must bid adieu to a country which had so much interested me; and with deep regret I contemplated the time when, in sketches and recollections, I must try and conjure up the magic scenes by which I had been so many months surrounded. I had revelled in temples, (pardon the expression,) I had lived in tombs, I had boiled my tea-kettle with mummies' bones, descended into labyrinths of passages—poking up from their long-hidden places birds and beasts; in short, I had become artist, naturalist, and half-Arab. I had ridden a camel, and I had shot at—but never *killed*—a crocodile. Here my train of musing was at once cut short by the remembrance that I had never been in the crocodile pits—so graphically described to me by my French companions at Thebes. True, they said it was a dangerous undertaking—that few accomplished it; nay, they had a story of some traveller having either lost himself, or some of his people: but what of that? If one never attempts a difficulty, he can never experience the pleasure of overcoming one. So with this reflection I filled my pipe, took up my map, just to see whereabouts the place might be; and to my no small pleasure discovered that by to-morrow morning we should arrive at the spot—*Manfalout* * * * bene—my mind was made up. The rest of the day I teased the Arabs with questions and cross-questions, to see if I could procure any information; and in the evening, when joined by my fellow-travellers—Mr. G., an English gentleman, with an abundant stock of good-nature, and my French friend, Monsieur D., with a violin—it was settled to make a party.

About five in the morning we awoke by the keel grating on the sand, and the lullaby of the Arab sailors ceasing from their rowing. They make a rascally noise, but travellers praise it—like Tasso's songs by the gondoliers in Venice. I've heard them both, and when I've not been in a

* This sketch is slightly altered from the Art-Union of March, in which it appears, with illustrations from the pencil of its lamented author—the late William Muller. "It is," says the editor of that elegant journal, "a graphic description of a most extraordinary scene; and a striking record of one of the many perils the accomplished writer underwent in his search after knowledge. It was written by Mr. Muller for the Art-Union many months ago; he had previously furnished us with the sketches, which we immediately engraved. We were, however, for some time under the impression that the descriptive matter had not been prepared; fortunately, it was found entire, and ready for the printer, among his papers, and was kindly transmitted to us by his brother."

very poetical mood, wished both the Arab sailors and Venetian gondoliers at * * * I won't say where. Alleck was despatched to the town to inquire for a guide, and procure eggs. We commenced washing—that is to say, myself and my English friend; but Monsieur D. forestalled his morning labors by a tune on that diabolical fiddle. It was found broken one day, and right glad was I of it—it put an end to the music for a time. In half an hour, just as the sun began to peep over the sand-hills of the desert, as if 't was a novelty to him, our breakfast was announced—boiled rice, dates, figs, coffee, eggs, and new bread—and we did justice to it. Shortly after, our guides made their appearance, and informed us that the pits were on the other side of the river, at Amabdi. This was soon obviated. We cast loose, and got into the stream, and a few minutes took us to the other side, where we found the boat of an English gentleman, who was returning from India, but, by an injury to his arm, from a fall from his camel at Thebes, had been an invalid—had put himself under an Arab doctor, been cupped with a cow horn, and martyred with certain little insects which make the acquaintance of strangers with great pertinacity. He was a gentleman of considerable information, and fond of pursuits of a much higher nature than ordinary travellers. In geology and botany he had made considerable advance; and many pleasant evenings I had spent with him in Upper Egypt, generally gaining much valuable information. Our meeting was a pleasure; and, on his hearing our intention of visiting the crocodile pits, he requested permission to join our party: of course we were most happy.

The guides informed us it was necessary to take arms, as in the desert there were some very bad men; and soon the inhabitants of Amabdi saw us loading guns, flourishing sabres, &c. But now came the most difficult part—as to the reward of our sworthy servitors. After much banter, noise, and gesture, we agreed to give them thirty piastres; so, forming a line of march, our party advanced, consisting of about fifteen persons, guides, boatmen, ourselves, &c. Our way lay along the plain, through beautiful clover-fields, the fragrance of which was most grateful; its luxuriant growth astonishing. Half an hour brought us to the margin of the desert; and it is curious to see what a positive line vegetation makes with the sand: just as far as the waters rise during the inundation, you have rich fertility; but past that, eternal sand.

Our path lay by a ruined convent, long deserted; and then we began to ascend the hills, which are here of considerable height—some thousand feet. We found abundance of shells in the rocks: the echinus was common. We kept on loading our guides, and should have had a very pretty museum, if the cunning rascals had not kept throwing away in nearly the same proportion as we gave them. Having crossed the hills, we came once more into the sandy plain, bounded by hills in the distance—the peculiar character of most deserts. Our guides now pointed to a small spot in the wide expanse; this was the mouth of the pit, and the object of our search. On arriving at it, I found a perpendicular hole, or shaft, of perhaps fifteen or eighteen feet, partly covered by a large block of stone, and the entrance surrounded by numbers of fragments of crocodiles, as also a great number of small pebbles, which that animal at times swallows—I believe to assist digestion. Amongst

these, I was informed by a Jew at Cairo, they sometimes find stones of value, that must have been washed from the mountains of Abyssinia, and carried down by the Nile.

Our party made a halt, our guides threw off their clothes, and, with the assistance of the sash worn round the waist, I descended, followed by a guide. On arriving, however, at the bottom, I could not discover, at the first instant, where in the name of fortune our direction would be; but as the eye became accustomed to the change of light, I observed a small hole, just large enough to admit a person to enter by lying flat on his chest. The place had a disagreeable smell, different from any mummy-pit I remember; and what did not enhance its general appearance, was a number of large black insects crawling about. The Arab lit some wax candles, motioned to me, and at once placing himself flat on the ground, extending his arm with the candle, commenced to enter this mysterious abode of silence. I followed, and then there was room for the rest of my friends to come down. Mr. N. declined the attempt, as his arm was far from well. We proceeded; the passages being tortuous, and the bats most numerous, insomuch that at times we feared they would extinguish the lights. We soon, however, arrived at a small chamber, when we left off practising our lizard-like exercise, and began to look at one another, and to rest for a second; but *en avant*. We now changed our previous order: my stout friend G. went before: the passage became narrower, insomuch that more than one or two bats that were hanging to the roof came to an untimely end by being squeezed to death by the backs of the foremost of our party; and poor G., who was much the stoutest of our 'set,' in one place stuck fast and firm. My laugh was unavoidable; but it sounded strange to the ear, as it echoed through the long passage. By dint of much exertion he got free; and once more we came to a chamber of rather large dimensions, the roof ornamented with hieroglyphics. Several small holes surrounded it: our guides fixed on one, and we again continued our route. The heat was tremendous; and it was with no small pleasure we found ourselves in a vast cavern, the roof of which I could not well see with our small means of lighting it. We sat down on some large blocks of stone, and began to take breath, for our exertions had been great. The guides, who looked like two fiends from the infernal regions, began to undo a piece of wood, (made from the fibre of the date;) this they tied to a large stone, then commenced searching about for the entrance to the next passage. All this caused a suspicion on my mind, and I determined to mark the passages as we entered and as we left them. I think, in the sequel, I, as well as my companions, had much reason to be thankful for this precaution.

We went once more creeping, the last Arab taking in his hand the cord, and came to chamber No. 4. Here large blocks of stone formed the ground, until a chasm, the depth of which I know not, presented itself. We summoned our courage and our strength to jump it, and all gained the other side: it was a place, to use the words of a favorite author of mine, (Forsyth,) 'that curiosity might stand appalled to gaze within.' We entered another passage, which led us to the largest chamber we had yet been in. Here it was discovered that the cord had broken—the thread to our labyrinth gone! The two guides began now looking

about for the next passage, but in vain : amongst the many they could not determine. They entered some, and then came out again : we heard them shouting to one another, as the voices of some demons, but all to no purpose. We sat with patience ; we had been under ground an hour, or very nearly so ; our candles began to burn short ; our patience, much like our candles, could not continue forever. The *guides* began crying, beating themselves, and performing a very pretty farce ; but it would not get us on, and we made them signs to return ; but in this we were as unfortunate. Passages on all sides of the chamber, they knew not which to take ; and now came the full horrors of our situation before us. We might have strayed so far from the right path, that in case of our friend and servants seeking us—and they had no guide—they might not find us. Where and to what may not these passages lead ? How far may they continue ? And to what extent ? These were questions which forced themselves upon our minds. Our candles went on burning, and, much like time to the ill-fated man about to be executed, each moment shortens both. Truly our consternation was great—to be buried alive in such a place !—without light, without assistance, without the means of making ourselves heard. We gazed on one another, and the full truth of our situation seemed to occupy our minds past the power of utterance. This, then, might be the termination of all our travels, of all our hopes. In vain had our pretended guides sought the path by which we entered ; they sat down, and for a moment all was silence. That black gulf over which we jumped presented fresh horrors ; the little narrow winding thread-like passages, all came before the eye, and the picture was despair. No word spoken—silence, deep and profound, alone seemed to occupy this abyss : the moments seemed hours. Still the candles burned : the knowledge of this roused us. We for the first time, in a low voice, began to communicate our ideas one to the other : the voice now sounded like some discordant noise. How different from when we entered !—the laugh, the jest ; then all was mirth, now all gloom.

We knew well that those who were without—our servants and friend—might never have it in their power to assist us ; the former from superstition and fear, (the loss of poor Legh's guides in this place must be fresh on their minds ;) and the latter (Mr. N.) could have little power to cause us to be sought. We had tried all in our power to discover the passage ; we talked over all the probabilities of finding it. In vain I had sought my piece of paper. All was despondency : the ideas of a lingering death—famine in its worst form—haunted the brain, and filled it with terrible forebodings. The candles were becoming shorter and shorter : the truth of this seemed to flash upon my mind more than on my companions, and at once I determined to act. That determination I believe saved us. How absurd to waste that on which our only power of escape existed—the means of light ! I immediately proposed the putting out all but one, dividing the few matches we had between two of our party, and then commencing a search for the paper with the utmost attention, as that was our only clue. We left our French friend sitting alone ; not but that he was a man of courage and considerable thought. I could not help at the instant expressing a wish that he had his "*violin pour passé le temps* ;" he gave me such a look. But I dislike melancholy as much as I did

my situation ; and if the worst came to the worst, our entertainment promised nothing better than eating our lean, dry, brown Arabs up—and that was not exactly the thing one would like. These reflections came into my head as I was poking it into one hole after the other : and how I regretted the wax that kept on falling drop after drop ; how we may want it in this infernal petrified region !

We had gone on nearly round the chamber, when all seemed hopeless. There remained but one or two holes more. A shout of joy broke from us both : there was the paper ! But was it possible we had entered by that little hole ? It must be so. It was truly so small, that we had overlooked it in our former search, and not regarded it as we crawled into the cavern. Huzza ! Poke up those black devils, and come along, my boy ! In our joy, the Arabs were more frightened than before : they must have thought it was our song previous to a cannibal feast. But how the rascals showed their teeth when they saw us light the candles, and begin the crawling exercise ! With our passage out I will not inflict the reader : he must be as tired as we were, especially as he has to descend again. We gained the fresh air, all perspiration and sand : we congratulated one another, had a good draught of water, lit our pipes, and instructed our servant, in particular set terms, to abuse the pretended guides. They looked rather queer when they found we did not intend paying them. But we had not seen the crocodiles.

We were regretting this, when on a sudden we saw an old man with a long beard coming across the desert : he was of a most venerable appearance. All shouted out, *this is the true guide* : this is * * * I forgot his name. He laughed with a sort of inward satisfaction when he heard our story, and told us he expected it. He had heard of our departure, and, with anticipation of its proving unsuccessful, came after us, had brought some candles, &c. : this was civil. I liked the look of the old gentleman. I had faith in him ; indeed so we all had, and we disliked being foiled in anything we attempted. We made certain we should go down again ; and so we did ; but we took with us our interpreter, followed a different route, and did not pass the chasm or the large hall. He showed us his marks on the sides of the rock, scratched into the stalagmite, which was of a beautiful brown color. Could the exhalations of the bitumen have mixed with it ? He gave us particular caution as we began to enter one passage, to mind and not let the candle fall on the inflammable substances by which the ground was covered—date leaves and old pieces of rag.

On proceeding a little farther, judge of our surprise : we were literally crawling over the bodies of once living human beings—*nummies* ! Were these the *red-haired*—sacrificed to the crocodile, as some authors assert ! The head I brought out with me, and afterwards sent to Bombay, had *red hair*—the learned must decide. There was something a little novel in this. We continued thirty or forty yards, when the old man stopped, turned round and pointed, then touched himself, and then something on the ground. This was the body of a man ; just behind him another. These were the remains of Legh's guides : they died from the mephitic vapor, he narrowly escaping. One was better preserved than the other : it was in a bent-up position, dried with all the flesh on, and part of the

blue dress still left. I lifted it. It may have weighed ten or fifteen pounds.

We now entered the chamber of crocodiles, the object of all our pursuit and adventure. There they lay, of all sizes, from five inches to twelve feet, and I dare say more: thousands packed on thousands, and so packed for thousands of years. I soon obtained a fine large head, and some half-dozen small crocodiles, all bandaged in cloth. There was little to observe in this sanctum sanctorum, and no knowledge how far it continued: it evidently had not been much visited. At the end of the passage, which might have been twelve or fifteen feet high, the bodies formed a solid mass. It was from the sides I obtained the specimens.

Our return, however, was rather ludicrous: one of the Arabs stuck the head on a spear, and looked a little like David of old. I chalked, or rather printed, the line of Dante over the entrance—

“Lasciate agnè speranza voi che entrate.”

We gained our boats at a late hour in the evening, enjoyed boiled rice and fruit; and just as we were commencing to light our pipes, the fiddle struck upon my ear, with “Dunois the brave.” I wished him at a place in the country he was bound to—Jericho.

One by one the stars shone out, the sky became of a deep purple, then to an indigo, the moon was high in the heavens, the plumed date-trees slept in her silver light, the slender minarets of Manfalout painted into the clear vault of the sky. All was repose. My friend's music had long ceased. All was silence. “How beautiful is night!” At least so I thought. My mind, nevertheless, turned to friends. I had few to trouble my mind about that time; and then to HOME—that was more easily disposed of, for I had no particular spot in the world so called. After these and various other subjects, but all in vain, I hit upon the right one—*sleep*. But my kind-hearted musical friend was of a different opinion. He opened a box, took out a little miniature, and then I heard a sort of smacking noise. Ay, ay, my fine fellow; my head to a handful of split peas you won't do that ten years hence. I pulled my beurnouse tighter over my face. What he did next I could not see; but in the middle of the night I awoke with the idea that the boat was on fire: it was only Monsieur writing a long letter by camp-light, to * * * no matter whom. Good night, again, M. B.; and once more to sleep, with hopes of an early breakfast.

LORD BROUGHAM.

(From Mr. Walsh's letter to the National Intelligencer, dated May 5.)

You are aware that Lord Brougham makes, in parliament, displays, or performs feats, sometimes skilful and creditable, oftener ridiculous or mischievous. His exhibition, on the 30th ultimo, in the high debate on the lord chancellor's *religious opinions belief bill*, is the subject of pungent French as well as derisive British commentary. It is pretty notorious that his lordship's composition does not include a particle of religious faith or sentiment. Yet how keen his alarm at the free importation of papal bulls into the British dominions, and how solemn his protest concerning the Gallic orisons for the return of the British people to the Roman Catholic fold! Can any text—as we con the speaker—be pleasanter than this:

“He had heard *with great concern* that a very

extraordinary proceeding took place in another country with which he was connected by the ties of friendship and residence, and for the preservation of the strictest ties of friendship between that country and this no one on either side of the channel was more anxious. He had heard that the government of France had permitted prayers to be offered up by the Archbishop of Paris for the conversion of the sovereign and the people of this country from their heresies to the true Catholic church. He thought that it was very strange, as his learned friend M. Guizot was not a Catholic but a Protestant, that this should have been allowed. *Nothing could be more embarrassing* than that the religious authorities of one country should interfere with those of another. It was the more objectionable in this case, for the object to be obtained would make our queen forfeit her crown, towards whom the French people entertain feelings of love and loyalty as strong almost as those held by her own subjects, and who were most anxious that she should pay a visit to that country, where no one could be more popular than she was. [Hear, hear.] He was sure that they had no wish of the kind; but if these prayers were fulfilled, that would be the result; for it was a forfeiture of the crown for any sovereign of this country to be reconciled to the Church of Rome. He therefore said that he never had heard of anything more embarrassing, and it could only have arisen from an oversight, and he was sure that such a proceeding would be prevented for the future. He was not likely to be connected or influenced by any Catholic superstition, but he had great respect for those who professed this religion; yet he could assure his noble friend near him (Lord Camoys) that the prayers of his church in his (Lord Brougham's) behalf would be thrown away.”

Lord Camoys, if he had lived in the time of Voltaire and Rousseau, whose libertinism of every description Lord Brougham has labored to excuse, if not to embalm, would have as readily anticipated success for the prayers of the church in their behalf. In every material statement, the universal genius must commit some mistake of fact: the Archbishop of Paris did not designate Queen Victoria, and no permission or agency of government was thought of; at the present juncture, his pastoral letter was not the most judicious for his cause. A morbid terror about popery, produced by Puseyism, and the further plunges of its professors, revives in England; to aggravate it could not help Catholicism. Lord Aberdeen, quite a precisian in creed and ritual, would have been a little embarrassed, if his usual chosen interlocutor on foreign affairs had—uninvited and untutored—called for an official expostulation with his learned friend, Mr. Guizot, the Calvinist. The *entente cordiale*, however, would have been well turned and felt in the correspondence. The Journal des Debats, usually tender of Lord Brougham, who is a devout worshipper, public and private, of Louis Philippe, noticed his sally in apt and ingenious terms:

“Lord Brougham on this occasion indulged in one of those eccentricities which for some time past have been so habitual to him. He quarrelled with the French government, and especially with M. Guizot, for having permitted the Archbishop of Paris to offer up publicly prayers for the conversion of England to the Catholic church. The illustrious orator said that these prayers tended to nothing short of the forfeiture of the crown of

Queen Victoria. The sovereign of England is, in fact, obliged by oath to profess and uphold the Protestant religion; but we will observe to Lord Brougham that the Archbishop of Paris causes prayers to be put up for the conversion of the people of England in general, and not for that of the queen in particular, and that if England were to be converted it is probable that she would not depose the queen for acting in the same way as herself. In any case a complaint of this kind is the most extraordinary thing in the world on the part of such a man as Lord Brougham. We should have thought that the old and eloquent defender of the ideas of liberty and propagandism would have been the last to take offence at such a manifestation. Governments would not complain if they had only to contend against crusades and prayers, and it appears to us that the purely spiritual means to which the Archbishop of Paris has recourse for the conversion of those whom he regards as heretics are infinitely more in conformity with liberty of conscience than the acts of parliament which have just been repealed. Every man speaks, preaches, and prays for what he believes to be the truth. The Protestants have a simple means of replying to the prayers of the Archbishop of Paris. Let them resort to reprisals. Let the Archbishop of Canterbury ordain prayers for the conversion of France to the Anglican church. Lord Brougham may be assured that nobody here would see in such a step any attack upon liberty or upon the government."

You understand that all Lord Chancellor Lyndhurst's zeal for religious toleration has burst forth since his marriage with a Jewish lady, a fortunate influence for all the Christian recusants! Neither the Bishop of London nor his brother of Exeter, any more than Lord Brougham, is spared by the London press for the part they took in the curious debate on the surviving penalties and restrictions "in more than thirty acts of parliament" of which the chancellor and Lord Camoys exposed the enormity and absurdity. British writers have often shuddered and wailed over the *code noir* of the southern states of our union; it might still be deemed a white or blushing code by the side of the British statute-books in the various legislation with regard to Papists, Dissenters, Jews, and Jacobites. So far as statute-books exemplify the spirit of liberality, Christianity, and humanity, and, of course, real civilization, or the reverse, those of the Union, and even of any of its members, might be proudly compared with any European whatever. The *Times* and the *Daily News* are particularly irreverent towards the mitred alarmists: if you wish your readers to be properly acquainted with Lord Brougham, you will copy the editorial sketch of the *Times* of the 28th ultimo. The protectionist writers have discovered that the noble lord, in the second volume of his lives, &c., just issued, has brought out and applied the doctrines of Adam Smith, whose life is of the number, in such a way as to invalidate, by that great authority, the cause of the repeal of the corn-laws, which the biographer advocates in parliament. It is, in fact, impossible for him to be consistent, sincere, or steadfast.

From the Truth-Seeker Magazine.

THE AGES.

SOCIETY, from the earliest ages to the present, has ever been in progress. The first dawns of

secular history—the twilight of the past—reveals it as rude and savage. Men, banded together as families and clans, made incessant war upon each other.

There was no law, but the law of the strongest.

This gave way before an increasing population, and the necessity of settlements. Hence arose the Feudal System.

A powerful proprietor secured to himself absolute right over a large body of dependents, whom he summoned, ever and anon, to make aggression upon some neighboring baron. Thus was presented the spectacle of servile dependence and irresponsible authority, and the consequent shock and tumult of irregular power. The elemental forms of society were in frequent and dread collision.

But population pushed wider its limits—the strength of contending families and factions, by repeated measurings, became known and defined, and, therefore, less turbulent.

A more fixed order was educed, which gave birth to a fairer civilization.

Then came the Age of Chivalry. It was the triumph of women. Devotion to the fair sex its basis—a courteous and gentle bearing its badge and symbol. It was the starlight age of nations.

At the sound of trumpet, forth came Rank and Beauty to the tented field, to witness, at joust and tournament, the pride and prowess of steel-clad knights.

The proud scion of a noble house sought distinction among his compeers by deeds of heroic gallantry or feats of perilous daring; or, to win the approving smile of some fair damsel, by fearful adventures in gloomy woods and haunted caverns. He assailed enchanted castles, encountered giants, and fought with fiery dragons. He thus achieved the desires of Love and Beauty.

But this gorgeous pageantry, and these fantastic forms passed into deeds of sterner truth and intenser character.

The church pointed to Palestine. A chord was touched that thrilled through the whole heart of society. The ardor of the knight was kindled by a holier fire; he assumed "*the cross*," and went to battle with the Infidel for the holy sepulchre.

It was an event to stir up men's minds, and operate on future generations. The old monotony was broken up by new and marvellous activities. A wider knowledge and more thoughtful habit were diffused among the nations of Europe.

The crusades came to an end; and soon, arose, in distinctive forms, the contest between the church and the civil powers; and in the dim uncertainty, the true principles and limits of government began to be studied and shadowed forth. Commerce, and the spirit of discovery, were, in the meantime, gloriously awakened. Liberalizing ideas were set loose and began to float through society, and right notions of liberty took root and grew.

Ere long the art of printing was discovered; and scarcely had that stupendous engine of moral power been planted on the firm earth, than a voice of thunder was heard reverberating through the forests of Germany, and amongst the mountains of Switzerland—re-echoed even with a louder note from the hills of Britain and the wildest glens of Scotland. It was the voice of many multitudes aroused from the sleep of centuries.

The foundations of the Vatican trembled, and the papal empire underwent an irreparable disruption. The whole moral aspect of Christendom

was changed. The nations stood forth in the freshness of a new creation.

Philosophy, which had already begun to revive, now fully arose from its torpor; shook off the weight and dust of ages, and expanded in its orb of freedom.

Letters, which had suffered a long eclipse, reappeared with more than original power and splendor.

Every succeeding age has witnessed nobler triumphs of science, and the genial progress of civil and religious liberty.

Commonwealths are settled, or are being settled, on the basis of utility; communities are become orderly, and kings constitutional. From this freer state of the human mind, and happier condition of society, innumerable institutions have arisen for the intellectual, social, and moral elevation of mankind. "As one star differeth from another star in glory"—so do these in fitness and effect; while of this bright circle of benevolent influence THE GOSPEL is, and ever must be, the glorious source and centre.

Conspicuous and foremost among the lights of our moral firmament is the *Temperance Reformation*.

Fitly harmonizing with the beautiful tendencies of modern civilization, it will become a grand instrument in working out the era of universal enlightenment and blessedness. Reflect on the opinion it attacks—the fatal spring of a thousand ills and a thousand woes;—on the habits it proposes to eradicate—incompatible with a high state of intellectual moral attainment:—and its vast and comprehensive bearings immediately rise before the view.

It is no pitiful thing of sentiment—no puny bantling of a spurious philanthropy:—but a child of Truth and Science, and whose lineaments show it to be of giant race.

It is yet in its infancy; but the manhood of the moral Hercules will come. Its present achievements indicate its power, and foreshadow its final triumph.

Would that all who are engaged in its service could rise to a due conception of its importance, and ever steadily regard it from that high vantage ground;—would that the whole field of possible results were distinctly mapped out before the intellectual eye;—then would there be no lack of zeal and no faltering of purpose. The magnitude and sublimity of the end would attract us on to its consummation.

Rightly is it cast upon the present eventful era—this crisis of the world—this momentous point where the old things of the past are closing, and from whence the new things of the future will issue and expand.

Strong, glorious, and hopeful is the contrast of the life and tendency of the nineteenth century, with the savage selfishness of the early peoples and of every intervening epoch of the world's progress. The past has been accumulating the present; this shall be resolved into wider issues, and these again expand into vaster ends and aims.

History is the unfolding of the high capacities of man, or rather of the benevolent wisdom of God; and less sublime is the glory of the opening day than this outbeaming of Heaven on the destinies of earth. The climax shall be—falsehood and vice put down—truth and virtue triumphant; and but one song shall be heard throughout the realms of intelligent being—"The Lord God omnipotent reigneth."

From the New York Observer.

LICENSED? TO DO WHAT?

LICENSED to make the strong man weak;
Licensed to lay the wise man low;
Licensed a wife's fond heart to break,
And make her children's tears to flow.

* LICENSED to do thy neighbor harm;
Licensed to kindle hate and strife;
Licensed to nerve the robber's arm;
Licensed to whet the murderer's knife.

Licensed thy neighbor's purse to drain;
And rob him of his very last;
Licensed to heat his feverish brain,
Till madness crown thy work at last.

Licensed, like spider for a fly,
To spread thy nets for man, thy prey;
To mock his struggles—suck him dry—
Then cast the worthless hulk away.

Licensed, where peace and quiet dwell,
To bring disease and want and woe;
Licensed to make this world a hell,
And fit man for a hell below.

X.

THE WAY THE IRISH WOMAN TOOK TO STOP HER HUSBAND FROM GETTING DRUNK.

A rosy daughter of Erin was busy at her wash tub, when some looker on observed that she wrung out the clothes with her left hand. "What, Judy, are you left-handed?" "Niver," she replied; "it is not left-handed I am, since there's only two things that I do with my left hand. One is to do what you see me doing now." "And what is the other?" "An' the other is to whip Jemmy." "What, whip your husband! How is that?" "An' I'll tell you how it is, plase ye: Jemmy would get drunk, and so I whipped him." "Well, did that make him leave off?"—"Niver a bit; for sure, the more I whipped him the more he got drunk." "And what did you do then, Judy?" "Oh, an' plase ye, I left off myself. As Jemmy would n't leave off getting drunk for my whipping, why, jist then, like a rasonable woman, I left off whipping him for gettin' drunk. And I took him on another tack. Says I to him, one bright evening, as we two were sitting alone, 'Jemmy,' says I, 'What is it, my Judy?' said he. So says I, 'Jemmy, if ye is not agoing to lave off getting drunk, I'll tell ye what I am going to do next.' 'What's that?' said Jemmy, looking up to see if I was in earnest.—'Well, I'll tell ye,' says I; 'I am going to getting drunk myself.' 'Don't do that, Judy,' says he. 'An' sure, I will,' said I. 'An' it will not be a spree now and then that I'll have, but I'll spree all the time. It is not the getting drunk every Saturday night that'll do me, but I'll be drunk every day in the week, and every night to.—An' we'll sell our table and our chairs, and our bed too, Jemmy, to buy rum.—An' we'll put little Jemmy into the work-house, and we'll be turned out of doors because we can't pay our rint.. an' then the officer shall come and carry us off to jail!' 'Stop! stop!' says he, 'an sure you don't mean so.' 'An' sure I do,' said I.—Jemmy hung down his head and said nothing. Says I, 'Jemmy!' But he said nothing, and pretty soon he got up and went to bed. The next morning he was up betimes, and after breakfast says he

to me, 'Come Judy, my dear, put on your things and go along with me.' 'An' where is it ye are going?' said I. 'Never mind that,' said he, 'come along.' So I went with him, and we both signed the pledge, and niver a drop of the critter has he tasted since."—*Dew Drop*.

DR. SENTER'S JOURNAL.

THE Historical Society of Pennsylvania has lately done itself credit by the publication of this work from the original manuscript. Dr. Senter, a native of New Hampshire, was pursuing the study of medicine at Newport, R. I., when the battle of Lexington opened the revolutionary war. He immediately joined a body of Rhode Island troops as surgeon, and having reached Cambridge, where the American army was encamped, he was shortly after appointed to the detachment entrusted to General Arnold for the invasion of Canada, by way of the Kennebec river. This little work is a plain but graphic narrative of the difficulties, dangers and sufferings, of that memorable expedition. A large part of the forces abandoned the enterprise in despair; the undaunted remainder pushed on and reached Quebec, after the most dreadful sufferings from hunger, cold and want of every necessary of life. At Quebec they were joined by General Montgomery, who had previously taken Montreal. It is evident from this journal that, had the American General had double the number of men, Quebec must have fallen into his hands, and the province of Canada might now constitute a portion of our union.

The party left Cambridge in September, 1775, and passed through Newburyport and Salem to Newbury, where they embarked in transports for the mouth of the Kennebec, up which river they sailed to a short distance above Gardiner's town, now called Gardiner. Here they took to their batteaux, and after sundry accidents by water, and having to carry their boats across a number of portages, around rapids and waterfalls, they reached, on the 24th of October, a part of the river where they found it impossible to proceed any further with the remainder of their boats, except by hauling them from the shore by towing lines. Their provisions had fallen short, and on that day the doctor joined "Colonel Greene's division, waiting for the remainder of the army to come up, that they might get some provisions ere they advanced any further." They were "almost destitute of any eatable whatever, except a few candles, which were used for supper and breakfast the next morning by boiling them in water gruel," &c.

"A council being here held whether all or part only should proceed, it was decided by a majority of one vote that all should proceed. Lieut. Col. Enos, however, who had been in the majority, shortly after changed his mind and joined the returners. The party that resolved to proceed were now one hundred and fifty-four miles from the Canadian inhabitants, with a howling wilderness between them. On the 27th of October, the doctor says:—"Our bill of fare for last night and this morning consisted of the jawbone of a swine, destitute of any covering.—This we boiled in a quantity of water, that, with a little thickening, constituted our sumptuous eating." Their way led them over mountains and through swamps and thickets, previously untrodden by the foot of civ-

ilized man. They frequently had snowstorms of great violence, and disease thinned their ranks. November 1st he states:—"Several had been entirely destitute of meat or bread for many days. These chiefly consisted of those who devoured their provisions immediately, and a number who were in the boats. The voracious disposition many of us had now arrived at, rendered almost anything admissible. Clean and unclean were forms now little in use. In company was a poor dog who had hitherto lived through all the tribulations, who became a prey for the sustenance of the assassins. This poor animal was instantly devoured, without leaving any vestige of the sacrifice.* Nor did the shaving soap, pomatum, and even the lip-salve, leather of their shoes, cartridge-boxes, &c., share a better fate." On the 8th of November they reached Point Levi, opposite Quebec. "The confusion in Quebec was very great. But if we had been in a situation to have crossed the river immediately upon our arrival, they would have fallen an easy prey." Five British vessels sailed down the river, supposed to be laden with valuable effects. On the night of the 13th they crossed the river without discovery from the British fleet, and without the loss of a man.

The bad condition of their arms, and a deficiency of ammunition compelled them on the 18th of November to raise the siege and proceed eight leagues up the St. Lawrence, whence they despatched messengers to Montreal to apprise Gen. Montgomery of their position and condition. On the 1st of December Montgomery joined them with part of his forces, and in a few days Quebec was again besieged. The doctor details some of their transactions in language altogether medical, thus: "Monday 11th—Agreeable to prescription, fifty-five more of the fire-pills were given to the Carletonians last evening. Operated with manifest perturbation, as they were [as usual] alarmed. Bells beating, dogs barking, &c. Their cannonade still continued on the battery, but to no advantage. Forty-five more pills as cathartic last night." Among other works the Americans built a battery of ice, but were obliged to abandon it. A most interesting account of the attack upon Quebec and the death of Montgomery is next given, but it is too long to transcribe.

Arnold was severely wounded in this assault, and displayed great courage on the occasion. "We entreated," says Dr. Senter, "Col. Arnold for his own safety, to be carried back into the country where they would not readily find him when out, but to no purpose. He would neither be removed nor suffer a man from the hospital to retreat. He ordered his pistols loaded, with a sword in his bed, &c., adding that he was determined to kill as many as possible if they came into the room. We were now all soldiers, even to the wounded in their beds were ordered a gun by their side." In June, the army evacuated Canada. The doctor describes their "unaccountable misfortunes" either to the neglect in the generals' not apprizing congress of the state of the army from time to time; or to the neglect of congress to provide for their necessities.—*Pennsylvanian*.

* This dog belonged to Mr. Steele, of Pennsylvania, brother of the late Gen. John Steele, of the Philadelphia custom-house. We shed tears for his loss, whilst his comrades were eating him.

From the Athenæum.

MR. JAMES, THE NOVELIST.

The Step-Mother. By G. P. R. JAMES, Esq. 3 vols. Smith, Elder & Co.

THERE is in rapidity of production a suggestion of power, which leads the mind, *ex mero motu*, to look for the qualities by which the rapidity and its inference are to be alike justified. It is true that this rapidity is quite as likely to have another source—that a consciousness of power and an unconsciousness of weakness may have a common expression, as temerity affects to speak the language of strength—that a great moral authority has described the fool as being often more forward than the angel on the same ground—and finally, that it is entirely illogical to accept quantity as in any degree a measure of quality:—still the prejudice exists—mere accumulation has its own dynamic value—and extent is assumed, on its first suggestion, to imply depth. When we see issue after issue from the same intellectual treasury, our first inference is of its wealth; and we recur for illustration rather to the multiplied creations of Scott and the sudden marvels of Michael Angelo, than to the garrulity of the gossip or the manufactured ingenuities of the merchant of delf.

The author before us abounds in this sort of imputed strength. The acreage of his literary estate is now very considerable—and fast increasing: but a strong suspicion of its want of value is spreading amongst readers. Each new addition is purchased by him, there is too much reason to think, at less and less of intellectual cost—and yet was less worth the purchase than the last. In fact, it is believed, in many quarters, that Mr. James started in life with but a slender literary capital; and early invested it in a particular form of fiction which yielded him an excellent return: and that this return he has been unwisely expending since in barren additions to his literary seigniorship—whose plashy waters, flavorless fruits, and colorless flowers are, in each new instance, less and less of temptations to “a generous and discerning public.”—But leaving the language of metaphor—which has caught our critical garment in walking over this last of Mr. James’ enclosures—we have, in fact, been curious to inquire into the disagreement between the promise of this author’s abundant production and the very unsatisfactory result which continually remains as its fulfilment;—to trace, if possible, the secret of those devices by which the facility is made to grow, as the force is declining—whereby the complement, menaced by the failure of means, is kept up by the substitution of their appearances; and we think we have made some discoveries, the communication of which may be useful to novel writers of Mr. James’ class.

The first and most obvious contrivance for the attainment of quantity is, of course, dilution; but this resource has practically its limit, and Mr. James had reached it long ago. Commonplace in its best day, anything more feeble, rapid—*sloppy*, in fact (for we know not how to characterize this writer’s style but by some of its own inelegancies)—than Mr. James’ manner has become, it were difficult to imagine. Every literary grace has been swamped in the spreading maramas of his style. Gossipry of the quality which proverb has assigned to the tea-table—sentimentalities such as are beloved of ladies’ maids, &c.—faded moralities, that look wan from their great age and originally doubt-

ful constitution—mix up with the vulgarities of a genteel writer, (for Mr. James is a very genteel writer,) into a farrago whose flatness has one only redeeming circumstance. An air of easy self-esteem presides over the delivery of all these platitudes which, out of the very heart of weariness, will raise an occasional smile; and this is now and then exalted into an absolute enjoyment by the ludicrous effects which the writer’s utter carelessness of manner produces, and his perfect unconsciousness of any such effect.

Mr. James’ dedications we have always thought models in their kind. Much may be learned of a man by his dedications. Something of the character will peep out in these treacherous reporters, where a writer commits himself to them freely. The preface and the dedication are, of course, carefully written parts of a book. Standing as each does prominent and detached—having no support for its weakness from the other portions of the volume—it has to make its impression by its own particular merits, and is usually put into attitude with sufficient care. Nowhere, then, do this author’s feebleness of manner and smirking intention show more conspicuously than in his dedications. His highest key-note is here touched; and it falls after this flat and unvarying fashion on the expectant ear:—“My dear —, a few words will be sufficient for the dedication of this book to one for whom I have so great a regard, and who, I am proud to believe, has so great a regard for me.” This is the very style of the “Complete Letter-Writer.” The comfortable reciprocity, too, which it announces, runs through all Mr. James’ compositions in this kind, in forms of about equal ingenuity and with a fine monotony of tone and intention. All his dedicatees are very distinguished men, as he assures them—giving them, at the same time, to understand that a leading proof of their title to distinction consists in the manner in which they have distinguished himself. On his own showing, this writer would seem to have the uncommon friendship of a larger number of gifted persons than fall as friends to most men’s share; and his design appears to be to reward (or perhaps secure) each with a separate dedication. It is pleasant work enough, this dedication-writing, as Mr. James manages it; because he never fails to make it render tribute, in the shape we have mentioned, or some other, to himself. In the present instance, we do not think he has been fortunate in his treatment of this delicate instrument—because while he assures, as usual, the gentleman who is the object of his dedication, that he (the dedicatee) possesses uncommon powers, it is incautiously added that he has given little proof of it.

To return, however, to Mr. James’ contrivances for getting three volumes out of small materials—and then three more out of the same by turning them. For this purpose, Mr. James has found great resource in description. Every man, woman, and child, town, village, house, tree, brook, and field that comes in his way is largely described—and most of them re-described. Then, the component parts of such of them as have component parts susceptible of description, are separately described—and this, of course, is ticklish work which leads to mistakes. Next, Mr. James will find out that something is beyond description, and therefore cannot be described; and having taken a somewhat unfair advantage of the reader by winning his ear to the explanation of this impossibility

—he then proceeds to describe it! We will confess that this has more than once tried the imperfection of our tempers sorely; because our immediate feeling was that we had been imposed on: but we have usually restored our good humor to the author at the second thought, which brought the sense of his ingenuity.—All these devices, however, Mr. James has found far from sufficient to eke out the paucity of narrative material; and before we proceed to relate the author's grand and paramount discovery, we must point out a few of the many supplementary means which the necessity of the case suggested to his invention as feeders. They form curious examples of adaptation. Our readers are to understand that the gain of a single word is of importance in our author's system; and like a man who has a sum to make up by a given day, with difficulty in doing so, he will not reject the smallest coin. Hence iteration, redundancy, and tautology, are brought to bear on the demand; and a page or two perhaps obtained by the appearance of such epithets as "exact" and "precise," repeating and confirming each other, in the same sentence. To this class of helps, too, belong expletives—which are very abundant; and interjections—a favorite example of which insinuates itself under the guise of a fond and confidential intercourse with the public; and, in the affectionate form of "dear reader," makes altogether a not inconsiderable amount of contribution to these volumes. It is, also, one of the writer's most successful pleasantries. Paraphrase and circumlocution next do something for him. For example, if he wishes to inform the reader that it is half-past one o'clock, he gives it in the form of a problem. The former is told that it was that time of the day which is represented by the hour finger on the dial pointing between the figures 1 and 2, while the minute finger was passing, or would shortly pass, over the figure 6. And the purpose for which this paraphrase is adopted is skilfully concealed under the pretence that it is offered as a grace of language.—An affectation of minuteness in matters indifferent is less successful in hiding its purpose—though the gain for which this exposure is incurred is, after all, but trifling. It is a very frequent device, however. "It was about four o'clock in the afternoon," Mr. James will say, speaking simply this time, but recovering his loss from doing so as follows—"or it might even be a few minutes earlier." Of course, the reader will suppose, as we did till we became accustomed to the sort of thing, that the words have some significance—do service of some kind—that a careful marking of the time is important to the incidents—that the addition, in fact, is not a mere redundancy. Absolutely and positively, as Mr. James would say, nothing else! The words are utterly without purpose, mere loungers—filling conspicuous situations, but enjoying them as sinecures; though the writer would perhaps again offer them as style—conveying the impression of reality. If Mr. James can give no reality to his incidents from within, he will scarcely animate them by such tricks as this. In the present volume Mr. Timothy Quatterly had passed his meridian—"being fifty-eight, if not fifty-nine:"—and so on, to an amount that makes an appreciable figure in the account. From moral reflections the author gains important assistance; and this resource is accordingly worked, we are bound to say, altogether beyond the limits of conscientiousness. Curiously enough, however, while these lengthen

the book for the author they shorten it for the reader—because he skips them. It is not in human strength to read them. We dare not offer one of the heavier passages to our own readers; but will give the most cheerful we can find—made cheerful by the fact that it is intended as at once a specimen of the reflections in question and of the author's liveliness. We do earnestly hope that the reader will not find the very liveliness a heavier thing than the heaviness which we have avoided for his sake: but if happily he can float upon this example as we just can ourselves, we ask him to think what effect pages upon pages of moralities—intruding themselves everywhere, incumbering all the incidents, keeping up a regular chorus—not Greek—and beside the most cheerful of which this looks lively—must have upon the spirits:—

"Intense selfishness is a very excellent thing—in some respects—for those who possess it; for although they may be very sensitive upon the one central spot, yet, at every other point, where all the rest of the world are vulnerable, they are guarded with triple steel. I wonder when Lord Bacon wrote his essay upon the wisdom of the ancients, he did not show that the character of Achilles was a mere allegory of the blind Greek to represent a perfectly selfish man; for there cannot be the slightest doubt that such was the case. Take his whole history, and it is evident; first, he was dipped in Styx, that hellish stream which rendered him invulnerable to all the slings and arrows of the general enemy. There was but one point in which he could be wounded, and that was the lowest point of his whole frame, his right heel. What could this mean but that he could not be reached through the head or the heart? This gave him very great advantages over all his companions, and he was able to overcome, and even kill, a great many much better men than himself; but still it did not secure him happiness, nor obtain for him ultimate success. What a fine moral to the allegory!—and at length a Phrygian boy, in a night-cap, found out the weak point, and despatched him with a missile!"

Let us, while we are on the article of liveliness, illustrate the author's manner of being lively in his general style, by a simple and accidental example—but one of an endless family:—"Oh, promises, promises! pie-crust is adamant to you, and puff-paste is not more fragile."—With reference to the philosophical portions of Mr. James' volumes to which we have alluded, we may observe, too, that there are many parts of them, as well as the openings of his descriptions and some other parts of his works, which are probably kept stereotyped. "There are moments in the life of every man" alone yields no inconsiderable supply of text to these volumes; most of the chapters begin with some little ornamental bit—and frequently the same—like an initial letter; and we scarcely remember any novel of Mr. James' before this, in which "two horsemen might not be seen riding up (or down) a hill"—the one being always young and cheerful, and the other older, stouter, and more thoughtful—but the two obviously contrived by the author to fit into any landscape.

But we are not yet at the end of Mr. James' devices for filling up the prescribed amount of paper; and the next is a clumsy one indeed—clumsy in itself, and looking clumsier beside the neatness of some of the others. It affects the conduct of his incidents, and may be called Repetition. The course of those, as in most other

stories, carries the writer backwards and forwards from place to place; and compels him to deal with a set of actors in one who are necessarily ignorant of what is doing, at the same moment, in another. These separate links of the tale have, of course, to be afterwards connected; and this is done in the works of others, either by assuming the necessary communication—or by letting us know that it was made, without going into the terms. Mr. James will not throw away matter in any such manner. After having gone through a series of events with ourselves, supposed to be lookers-on, he repeats them in our hearing for those who were not. Men recapitulate to each other what we already know to have passed, instead of being supposed to do so—knit together their separate threads of narrative before our eyes—and, so far as this particular book is concerned, in as coarse and bungling a manner as we remember to have seen such workmanship performed. Thus, we have the same portion of the narrative two, and occasionally three, times over. Nothing but the very productive character of this contrivance could, we should think, have reconciled the author to its awkwardness; but in his system that becomes a most important element, whatever its defects, which adds a third or fourth to the raw material of his volumes.

The last and greatest of Mr. James' discoveries in the way of resource, however, returns to the original field of Description—and throws all such minor contrivances into shade. When Mr. Pitt discovered the window tax, he was considered to have carried taxation to its most transcendental point; because, however all other forms of imposition might be crippled by man's evasion or self-denial, a certain portion of light and the air which is its accompaniment, is essential to the mere existence of the human plant; and it was a triumph of the financial imagination to intercept the elemental provision as it came direct from heaven, and "excise" a nourishment which is indispensable. A new world of resource was opened up to Chancellors of the Exchequer. Pitt was the Columbus of taxation, and the window tax his America. Expatiating in a region less sublime, Mr. James' discovery is as boundless for his purposes; and we see no reason why, by its means, he should not complete his project in favor of his distinguished friends by a book per man. His new and most ingenious application deals with objects, alike sensible and speculative, no longer by their positive, but by their negative qualities—describes them not by properties but by the absence of them. Now, whatever any particular object may be, there are so many things which it is *not*, that we see scarcely a limit to this mode of dealing with a subject. The hint appears to have been taken, no doubt, from an Irish form of direction to a party inquiring out some place or abode—whose elaboration has often been quoted as having a whimsical relation to the negative result. The formula, as our readers are aware, is something like this:—"You know the house that stands somewhat forward in the middle of the street, with a bow window, three chimneys—one with a pot on—a brass knocker on the door, and a crack in the centre pane of the middle first floor window?" "Yes! I know it perfectly."—"Well, *that's not it!*" Accordingly, Mr. James gives long accounts of what happens in some cases, for the purpose of informing the reader that it does *not* happen in the one before him—doing so, be it observed, in pure and gratuitous speculation.

With the accustomed economy of his entire system of prose-spinning, too, he applies this invention in minute, as well as large, instances—infusing its genius throughout his style. The very first sentence, in the very first description in these volumes informs us that "a certain county in England cannot exactly be called a *midland* county, because at one point it comes within a few miles of the sea." It is in a spirit somewhat akin to that of this last contrivance, that effects are occasionally produced which strike us with the sense of an imposition practised, already mentioned as generated by another of the author's ingenuities. After giving some pages at the very outset of his volumes—when our attention is particularly engaged, because we desire to know the parties and positions with which we are about to deal—to an elaborate description of a certain nobleman, he has no remorse in presenting us with the following *non sequitur*:—"Now, doubtless, the reader may imagine" (doubtless, indeed,) "that, because we have introduced this noble lord before any one else to his notice, and have spoken of himself and his dwelling somewhat at large, we intend to make him one of the principal characters in the story, and introduce him frequently upon the stage. *But such is not at all the case.* You have seen him, dear reader, and you will never see him again." Dr. Kitchiner's prescription for dressing a salad suggests itself at once:—very particular directions are given as to the preparation of the ingredients—followed up by the final one to *throw the prepared mixture out of the window!*

Such is the loose, rambling, incoherent, unmeaning style in which a popular novelist thinks fit to entertain (we dare say Mr. James would even call it instruct) the public! Anything that can fall from his pen is supposed to be, by virtue of its origin, good enough for the purpose; and Art is held altogether below the necessities of a writer of so many books as Mr. James. We will not dwell, in the presence of these more serious charges, on mere grammatical slovenliness; such schoolboy errors were sure to follow in the train of a literary truancy like this. Nor will we dwell much upon the story itself—far more reprehensible than all the rest. "We have led the gentle reader by the hand," says Mr. James, "all about the little town of Mallington, and the paths in that neighborhood. If we had been the surveyor of the roads for that district, we could not have laid them out with greater accuracy." Perhaps so; nay, it is too true; their tracing is laborious enough: but we fancy the surveyor of the district must have laid them out with greater clearness, or lost his place. The issue of Mr. James' multiplied and minute descriptions is, to create, at length, a maze, in which the reader can by no effort see his whereabouts, and wanders vainly about, like the babes in the wood, till he gives it up, like them, from very hopelessness. So, also, with the incidents of the tale. Situations are complicated and events return upon themselves, in the attempt to get the effect out of their number which the author cannot communicate to their kind; till we lose the sense of where we are in the story—and, in a fit of indifference, at last give up the attempt, and let the author lead us about where he will. We know not if he will think it a compliment to be told that he has thus obtained involuntarily another mystery to add to the many which he has sought. Be that as it may, however, this confusion of situation and incident, mixed up with

these commonplaces of sentiment, will be full of attraction for circulating-library readers; and yet this writer has not a chance at an entanglement against the literary parent of "Susan Hopley." Of the less exceptionable characters we shall say nothing, (which is just what they demand,) beyond earnestly recommending Mr. James never to be seduced into trying his hand at the facetious again. It is inconceivable how a man of sense, as Mr. James is, can have been betrayed into folly so like a schoolboy's as the production of *Lawyer Quatterly*. But the worst remains behind. On the present occasion Mr. James has descended into the vicious school of "Jack Sheppard;" and nowhere have its immoralities seemed grosser than in his page—from the coarseness, yet feebleness, of the drawing. Never did slang sound so vulgar as in these volumes, because so impressive and uncharacteristic: never has the face of ruffianism looked so dirty, because never so pale. Murder, robbery, and seduction are the staple of the book; and look only the more hideous in their masques because Mr. James has not succeeded in making any one of them speak its natural language.

How long are the public to feed on garbage like this! How long are the growing thirst for what is knowledge, and taste for what is beautiful to have no better representative than such works in a favorite branch of our literature! How long are we to appear before the stranger by such literary ambassadors as these! How long are such things to be called literature at all! While the popular mind is awakening to hear, never was the popular teaching which speaks by fiction at so low an ebb. The passion for literary fame has yielded to the mere love of literary reputation (which is not the same thing;) the self-respect of genius to a cold calculation of gain. The taste for the high and pure is exchanged for a sordid ministry to what is corrupt in feeling and vicious in instinct. It is of the class, not the individual, that we are speaking now. Is the literary conscience extinct amongst our novel-writers! Have they deposed Art! But the principle of redemption lies finally in that under-current of improvement which we have described as going on; and which, if it did not finally purify the literary atmosphere to which it is exposed, must itself perish. The two conditions cannot much longer coëxist; and we have faith in the latter, because it is the healthy one. An idle, vulgar, unmeaning literature like ours of to-day must give place to something higher and nobler, before the better sympathies and purer cravings that are abroad:—and such a work as Mr. James' "Step-Mother" is, we think, calculated to help on the welcome change.

A FOREST WALK.

BY ALFRED B. STREET.

A LONELY sky, a cloudless sun,
A wind that breathes of birds and flowers,
O'er hill, through dale my steps have won,
To the cool forest's shadowy bowers:
One of the paths all round that wind,
Traced by the browsing herds, I choose,
And sights and sounds of human kind
In nature's lone recesses lose:
The beech displays its marbled bark,
The spruce its green tent stretches wide,
While scowls the hemlock, grim and dark,
The maple's scalloped dome beside:

All weave on high a verdant roof,
That keeps the very sun aloof,
Making a twilight soft and green,
Within the columned vaulted scene.

Sweet forest odors have their birth
From the clothed boughs and teeming earth;
Where pine cones dropped, leaves piled and
dead,

Long tufts of grass, and stars of fern,
With many a wild flower's fairy urn,
A thick elastic carpet spread;
Here with its mossy pall, the trunk
Resolving into soil, is sunk;
There, wrenched but lately from its throne,
By some fierce whirlwind circling past,
Its huge roots massed with earth and stone,
One of the woodland kings is cast.

Above, the forest tops are bright
With the broad blaze of sunny light:
But now a fitful air-gust parts
The screening branches, and a glow
Of dazzling, startling, radiance darts
Down the dark stems and breaks below;
The mingled shadows off are rolled,
The sylvan flower is bathed in gold:
Low sprouts and herbs, before unseen,
Display their shades of brown and green;
Tints brighten o'er the velvet moss,
Gleams twinkle o'er the laurel's gloss;
The robin, brooding in her nest,
Chirps as the quick ray strikes her breast;
And, as my shadow prints the ground,
I see the rabbit upward bound,
With pointed ears an instant look,
Then scamper to the darkest nook,
Where with crouched limb, and staring eye,
He watches while I saunter by.

A narrow vista, carpeted
With rich green grass, invites my tread;
Here showers the light in golden dots,
There sleeps the shade in ebon spots,
So blended, that the very air
Seems network, as I enter there.
The partridge, whose deep-rolling drum
Afair has sounded on my ear,
Ceasing his beatings as I come,
Whirrs to the sheltering branches near;
The little milk-snake glides away,
The brindled marmot dives from day;
And now, between the boughs, a space
Of the blue laughing sky I trace:
On each side shrinks the bowery shade;
Before me spreads an emerald glade;
The sunshine sleeps its grass and moss,
That couch my footsteps as I cross;
Merrily hums the tawny bee,
The glittering humming-bird I see;
Floats the bright butterfly along,
The insect choir is loud with song;
A spot of life and light it seems
A fairy haunt for fancy dreams.

Here stretched, the pleasant turf I press,
In luxury of idleness;
Sun-streaks, and glancing wings and sky,
Spotted with cloud-shapes, charm my eye;
While murmuring grass and waving trees
Their leaf-harps sounding to the breeze,
And water-tones that tinkle near,
Blend their sweet music to my ear;
And by the changing shades alone
The passage of the hours is known.

THE WORLD IS NOT SO BAD AS IT IS BELIEVED TO BE.*

I VENTURED this observation to my companion over an excellent breakfast in the travellers' room at the Crown Inn, Devizes. He was a veritable "traveller," arrived late the night before; but I had been such by courtesy only, while making this inn my head-quarters for some preceding days, devoted to antiquarian researches in the neighborhood. "No," said I, in answer to a remark which I thought too depreciatory of men in general, "the world, in my opinion, is *not* so bad as it is believed to be."

"The world," replied my new acquaintance, "I think a very wicked world. It shows its wickedness by its suspicion. It trusts nobody; and why! Because it knows it is not worthy to be trusted. And so, as I expect it will place no confidence in me, I place no confidence in it. 'Trust no man any farther than you can see him;' that's my maxim."

I was provoked by this to relate a little "incident of travel," which, occurring to myself not above a week before, had proved, to my own satisfaction at any rate, that the world *will* sometimes trust those whom it does not know. I had reached Salisbury after dark, and all the shops were closed. Notwithstanding, I presumed to knock at a bookseller's opposite my inn, and beg to be allowed to purchase a "guide" to Old Sarum and Stonehenge, as it was my wish to employ an hour or two in recruiting my knowledge (then wholly derived from reading) of those interesting antiquities, the better to enjoy a personal inspection of them the next morning. The worthy tradesman was "out of the guide," but would with pleasure lend me a book—a portly volume, and with plates, which, he assured me, contained all the information I required. Surprised, I stated that I was only at the—naming where the coach had set me down—for a night, and should quit in all probability soon after daybreak. "That," he said, "need make no difference; you can leave it for me at the inn." Even my desire to make a proper compensation for the loan was not acceded to, on the delicate ground that, as the books did not "circulate," he, the bookseller, was ignorant of the proper charge. As I told my story, methought the traveller's eyes opened wider; and when I had done, he was so rude as to give the lowest possible whistle. But, apologizing, "I'll believe you," he said; "though it's the strangest way of turning stock, I ever heard of. Not very likely to make fifty per cent. of his money. Well, people are not always awake. But I say still, 'Trust no man any farther than you can see him.'" Long before our conversation had proceeded thus far, we had, I should think, equally arrived at the opinion, that two persons could hardly be more unlike each other, in their whole turn of mind and pursuits, than were my companion and myself—he entirely devoted to business, and I the rather given to literature; he a keen man of the world, and I—an antiquary. But, nevertheless, we got on surprisingly well together; and our discourse, I am persuaded, gave a zest mutually to our breakfast.

It appeared that we were going the same road; though he only as far as Reading, and I through

that town to London. Having settled with the "house," therefore, we took up a position in front of the "Crown," to be ready to mount the first coach from Bath. In those days stage-coaches were in their glory; and several, whose destination was the metropolis, changed horses at Devizes daily. But, for a reason which I forget, coach after coach came up, and not a place, outside or in, could be obtained. My friend bore the arrival and departure of the fully-loaded vehicles with true traveller-like equanimity; but my—yes, I confess it—my ill-humor grew with every disappointment: and when the last day-coach was gone, and we were left without another chance until the evening, I had so little of the traveller's heart remaining in me, as to turn a deaf ear to the suggestion of my brother in misfortune—that the best way to fill up the time would be by "dinner and a bottle." To tell the exact truth, I employed the intervening hours in a spiritless inspection of some relics of early Norman architecture possessed by the oldest church in the place, taking a solitary snack at a small road-side inn, in preference to a good meal with fair companionship at the "Crown." My conscience smote me for this, when, on returning, I saw my friend already at his post, on the spot we had so fruitlessly occupied in the morning. I thought too that his greeting was not quite cordial. But almost immediately the evening coach drove up; it had room for both outside; and as we sat together I took an opportunity to say that vexation at the imagined possibility of being kept another night at Devizes, when it was of great consequence to me to be in London early the next day, had rendered me not "i' the vein" for good fellowship. The excuse was accepted; and our talk was cheerful until we had passed, as daylight was failing, the great barrow of Silbury, which my restored companion seemed interested to learn was not, as he had always supposed it to be, a rather considerable natural hill. When informed, however, that this same barrow was a work of the ancient Britons, and might boast an antiquity of at least two thousand years, he hoped he should be allowed to "tell *that* again with some discount."

But now a new unpleasantness began to be felt by one of us. It was early summer; and, for a brief week's excursion, I had not thought of an equipment adapted to a night-ride through almost frosty air. My friend observed my deficiency; and remarking that, as a traveller, he was very differently provided for, proposed to invest me with a most capacious box-coat, which, he said, he could perfectly well spare, having another top-coat and a cloak besides. I demurred to the offer, since I should be only the worse off for having accepted it when he got down at Reading. "But my coat need n't get down at Reading," was his reply; "here's a card of our house in town; you can forward it when you arrive." The conversation of the morning flashed through my mind, and I hardly repressed an exclamation of astonishment. What! the traveller, the man of business, and of the world, confide a coat that must have cost seven or eight pounds, and which, as I had seen in the daytime, was still in excellent condition, to a perfect stranger, to one whose name even he did not know, and as to whose whereabouts "in town" he made no inquiry! As I donned with thankfulness the comfortable habiliment, having first deposited my card with its owner, I could not avoid repeating, "Trust no man any farther than you can see him." "Pooh!" said he; "safe as the bank at Salisbury." He shook my hand

* From a pleasant little volume, entitled *Literary Florets*, by Dr. Thomas Cromwell, consisting of short pieces in prose and in verse—"the products," according to the author, "of moments calling for no more important employment." London: J. Chapman. 1846.

heartily when he alighted at his destined hotel; and a nap I soon afterwards obtained in his coat was forwarded, I made no doubt, by my often murmured repetitions of, "The world is not so bad as it is believed to be."

WHERE SHALL I SPEND ETERNITY?—A lady had written on a card, and placed it on the top of an hour-glass in her garden-house, the following simple verse from the poems of J. Clare. It was when the flowers were in their highest glory.

"To think of summers yet to come,
That I am not to see!
To think a weed is yet to bloom
From dust that I shall be!"

The next morning she found the following lines, in pencil, on the back of the same card. Well would it be if all would ponder upon the question—act in view of, and make preparations for an unknown state of existence.

"To think when heaven and earth are fled,
And times and seasons o'er,
When all that can die shall be dead,
That I must die no more!
O! where will then my portion be?
Where shall I spend ETERNITY?"

Banner.

EASTER AT CONSTANTINOPLE.—A correspondent of the London Daily News, quoted in the English Churchman of May 14th, concludes a description of the Easter services, in a church at Constantinople, with the following singular picture:

"The throng was great; yet there was room to move about. I was struck by the picturesque confusion which prevailed among the crowd, the variety of costumes, and the expressions of the wearers. I saw nothing in their deportment which reminded me that I was in a church, except the reverent bearing of the poorer and simpler sort, the rustic pilgrims who had poured from their wild villages, to be present at the solemnities. The city-people talked about in groups, swaggered up and down, climbed up into pulpits, crowded the pulpit-stairs, sat, swinging their legs, sheathed in embroidered greaves in the window-benches, lounged, and stared, and fluttered their fustians, twirled their mustachios, and fired their pistols. I was prepared for this singular custom; but I cannot describe the strange effect which these profane reports had in the midst of all those sacred and solemn symbols of devotion, leaving behind them a heathenish smell of gunpowder. Now, a fire-arm would crack off at your ear, now, at a distant corner of the church. An order had been issued to prohibit this strange custom. However indecent the practice appears to our notions, it is extremely ancient, perhaps coeval with the use of gunpowder among the Greeks. They paid accordingly but little attention to the prohibition. A kavass, however, had introduced himself into the church in disguise, and marked with a piece of chalk the jackets of all he found discharging, or armed with pistols. This unfortunate being was detected in making his chalk signs. A dreadful row instantly ensued. He was beaten on the head with pistols, and after getting half killed was kicked out of the church. The doors were closed, and no one was permitted to enter who did not answer to the salutation from within, 'Christ is arisen.' Neither, indeed, was any force used on the part of the body of kavasses placed outside; but, at the end of the ceremony, they made prisoners of the ringleaders

of the tumult, when they came forth, without any difficulty, and led them off to prison, taking care to pay them off on the way for their rough treatment of the spy."

CORRESPONDENCE.

(Parts of Mr. Walsh's letters from Paris to the National Intelligencer.)

13 April.

PELIGOT, an eminent and very learned chemist, was delegated by the Paris Chamber of Commerce to examine the exhibition of manufactures opened at Vienna on the 15th May last. He has made an extensive, impartial, and able report. He represents Austria as possessing all the *material* elements of a great industrial power. Within the last thirty years past she has advanced greatly, the government having attended to "the development of production." The Polytechnic Institute of Vienna is highly extolled. Austria is wedded to the protective system. On the whole, her fabrics are sensibly inferior to those of France, according to M. Peligot.

The volume by Amedée Renée, which completes Sismondi's History of France, continuing it to the convocation of the States-General, in 1789, has won the sanction of competent critics. Sismondi is *charged* with having pronounced sentence under an unfair *republican* bias, on the monarchs who had done the most for the grandeur and political unity of France, and yet having dealt too severely with the revolutionary governments. In fact, Sismondi was a rigid moralist—a conscientious inquirer and writer. Hence, he spared neither king nor demagogue. His history does not reach the revolution; his ideas of it are merely conjectured from his moral reflections and judgments, and his essential character. More reliance is to be placed on his narrative than any other, prior or subsequent. The twenty-nine volumes are too much for readers of this day; the plenitude of the work will prove its misfortune.

Dumas, the first of French chemists, has just issued the eighth and last volume of his *Chemistry applied to the Arts*, and the fourth and last of his *Organic Chemistry*. Liebig's work on *La Médecine Opératoire* has already been translated into German, English, and Spanish.

The *Courrier du Havre* discusses the British and French intervention in Rio de la Plata, with facts and opinions like those of the able writer in your Democratic Review. Sir Robert Peel's subterfuges are roundly exposed and censured. Due stress is laid on the danger and insufficiency of the plea that the prolongation of the struggle between Buenos Ayres and Montevideo injured French and British trade—as if most wars did not affect commerce in general. By the same logic, if France and England should quarrel and fight, the whole of the rest of the trading nations of the world might combine to assail and cripple one or the other, or both. *La Presse* of the 4th instant has a long and interesting private communication from Rio on the intervention. The Brazilian minister of foreign affairs formally denied to the legislature that he had ever contemplated the least coöperation in hostilities on Buenos Ayres, or ever anticipated them. The Anglo-French intervention was so unpopular in Brazil that a French newspaper, established at Rio, barely escaped, through a change of title, "summary execution" by a mob. The correspondent says: "For cotton and tobacco, Paraguay is, in the southern hemisphere, what Louisiana and Texas are in the north. Its crops

may even prove the most considerable. Hence, England's projects of colonization in Paraguay, which cannot be accomplished unless the navigation of the Parana and its tributaries be free. What she therefore fears most is competition, either political or commercial. You thus may understand her enmity to Rosas, and her measures of violence to open the interior for her free access. It is a master stroke to have involved France in the strife—to render the odium common to them, though the fruits of the outrages would not be in anything like an equal measure." Mr. Brent's protest is described as an important document, which had produced a great effect.

25 April.

An official report states the number of political refugees in France, last year, to have been twelve thousand two hundred and three, of whom seven thousand seven hundred and seventy-eight were supported by the French government. Nearly four thousand Poles are included in the latter description. About a thousand Poles supported themselves. It may be conjectured that the chief business of the great majority was the prosecution of schemes of insurrection in the north. The thousands of Italians and Spaniards were employed in the same way for their respective countries. This is very serious work for the governments north and south, and naturally causes France to be regarded as the revolutionary furnace.

Didot advertises at length Mr. Prescott's History of the Conquest of Mexico, translated into French by Amedée Pichot, in three volumes octavo, price eighteen francs: with an account of ancient Mexican civilization and a life of Cortes.

Our exports to Great Britain and her dependencies, observes the *Journal des Debats*, are double what they were ten years ago. They now amount to one hundred millions of francs, while the consumption, in France, of British products does not exceed twenty millions. The British money directly spent in France is incalculably more than the French spent on the other side of the channel. Our numberless British visitors are not perhaps aware how much of the welcome which they experience even at court is due to the consideration of that kind of shower in which Jupiter descended into the lap of Danaë.

2 May.

For a fortnight past our heads have swarmed with princes, pachas, marquises, lords, and right honorables of every notch. Viscount Palmerston left us on Tuesday last, surrendering our capital to Ibrahim Pacha, whom he beat out of Syria. The Viscount made himself the eastern lion, and played his part skilfully. His manners and pretensions ingratiated him with the heads of the government and the dynastic circles. He entered the chamber of peers with the Duchess Decazes, wife of the grand referendary, most complacently leaning on his arm. Ibrahim Pacha's journey from the Pyrenees to this capital was an uninterrupted ovation. Here, he enjoys a royal residence, and a royal welcome, and feasting such as might seem due only to the Sublime Porte. The ambassador of the Turk would present himself at the Tuileries simply as the vassal of his master. At the grand dinner with which Marshal Soult regaled him yesterday he gave this toast: "To France, protectress of Egypt." The British government will feel no jealousy nor apprehension. Ibrahim remembers how he was forbidden, on the field of Nezib, by a French express, from marching to Constantinople;

and Mehmet Ali hardly forgets the dénouement or catastrophe of his reliance on French protection before and at the period of the battle. I refer you to the printed accounts of Ibrahim's imperial honors and splendid excursions. He eclipses, with his suite, the Moorish magnifico, whose costume and retinue delighted the public gaze. Mr. Jomard, of the Institute, is to accompany me, next week, on a formal visit to Ibrahim, "the Conqueror;" so that I shall be able to describe graphically his highness, and the sumptuous hospitality of the government.

I have gone through the number of *La Revue des Deux Mondes* delivered yesterday. The first article, on the kingdom of Lahore and the Sikh war, is from a writer of authority (Count Edward de Warren) on India affairs. He concludes that the fate of the kingdom is sealed by the terms which the British imposed and can enforce. Nothing else in *La Revue* claims immediate notice, except some advices from Mexico recorded in the political chronicle. Paredes, according to them, was pledged to the support of a monarchy in Mexico. "We have seen," say the chroniclers, "a memorial from Santa Anna to the three courts of France, Spain, and England, in which he offers to put himself at the head of an expeditionary army to plant monarchy on the Mexican soil. He places all his influence and resentments at the disposal and for the service of a foreign dynasty. He has, we know, made overtures to Paredes." You may, I ween, without dread or the least danger, suffer the Mexicans to try a king, and any European dynasty to try the Mexicans. Neither might be envied if the experiment were feasible.

6 May.

On the subject of Ireland, there is abundance of the most instructive and impressive information in all the discussions on the Coercion bill, in the letters of the commissioners in Ireland, of the London Morning Chronicle, and the Daily News. I margined for quotation several passages of the letters; but, truly, the details of wretchedness are so harrowing that there would be a sort of cruelty in the act. *Distress and Crime, Fever and Famine*, placed at the head, are weak introductory phrases. The present Coercion bill is the eighteenth. The *Times* calls it a strait waistcoat for a people raving from starvation. The best part of Sir Robert Peel's speech (27th ultimo,) on the measure is this apostrophe:

"I, for my part, think that one of the evils—excuse me, I know you distrust the feelings of Englishmen on this subject; I can only declare for myself that I lived for six years in that country, and that I left it with every feeling of good will for the people of Ireland—excuse me, therefore, if I say, that one of the evils of the country is, that you rely too much upon the powers of the executive government. [Loud cries of hear, hear.] You always say the government ought to interfere—the legislature ought to pass this measure, or it ought to pass that. Believe me, you have it in your own power; the landlords of Ireland have it in their own power to effect immensely more good than the legislature ever can. It is my firm belief that if you would meet together—absentee as well as resident proprietors—that if you would meet together and consider what are the real evils of the country, and what are the real obligations imposed upon you, the landlords, you would benefit the country more than the legislature could do. I speak of your rights; but when you, armed with the legal powers, turn out the resi-

dents on your estates from their houses on a winter night without considering how provision is to be made for them under such dreadful circumstances, what can ensue but misery, ruin, and desperation? while by the exercise of a little liberality you would accomplish more than all the measures the legislature could adopt."

A commentator has well remarked that in this text of Sir Robert Peel, fairly amplified, he finds as strong an argument, as distinct an admission, in favor of repeal, or the creation of a separate Irish legislature as has come from any mouth. The landlords could hold counsel efficaciously for the people only as part of a deliberative assembly equally representing the people; and thus restrained, enlightened, and assisted, they might perceive and accomplish the salvation and weal of all parties. Some time ago, perusing a cogent editorial article of the *Morning Chronicle*, this paragraph struck me:

"We, the people of England, are the real criminals. We, by our detestable system of confiscations, and our yet more detestable penal laws, intentionally impoverished and degraded the people of Ireland. We fostered the pride and selfishness of the intruders, whom, after endowing with the land of the country, we upheld in a demoralizing immunity from every check which interest, fear, and sympathy impose on the rich of other countries. We planted the seeds of that system of mutual outrage of which the fruits amaze and shock us. Ours was the guilt; ours is the duty of reparation. Our task it must be to remove the causes of mutual outrage, by placing restraints on the oppressions of one party, and taking away the exciting causes of the other's revenge."

Such a British acknowledgment has, indeed, weight and desert; but is the task practicable by any other than domestic Irish agency?

14 May.

On Saturday last, in the chamber of peers, the bill from the deputies, respecting modifications of the tariff, gave rise to an able and important discussion which finished only yesterday.

The Duke d'Harcourt, a neat orator, fond of epigrammatic turns, delivered a set discourse on the excellence of free trade, the beauty and value of Sir Robert Peel's measures, and the blindness or backwardness of the French ministry. He assailed the minister of commerce in particular for the *protectionist* speech which I heretofore reported to you. The diplomatic tactics of the minister of foreign affairs rendered it difficult to ascertain his real opinions. Baron Charles Dupin, who best understands the subject, entered the lists on the side of moderate protection. He would rejoice if the Zoll-Verein could acquire great maritime consequence. It was important for France that other continental nations should be directly interested in the liberty of the seas. The Zoll-Verein had a right to complain of the illiberality of Holland. Now that the former had opened a passage and issue through Belgium for German products, the Dutch would be more reasonable concerning the route of the Rhine. He, the baron, would be glad to hear of ocean vessels built at Cologne, and reaching the seas below Rotterdam. The Zoll-Verein would, ere long, count thirty millions of population. Some weight in the scale of neutral rights. The baron enlarged on the case of India, whose cotton fabrics England long protected, but finally and utterly sacrificed to her own manufactures. He asked whether, if India had remained

independent, her own industry might not have prospered; whether she would have blindly immolated it to free-trade; whether her cities, once so busy and flourishing, would be, as they are, a spectacle of decay and ruin? On this point I am struck with the language of Wilson in his history of British India. "The British trade, both export and import, obtained a considerable augmentation under the new charter of the company, the modification of the monopoly; articles entirely unknown in the annals of Indian imports were exported thither from Great Britain to an immense amount, to the extinction of similar products of domestic labor. This effect was prepared for by an iniquitous abuse of the power of Great Britain in excluding from her own consumption the principal manufactures of India, and in opening the ports of India to those of Britain free of charge." * * *

You perceive to what the independence of Belgium amounts. If she hold it desirable and proper for her to establish a customs union with France, England and Prussia and Austria peremptorily forbid the bans. If, with the Zoll-Verein, France is resolved, pledged, ready, "not to suffer it;" she keeps a close overweening watch. The truth is, that the French cabinet has allowed Belgium material advantages in the commercial convention; the policy of keeping her detached relatively from the German sirens, and binding her by the friendship of interest to her French cousins, is not the only motive. Her worthy king is the son-in-law to his majesty Louis Philippe; the family alliance must appear to enable Leopold to secure special kindness and benefits for his little realm. In the sitting of the 11th instant of the peers, the Marquis of Gabriac delivered quite an original and a most satisfactory critique of the vulgar notions and clamors respecting foreign *literary piracy*. It should be translated *in extenso*, for the instruction of your petitioners and sticklers for *international copyright*. The marquis contended that the cheap re-printing abroad of French publications was a signal and manifold demonstrable benefit and triumph for France. His details of fact and considerations of argument are curious and conclusive. He exploded the whole delusion of wrong and detriment.

16 May.

At the last two sittings of the deputies the topic of the execution of the law modifying negro slavery in the French West Indies fell under debate. The minister of marine announced perseverance in the plan of emancipating the negroes of the public domain within five years.

I am struck with the annexed language of the *London Standard* of the 14th of this month: "The United States would seem to be, of all places in the world, the worst adapted for manufactures—abundant land, dear labor, no neighboring market; yet the United States are making rapid progress in manufactures, and it is a remarkable fact—not, we believe, as generally known as it ought to be—that nearly all the recent mechanical contrivances introduced into our factories, for dispensing with human labor, are of American invention; proof that, where money or credit can be had, a dense population is not, as has been supposed, necessary for the advancement of manufactures." American ingenuity is so superior, intrepid, and various that a repressive, and baffling policy, or any other than one of encouragement and scope, would seem against the favor of Providence and the march of destiny.

From the N. Y. Albion.

RECOLLECTIONS OF MEXICO.

GENERAL Waddy Thompson, lately the American plenipotentiary to the republic of Mexico, has just given to the world his recollections of that beautiful and interesting country. It is an octavo volume, published by Messrs. Wiley and Putnam, and issued in London and New York.

We do not know when we have been more interested than while perusing this volume. It is written without effort or pretension, bearing marks of being struck off with true Virginian impulse, rather than finished with elaborate authorship; but its interest is nevertheless kept up through every chapter, and the author has contrived to throw a great deal of popular information into its pages. Nor is this all; Mr. Thompson writes in a free and liberal spirit; gives much credit to the Mexicans as a people, and portrays their magnificent country in favorable colors. He is remarkably proud of his own race, and religiously believes that the Anglo-Saxons are destined to conquer the whole continent with their civilization. He entered freely into the society of the British merchants he found in the capital of Mexico, and disabused his mind of the pernicious notion that England was anxious to acquire any part of the dominions of that republic. He has wisdom enough to see that England has territory in abundance—that her object is to improve what she already possesses, rather than to acquire more. Trade and commerce she cherishes—these are her compass and polar star—and they will assuredly lead her to the haven of prosperity. Like every Virginian gentleman we have ever met with, Mr. Thompson glories in his English ancestry. "I would not sell," he says, "for the seas' worth my share of the glory of my English ancestry—Milton, Shakspeare, and John Hampden, and those noble old barons who met King John at Runnymede." Thus much for the author; and we need not tell our readers how delightful it is to travel over three hundred pages with such a companion.

Mr. T. assumes that the produce of precious metals from the mines are as great, or nearly so, as at any former period. This we did not think was the case. We agree with him, however, in believing that they are far less profitable, owing to the expensive nature of the machinery now employed by the English miners, and also in consequence of the high price of quicksilver. The dearness of this latter article is, as Mr. Thompson describes, owing to the monopoly of the Rothschilds, who rent the mines of Almadin, in old Spain. From the mines of Almadin come nine tenths of all the quicksilver of commerce; and these mines are farmed out by the cabinet of Madrid to the capitalists just named at an enormous rental, which is, of course, put on the selling price of the commodity. Not only does this circumstance add to the cost of producing the gold and silver, but it lessens the quantity prepared for the mint—the less valuable ores being cast aside as not being worth the quicksilver employed to separate the metallic portion of the mass. So long, then, as the necessities or the policy of the Spanish cabinet continue

to put such a tax on quicksilver, so long will the precious metals bear a very enhanced cost in producing them. The monopoly then, it is clear, is not strictly with the Rothschilds, but with the Spanish government. Mr. Thompson adduces the following figures.

Baron Humboldt gives the gross produce of the mines of Mexico from 1690 to 1803 as \$1,358,452,020, or about twelve millions per annum.

The highest product was in 1796, when the mines yielded \$25,644,566.

Mr. Ward states the annual produce for a few years prior to 1810 at per annum \$24,000,000.

During the revolutionary struggle the produce fell to three millions annually. In 1842 the official custom house returns give \$18,500,000.

As there is an export duty of six per cent. on all the precious metals, much is sent out of the country clandestinely, say some three or four millions; thus bringing up the whole amount to, or nearly so, its original standard.

It is gratifying to learn that the Mexicans are not so irretrievably sunk in ignorance as many suppose. Mr. Thompson says that during his residence at the capital he never had a Mexican servant that was not able to read and write. Persons from the country, too, were generally able to read the signs over the shops in the streets of Mexico. The Lancasterian system, it seems, has been very generally introduced, and is working a favorable change in the rising generation. Mr. Thompson attributes the introduction of these schools to the patriotic exertions of Signor Tornel. Let us hope that good fruit will by-and-bye grow from this seed; that the people may become enlightened and duly sensible of their own advantages; that party feuds be superseded by true patriotism, and thus an end be put to those frequent and deadly civil contests that distract the mind and tear the bosom of the country.

We have given among other extracts the entire chapter on California; and Mr. Thompson affirms that such is the value of that country that he would rather have twenty years' war than see England in possession of it! If it be worth twenty years' war to the United States it may be worth twenty years' war to England. Would it not be better, then, that neither should have it, or that it become independent! Or would it not be better still, that both England and the United States make an effort to preserve the country to its proper owner, Mexico; and that Mexico in return for such assistance make all the valuable harbors free ports? This seems to us to be the more rational mode of dealing with such a bone of contention, and we feel pretty confident that the European powers will so consider it. But although Mr. Thompson is thus anxious that California should not pass to another power, he by no means betrays any improper craving for Mexican territory, for he closes his twenty-first chapter with the following honorable and noble-minded paragraph.

"It is risking very little to say that if Mexico was inhabited by our race, that the produce of the mines would be at least five times as great as it now is. There is not a mine which would not be worked, and as many more new ones discovered.

In five years, with such a population, and only of an equal number with that which Mexico now has, I do not hesitate to assert that the mineral and agricultural exports alone would nearly equal all the exports of any other country of the world. The last time I examined the tables upon that subject, the whole exports of the produce of British labor was about two hundred and sixty millions of dollars per annum. Mexico, in the possession of another race, would approach that amount in ten years. Recent manifestations of a rabid, I will not say a rapacious, spirit of acquisition of more territory on the part of our countrymen may well cause a race so inferior in all the elements of power and greatness to tremble for the tenure by which they hold this *El Dorado*. 'T is not often, with nations at least, that such temptations are resisted, or that 'danger winks on opportunity.' I trust, however, that our maxim will ever be—'Noble ends by worthy means attained,' and that we may remember that wealth improperly acquired never ultimately benefited an individual or a nation."

EXTRACTS.

Kindness and Courtesy—Society of Dinner Parties and Entertainments—Mexican Ladies wanting in Beauty—Do not dance well—Charity—Routine of daily life—Coarseness of Dress—In the streets—Women generally smoke—A day in the Country.

"Notwithstanding the general prejudice which existed in Mexico against me when I first went there, I was treated, although somewhat coldly, always and by all classes with the most perfect respect. In this particular the higher classes of all countries are very much alike, but I doubt whether there is any other country where the middling and lower classes are so generally courteous and polite. There is no country where kindness and courtesy are more certain to meet with a proper return. It may be that three hundred years of vassalage to their Spanish masters may have given the Indian population an habitual deference and respect for a race which they have always regarded as a superior one. No people are by nature more social, none less so in their habits. It is not the fashion to give entertainments of any sort. And what I regarded as a little remarkable, the members of the Mexican cabinet, most of whom were men of fortune and had ample means at hand, not only never gave entertainments, even dinner parties to the members of the diplomatic corps, but never even invited them to their houses—when invited to such parties however by any of the foreign ministers, they never failed to accept the invitation. With any other people there would be a seeming meanness in this. But such was not the case. No people are more liberal in the expenditure of money. General Santa Anna had two very large dinner parties whilst I was in Mexico, and two or three balls; but I heard of nothing else of the kind, except at the houses of the foreign ministers. Santa Anna's dinners were altogether elegant, and he presided at them with great dignity and propriety. On such occasions he was joyous and hilarious. The company, without exception, had the appearance and manners of gentlemen; I sat next to him on these occasions, and his aides-de-camp, who were not seated at the table, would occasionally come to his seat and say some playful thing to him. I was much struck with the style and intercourse between them; marked by an affectionate kindness on his part, and the utmost respect, but at the same time freedom from restraint, on theirs.

"His balls were very numerous attended. The company was by no means select. In fact I saw there very few of the ladies belonging to the aristocracy; but very many others who had no business there. This, however, is unavoidable in a revolutionary country like Mexico. Every President holds his power by no other tenure than the caprice of the army, and he is forced, therefore, to conciliate it. If a corporal, who has married the daughter of the washerwoman of the regiment, has risen to the highest station in the army, his wife cannot be slighted with safety—and such cases have occurred.

"I wish that I could in sincerity say that the ladies of Mexico are handsome. They are not, nor yet are they ugly. Their manners, however, are perfect; and in the great attributes of the heart, affection, kindness and benevolence in all their forms, they have no superiors. They are eminently graceful in everything but dancing. That does not 'come by nature,' as we have the authority of Dogberry that reading and writing do; and they are rarely taught to dance, and still more rarely practise it.

"I think that in another, and the most important point in the character of woman, they are very much slandered. I am quite sure that there is no city in Europe of the same size where there is less immorality. Indeed, I cannot see how such a thing is possible. Every house in Mexico has but one outside door, and a porter always at that. The old system of the duenna, and a constant espionage, are observed by every one, and to an extent that would scarcely be believed. I have no doubt, however, that whatever other effects these restraints may have, their moral influence is not a good one. The virtue which they secure is of the sickly nature of hot-house plants, which wither and perish when exposed to the weather. Women, instead of being taught to regard certain acts as impossible to be committed, and therefore not apprehended or guarded against, are brought up with an idea that the temptation of opportunity is one which is never resisted.

"I do not think that the ladies of Mexico are generally very well educated. There are, however, some shining exceptions. Mrs. Almonte, the wife of General Almonte, would be regarded as an accomplished lady in any country. The Mexicans, of either sex, are not a reading people. The ladies read very little.

"The general routine of female life is to rise late, and spend the larger portion of the day standing in their open windows, which extend to the floor. It would be a safe bet at any hour of the day between ten and five o'clock, that you would in walking the streets see one or more females standing thus at the windows of more than half the houses. At five they ride on the Paseo, and then go to the theatre, where they remain until twelve o'clock, and the next day, and every day in the year, repeat the same routine. In this *dolce far niente* their whole lives pass away. But I repeat that in many of the qualities of the heart which make women lovely and loved, they have no superiors.

"The war of independence was illustrated with many instances of female virtue of a romantic character, one of which I will mention. And I again regret that I have forgotten the name of the noble woman whose virtue and love of country were so severely tested. The lady to whom I refer had two sons, each of whom was in command of a detachment of the patriot army. One of them was

made prisoner, and the Spanish general into whose hands he had fallen, sent for his mother and said to her, 'If you will induce your other son to surrender his army to me, I will spare the life of the one who is my prisoner.' Her instant reply was, 'No! I will not purchase the life of one son with the dishonor of another and the ruin of my country.' This fact is historic, and is more true than history generally is.

"The ladies of Mexico dress with great extravagance, and I suppose a greater profusion of 'pearl and gold'—I will not say more barbaric—than in any other country. I remember that at a ball at the President's, Mr. Bocanegra asked me what I thought of the Mexican ladies; were they as handsome as my own countrywomen! I of course avoided answering the question; I told him, however, that they were very graceful, and dressed much finer than our ladies. He said he supposed so, and then asked me what I thought the material of the dresses of two ladies which he pointed out had cost; and then told me that he had happened to hear his wife and daughters speaking of them, and that the material of the dresses, blonde, I think, had cost one thousand dollars each. I asked on the same occasion, a friend of mine who was a merchant, what he supposed was the cost of an ornament for the head thickly set with diamonds of the Señora A. G. He told me that he knew very well, for he had imported it for her, and that the price was twenty-five thousand dollars; she wore other diamonds and pearls no doubt of equal value.

"I have said that there are very rarely anything like evening parties, or tertulias; social meetings, or calls to spend an evening are quite as unusual, except among very near relations, and even then the restraint and espionage are not at all relaxed. Persons who have seen each other, and been attached for years, often meet at the altar without ever having spent half an hour in each other's company. Ladies of the better classes never walk the streets except on one day in the year, the day before Good Friday, I believe it is. But they make the most of this their saturnalia; on that day all the fashionable streets are crowded with them, in their best 'bibs and tuckers,' and glittering in diamonds.

"The streets are always, however, swarming with women of the middling and lower classes. The only articles of dress worn by these are a chemise and petticoat, satin slippers, but no stockings, and a rebozo, a long shawl improperly called by our ladies a mantilla. This they wear over the head and wrapped close around the chin, and thrown over the left shoulder. Whatever they may be in private, no people can be more observant of propriety in public; one may walk the streets of Mexico for a year, and he will not see a wanton gesture or look on the part of a female of any description, with the single exception, that if you meet a woman with a fine bust, which they are very apt to have, she finds some occasion to adjust her rebozo, and throws it open for a second. This rebozo answers all the purposes of the shawl, bonnet and frock-body.

"The women of Mexico, I think, generally smoke; it is getting to be regarded as not exactly *comme il faut*, and therefore they do it privately. As the men generally smoke, they have the advantage which Dean Swift recommends to all who eat onions, to make their sweethearts do so too.

"One of the favorite and most pleasant recreations of the Mexicans is what they call *un día de campo*, a day in the country. A party is made up

to spend the day at Tacubaya, or some other of the neighboring villages, or at some house in the suburbs of the city, where a dinner is prepared, and a band of music sent out; and the day and a large portion of the night spent in dancing. Never have I seen a more joyous and hilarious people than they are on these occasions.

"I shall never forget one of these parties which was given to General Almonte, just before he left Mexico on his mission to this country. It was a genuine, roistering, country frolic. We got into boats, and with the music playing, were rowed for some distance by moonlight, in the canal which terminates in the Lake of Chalco, and then amongst the Chinampas or floating gardens, which are now nothing more than shaking bogs. The very thin stratum of soil which had formed on the water of the lake is made more unsteady, when a small space of an acre or two is surrounded by a canal. There are now none of the floating gardens described by the conquerors, which were formed by artificial means, and moved about from one part of the lake to another.

"The men who are met in the streets, are almost exclusively officers and soldiers of the army, priests and leporos, the latter quite as useful, and much the least burdensome and pernicious of the three classes. The Mexicans of the better classes generally wear cloth cloaks at all seasons of the year, and the Indian blankets; for ornament, I suppose, for the weather is never cold enough to make either necessary. One thing, however, I could never account for, I did not feel uncomfortably cold in a linen coat, nor uncomfortably warm with my cloak on. All the physical peculiarities of the Indians of Mexico are precisely the same as those of our own Indians; they are, however, much smaller. Their appearance is very much the same in all respects as those of the straggling Indians who are seen about our cities; nothing of the elastic step and proud bearing of our natives of the forest. Such a noble looking fellow as the Seminole Chief, Wild Cat, would create a sensation there; he might possibly get up a *pronunciamento*—I have no doubt he would attempt it. In a word, I am by no means sure that in exchanging the peculiar civilization which existed in the time of Montezuma for that which the Spaniards gave them, that they have improved the condition of the masses; they have lost little of the former but its virtues, and acquired little of the latter but its vices. I have already remarked that, although there are no political distinctions amongst the various castes of the population of Mexico, that the social distinctions are very marked. At one of those large assemblies at the President's palace, it is very rare to see a lady whose color indicates any impurity of blood. The same remark is, to a great extent, true of the gentlemen, but there are also a good many exceptions.

FRIENDSHIP WITH ENGLISHMEN.

"The generous and honorable sentiment so well expressed by the Englishwoman of Puebla leads me to remark that my residence in Mexico furnished me more evidences than one, of the powerful sympathy of race. Even the revengeful character of the Spaniard yields to it. Notwithstanding the recent termination of the fierce and sanguinary civil war which has raged between Mexico and the mother country, no other people are so favorably regarded by the Mexicans as the Spaniards. And I can say with truth that I never met an Englishman there that I did not feel the full

force of "the white skin and the English language"—and I had no cause to believe that the same feeling was not entertained towards me by the English gentlemen in Mexico; and why, in God's name, should it be otherwise? I would not sell "for the seas' worth," my share of the glory of my English ancestry, Milton, Shakspeare, and John Hampden, and those noble old barons who met King John at Runnymede; and on the other hand, Englishmen should have a just pride in the prosperity and greatness of our country. In the beautiful language of a highly-gifted and liberal-minded Englishman, Mr. Charles Augustus Murray, "whether we view the commercial enterprise of America, or her language, her love of freedom, parochial, legal or civil institutions, she bears indelible marks of her origin: she is and must continue the mighty daughter of a mighty parent, and although emancipated from maternal control, the affinities of race remain unaltered. Her disgrace must dishonor their common ancestry, and her greatness and renown gratify the parental pride of Britain. Accursed be the vile demagogue who would wantonly excite another and fratricidal war between the two greatest and only free countries of the earth!"

I should not satisfy my own feelings if I were not to notice here the circle of English merchants, who reside in Mexico. I have nowhere met a worthier set of gentlemen—enlightened, hospitable and generous. I can with great truth say, that the most pleasant hours which I have spent in Mexico were in their society, and I shall never cease to remember them with kindness and respect. I now and then met with a little of the John Bull jealousy of this country, but I playfully told them that I could pardon that—that it was altogether natural, for that the English flag had waved on every sea and continent on the face of the globe, and that for the last thousand years it had rarely, if ever, been lowered to an equal force, except in conflicts with us, where its fate had always been to come down. I believe that I may say that their greatest objection to me was, that I was rather too fond of talking of General Jackson and New Orleans. There is no single name which an Englishman so little likes to hear as that of General Jackson, and none so grateful to the ears of an American in a foreign land, only excepting that of Washington. I do not doubt that it will be known and remembered long after that of every other American who has gone before him, except Washington and Franklin, is swallowed up in the vortex of oblivion. I have been the political opponent of General Jackson, and should be so now upon the same questions. I believe that he committed some very great errors, but that he did all in honor and patriotism. I have at the same time always had a just admiration for his many great qualities and glorious achievements, and I should pity the American who could hear his name mentioned in a foreign land without feeling his pulse beat higher.

CALIFORNIA.

The California Question—Captain Suter's Settlement—Value of the country—Importance to the United States—English influence in Mexico—Annexation of Mexican provinces to the United States—Present relations.

I confess that in taking the high ground which I did upon the order expelling our people from California, that I felt some compunctious visitings, for I had been informed that a plot had been arranged and was about being developed by the Americans

and other foreigners in that department to reëact the scenes of Texas. I had been consulted whether in the event of a revolution in California, and its successful result in a separation from Mexico, our government would consent to surrender their claims to Oregon, and that Oregon and California should constitute an independent republic. I of course had no authority to answer the question, and I would not have done so if I could.

The inhabitants of California are for the most part Indians, a large proportion naked savages, who not only have no sympathies with Mexico but the most decided antipathy.

Mexico has no troops there, and the distance of the department prevents any being sent.

Captain Suter, who was one of Bonaparte's officers, and, I believe, is a Swiss, has for many years had an establishment there, and is the real sovereign of the country if any one is, certainly so *de facto* if not *de jure*. The government of Mexico has done none of those things, such as settlement, extending her laws, and affording protection, which alone give to a civilized people a right to the country of a savage one. As to all these, the natives of California are as much indebted to any other nation as to Mexico; they only know the government of Mexico by the exactions and tribute which are levied upon them—it is literally a wail, and belongs to the first occupant. Captain Suter has two forts in California, and about two thousand persons, natives and Europeans, in his employment, all of them armed and regularly drilled. I have no doubt that his force would be more than a match for any Mexican force which will ever be sent against him. He has once or twice been ordered to deliver up his forts, and his laconic reply has been "Come and take them."

From all the information which I have received, and I have been inquisitive upon the subject, I am well satisfied that there is not on this continent any country of the same extent as little desirable as Oregon, nor any in the world which combines as many advantages as California. With the exception of the valley of the Wallamette, there is scarcely any portion of Oregon which is inhabitable except for that most worthless of all—a hunting population—and the valley of the Wallamette is of very small extent. In the south the only port is at the Columbia river, and that is no port at all, as the loss of the Peacock, and others of our vessels, has proved. To say nothing of other harbors in California, that of San Francisco is capacious enough for the navies of the world, and its shores are covered with enough timber (a species of the live oak) to build those navies. If man were to ask of God a climate he would ask just such an one as that of California, if he had ever been there. There is no portion of our western country which produces all the grains as well; I have been told by more than one person on whom I entirely relied, that they had known whole fields to produce—a quantity so incredible that I will not state it. The whole face of the country is covered with the finest oats growing wild; sugar, rice and cotton, find there their own congenial climate. Besides all these, the richest mines of gold and silver have been discovered there, and the pearl fisheries have always been sources of the largest profits; and more than these, there are the markets of India and China with nothing intervening but the calm and stormless Pacific ocean.

The distance from the head of navigation on the Arkansas and Red rivers to a navigable point of

the waters of the Gulf of California is not more than five or six hundred miles; let that distance be overcome by a railroad, and what a vista is opened to the prosperity and power of our country. I have no doubt that the time will come when New Orleans will be the greatest city in the world. That period would be incalculably hastened by the measures which I have indicated, which would throw into her lap the vast commerce of China and of India. Great Britain, with that wise and far-seeing policy for which she is more remarkable than any other government, has already the practical possession of most of the ports of the Pacific ocean—New Zealand and the Sandwich Islands, and very soon the Society Islands also. We have a commerce in that ocean of more than fifty millions of dollars, and not a single place of refuge for our ships.

I will not say what is our policy in regard to California. Perhaps it is that it remain in the hands of a weak power like Mexico, and that all the maritime powers may have the advantage of its ports. But one thing I will say, that it will be worth a war of twenty years to prevent England acquiring it, which I have the best reasons for believing she desires to do, and just as good reasons for believing that she will not do if it cost a war with this country. It is, perhaps, too remote from us to become a member of the Union. It is yet doubtful whether the increase of our territory will have a federal or a centralizing tendency. If the latter, we have too much territory; and I am by no means sure that another sister republic there, with the same language, liberty and laws, will not, upon the whole, be the best for us. If united in one government, the extremities may be so remote as not to receive a proper heat from the centre—so, at least, thought Mr. Jefferson, who was inspired on political questions if mortal man ever was. I am not one of those who have a rabid craving for more territory; on the contrary, I believe that we have enough. I know of no great people who have not been crowded into a small space—the Egyptians, the Romans, the Greeks, and another people who have exercised a greater influence upon man and his destiny than all others, the Jews; and, in our time, the English. I want no more territory, for we have already too much. If I were to make an exception to this remark, it would be to acquire California. But I should grieve to see that country pass into the hands of England, or any other of the great powers.

Whenever the foreigners in California make the movement of separation, it must succeed. The department of Sonora, not half the distance from Mexico, has been in a state of revolt for the last four years, and the government has been unable to suppress it. The civil war there has been marked by acts of horrible atrocity, which are almost without precedent in any country. It is true that they do not eat the flesh of their enemies, but they leave them hanging on the trees to feast the birds of prey. There is scarcely a road in the whole department where such spectacles are not daily exhibited.

There is a great mistake, I think, in the opinion which is general in this country of the great ascendancy of English influence in Mexico. It is true that Mr. Pakenham had much influence there, which his great worth and frank and honorable character will give him anywhere; but my opinion is, that the general feeling of the Mexicans

towards the English is unfriendly. They have a well-grounded jealousy of the great and increasing power which their large capital gives them; and, if the feelings of the Mexican people were consulted, or the opinions of their most enlightened men, England is the very last power to which the Mexicans would transfer California, or any other portion of their territory. I am quite sure that they would prefer that it should be an independent power, than to have any connection or dependence of any sort upon England. The most valuable of the Mexican mines are owned and worked by English companies, and at least two-thirds of the specie which is exported goes into the hands of the English. The British government keeps two officers, or agents, in Mexico, with high salaries, to attend to this interest alone. It is with the money thus derived that the English establishments on this continent and in the West Indies are supported.

The amount of the specie annually obtained from Mexico is more than half as great as that which is kept at one time in the Bank of England. The stoppage of this supply would very much derange the whole monetary system of England; on this account, it is to be apprehended that in the event of a war between the United States and Mexico, that England would very soon be involved in it. If the coast of Mexico should be blockaded, England will demand that the line of steam-packets to Vera Cruz should be exempted from its operations. These packets, although commercial vessels, possess a sort of quasi government character. This, of course, our government could not concede; and the interruption of the regular supply of the precious metals from Mexico would be most disastrously felt in England. Knowing all this, I was well satisfied that all that we have heard about England stimulating Mexico to declare war against this country was ridiculously absurd. Such a war would injure England more than either of the belligerents. All her interests are opposed to it, unless, indeed, she intended to participate in that war. I have the best reasons for saying, that there is no other power in the world with which England would not prefer to engage in a war; not that she fears us, for England fears no nation, nor combination of nations, as all her history proves; but such a war would be, more than any other, disastrous to her commercial, manufacturing, and all other industrial pursuits.

England has no single motive of a war with us. It is not of this country that she is jealous, but of the northern despotisms of Europe, and mainly of Russia, and has been so since the seizure of the fortress of Azaczo, in 1788. And well may England and all Europe tremble under the shadow of that terrible military despotism now holding one-eighth of the territory of the globe, and continually extending its limits and its power. All the wars of the present century which have weakened other European powers have resulted in the aggrandizement of Russia. The government is not only a despotism, but essentially a military despotism. The studies in which her people are educated are principally those of war and diplomacy. Russia and the United States are antipodes and antagonists. The wise and far seeing statesmen of England see this and calculate as well they may, upon our sympathy, in a conflict with Russia. I repeat, England wants no war with us, although we may force her into one. "That old and

haughty nation proud in arms" will never submit to injustice or insult.* But to return from this perhaps uncalled-for digression to the jealousy of England which is felt in Mexico.

A leading member of the Mexican cabinet once said to me that he believed that the tendency of things was towards the annexation of Texas to the United States, and that he greatly preferred that result either to the separate independence of Texas or any connection or dependence of Texas upon England; that if Texas was an independent power, other departments of Mexico would unite with it either voluntarily or by conquest, and that if there was any connection between Texas and England, that English manufactures and merchandise would be smuggled into Mexico through Texas to the utter ruin of the Mexican manufactures and revenue.

In one of my last interviews with Santa Anna I mentioned this conversation. He said with great vehemence, that he "would war forever for the reconquest of Texas, and that if he died in his senses his last words should be an exhortation to his countrymen never to abandon the effort to reconquer the country;" and added, "You, sir, know very well that to sign a treaty for the alienation of Texas would be the same thing as signing the death-warrant of Mexico," and went on to say that "by the same process we would take one after the other of the Mexican provinces until we had them all." I could not, in sincerity, say that I thought otherwise; but I do not know that the annexation of Texas will hasten that event. That our language and laws are destined to pervade this continent, I regard as more certain than any other event which is in the future. Our race has never yet put its foot upon a soil which it has not only kept but has advanced. I mean not our English ancestors only, but that good Teuton race from which we have both descended.

There seems to be a wonderful adaptation of the English people to the purpose of colonization. The English colony of convicts at New South Wales is a more prosperous community than any colony of any other country. That the Indian race of Mexico must recede before us, is quite as certain as that that is the destiny of our Indians, who in a military point of view, if in no other, are superior to them. I do not know what feelings towards us in Mexico may have been produced by recent events, but whatever they may be, they will not last long; and I believe that the time is not at all distant, when all the northern departments of Mexico, within a hundred miles of the city, will gladly take refuge under our more stable institutions from the constant succession of civil wars to which that country seems to be destined. The feeling is becoming a pretty general one amongst the enlightened and patriotic, that they are not prepared for free institutions, and are incapable themselves of maintaining them. There is very great danger that the drama may close there, as it has so often done in other countries, with anarchy ending in despotism—such is the natural swing of the pendulum. The feeling of

all Mexicans towards us, until the revolution in Texas, was one of unmixed admiration; and it is our high position amongst the nations, and makes our mission all the more responsible, that every people, struggling to be free, regard us with the same feelings—we are indeed the "looking-glass in which they dress themselves." As a philanthropist, I have deeply deplored the effects of the annexation of Texas upon the feelings of the people of all classes in Mexico, towards this country, as diminishing their devotion to republican institutions; this should not be so, but it will be. Ours is regarded as the great exemplar Republic in Mexico, as everywhere else, and the act which they regard as such an outrage, must have the prejudicial effect which I have indicated—still more will that effect be to be deprecated, if it should throw Mexico into the arms of any great European power.

The northern departments of Mexico contain all the mines, and more of the wealth of the country than any others; and they all hang very loosely to the confederacy;—they receive no earthly benefit from the central government, which in truth they only know in its exactions. All the money collected from them is expended in the city and elsewhere, and they have not even the satisfaction of knowing that it is beneficially or even honestly used. The security which would be given to property, as well as its great enhancement in value, would be powerful inducements with all the owners of large estates which are now comparatively valueless. The only obstacle that I know of to such a consummation, infinitely desirable in my judgment, to the people of those departments, less so to us, would be in the influence of the priesthood. They are well aware that such a measure might very soon be fatal, not only to their own supremacy, but that of the Catholic religion also—but they would have on the other hand a powerful motive in the security which it would give them to their large church property—no motive but interest would have any influence with the people of Mexico, for they certainly do not like us. Their feelings towards us may be summed up in two words, jealousy and admiration—they are not going to declare war against us. I have never doubted for a moment about that. Public opinion in Mexico, to all practical purposes, means the opinion of the army, and the very last thing in the world which the army desires, is such a war—nor do I believe that one Mexican in a thousand does, however they may vaunt and bluster—just as a frightened school-boy whistles as he passes a grave-yard in the night. I have just as little idea they will negotiate now, or until matters are adjusted between England and this country. I doubt whether they will do so even then, for the government of Mexico owes our citizens as much money as they could expect to get from us for their quit claim to Texas, and Mexico, therefore, will have no motive to negotiate as long as she is not pressed for these claims; and the restoration of official intercourse is not of the slightest consequence to her. The few Mexicans who would come here, would be in no danger of being oppressed, and nothing would be more convenient to Mexico than that we should have no minister there to trouble the government with complaints.

PATRIOTISM OF SANTA ANNA.

Another, and a very important one to many Americans in Mexico, was that which prohibited

* Our worst enemy among the sovereigns of Europe is Louis Philippe, the catspaw-king. Every people struggling to be free look to the United States for light and aid, and it should be a source of pride to us that every despot regards us with fear and hatred. Well may the treacherous citizen-king exclaim with reference to America, with the fallen archangel to the sun—

"How! oh sun, I hate thy beams."

the privilege of the retail trade to all foreigners—all my efforts to procure a rescision of this order were ineffectual, and this is the one exception to which I have alluded. One of the members of the diplomatic corps, the French minister, had felt it his duty to write a note on the subject, which Santa Anna regarded as very harsh in its terms and spirit. After I had discussed the matter with him for some time he said, "I know nothing about these questions of international law, I am only a soldier, and have spent my life in the camp—but eminent Mexican lawyers tell me that we have the right to enforce such an order, and if we have I know that it will be beneficial to Mexico. These foreigners come here and make fortunes and go away; let them marry here, or become Mexican citizens, and they may enjoy this and all other privileges." He added that if all the other ministers had taken the same course that I had, that he might have consented to rescind the order, but that whilst he was the president he would cut his throat (suiting the action to the word with great vehemence) before he would yield anything to insult or menaces—alluding to the note of the French minister. He became very much excited, and with his fine eye flashing fire, went on in a strain of real eloquence.—"What," said he, "has Mexico gained by her revolution, if she is thus to be dictated to by every despot in Europe; before, we had but one master—but if this is permitted we shall have twenty. We cannot fight on the water; but let them land, and I will drive them to their boats a little faster than I did in 1839"—and then casting his eye to his mutilated leg, with that tiger expression which Mrs. Calderon noticed—he said, "they have taken one of my legs, they shall have the other, and every limb of my body before I will submit to their bullying and menaces. Let them come, let them come as soon as they like, they will find a Thermopylæ."

"These were his very words. If he did not feel what he said, I have never seen the hero and patriot better acted. Again I thought of General Jackson. The reader may be assured that whatever may be the faults of Santa Anna, he has many points which mark him "as not in the roll of common men."

When I first visited him at Encerro, he was examining his chicken cocks, having a large wicker then depending—he went round the coops and examined every fowl, and gave directions as to his feed; some to have a little more, others to be stinted. There was one of very great beauty, of the color of the partridge, only with the feathers tipped with black, instead of yellow or white; and the male in all respects like the female, except in size. He asked me if we had any such in this country, and when I told him that we had not, he said that if that one gained his fight he would send him to me—he was the only one of fifteen which did not lose his fight: and shortly after my return, when I visited New York, I found the fowl there. I had thought no more about it, and had no idea that he would.

After examining his chicken cocks we returned to the house, and then he was all the president—and to have listened to the eloquent conversation which I have sketched, one would not have supposed that he had ever witnessed a cock-fight.

The taste for this amusement, which amongst us is regarded as barbarous and vulgar, is in Mexico by no means peculiar to Santa Anna. It is universal, and stands scarcely second to the bull-fight.

NICHOLAS' WIFE IN ITALY.

TAKE heart, poor milliner girls! and, though poorly paid, and sadly overworked, thank Heaven you are not the empress of Russia. Though you are fagged, you are not dehumanized by adulation—you are not flattered into insanity—you are not made one fester of human pride by the abasement and adoration of millions. The hearts in your bosoms are not petrified by imperial blood; they may yet bound with kindly impulses; they may yet thrill with a sympathy that the wife of Nicholas—poor victim of state!—can never know. Late accounts from Italy present a sad picture of the unfortunate woman. It appears that she is very sick—but not nearly so sick as arrogant. Could pride have killed her, she would have died long ago—every one of her nine lives been rendered up.

It seems that the King of Naples has beggared himself for a year or two, to do the handsome thing for his Russian guest; and she did little other than turn the poor man out of his own house.

"On the first day of her arrival, the empress sent her chamberlain to invite the King and Queen of Naples to dine with her in his own dining-room, which meant—'to-morrow I shall dine alone.' The poor King of Naples understood it immediately, and was in great trouble to know where he should dine with his family, or receive his court."

And these are the folks who—according to the tribe of Jenkins—are the patent manner-mongers for the rest of mankind!

At Florence, she refused to take the arm of her host, the Grand Duke, and took that of the Russian Admiral. It is said that in one of her letters to the emperor, she wrote—

"Since our marriage I have never asked you a favor, but now I have a request to make, which I hope you will not refuse, since it is of consequence to my health, and probably my life may depend upon it—*make me a present of Sicily*."

—with Etna to boil the royal tea-kettle! What a pity that the emperor could not, by a ukase, give her the man in the moon as a little flunkey! Still, we have some compassion for the empress. She is the wife of Nicholas, and that may account for much. Nevertheless, milliners, *Punch* says, again and again—thank Heaven you are not the Empress of Russia. Surely, it is better to feel want and oppression, than to be educated out of the feeling of all human sympathy.—*Punch*.

CHINESE BENEVOLENCE TO A BRITISH CHARITY. —The governors and friends of the Seamen's Floating Hospital will be highly gratified to learn that the universal principle which governs that charity (the relief of sick seamen of all nations) has not escaped the observation of that enlightened and distinguished personage, Keying, the High Commissioner to his imperial majesty the Emperor of China, who has requested Rear Admiral, Sir Thomas Cochrane, commander-in-chief there, to record his name as a donor of \$900 (about £190) in aid of this benevolent object. Well might Sir Henry Pottinger eulogize the high character of this eminent Chinaman, since he has shown, by this uninvited display of beneficence, that he can feel for the possible necessities of his countrymen in a far distant land, and can so munificently mark his gratitude to foreigners for the care taken of them.—*Times*.

From the Canada Temperance Advocate.

STUDIES ON THE SEA-SHORE.

THERE are few young people who have been brought up in an inland district, to whom their first visit to the ocean does not form a remarkable era in their juvenile life. The scene is so perfectly new, everything is so strange, the shores abound with so many glittering pleasures, while the prospect of the vast expanse does at the same time inspire a kind of solemn awe, that the youthful mind is filled and impressed with recollections that never afterwards fade. A long-promised visit to the sea-coast was at last accomplished, and a beautiful autumn evening found us for the second time wandering on the smooth white sands of the shore. The receding tide had left dry the far-sloping beach; the sea was still and placid, with now and then a slight ripple glittering in the sun: a few boats and distant ships glided with their white sails on the deep, nearly as like things of life as the agile sea-birds that dipped and sported in the shallow water. The hearts of the young people bounded with an exquisite and new joy; and after skipping about for some time in many circles over the sands, they returned to me to give words to their novel delight.

"How lovely is everything to-night!" said Elizabeth. "I have now got familiar with the great ocean. I confess my mind yesterday was filled with a strange dread; those noisy and foaming breakers seemed so angry like; the waves came one after the other, rolling up to us like so many coiling serpents; and my heart shuddered as I looked far, far onward, and saw nothing but one dim expanse of green water; but now the waves, instead of menacing us, have retired far out. All is lulled and quiet, and such a beautiful beach is left us, that I never shall tire wandering over it, and exploring its curious productions."

"We have been fortunate, my dears, in this our first and short visit, to witness the ocean in its two extreme phases. Yesterday was indeed a storm; less, however, in its violence in this locality than it must have been seaward; for the swelling waves and high surf extending in that vast circular line which you witnessed with such astonishment, indicated that a high wind at a distance had raised the commotion."

"I had many strange dreams last night," said Henry, "about vessels foundering, and the cries of sailors clinging to the broken masts, or dashed among the rocks, and dying without any to help them. Nor shall I forget the appearance of last night's sun, as it set redly amid dark purple-looking clouds, which came in huge masses careering with the wind, while the frothy spray dashed up among the hollow rocks. Beautiful as the scene before us now is, I almost regret that it is so changed. I hope we shall have another storm before we go; for I delight to watch the turmoil of the waters, the screaming of the sea-birds, and the roar of the surf against the rocks. What, after all, is our lake, and hills, and green fields at home, compared to this magnificent scene! I long to launch upon those waters, and explore them to their uttermost boundaries."

"So Henry is become a sailor at once," cries Mary; "but he shall never speak ill of our loved home; and instead of sailing over the seas, let us go and collect beautiful shells and pebbles to carry home with us."

"Mary is right," we exclaimed; "instead of

speculating about untried enjoyments, let us improve those which the present time presents. The storm of yesterday has been at work for our gratification; the beach is strewn with the treasures of the deep: marine plants have been torn up and drifted along the shore; shells and marine animals have been scooped from their caves and hiding places; and all are now exposed to view, and await our inspection. You see those piles of seaweed!—that is the vegetation of the deep; and though differing greatly in form and appearance from land plants, yet they are not without their importance, nor are they without their admirers."

"Do trees, then, grow in the sea?" inquired Mary.

"Not exactly trees," I replied, "but a kind of simple plants called *fuci*, having stems and broad leaves of a soft leathery structure, nearly resembling the lichens which I have shown you on our rocks, and bearing seeds of a very simple kind like them. You see they are of all sizes, from this small delicate tufted plant to those large-leaved tangles of many feet in length. Indeed many parts of the ocean, to the depth of several hundred feet, are clothed with a vegetation as luxuriant as that on land, the tangled stems and leaves of which form the abiding places of myriads of fishes and marine animals of various kinds. We shall now pause at this spot, and examine a few of the plants. That long cord-like specimen which Henry draws out to the length of ten or twelve feet, is very common in the northern seas; in Orkney it is called sea-catgut, with us sea-lace. It grows in large patches, just like long grass in a meadow, attaining a length of from 20 to 30 feet. This other plant, with the tall round stem, terminated by a broad and long leaf, is a very common one, called the *laminaria*, or sea tangle, of which there are several species, those of warm seas growing to the height of 25 feet, with a stem as thick as that of a small-sized tree. The gigantic fucus of South America attains a height much greater than this, but with a diameter of stem not more than an inch. Captain Cook describes these fuci as attaining the astonishing length of 360 feet. They flourish in immense groves throughout the Southern Ocean, and are all alive with innumerable animals, that take shelter among and derive their sustenance from them."

"The sea, then," said Henry, "can boast of taller vegetables than the land; for, if I recollect rightly, the tallest palms do not exceed 150 feet, and the *araucaria* of New Holland is not above 60 feet more."

"You are quite correct, Henry; and I may mention another sea-plant, which is said to reach 500 to 1500 feet in length. It is a slender weed, called *macrocytes*; the leaves are long and narrow, and at the base of each is placed a vesicle, which is filled with air, and which serves to buoy up and float the plant near the surface of the water, otherwise, from its weight, it would sink to the bottom."

"And what is the use of all these plants?" inquired Elizabeth.

"Like land vegetation, they fulfil the important office of affording food and shelter for the myriads of animals with which the sea, like the land, is peopled. They are also not without their uses to man. These heaps of drifted weed form the best of manures for the soil. In some countries sea-weed is collected and burnt, and the ash, which is called kelp, produces soda. Several kinds are also capa-

ble of being boiled down into a sort of glue; and here is the little rock-weed, which is erroneously termed Irish moss, but which is, in fact, a sea-plant (*chondrus crispus*.) This plant, when well washed, so as to free it of its salt, and then slowly boiled in water, forms a light and nutritious jelly, of which, I think, you have often partaken when made up with milk and sugar."

"But look here," said I, pointing to a small object lying under the heap of wreck which we had just been examining; "what do you take that to be?" They all pronounced it to be a small marine plant just like many of the others strewn round. "Now, scrutinize it particularly," said I. Henry took it up with his hand, and laid it on a piece of paper prepared to receive some other plants. To their surprise the object made several movements; it again moved, and again was still; they watched it with some eagerness, and not without some dread. At last I picked off two or three of the branches of the apparent plant; a claw of an animal now was visible; I continued to pick off more; a head of a crab-like creature was displayed; and finally, cleaving off the whole, a small but complete and living creature of the crustaceous family was exhibited to their wondering gaze. A flood of questions now assailed me. "This little crab (*macropodia phalangium*) is an inhabitant of our sea-shores, and is remarkable for its instinctive propensity of adopting the disguise of a vegetable. It, in short, lives a continued life of masquerade. For this purpose it selects the branches of a small fucus just about its own size, and sticks them so artfully over its limbs and body, that the whole is masked, so as to represent exactly the plant which it has selected. Whether the pieces of plant adhere by their own glutinous juices, or whether the animal spreads over its body a juice peculiar to itself, I cannot tell, but certain it is the animal is found always thus dressed; and it would appear to change its coat whenever it becomes old, for the leaves are always fresh and unshrivelled. The reason of this disguise is evidently concealment—either to conceal itself from its own foes, or to enable it the better to pursue its prey, or, perhaps, for both these purposes. At all events, the instinct is a very singular one. There is another crustacean, and a better known one than the other—the hermit crab. This fellow likes a good comfortable house, but he will not build one for himself, so he looks about for the first empty shell that will fit him, and in he walks back foremost. You see how he looks out at his door, and now he scampers off with his house upon his back. To convince you that the creature takes up its abode in a chance shell, here are several more of them, and all the shells you see are of different forms. As the young animal increases in bulk, it leaves its first small shell and takes to a larger. You see this well exemplified in the various sizes of the animals before us."

Mary had now got hold of a large shell, the waved buccinum, and had applied it to her ear, listening to the hollow sound which it thus emitted. She had been prompted to this from having practised the same thing with shells at home, and I now asked Henry if he recollected Lander's verses in allusion to this circumstance. He promptly called to mind those shells

"Of pearly hue

Within, for they that lustre have imbibed
In the sun's palace porch, where, when unyoked,

His chariot wheel stands midway on the wave.
Shake one, and it awakens—then apply
Its polished lips to your attentive ear,
And it remembers its august abodes,
And murmurs as the ocean murmurs there."

"Sure enough it murmurs," cries Mary; "but if we carry it away with us, will it still preserve this mysterious union with the ocean?"

"It will still continue to sound when applied to your ear wherever you carry it; but so will any other hollow thing—a tin box, a cup, an empty tumbler, or any such—and yet I am sorry thus to dissipate with plain matter of fact the beautiful fancy of the poet."

"What is the real matter of fact, then?" inquired Henry.

"It is simply that the concave sides of the shell reverberate the current of warm air which is always passing off and upwards from the surface of our bodies, its place being as constantly taken by a fresh supply from the surrounding atmosphere. The hollow murmuring is the slight sound produced by the air-current striking against the sides of the shell, and being echoed, as it were, from every point, and returned again to the ear."

"I am almost vexed you have explained this to me," said Mary, "for at home I have often pleased myself with the thoughts that the shell roared or murmured when the tides of its parent ocean flowed in, and that it was silent until the time of the flowing tide returned. So bewitching is fancy! And yet, after all, I believe I shall be more satisfied with truth. I shall carry this shell home with me, however; and when I wish to recall the dashing of the sea-waves and the roar of the surf along the sands, and up among the rocks, I will have only to apply this talisman to my ear. In this respect it will be to me still the shell of the poet."

As we continued our walk, several little tracks in the sand attracted our attention. Henry determined to follow up one of them, in order to ascertain their cause: he continued to trace one for more than ten yards, and at last stopped almost at the brink of the water. We hastened to the spot, and perceived that the trail was made by the common cockle. It was curious to mark the creature pushing out its single foot from between its two-valved shell, and pressing it against the soft sand, thus pushing itself onward step by step. It had thus travelled at least ten to fifteen yards in the few hours since it had been left on the beach at high water, and now it seemed to be returning to the sea to feed. A little onwards we came to two other well-known edible shell animals—the oyster and mussel. Unlike the cockle, both these were stationary animals. They were securely anchored to stones, and we spent some time in examining the fine silken fibres (the *bysus*) which proceeded from their bodies, and were fixed by the other end to the rocks, thus forming a secure cable.

The frequent lash of the returning tide, and the rapidly descending sun, now warned us that it was time to return home.

We did so reluctantly, and paused for a moment to take a look at the descending luminary. How different was the sunset from last evening. The sky was one sea of soft mellow light, curtained above by stripes of filmy clouds of the brightest hues. The sun was just dipping its orb into the deep, and sent a long line of flickering rays athwart the glassy mirror, even reaching to our feet. Sea-birds were speeding along on swift wing

to the shore; one or two little boats were seen gliding homewards; but the distant ships steadily held on their way, now almost lost in the misty distance—night and day pursuing their course over the vast deep. As we ascended the aloping beach, we were recalled from our visions of the sea by objects reminding us of the land. The cattle from the neighboring fields had wandered down to the beach, and their dark massive forms were seen between us and the sky, as they straggled along the shore. "I think these cattle are actually feeding on the sea-weed," cried Henry; "I am sure I see one cow busily chewing a piece of sea-tangle."

"That is the very object," I replied, "which has made them wander here. Why should not cows and oxen love the sea-side as well as we? All graminivorous animals are exceedingly fond of salt, and of every substance which contains it. Hence they chew with avidity the sea-weed and lick the salt incrusted on the rocks. Nay, they will also feed with avidity on fish."

"At the western extremity of the island of Lismore, on the Argyleshire coast," says Dr. Macculloch, 'are some rocks separated at low water, where the cattle may be daily observed resorting, quitting the fertile pastures to feed on the sea-weed. It has erroneously been supposed that this practice, as well as the eating of fish, was the result of hunger. It appears, on the contrary, to be the effects of choice, in cattle as well as in sheep, that have once found access to this diet. The accuracy with which they attend to the diurnal variations of the tide is very remarkable, calculating the times of the ebb with such nicety, that they are seldom mistaken even when they have some miles to walk to the beach. In the same way, they always secure their retreat from these chosen spots in such a manner as never to be surprised and drowned by the returning tide. With respect to fish, it is equally certain that they often prefer it to their best pastures. It is not less remarkable that the horses of Shetland eat dried fish from choice, and that the dogs brought up on these shores continue to prefer it to all other diet, even after a long absence.'

"Herodotus mentions that the inhabitants in the vicinity of the lake Prasias were in the practice of feeding their horses and cattle on fish. The Icelanders and Faroese do the same, both with fish and dried whales' flesh, which they generally serve up as a soup, with a small quantity of fodder. 'In the northern parts of the state of Michigan,' says Captain Marryat in his diary in America, 'hay is very scarce, and in winter the inhabitants are obliged to feed their cattle on fish. You will see,' says he 'the horses and cows dispute for the offal; and our landlord told me that he has often witnessed a particular horse wait very quietly while they were landing the fish from the canoes, watch his opportunity, dart in, steal one, and run away with it in his mouth.'"

'This surprises me,' said Elizabeth, "I thought animals, if left to their own choice, would always confine their taste to the particular kind of food to which they were destined by their structure."

"As a general rule this holds true; few carnivorous animals, I believe, would be disposed to exchange their beef for greens; but then, again, those who live on greens seem to have a hankering now and then after a piece of beef. I dare say you may have observed at home how pertinaciously a cow

will keep chewing at a bone a whole day, to the utter neglect of her grass, and to the no small dismay of the dairy-maid in the evening, when the cow returns without a drop of milk!"

"I have observed it frequently," cried Henry, "and I have been taught to creep close to said cows when so employed, and throw into their mouth a handful of sand and small pebbles; this, by mixing with their favorite morsel, spoils the whole, and they then reluctantly throw the mouthful out, and take to their grass."

Darker and darker now grew the evening shadows as we slowly took our way landwards. The waving sand-hills at last shut out our view of the ocean, and its hollow murmurs only reached our ears. We bade it a last adieu, after having spent two delightful days admiring its wonders, and having brought away with us numerous trophies, to remind us of our studies on the sea-shore.

VERSES,

SUPPOSED TO BE WRITTEN BY WILLIAM SMITH O'BRIEN, DURING HIS SOLITARY ABODE IN THE CELLAR OF THE HOUSE OF COMMONS.

I AM monarch of all I survey;
My right there is none to dispute;
From the breakfast-time round to the day,
I see neither Saxon nor brute.
O Solitude! where 's the attractions,
That sages have seen in your face!
Better dwell in the midst of the Saxons,
Than reign in this horrible place.

I am out of humanity's reach,
I must finish the Session alone,
Ne'er cry "hear!" to an illigant speech,—
Sure I start at the sound of my own.
Them beasts, the attendants and waiters,
My form with indifference see;
They are so unaccustomed to Marthyrs,
Their coolness is shocking to me.

Society—blarney—abuse—
Gifts dear to the boys of my name!
O if I had the wings of a goose,
It 's soon I 'd be out of this same.
I then might enliven my gloom
In the ways of repalers and men,
Might learn from the wisdom of Hume,
And be cheer'd by the sallies of Ben.

Ye Mimbers, that make me your sport,
O convey to this desolate door
A Times, with a faithful report
Of the house I shall visit no more.
My friends, sure they now and then send
A joke or a laugh after me!
O tell me I yet have a frind,
Though Bentinck I 'm never to see.

The attendant is gone to his rest,
The Saxon lies down in his lair,—
While I think of the Isle of the West,
And turn up my bed * in despair.
But whisky is still to be had;
And the whisky—encouraging thought!
As it is not by any means bad,
Half reconciles me to my lot.

Punch.

*The Martyr is accommodated with a very neat "folding bed."

It were a curious and instructive study to trace the progress of the Newspaper Press of France, from the earliest times down to our own day;—to record the history of the ancient *Gazetier* and the modern *Journalist*;—of the old *Gazette* of times long gone by, as well as of the modern *Journal*. In the French of the 17th century, the *Gazetier* signified the Editor of a periodical publication, as well as the Publisher; but the word is not now used in this latter sense, and generally bears an ill signification.

Though any frivolous inquiry into the origin of words, in the present age of facts and realities, be for the most part idle, yet it may be permitted to us to state, that the word *Gazetier* is derived from *Gazette*, a denomination which the earliest journal received from the piece of Venetian coin, "*Gazetta*," which the reader paid for each number in the Piazza de St. Marco, in the seventeenth century. The first regular *Journal* which modern times has known, however, appeared in England in 1588. It bore the title of the "*English Mercury*," and probably suggested to the French nation the idea of the "*Mercurre François, ou Suite de l'Histoire de la Paix*." This publication commenced in 1605, the *Septennaire* of D. Cayer, and extended to the year 1644, forming altogether a collection of 25 vols. The curious compilation was, till 1635, edited by John Richer, and continued by Theophile Renaudot.

The "*Mercurre Galant*," which gave birth to the "*Mercurre de France*," and to the "*Mercurre François*" of 1792, commenced in February, 1672, under the editorship of Visé, and subsequently counted among its contributors and editors some of the first names in French history. Another "*Mercury*," not merely gallant, but historical and political, appeared in 1686, under the editorship of Sandras de Courtiltz; and to this periodical the great Bayle did not disdain to contribute. It survived to a good old age, and died in its 76th year, in 1782. The publication of the "*Public Intelligencer*" in England, in 1661, which met with a success signal and decisive, soon found copyists in France. Loret, in imitating it, composed his pitiable "*Gazette Burlesque*," or "*Muse Historique*," which was followed by the "*Journal des Savans*," beginning in 1665, and continued without interruption down to 1792.

Recommended in 1797 by Sallo, who took the pseudonyme of "Hédouville," it attained its greatest renown about 1816. In any sketch of the

history of journals or gazettes, the "*Nouvelles de la République des Lettres*" should not be forgotten. This work was originally undertaken by Bayle, Le Clerc, Basnage, and some other illustrious savans, and under their management continued to give that which is oftener sought than found in our own day—a just and impartial account of the works reviewed. Among the political and literary gazettes of a somewhat later epoch, "*La Clef du Cabinet des Princes*," commenced at Luxemburg, in July, 1704, by Claude Jordan, and continued under the title of "*Journal de Verdun*," because it appeared in that town, had the greatest success. Towards the end of the republic, the celebrated bookseller, Panckoucke, borrowed this title for a well conducted journal, "*La Clef du Cabinet des Souverains*," a daily paper, to which Garat and Roussel contributed excellent articles.

The name of the "*Moniteur*," so often cited, not merely in France, but in every civilized country in the world, was borrowed from the English journal of that name which appeared in 1759. France, whose object it always seems to have been, "to tread upon the knees of England," possessed in the following year (1760) a *Moniteur* of her own—a periodical journal, containing moral and political articles. The graveurs and the printers' art did not alone suffice for our restless and volatile neighbors. There were not wanting speculators, scandalous and shameless enough to send under an envelope to their abonnés, a manuscript bulletin of all the tittle-tattle trivialness, gossip, scandal, roudies, and lies of Paris. These letters, called "*Nouvelles à la Main*," were invented by a discreditable demirep, one Mde. Doublet, who kept a regular scandal-shop, where persons of both sexes resorted, and where characters were blackened, and reputations destroyed, for any consideration that malevolence might offer or infamy accept.

Some small rivulet of truth occasionally meandered through this vast meadow of médisance; but fiction, not fact, was the dame's staple article. It is certain that this clandestine publication gave some concern to the government; for, on the 6th of October, 1753, the Marquess d'Argenson wrote to the lieutenant of police of Berryer, that the "*nouvelles*" could not fail to produce an ill effect, seeing that Mde. Doublet kept a regular registry of scandal, which was not only spread through Paris, but dispersed all over the provinces. The minister went on to state, that though such conduct was displeasing to the king, yet his majesty had requested, before severer means were resorted to, that his minister should see Mde. Doublet, with a view of representing to her that the abuse and the scandal should cease, and that she should no longer permit those who encouraged such infamies to frequent her house. Notwithstanding these threats, the injunctions of the police were not, it appears, obeyed; for, in 1762, the Duke de Choiseul, then minister of Louis XV., complained again to Berryer, and at the conclusion of his letter of the 24th of March thus expressed himself: "His majesty has directed me to order you to repair to Mde. Doublet, and to announce to her that, if any more '*nouvelles*' are issued from her house, the king will cause her to be immured within the walls of a convent, from whence she can no longer send forth '*nouvelles*,' not merely impertinent and improper, but contrary to the rules of his majesty's service." Mde. Doublet persevered, nevertheless, in her course. The police now

sought to corrupt some of the habitués of her bureau, and for this purpose pitched on a certain Chevalier de Mouchi, who made a report to the minister to the effect, "that there was and had long been at the house of Mde. Doublet, a 'bureau de nouvelles,' which was not the only one in Paris; but her employés wrote a great deal, and profited largely by it." It cannot be denied that this Mouchi, author of the "Mille et une Faveurs," played, in reference to this bad woman, the part of a base mouchard. He had been received at the officina of Mde. Doublet as a man of letters, and he singled out in his report M. and Mde. Argental, Mde. du Bocage, the authoress of the "Colombiade," Pidanzat de Maïrobert, one of the authors of the "Memoirs Secrets," better known as the "Memoirs of Bauchaumont," the Chevalier de Choiseul, and many medical and literary men among the contributors.

According to the report of Mouchi, one Gillet, valet de chambre of Mde. d'Argental, was at the head of the bureau. This base, unlettered lacquey, after having collected together all that was said in the best houses of Paris, sent his bulletins (as some infamous Sunday journals in our own day were sent) into the provinces at six and twelve francs the month; his despatches being literal copies of what Mde. Doublet circulated through the capital, on the morning of the same day, under the title of "Nouvelles à la Main." The more iniquitous and odious the government, the more extensive the sale and distribution, and the more formidable the influence and effect of the publications. In 1771, the Duke de la Vrillière exercised increased severity towards the authors of this scandalous chronicle. M. de Vergennes proceeded still further, for he would not permit literary men to carry on a correspondence with foreign countries, though the censor, Suard, was ready to certify to their character and conduct. This species of correspondence, wrote the minister, ought to continue prohibited, and those who persevere in it notwithstanding the prohibition, shall be severely punished. Good advice has proved valueless, and rigorous measures can alone prove effective.

We have already spoken of three Mercuries, but have not said a word of one, of which La Bruere was the "titulaire," as it was called. This privilege of titulaire was worth, to that fortunate man, 25,000 livres de rente, and having died one fine morning at Rome, about the year 1757, while the court was at Fontainebleau, Marmontel, who was there passing an hour with Quesnai, was sent for by Mde. de Pompadour, who said "Nous avons dessein d'attacher au nouveau brevet du Mercure des pensions pour les gens de lettres. Vous qui les connaissez nommez moi ceux qui en auroient besoin et qui en seroient susceptibles." Marmontel named Crebillon, d'Alembert, Boissy, and some others. Boissy obtained, through Marmontel's instrumentality, the brevet of the Mercure, but Boissy, though able enough to edit the journal, was incompetent to sustain it for any length of time. He had neither resources, nor activity, nor literary acquaintance, and he could not turn to the Abbé Raynal—for he did not know him—who was the man of all work in the absence of La Bruere. In this emergency Boissy held out a signal of distress to Marmontel, and wrote to this effect. "Prose ou vers ce qu'il vous plaira tout me sera bon de votre main."* Marmontel passed a sleepless and

feverish night in consequence of this unexpected demand being made upon him, and in this state of crisis and agitation it was, that the idea of a tale first suggested itself. Alcibiade was the result, and at Helvetius' dinner the day after, this anonymous article was attributed by the first ceanoisseurs of the day to Voltaire or Montesquieu. Such was the origin—and this is a curious piece of literary history—of those very "Contes Moraux" which have since had such vogue in Europe. Boissy did not long enjoy this brevet. At his death, Mde. de Pompadour said to the king, "Sire, ne donnez vous pas le Mercure à celui qui l'a soutenu?" The favorite meant Marmontel, and Marmontel obtained it accordingly. Well would it be for princes and people if favorites never less abused their privilege than the Pompadour did on this occasion. The Mercure, when Marmontel undertook it, in 1758, was not merely a literary journal, in the strict sense of the term. It was formed of diverse elements, and embraced a great number of subjects. It was not simply a gazette, but a register, so to speak, of theatres and spectacles. It entered into a full and generally a just appreciation of literary publications, into the discoveries in the useful arts, and local and social interests, into everything, in fact, but the great cardinal questions of government representation and general politics. It would be difficult to imagine a journal more varied, more attractive, and of more abundant resources, in so far as regarded science, literature, and the fine arts.

But, alas! all is not "couleur de rose" in the life of a journalist, as the initiated know but too well; and Marmontel confesses that he soon found out that to come to Paris to edit a newspaper was to condemn himself—to use his own words—"au travail de Sisyphe ou à celui des Danaïdes." Some of the first literary names in France were at this moment connected with the "Mercure" and its editor. Among others we need only name D'Alembert, L'Abbé Morellet, L'Abbé Raynal, Marivaux, and Chastellux. Nor was this collaboration exclusively confined to Frenchmen. The Abbé Galiani, Caraccioli, and the Comte de Creutz, were among the contributors; and the chansonniers Panard, Gallet, and Collé, occasionally lent their blithesome aid.

But this voluminous journal was soon to be suspended by the Revolution, not, however, before its columns had been enriched by the pens of Chamfort and Guinguéné. The former delicate, ingenious, brilliant, and witty writer, furnished the Tableau de la Revolution, in which the remarkable events of that remarkable time are eloquently retraced. Of these, Chamfort composed thirteen livraisons, each containing two tableaux, and the work was afterwards continued to the twenty-fifth by M. Guinguéné.

We have not spoken of the "Journal Etranger," to which the Abbé Arnaud and Prevost, Toussaint Fréron, (the famous Fréron, of whom more anon,) Favier Herandex, J. J. Rousseau, Grimm, and other celebrated men, were contributors. The editorship of this miscellany was undertaken by Suard, afterwards of the Academy, in 1754, and its object was to introduce to the notice of France all that was remarkable in the literature of England, Spain, and Germany. The paper existed until the month of June, 1763, when it ceased to appear. Towards the close of the same year, Suard, and his friend Arnaud, were commissioned by the government to undertake the "Gazette de France,"

* Memoires de Marmontel, tom. ii. p. 79.

each with a salary of 10,000*fr.* A void, however, was created by the demise of the "*Journal Etranger*," which the two friends determined to supply by the creation of the "*Gazette Littéraire de l'Europe*." This new periodical, protected by the Minister for Foreign Affairs, bore no more charmed existence than its predecessor, and when it died a natural death, Suard and Arnaud were paid by their subscribers to the tune of four volumes in advance. Where should we find such easy gullible subscribers now-a-days in the new world or the old? and echo answers, where, in mournful response to curious and inquiring aspirants to authorship.

Let the meanest among the dregs of the Row and Grub-street, pluck up "heart of grace," however, for be it known to all the dullards and dunces for their comfort, that among the most complaisant and contented contributors to this journal were the famous Denis Diderot, and the gentleman philosopher Saint Lambert. Nor were other appliances wanting to success. Suard had married one of the cleverest and most agreeable women of the day, Mdlle. Panckoucke, the sister of the famous printer and bookseller. His house and hearth were patronized by the "grand monde," under the title of "*le petit ménage*;" and here the munificence of the prince de Beauvau, and of the Marquis de Chastellux were exhausted, to place the *petit ménage*, to use the language of the biographer of Suard, "*en état de donner des festins à la haute littérature*."* It is the fashion among some Englishmen to cry up their own country at the expense of France; but where, we would ask, can any Englishman lay his finger on prince or marquess who exhausted, not his munificence, but who contributed one hundred pounds, either in gifts or otherwise, to place the "*petit ménage*" of an English journalist in a condition to worthily entertain men of letters?

It is not our purpose, and it would far exceed the compass of an article, to go over the journals and newspapers of the Revolution. Most of them were scandalous—many of them were bold—a few useful; but there was one journal which sprung out of this great crisis, which has survived that stormy and terrific epoch, and which has lived to see many great changes even in our own day. We allude to the "*Moniteur Universel*," the official journal of the French government. Born of the first Revolution, and a witness of all the political revolutions which have succeeded it, the "*Moniteur*" has had the rare advantage of surviving times of trouble and civil strife, without losing any portion of its high consideration, and without changing either its character or its language.

The founder of the "*Moniteur*" was a great and enterprising bookseller, of the name of Charles Joseph Panckoucke, the father of Madame Suard, of whom we have just spoken, and celebrated by the publication of the "*Encyclopédie Méthodique*." Panckoucke had, in a journey to England, been struck with the immense size of the London journals. He resolved to introduce a larger form into France. This was the origin of the "*Moniteur Universel*," which first saw the light on the morning of the 24th November, 1789. But the "*Moniteur*," in its infancy, did not, as the reader may well suppose, possess its present organization. A very small space was allotted to the report of the proceedings of the National Assembly, and the debates were often incorrectly given. Shortly after

this period, M. Maret, afterwards Duke of Bassano, and who was editor of the "*Bulletin de l'Assemblée Nationale*," agreed to incorporate his paper with the "*Moniteur*,"* and soon after became the first rédacteur en chef of the latter journal. As Maret was an admirable short-hand writer, the paper became, to use the words of his biographer, a *tableau en relief*. It was not merely fidelity of expression that was transmitted, but the spirit of the debate was embodied, and the gesture and demeanor of the orator described. Something more, however, than mere reports were needed, and a series of articles were determined on, comparing the parliamentary system springing from the Revolution, with the system that prevailed anteriorly. The exact and conscientious Peuchet undertook this difficult task. His articles, under the title of an introduction, form the first volume of the collection of the "*Moniteur*."

From this period the principal and the most precious recommendation of the "*Moniteur*" was, and is, that it is a repertory of all the important facts connected with the annals of modern France. The "*Moniteur*," indeed, is the only pure wall of undefiled historical truth, though occasionally dashed and brewed with lies, more especially in the Napoleonic time, from which a thorough knowledge may be obtained of the parties and history of France. Tables compiled with diligence, method, and clearness, and published for each year, facilitate the researches of the student, and conduct him through the immense labyrinth of facts which have been accumulated during half a century. Men of extraordinary merit have occasionally coöperated, either as men of letters or as philosophical writers or as publicists in the editing of this remarkable journal. We have already cited the Duke of Bassano, who was rédacteur en chef, to the end of the Constituent Assembly. Berquin, the author of "*L'Amie des Enfants*," succeeded him at a time when Rabaut de St. Etienne, La Harpe, Laya, the author of "*L'Ami des Lois*"; Framery; Gouguené, author of a Literary History of Italy; Garat, who was minister and senator; Suard, of the Academy, of whom we have before spoken; Charles His, Gallois Granville, Marsilly, La Chapelle, and others, enriched the very same pages with their united labors. Under the Convention and the Directory, M. Jourdan performed the duties of rédacteur en chef, and was assisted by Trouvé, Sauvo, and Gallois. Under the Consulate, Sauvo was placed at the head of the "*Moniteur*," and is, or lately was, editor in chief. It may be in the recollection of our readers, that during the crisis of the ministry of Polignac, that weak foolish man sent for M. Sauvo, and handed him the famous ordonnances which produced the Revolution of July, with a view to their publication in the official journal, when the courageous journalist remonstrated with the president of the council, and pointed out to him the folly—the madness—of his course.† The minister refused, even at the twelfth hour, to listen to the voice of wisdom, and our readers know the result. During a period of nearly forty years, M. Sauvo has written in the "*Moniteur*" the principal portion of the matter under the head *Théâtres*; and all parties most capable of judging of such matters admit the taste and the tact he has uniformly

* Souvenirs du Duc de Bassano, par Mde. Charlotte de Sor. Bruxelles, 1843.

* Vie de Suard, par Charles de Rozior. Paris, 1839.

exhibited in this department of his labors, his criticisms being extended not merely to the pieces, but to the actors and actresses. If these essays were published separately, they would form no mean course of dramatic literature. Among the numerous collaborateurs of M. Sauvo, from the Consulate and Empire to our own day, we may mention Peuchet; Tourlet; the learned Jomard; Champollion, of the Academy des Inscriptions et Belles Lettres; Amar; Tissot, of the Academy; Kératry; Petit Radel; David, formerly consul-general in the East; Aubert de Vitry, and Champagnac. The "Moniteur" is the only journal, it should be observed, which reproduces exactly the debates of the Chambers, for other journals have recourse to analysis and abridgments. The only certain basis of an exact analysis would be the words of the "Moniteur;" but this journal, contrary to its agreement, which imposes on it the obligation of furnishing proof sheets to all the journals on the evening of its publication, appears after the latter have been printed off, and cannot consequently be of the least use for an analysis of the debates. It were, perhaps, a piece of supererogatory information, to state that the "Moniteur," which forms a collection of more than 100 volumes, is furnished to all the higher functionaries of the state, and is constantly referred to, not merely in France, but in every civilized country. It is the best repertory of contemporaneous history, and complete copies of it are therefore very rare, and always fetch a high price.

During the emigration, Monsieur, afterwards Louis XVIII., had a species of *Moniteur* of his own, under the title of "Journal de Monsieur," in which the Abbés Royon and Geoffroy, the latter afterwards so celebrated as the feuilletonist of the "Débats," both wrote; but this paper necessarily expired the moment his majesty landed on the French soil. The Abbé Geoffroy, indeed, played an important literary part after the Restoration; but before we speak of him, it will be necessary that we should enter into the history of that journal, which he rendered so celebrated by his criticisms. In so doing, it is indispensable that we should speak somewhat at length of the very remarkable founders of the "Journal des Débats," the MM. Bertin. These two brothers, François Bertin the elder, and Louis Bertin, commonly called Bertin de Vaux, were the men who first elevated journalism in France into a power in the state, and made of newspapers a great instrument, either for good or for evil. François was the elder brother of the two, and continued till the period of his death "Rédacteur en chef et Gérant" of the "Journal des Débats." Louis, the other brother, after having been fifteen years a member of the Chamber of Deputies was, soon after the Revolution of 1830, sent ambassador to Holland, and elevated to the Chamber of Peers.

Bertin the elder was a man of large and liberal views, intelligent, instructed not merely in letters, but in politics and legislation—a man of the world, in the best sense, generous, indulgent, and great, not only in accomplishments of the mind, but what is rarer, and better, in virtues of the heart.

Bertin de Vaux, his brother, was an active, indefatigable man of business, and at the same time a distinguished and spirited writer, and a scholar of no mean pretensions, especially in classical literature. Both these remarkable men were born at Paris, of a rich and respectable family. Their father, who was secretary to the Duke de Choiseul, premier of

France, died young. Their mother, a woman of sense and talent, afforded them the advantage of the best and most careful education. In the revolution of 1789 they were both young, but the elder was old enough to have witnessed many of the horrors of 1793. He assisted at some of the tempestuous and sanguinary debates of that epoch, and was saved from being a victim by his extreme youth.

It is not our purpose to go over the history of the press during the consulate. It will be sufficient to state that soon after Bonaparte had established himself in the seat of power, he practically annihilated the decree of the ninth of September, 1789, which declared that the liberty of the press was one of the inalienable rights of men. With one stroke of the pen, the little Corsican decided that among the numerous political journals existing, twelve should alone survive, and to these was conceded the exiguous liberty of publishing the list of sales of real and personal property by auction and otherwise, the bulletins and recitals of battles published in the "Moniteur," the new laws, and dramatic criticisms on the spectacles of the day. It should be remembered, that in those days the largest journal was no bigger than a quarto sheet, and that charades and rebusses were then more in vogue than political disquisitions. It was in such a season as this that Bertin the elder purchased for 20,000 francs, or £800, of Baudoin, the printer, the name and copyright of a "Journal d'Annonces." With the sagacity of a man of profound sense, M. Bertin soon perceived that the journal of which he had become the proprietor ought neither to resemble the journals of the ancient regime, such as the "Mercure de France," of which we have already spoken, nor the journals of the revolution, such as the "Orateur du Peuple," formerly conducted by Dussault, of whom more anon, nor the journal, reeking with blood, of the cowardly Hebert, called the "Père Duchesne." The "Mercure de France," though supported by Marmontel, and the beaux esprits of the court, was but a pale reflection of the inane vanity and emptiness of the old monarchy. But the journal of the "Père Duchesne" was the very image of the blood and fury and worst democratic drunkenness of the revolution. Such journals as either the one or the other were impossible, under a strong and intelligent government. Neither as consul nor as emperor, had Napoleon permitted their existence; and even though he had, the nation would not have long supported it. It was a difficult task to hit the house "betwixt wind and water," to use the familiar phrase of Burke, in speaking of the wonderful success of the wonderful Charles Townshend in the house of commons, and no less difficult was it for M. Bertin to hit the will of the emperor, and the humor, whim, and caprice of the good people of Paris. It was, indeed, an up-hill task to make a journal palatable to a successful soldier, who had made himself emperor, and who desired that neither his laws nor his victories might be discussed or criticised. And nearly as difficult was it to conciliate the good will and favorable attention of a people accustomed to the rank and strong diatribes of the democrats. Any other man than Bertin the elder would have given the task up in despair—but the word "despair" was no more to be found in his vocabulary than the word "impossible" in the vocabulary of the emperor. To create a journal without freedom of speech were indeed hopeless. M. Bertin spoke, therefore, freely, but

he was freely outspoken only of literature and the théâtres, holding his peace on higher and more dangerous topics.

The history of the rise and progress of the "Journal des Débats" is a moral and psychological study, not without its interest. Tact, and management, and moderation were necessary in order to write at all in that epoch, but the moment Bertin obtained permission to put pen to paper, he used the two-edged weapon so discreetly, that governor and governed were equally content. To use the phrase of Burke, he hit the ruler and the ruled "betwixt wind and water." What was the cause of this success? Bertin called to his aid men of science, learning, talent, and art, but all inexperienced in the art of journalism. There was not one among them who had ever before written a stupid leading article, or graduated in the stenographic tribune of the constituent or national assemblies, but they were men of mind and education—not what in England are called literary men—i. e., men without letters—who have failed in other callings, but scholars "ripe and good," brimful of learning. The greater number of the earlier contributors had been bred in the schools of the Jesuits; some among them were intended for the priesthood, but all were deeply imbued with the literature of Greece and Rome. Among the earliest regular contributors of the new journal were Geoffroy, Dussault, Feletz, and Delalot. On a second floor, in a small, dingy, damp hole, in No. 17, in the Rue des Prêtres, St. Germain l'Auxerrois, where was situated the office of the journal, these choice spirits met. After having traversed a dirty court, whose sweltering walls conducted to the first floor, they groped their way to the second floor, where the elder Bertin sat enthroned in all the pomp of editorial majesty. When the lively, intelligent, witty, and spiritual populace of Paris—for, after all, they are but a populace—but the cleverest and most gifted under the sun—when this mob of something more than fine gentlemen, though less than perfectly reasonable beings, read the first number of a journal written with moderation, yet vigorously; witty, yet with the air of good breeding and good society; learned, yet without the rust of the schools; bitter and incisive, yet without personal malignity—the town was amazed and delighted, as though a new pleasure had been invented, or, what is equivalent in France to a new pleasure, a new sauce. And a sauce piquante certainly was invented, for Julien Louis Geoffroy, the most ingenious critic of our age, and the civilized French nation, so improved and expanded the feuilleton, that it may in his hands have been pronounced a new creation. A distinguished scholar of the Jesuits, at the school of Rennes, Geoffroy afterwards entered the college of Louis le Grand. He subsequently was admitted to the Collège de Montaigue as Maître d'Etudes, and was ultimately named Professor of Rhetoric at the College of Mazarin, where for three years he successively obtained the prize for Latin prose. This success procured him the editorship of the "Année Littéraire," in which he succeeded Fréron, the redoubtable adversary of Voltaire, after Renaudot the founder of the journal in France. In the first years of the revolution his monarchical opinions pointed him out as the colleague of Royou, in the editorship of the "Ami du Roi;" but in the reign of terror he did not aspire to the crown of martyrdom, and escaped it by hiding his proscribed head in a small village, where he exercised the calling of a schoolmaster. After

the 18 Brumaire (18th Nov., 1799,) he returned to Paris, and was soon after chosen as theatrical critic to the "Journal des Débats." It was difficult, indeed, within the limits to which we are confined, to explain the immense vogue which his articles obtained. Every other day there appeared one of his feuilletons, of which the occasional bitterness and virulence were pardoned because of the learning and the wit. It was, indeed, the liveliest and most pungent criticism, but frequently partial and unjust. It was, above all, partial and unjust, in regard to some of the most remarkable actors and actresses of our own day, as Talma, Mde. Contat, Mlle. Duchenois, &c. The virulent war carried on by Geoffroy, also, against Voltaire, was indiscriminate and unjust, and in some respects ridiculous. Venality, in respect to contemporary authors and actors, has been more than once imputed to him; and it is openly said in the "Histoire du Journal des Débats," that he received cachemires, services in porcelain, bronzes, statues, cameos, clocks, &c. But without giving too much heed to these imputations, it may be truly said that his constant and unvarying adulation of Bonaparte is not a little disgusting and suspicious. This servile trait in his character is energetically castigated in an epigram, whose coarse, gross energy may be pardoned under the circumstances:

"Si l'Empereur faisait un pet,
Geoffroy dirait qu'il sent la rose;
Et le Senat aspirerait
A l'honneur de prouver la chose."

Notwithstanding these and other defects, however, the feuilleton of Geoffroy "faisait fureur parmi toutes les classes." The lively, learned, alert, ingenious, mocking manner of the ex-abbé had been unequalled since the time of Fréron. The vogue and popularity of the "Journal des Débats" were, therefore, soon established, and the people, who were beginning to be tired of war and Te Deums, desired no better pastime than to read the accounts of new actors, new books, and new plays, by Geoffroy and Dussault. An unheard-of prosperity was the result. The "Journal des Débats" soon had 32,000 subscribers, a number never equalled, we believe, even by the "Times" for any lengthened period, though surpassed on particular occasions. Jules Janin relates that a friend of his saw in Provence a travelling showman, with magic lantern in hand, who exhibited for two sous the heads of the most remarkable men in France. The first of these was Napoleon Bonaparte, Emperor of the French, King of Italy, Protector of the Confederation of the Rhine, &c.; the second was Geoffroy, writer of the feuilleton of the "Journal de l'Empire," as it was originally called, and indeed as it continued to be called till 1805, when it took the name of "Journal des Débats." The manner in which the "Débats" treated public topics was dexterous in the extreme. It was not then possible or practicable, indeed it was dangerous, to dilate openly on politics; but in speaking of the prose and poetry of Boileau and Racine and Fontenelle, the ingenious writers generally insinuated, as it were, "par parenthèse," a word or two on great questions of state, by which their political opinions were rather suggested than expressed. Thus was literature the wicket by which they entered into this vast and fertile domain, which they subsequently made their own in fee. Bonaparte would not at this period have tolerated an opposition to his government and pol-

ity, though he allowed an opposition to his literary opinions—to his ideas of tragedy and of a perfect epic. When he drove M^{de}. de Stael from France, that woman, of a genius so masculine and profound—of feelings so deep and impassioned—the illustrious authoress of “*Corinne*” was sustained and comforted by the support of the “*Débats*.” Chateaubriand, too, was understood, sustained, and defended, in the “*Journal de l’Empire*,” at a period when Bonaparte would allow no superiority but his own, and it is now a well-known fact that the proof sheets of “*Atala* and *René*” were corrected by the friendly, conscientious, and critical hand of the elder Bertin.

The history of the “*Journal des Débats*,” therefore, naturally divides itself into two distinct epochs. First, there was the “*Journal de l’Empire*,” which at the beginning was more literary than political; and, secondly, there was the “*Journal des Débats*—the same journal under a new name—which, in becoming openly political, did not cease to be literary. It is hardly possible to overrate the benefits which the “*Journal de l’Empire*” conferred on literature and on France. Its editors and contributors were the first to revive sound literature and a better taste. They raised up and placed on their proper pedestals the ancient models, forgotten, and cast down, without unduly depreciating any innovators distinguished by ingenuity, talent, or learning. The principal writers in the “*Journal de l’Empire*,” were Geoffroy, who died in his 70th year, in 1814; Dussault, who in 1793 published the “*Orateur du Peuple*”; Feletz, Delalot, Hoffmann, Malte Brun, and Fievée.

The articles of Dussault were always signed Y.; but such was the spirit, taste, and immense erudition that they disclosed, that they principally contributed to establish the literary infallibility of the journal. M. de Feletz was a man of a different order. He was a gentleman of the old school, polished, perfumed, polite, satirical, witty, instructed, writing paragraphs à la Pompadour, and articles à l’ancien régime. But this veteran of Versailles had such a varnish of finesse d’esprit, that his collaboration was of the greatest advantage. Delalot subsequently became an eminent member of the Chamber of Deputies. Hoffmann, a German by birth, was distinguished by a light, agreeable, transparent style, eminently French. He was a man of real depth and learning, and who gloried in the position of a public writer—a condition of existence he would not have changed with kings or emperors. Distinguished by a love of labor and of letters, he wrote with extreme facility, and could make the very essence of a book his own in a shorter time than any man of his day. He left behind him a noble library, within the four corners of whose walls he spent the happiest days of his existence.

Hoffmann became connected with the “*Journal des Débats*,” then called, as we before remarked, the “*Journal de l’Empire*,” in 1805. The connexion was promoted and facilitated by his friend Etienne, formerly secretary of the Duke of Bassano, and who was named by the emperor, “*Censeur du Journal de l’Empire*.” Hoffmann was possessed of rare qualities. He was learned, not merely as a classical scholar, but as a man of science. He was exact and scrupulous in reading and meditating on the works which he was about to criticise. He had a hatred of coteries and cliques, and a love of independence and impartial-

ity. These creditable feelings induced him to leave Paris for Passy, in order that he might live isolated and remote from all solicitation and influence. It was from this retreat at Passy that he attacked mesmerism and somnambulism, in articles full of wit and talent. It was from Passy, too, that he wrote that series of criticisms on the works of Chateaubriand, de Pradt, and Madame de Genlis, and those celebrated articles on the Jesuits, worthy of Pascal himself, which raised the paper to 18,000 or 20,000 abonnés. Such was the effect of good literary management, that at the end of the year 1805, the Messrs. Bertin were said to be making 200,000 francs, or 8000*l.* a year by their paper. Hoffmann continued to write in the “*Débats*” till the middle of April, 1828, towards the close of which month he died suddenly, in the 68th year of his age. The last time we met him was at the table of a common friend, on Twelfth-day, 1828, since also numbered with the dead. His learning, modesty, and rare companionable qualities, made on us an impression which time has not effaced.

Articles on foreign politics became, from the period of Napoleon’s letter, addressed directly to George III. (14th January, 1805,) a principal feature in the “*Journal des Débats*.” The greatest number of these articles from 1806 to the end of 1826, were written by the famous Danish geographer, Malte Conrad Brun, more commonly called in France, Malte Brun. Malte Brun was a brilliant but not a profound writer; but it must to his credit be admitted, that he was the first to render the study of geography attractive in France. It is a curious fact, yet perfectly true, and which we may state, en passant, that of the three great geographers of whom France is so proud, not one is a Frenchman. Brunn, or Malte Brun, to use his French name, was a Dane, Oscar M’Carthy is of Irish origin, and Balbi is an Italian. Of Fievée, we shall only say that his literary articles were considered solemn decisions, from which there was no appeal. He passed judgment of life or death on books, like an infallible, immovable judge, and was rewarded by his sovereign with a prefecture. We manage these things very differently in England. No critic, however eminent in England, ever obtained the place of police magistrate, from which an unknown Mr. Twyford has been dismissed, or the place of consul, at Calais, to which a too well known Mr. Bonham has been appointed. Such were the men who sustained the “*Débats*” up to the year 1814, when Geoffroy died, in the 71st year of his age. The gratitude and good feeling of the proprietors of the journal, of which he had been so long the glory and the pride, secured to his widow a pension of 2400 francs, a sum equal, at that period, to 200*l.* a year in England now-a-days.

We have heard and believe, that such good and generous things have been done by the “*Times*” in reference to old writers and reporters, and in the days of Mr. Perry, at the “*Morning Chronicle*,” but we do not believe that in any English journal, however liberal, the example has been as generally followed as it ought to have been.*

The death of Geoffroy, and the official occupa-

* The “*Morning Herald*” is said to have passed, recently, into the hands of Mr. Edward Baldwin, a gentleman distinguished by munificent liberality, and the most gentlemanly feelings. It is therefore to be hoped that the good example of the “*Débats*” will be more liberally followed in this country.

tions of Fievée obliged the elder Bertin, who had been for some time judge of the Tribunal de Commerce of the Seine, to look out for recruits. The restoration had now taken place, and a new era dawned on literature. Men breathed more freely, and dared to utter their thoughts in a somewhat bolder tone. A hundred thousand new ideas, stifled amid the clangor of battle and the din of arms, now found free expression. The reign of terror had passed, and the reign of despotism. Men were sickened with the smell of gunpowder, and fatigued with the sound of cannon. The pen, now that the sword was sheathed, began to be used. Mind vindicated itself against matter—intellect against mere brute force. There was on the throne of France a learned and philosophic sovereign, a gentleman and a man of letters; a royal author, if not a noble one; for Louis the Eighteenth had translated Horace with spirit and fidelity, and was the writer of the "Voyage à Coblenz,"—not exactly a tour, but a forced march, or flight from France, made by himself on the 21st June, 1791. It was therefore a moment propitious to letters and progress. Chateaubriand gave full rein to his imagination; Lamartine composed his first "Méditations Poétiques," Victor Hugo started into literary life, and Scott, Byron, Goethe, and Schiller, found hundreds of translators and imitators. The classic taste of the learned and voluptuous old king recoiled from much of the new literature; but he resolved that, at least, the Muse should be free, that the thoughts of man should range unconfined, and that no padlock should be clapped on mind. The "Journal des Débats" was the first to understand the new era. Bertin the elder was a keen observer, and he comprehended the distinctive character of the restoration as readily as he had understood the quality of the empire. New and fresh, if not young blood, was infused into the rédaction of the paper. Duvicquet—the worthy and excellent Duvicquet, so fond of a good glass of Clos Vougeot, and so devoted an admirer of the plats truffés—had succeeded to Geoffroy. But Duvicquet was a rigid classicist, and it was necessary to find some one who would read and comprehend the rising literature of France, and not be disposed to make a holocaust of it. Charles Nodier, a man of an easy and facile character, of gentle manners, but of solid learning, a pupil of the school of Chateaubriand, was the censor chosen to stretch out the friendly hand to the new band of innovators. It were difficult to fix on a happier choice. Nodier was not merely a classical scholar, in the best acceptance of the word, but a man well read in the modern and living literature of England and Germany. His articles were learned without pedantry, and distinguished by an admirable freedom, freshness, and grace. While Nodier yielded to the spirit of progress in literature, the high political doctrines of the journal were maintained by Casteljau, Clausel de Cousserques, and the famous De Bonald.

In March, 1815, the proprietor of the "Débats" followed the king to Ghent, and in the September following was named President of the Electoral College of the Seine. Soon after, he was appointed to the Secretariat Général du Ministère de la Police. Meanwhile the columns of the "Débats" resounded with the eloquent prose of Chateaubriand, and this was a step in advance of the ultra and excessive royalism of 1814. Men of genius in every walk of life were now encouraged

to write in the paper, and in such a season it was that the Abbé de Lammenais, since become so famous in a democratical sense, composed some remarkable articles, not yet forgotten after the lapse of a quarter of a century. The old classical school of literature in France was fast disappearing, and Bertin soon perceived that the classical school of criticism must disappear with it. He again cast about him for young writers, and fixed upon M. St. Marc Girardin, then a nearly unknown young man, but whose "Tableau de la Littérature Française," subsequently to 1839, obtained the prize of eloquence from the French Academy, and who is now one of the most learned professors of the Sorbonne, and M. de Sacy, the son of the celebrated Orientalist, a young and learned advocate, of ripe studies and a pure taste. Both these gentlemen still afford their valuable assistance to the paper, and both are among the ablest writers in France. Previously to this period, Salvandy, the present minister of public instruction in France, had written some remarkable articles, distinguished by a felicitous imitation of the style of Chateaubriand. From the period of the death of Louis XVIII., in September, 1824, of whose character he gave an admirable sketch, till the present day, M. Salvandy may be considered among the contributors to the *Débats*. There are few public men in France who have more of the talent of the journalist than Narcisse Achille de Salvandy. To an extreme vivacity of intellect he joins great power of expression, an energy and enthusiasm almost inexhaustible. Some of the best and most bitter articles against the Villèle ministry proceeded from his pen, and he it was who, from his country-house near Paris, dealt, in some very able leading articles, the deadliest blows against the Polignac ministry. To this deplorable ministry the "Débats" was as much opposed as the "Constitutionnel," and both waged an inextinguishable war against the Jesuits.

From the death of Hoffmann, in 1828, Eugene Béquet, the last of the old school, took a more prominent part in the literary department. His productions were distinguished, not more by sound sense than by exact learning, and a pleasant vein of humor.

In 1826-7 the "Débats" counted not more than 12,600 subscribers. This was not owing to any lack of interest or ability in its articles, for it was conducted with amazing tact and talent; but a formidable competitor had appeared, in the shape of a journal called the "Globe," to which some of the ablest and most educated young men of France contributed. Among others, M. de Rémusat, one of the deputies for Garonne, and minister under Thiers, and M. Duvergier de Hauranne, one of the deputies for Cher, MM. Duchatel and Dumon, now ministers of the interior and of public works respectively, and M. Piscatory, minister of France, in Greece.

Against that illegal ordonnance of Charles X. which abolished the press, the "Débats" made no such energetic remonstrances as the other journals. In speaking of the tumultuous groups of workmen traversing the boulevards, the writer of a leading political article remarked, "*On s'attendait à des actes énergiques de la part de l'autorité, l'autorité ne se fait remarquer que par son absence.*"

When, however, the insurgents obtained the upper hand, the note of the writer suddenly changed, and Lafayette was then spoken of as "*le viel et illustre ami de la liberté, le défenseur intro-*

pide de l'ordre, dont l'âge ne refroidit pas le zèle patriotique."

This was in the first days of August, and within seven weeks afterwards M. Bertin de Vaux was named minister plenipotentiary to the King of Holland. In a very little while afterwards, Armand Bertin, the present *gérant* responsible of the journal was appointed "commissaire" of the Académie Royale de Musique.

After the revolution of 1830 Duvicquet retired to his native place, Clamecy, and the *feuilleton** of the "Journal des Débats" passed into the hands of Jules Janin, who had previously been connected with the "Messager," the "Quotidienne," and the "Revue de Paris," and who was then better known as the author of "L'Âne Mort et la Femme Guillotinée," published in the year previously. The modern *feuilleton* under his management, no longer resembles the ancient. Whether it has been improved is, we think, more than questionable, and it certainly no longer possesses the authority which it enjoyed in the time of Fréron, Geoffroy, Feletz, and Hoffmann. The earlier *feuilleton* was distinguished by learning, judgment, critical acumen, and discretion, and a measured moderation of tone. It was occasionally dry, sometimes smelling too much of the rust of the schools, almost always ignorant of, and invariably intolerant towards, foreign literature. But though it did not exhibit the variety and vivacity of tone of the modern *feuilleton*, it was devoid of its shallowness, pretension, and parade. The ancient *feuilleton* aspired to instruct, the modern seeks merely to amuse. If the ancient *feuilleton* adhered somewhat too strictly to certain canons of criticism, certain cardinal principles in literature and art, the modern has too freely trifled with received notions, too much in paradox, and a *laissez aller* style. In seeking to avoid a heavy, pedantic manner, the modern *feuilleton* has become affected, mincing, and *maniérée*. The ancient *feuilleton* was too learned and too erudite—the modern is too ignorant and superficial. The ancient frequently dived too deep into the subject in hand for a daily newspaper—the modern almost always skims too lightly over the surface of the subject, if it does not give the real question the go-by.

The great abuser and perverter of the modern *feuilleton* has undoubtedly been Jules Janin. There is, as it appears to us, in everything that he has written, what has been well characterized a "marivaudage de bas étage." He seems always to wish to be saying things uncommonly fine, witty, and clever, and to be fully persuaded that it is his duty not only to write, but to think, differently from other people. To accomplish this, he performs all sorts of mental gyrations and contortions, all sorts of grey-geese antics. Sometimes

* An explanation of the word "*feuilleton*" may be needed by some of our readers. Till within the last ten years, that part of the newspaper separated by a line of demarcation from the politics and mere news, was called the *feuilleton*. It consisted of small, short columns, and was devoted to literature and literary criticism. It was in these columns that the Geoffroys, Hoffmanns, and other able and learned men of the day, produced articles worthy of a permanent place in the standard literature of France. This was the ancient *feuilleton*, which degenerated in the hands of Janin. Though subsequently sought to be restored to its pristine purity by Evariste, Dumoulin, Saint Beuve, Nisard, Gustave Planche, and others, the ancient *feuilleton* has now expanded into the "Roman *feuilleton*," in which all sorts of literary monstrosities are perpetrated.

he is seized with a forced gaiety, which is, after all, but an abortive and lugubrious hilarity; anon he assumes a melancholy, which, if not sickly and sentimental, is put on as a mask to suit the occasion. Jules Janin is just the man who, for effect—to use the phrase of Curran—"would teach his tears to flow decorously down his cheeks; who would writhe with grace, and groan with melody." He has sought the pretty, as Longinus sought the sublime. He delights in ingenious paradoxes, which he presents to you in ten different fashions: sometimes all rude and naked; sometimes with a thin robe of gauze; sometimes painted, powdered, and patched, with flounce and furbelow to match. Janin is seldom deficient in delicate irony, but is always full of mincing airs and graces, and an esprit à-la-mode de Paris. But in his gallon of sugared sack, there is but a "ha'porth" of bread, after all. In the stream of pet phrases which he pours forth, there is a tininess, if not a tenuity of idea. His style might be stereotyped. It would be a great saving to the "Débats" to have certain fond familiar words always set up, standing in case. Scores and scores of times, speaking of *débutantes*, he has said: "Pauvre jeune fille aux joues roses, aux mains blanches, elle si pure, elle si candide."

Would he describe an age or an epoch, here are his words:—"Ce XVIII^e siècle en manchette, en dentelles, en talons rouges, en velours, en paillettes, avec ses mouches, son rouge, ce XVIII^e siècle si fardé si corrompu," &c. This carillon of click-clack, this fredon—to use a musical term—of phrases; this floritura of variations and doubles, called by musicians "*folia di Spagna*," is very contemptible; but it has had great vogue; for the object of this writer is more to amuse than to inform the reader, more to be playful than profound, more to be satirical than solid or satisfying. It is, therefore, no matter of marvel that Janin has many admirers and many imitators, and is the rage of men, women, and children.

One of the burning and shining lights of the higher *feuilleton* of the "Débats" in 1830 and 1831, was Loève Weymar, who had become known in 1828 and 1829, by translations from the German. His articles were distinguished by considerable brilliancy, and secured the approbation of the minister of the day. He was, in consequence, sent on a kind of literary mission to Russia. At St. Petersburg he married a young Russian lady, with 700 or 800 slaves for a dowry, and is now consul-general of France in some part of the eastern hemisphere. This is a sort of accident which has never happened, we believe, to any writer in the "Times" or "Chronicle," literary or political. Ministers in England claim no kindred, and have no fellow feeling, with the press; and if the "sublime of mediocrity," the descendant of the Lancashire cotton-spinner, has anything to give away, he bestows it, not on writers or literary men, but on the stupid son of some duke, who calls him Judas and traitor, or on the thirty-first cousin of some marquess, who tells him, for his pains, that he is no gentleman, and does not know what to do with his hands; or on the nephew of the Countess of Fashington,* who simpers out, with a seductive smile, that the premier is like Thresher's best silk stockings, fine and well woven on the leg, but, after all, with a cotton top.

The "Débats" was also enriched shortly after

* This is the *mot* of a fashionable countess.

the revolution of 1830, by the letters and articles of Michel Chevalier, an élève of the "Ecole Polytechnique," and former editor of the "Globe." Some of his earliest productions in the "Débats" were the Letters from America—letters remarkable in every respect, and well entitling this celebrated economist and engineer to the renown he has subsequently attained. On the early freaks of M. Chevalier as a St. Simonian, it is no part of our business to dwell. He has outlived those follies, and is now pursuing a useful and prosperous career, not merely in the "Débats," but as a professor in the university; and what is better still, in his profession.

Another recruit obtained in 1830, was our excellent friend, M. Philarete Chasles, one of the half-dozen men in France who are learned in ancient lore, and complete master of their native language. M. Chasles is one of the very few Frenchmen well versed in Greek literature. He accompanied Marshal Soult to England in 1837, and wrote the articles and letters on his visit which appeared in the "Débats" at that time. M. Chasles was then also deputed, on the part of the government, to inquire into the scholastic and university system of England; and from conversations we had with him on the subject, we can take upon ourselves to assert, that he had a more accurate knowledge on those matters than falls to the lot of the great majority of Frenchmen. M. Chasles' familiarity with ancient literature in no respect indisposes him to the modern; and he is well read in our English historians and poets.

We have now gone through with the greater number of regular writers in the "Débats," and of these M. de Sacy, M. St. Marc Girardin, M. Philarete Chasles, and others, still afford their valuable aid. At the head of the establishment is M. Armand Bertin, the son of one of the late proprietors and the nephew of the other—a scholar, a gentleman, and a man of large and liberal feelings. The great boast of M. Armand Bertin is, that he is a journalist, and nothing but a journalist; and for renowned journalists of all countries M. Bertin has a predilection. With one of the most celebrated journalists that England ever produced, he was on terms of the warmest friendship; and we are ourselves in possession of his last gift to his and our departed friend, the rarest edition of Lucan, according to Brunet, beautifully bound by Koehler, which bears this autograph, "To my friend, Thomas Barnes. Armand Bertin."

But the writers who afford a literary support to the "Débats," and whose names are not known, or at least not avowed, are of as much, if not more, consequence to the journal, than the regular contributors. There has been scarcely, for the last forty years, a minister of France or a councillor of state of any ability, who has not written in it; and since the accession of Louis Philippe in 1830, its columns have been open to all the king's personal friends, both in the Chamber and in the House of Peers. In the Chamber of Deputies alone there are eight or ten members attached to the king personally, aid-de-camps and employés on the civil list, and such of these as are capable of wielding a quill, place it at the service of the "Débats." Among the feuilleton writers of this journal, are some of the most celebrated in Paris—as Jules Janin, Alexandre Dumas, Theophile Gautier, &c. Since the size of the journal has been increased, the lucubrations of Jules Janin appear more rarely, and Theophile Gautier, too, does not

seem to write so often; but Alexandre Dumas often fills ten of the smaller columns with the productions of his inexhaustible pen. From two to four columns are generally dedicated to leading articles. The price of the journal is seven francs a month, 20 francs for three months, 40 francs for six months, and 80 francs for a year. The price in London is 3*l.* 10*s.* the year, 1*l.* 15*s.* the half-year, and 17*s.* 6*d.* the quarter.

The "Journal des Débats" is said now to have 9,000 or 10,000 abonnés; and 10,000 abonnés at 80 francs a year, we need hardly say, is equivalent to 20,000 at 40 francs, the price at which the "Constitutionnel," the "Siècle," the "Presse," and other journals, are published. The political articles in the "Débats" are superior in style and reasoning to anything in the English periodical press. They are not merely distinguished by first-rate literary ability, but by the tone of well-bred and polished society. For these articles large sums are paid in money; but they bear a value to the writers far above any pecuniary recompense. An eminent writer in the "Débats" is sure of promotion, either to a professorship, to the situation of maître de requêtes, or conseiller d'état, to a consulship, or, peradventure, to the post of minister at some second or third-rate court—a position attained by M. Bourquenay, a fourth or fifth-rate writer in that paper at the period of the July revolution. It was the well-founded boast of the "Times," little more than a twelvemonth ago, that it had made the son of one of its proprietors, and its standing counsel, Mr. (now Baron) Platt, a judge; but the "Journal des Débats" may boast, that it can give power as well as take it away. It has made and unmade ministers, ambassadors, prefects, councillors of state, and masters of requests, as well as poets, historians, orators, musicians, dancers, modistes, perruquiers—nay, even to that ninth part of a man called a tailor, or to that eighteenth fractional part of a man, unknown in England, called a "tailleur de chemises."

The "Constitutionnel" was, about twenty or twenty-five years ago, (i. e., from 1820 to 1825,) the most successful and flourishing, and certainly one of the best conducted papers in France. It had then a greater circulation than any paper in Paris, as the following figures will prove:—

Débats,	13,000 abonnés.
Quotidienne,	5,800 —
Journal de Paris,	4,175 —
Courrier Français,	2,975 —
Etoile,	2,749 —
Journal de Commerce,	2,380 —
Moniteur,	2,250 —
Constitutionnel,	16,250 —

But the "Constitutionnel" had, from 1815, two or three staple articles to trade in, of which it made a great literary market. First, there were the Voltairian principles and opinions, which it put forth daily; 2ndly, there were denunciations of the "Parti Prêtre" and of the Jesuits, and the affair of the Abbé Contrefaite; and 3rdly, there was the retrograde march of the government, caused by the intrigues of the Pavilion Marsan, which promoted, and indeed justified, a vigorous opposition. The soul of this opposition was Charles William Etienne, who had shortly before, somewhere about 1817 or 1818, acquired a single share in the paper. Etienne started in Paris as secretary to the Duke of Bassano, and was named, in 1810, as we have stated, one of the higher political writers of the

"Journal des Débats." From this position he was removed after the Restoration, and throwing himself with heart and soul into the "*Minerve Française*," produced by his "*Lettres sur Paris*," a prompt and prodigious success.

It was soon after these letters had been collected in a volume, and had gone through several editions, that Etienne became a shareholder in the "*Constitutionnel*." His lively and piquant articles, full of strength and spirit, soon contributed to raise the paper. These efforts, so every way useful to the liberal cause, had fixed public attention on the most successful writer on that side of the question, and on a man who joined to this renown the additional merit of being the author of some of the very best comedies in the French language; such, for instance, as the "*Deux Gendres*," the "*Intriguante*," "*Une Heure de Mariage*," "*Jeannot et Collin*," &c. &c. The department of the Meuse selected him, therefore, in 1820, as one of its deputies; and from that period to 1830, he continued to figure as one of the firmest and steadiest defenders of the liberties secured by the charter. M. Etienne displayed at the tribune the spirit and taste with which his literary productions are imbued. Some of his discourses produced a prodigious effect on the public mind, and his general political conduct procured for him the warm friendship and esteem of Manuel, who frequently contributed to the "*Constitutionnel*." Within three years after this period, Manuel rendered him a signal service, in introducing to his notice a young and unknown writer, who within ten years was destined to be a minister of France. This was none other than Louis Adolphe Thiers, who had then just published, in conjunction with Felix Bodin, the two first volumes of his "*Histoire de la Révolution Française*." M. Etienne, with the sagacity of a practised man of the world, saw from the first the talent of his young contributor, and at once opened to him the columns of the "*Constitutionnel*." The articles of Thiers bore the impress of that clearness and logical vigor, of that liveliness and lucidity of style, which constitute his greatest charm. For six years Thiers continued to write in the "*Constitutionnel*;" and it was not until August, 1829, when he founded the "*National*," in conjunction with the late Armand Carrel, of which Thiers was rédacteur en chef, that he abandoned the small room in the first floor of the Rue Montmartre, No. 121, in which we have often sat in the last days of 1828, when Etienne conducted the paper, and in which very chamber our last visit was paid to M. Merruau—at present, rédacteur en chef—in the month of April, 1846. During the period of Thiers' collaboration, his friend and countryman, Mignet, occasionally wrote articles, distinguished by neatness of style and correctness of view. During the Villèle administration, the "*Constitutionnel*" may be said to have attained its highest prosperity. It then numbered nearly 30,000 subscribers, and existed on the cry of "*à bas les Jésuites!*" The "*Constitutionnel*" of those days had no Roman feuilleton, and lived altogether on its reputation as a political paper. Many were the prosecutions which this journal had to undergo; but the most celebrated, perhaps, was that in which its articles were accused of "*a tendency to bring the religion of the state into contempt*." It was on the occasion of this suit, that M. Dupin, the friend and counsel of M. Etienne, shut himself up for a month in his study to read theology, in order to be enabled to tear to tatters the "*acte d'accusation*," or indictment,

of the attorney-general. In this he was successful, as was proved by the arrêt, or decision of the Cour Royale, and the triumph redounded to the credit of the advocate, while it greatly tended to increase the circulation of the paper. From the period of the Revolution of 1830, however, the "*Constitutionnel*" began to decline, and in 1843, three years ago, it had but 3500 abonnés. In changing hands in 1844, the new proprietors reduced the price of the journal one half, i. e., from 80 to 40 francs, while they raised the remuneration for the feuilleton from 150 to 500 francs. In consequence of this judicious liberality, the most popular writers of Paris contributed to its columns. From the 1st of April, 1845, Alexandre Dumas bound himself to produce only eighteen volumes in the year—nine in the "*Presse*," and nine in the "*Constitutionnel*;" and Eugene Sue has also lent his exclusive coöperation to the "*Constitutionnel*" for a period of fourteen years, for which he is to receive an immense sum. "*La Dame de Monseigneur*," by Dumas, and "*Les Sept Péchés Capitaux*," by Eugene Sue, have both had an immense success. The "*Constitutionnel*" has agreed to give Eugene Sue 10,000 francs a volume, to take him from the "*Presse*;" and Dumas receives a sum very nearly equal. There are half a dozen other novels at this moment in publication in the columns of this journal; among others, the "*Cabinet Noir*," by Charles Rabou; and the subscribers are to receive (gratis) all that has appeared in what they call their "*Bibliothèque Choisie*."

In the political department, the "*Constitutionnel*" has now first-rate assistance. De Remusat, ex-minister, Duvergier d'Hauranne, one of the most enlightened deputies of the Chamber, and M. Thiers, often lend their able aid. The editor of the "*Constitutionnel*" is M. Merruau, an able political writer, and a gentleman of the blandest and most winning manners. It was Merruau who reviewed the "*History of the Consulate and the Empire*," by Thiers, in the "*Constitutionnel*." The "*Constitutionnel*" consists of twenty columns, of which five are devoted to advertisements. The price in Paris is 40 francs a year, and the number of abonnés is 24,000—a number equal to the "*Presse*," but falling far below that of the "*Siècle*," which is said to possess 42,000.

The "*Courrier Français*" is one of the oldest of the Parisian papers, but it has undergone many transformations of late. In 1827-28-29, it supported the same cause as the "*Constitutionnel*," with greater spirit, if not with equal talent. When the "*Constitutionnel*" had become rather indifferent or lukewarm towards those principles with which its fortunes originated, the "*Courrier Français*," though poor in respect to fortune, as compared with the "*Constitutionnel*," was foremost boldly to attack the ministers, and to defy persecution, imprisonment, and pecuniary punishment, whilst the "*Constitutionnel*," like those individuals who have amassed immense wealth, acted a more prudent part, and was content to appear as a safe auxiliary. The principal editor at the period of which we speak, was Benjamin Constant. His articles were remarkable for a fine and delicate spirit of observation, for a finesse and irony which, in saying the bitterest things, never transgressed the bounds of good breeding. The charm of his style, too, was most attractive. Shortly before the Revolution of July broke out, Constant had undergone a severe surgical operation, and had retired from Paris into the

country; Lafayette wrote to him in these words—"Il se joue ici un jeu terrible: nos têtes servent d'en jeu; apportez la votre." Constant at once came and had an interview with the monarch now on the throne, who made to him certain propositions, to which Constant replied, "Je veux rester independant, et si votre gouvernement fait des fautes je serai le premier à rallier l'opposition."* The faults of the new government hastened his death. He expired within a few months, almost despairing of the liberties of his country. Though the "Courrier Français" was, from 1825 to 1830, supported by the eloquent pens of Constant, Villain, Cauchois, Lemaire, and Mignet who was at one period its editor, yet it never, in these days, numbered above 5000 abonnés. There is no more practical truth in literature than that no amount of good writing will raise the fortunes of a falling newspaper. To write up a failing literary enterprise is a task for the pen of angels, and is almost beyond the power of mortal man. After the death of Constant there were many editors, among others, Leon Faucher, original editor of the "Temps"—a paper founded by an homme à projets, named Jacques Coste, originally a cooper at Bordeaux, and subsequently one of the editors of the "Constitutionnel." This gentleman, who is an able, pains-taking, and well informed man, and who has recently made himself more advantageously known by a work called "Etudes sur l'Angleterre," continued at the "Courrier" till the end of 1842. Under him it represented the Gauche, and he had the merit of operating a fusion with the Centre Gauche; but notwithstanding this fact, and the occasional appearance of good articles, the fortunes of the "Courrier" did not improve. A change in the distribution of parts was next tried. M. Adolphe Boule was named directeur of the journal; M. E. de Reims secrétaire du comité du Centre Gauche, rédacteur en chef, with M. Eugene Guinot as feuilletoniste, but this combination was no more successful than all previous ones. Sometime at the latter end of November, or the beginning of December, the "Courrier" was sold, and it is now conducted by M. Xavier Durrieu, by M. de Limerac, and by M. Du Coing, the defender of Rosas. The circulation is not more than 3000 or 4000.

The "Gazette de France," as we stated at the beginning of this article, is one of the oldest newspapers in France. Under Villèle and Peyronnet, in 1827 and 1828, it was converted into an evening paper, and substituted for the "Etoile." It was then the organ of the Jesuitical party, and expressed in all its hideous nakedness the frenzy of the most fanatical ultraism. It had in 1827 no support whatever from private subscribers, but drew all its resources from the treasury, where it had powerful and influential friends. The Bishop of Hermopolis—Count Frassynous—at that period minister of worship and of public instruction, was one of its most able and influential supporters; M. de Genoude, then a married man, now an abbé and a priest, was the theatrical critic, and M. Benabini, formerly of the "Etoile," his associate. Genoude having since become a widower, entered holy orders, and is now a mundane abbé, so devoured by ambition, that he looks to the cardinalate. Though a regular priest, Genoude is a thorough Jesuit at heart, and we verily believe neither honest nor sincere as a priest or a politician. Like Henry of Exeter, his great object is personal advancement,

* We are indebted for these details concerning our lamented friend to Monsieur J. P. Pagès.

and he endeavors to compass his ends by all and every means: to-day by flattering the aristocracy; and to-morrow, by pandering to the lowest tastes of the lowest rabble. De Genoude pretends to write under the inspiration of M. de Villèle, who lives at Toulouse, altogether retired from public life, but it may be well doubted whether so able a man would commit himself in any way with such a charlatan. It would be unjust not to admit that there are occasionally (there were the contributions of Colnet, from 1836 to 1837) good articles in the Gazette; but, on the other hand, it must be averred that it is generally an unreadable paper, unless to such as are strongly tinged with a Carlist or priestly bias. The great writer and chief support of the "Gazette de France"—Colnet—died of cholera, in May, 1832. The last time we spent a day in his company, was in September, 1831. We had just returned from Russia, where the cholera was raging furiously, and well remember his making many inquiries as to the progress of the complaint, which had then reached Germany, and which he predicted would soon rage in France. Within four months afterwards, it had reached France, and within seven, poor Colnet was a victim to it. Colnet was born a noble, being the son of a garde-du-corps who distinguished himself at the battle of Fontenoy. His first studies were made at the Military College of Brie, then at the Military College of Paris, where Bonaparte and Bertrand were his fellow-students and associates. Neither his taste nor his feeble health allowing him to enter the army, he studied medicine under Cabanis and Corvisart, but expelled from the capital, in 1793, as a noble, he passed more than two years in solitude at Chaunay, at the house of a poor apothecary. Returning to Paris in 1795, he established himself as a bookseller at the corner of the Rue du Bac, opposite the Port Royale. He was so prosperous in this enterprise, that in 1805 he was enabled to establish a second shop in the Quai Malaquais. Here, in a little room which he called his caverne, he assembled around him some able writers, a majority of whom were hostile to the imperial government. These half dozen men were deemed so formidable, that Fouché tried every means to silence or bribe the chief. But Colnet was as inflexible as incorruptible. During fifteen years, i. e., from 1816 to 1831, he labored at the "Gazette de France," signing all his articles with his name; and it may be truly said, that nine out of every ten readers only took up the journal to read Colnet. His lively and learned attacks against the apocryphal memoirs in vogue about twenty years ago, which he exposed with the hand of a master, induced the Minister of the Interior, Count Corbière, to thank him in a friendly and flattering letter. But we order these things differently in England. A man might now write with the eloquence of Burke, the wisdom of Plato and Socrates, and the wit of Sheridan, and neither the Peels, nor the Gladstones, nor the Goulburns, nor any of the mediocre fry whom we in our besotted ignorance call statesmen, would take the least notice of him. It was not always so. The minister Wyndham, within the memory of living men, wrote to that racy writer of pure Saxon, Cobbett, thanking him for his aid, and saying that he deserved a statue of gold. By the means of translations and open plagiarisms from Colnet, a late Right Hon. Secretary of the admiralty and great Quarterly Reviewer, obtained the praise of being a good French scholar and historian. The staple of most of the articles on French literature and

memoirs, published about ten or twelve years ago in the "Quarterly," was contraband, stolen from Colnet, and smuggled into the Review as though it were native produce. There was not a critic in England to detect or expose this plagiarism, or to prove to our countrymen that there was scarcely an original thought in the articles, all being borrowed or literally translated from the French. The ignorance of France and of French literature in England is astonishing. With the exception of Mr. Crowe, recently foreign editor of the "Morning Chronicle," we do not believe there is a single man at the press of England well informed on France and French literature.

Under the ministry of Villèle, Genoude was made a *Conseiller d'Etat*. He then placed the prefix to his name, and obtained, although son of a limonadier of Grenoble, letters of nobility. Now it suits M. de Genoude to demand *assemblées primaires*—or a general council of the nation—in the hope—the vain hope—that the people would call back the elder branch of the Bourbons. This cry has failed to cause any fusion of ultra-royalists and republicans. The people well know that Genoude and his party are not sincere, and that he and they only clamor for universal suffrage, under the impression that power would be transferred from the bourgeoisie to the grands and petits seigneurs and their dependents. M. Lourdoux, formerly an *ex chef des Belles Lettres* in the Ministry of the Interior, is supposed to write many of the articles conceived in this spirit. He is undoubtedly a man of talent, but, to use a vulgar phrase, he has brought his talent to a wrong market. Theatres are supposed to be reviewed by M. de la Forest, and a few years ago the place of Colnet was filled—though his loss was not supplied—by another bookseller, M. Bossange, author of a theatrical piece.

M. de Nettelement, son of the late consul-general of France in London, frequently writes in the "Gazette de France," and also in the "Corsaire Satan," another paper of M. Genoude. The circulation of the "Gazette de France" has diminished within the last year. It had, a couple of years ago, about 1500 subscribers in Paris, and about 4000 in the provinces, but now the abonnés in Paris are scarcely a thousand, and it is said not to have 3000 in the provinces. The legitimist press is reported to have lost 4000 subscribers since the *feuilletons* of Alexandre Dumas, and of that lively writer, Theophile Gautier, have been admitted into it. Both these gentlemen are liberals, and your true Carlist, too much like some of the same breed among ourselves, would scorn to be instructed, and will not deign to be even entertained by the most amusing liberal in Christendom.

The "Quotidienne" was a most furiously bigoted high church paper in the days of Villèle, and it is so still. It detests the very name of the revolution, and abhors the memory of all those who remained in France during its progress. In 1827 and 1828, the "Quotidienne" was written in a most obsolete and barbarous style, by young seminarians, who had never seen the world, and who were taught to admire the ages of monks and inquisitors. During the Martignac administration, the "Quotidienne" was enthusiastically supported by the pure Ultras, at the head of whom were La Bourdonnaye, Delalot, and Hyde de Neuville. M. de la Bourdonnaye, then the leader of the centre opposition, and afterwards, for a short period,

a member of the Polignac administration, frequently wrote in it; and one of the recognized editors at this period was the founder of the journal, Joseph Michaud, author of the "History of the Crusades." M. Merle used to write the theatrical, and M. Balzac the *feuilletons*; but of late, this latter person has ceased to write. The circulation of the "Quotidienne" is under 4000.

We are now about to speak of a remarkable man and a remarkable journal—the man, the late Armand Carrel—the journal, the "National." Carrel was born at Rouen, in 1800, of a legitimist family. From his earliest youth, though his family were all engaged in commerce, he exhibited a predominant passion for the military profession, and was entered of the college of St. Cyr. While a *sous-lieutenant* of the 29th regiment of the line, in garrison at Belfort, he took an active part in the conspiracy of 1821, which failed miserably. He was not either discovered or denounced, and proceeded with his regiment to Marseilles.

The war of 1824 had just broken out in Spain, when, impelled by a love of adventure, he resigned the military service of his country, embarked on board a fishing-boat at Marseilles for Barcelona, and entered the French regiment of Napoleon the Second. This foreign legion, after much adverse fortune, capitulated to the French troops. The capitulation included the French as well as the Spanish soldiers. They were, nevertheless, thrown into prison, and ultimately dragged before a council of war. Carrel was tried and acquitted. But this affair put an end to all hope of preferment in the army, or, indeed, to a military career, and Carrel thought of studying the law. But he was not a Bachelor of Arts, or, as the French say, a Bachelor in Letters, and the law, too, he was obliged to renounce. He became the secretary of a distinguished historian, and in this way it was that his literary and political labors commenced. He wrote a *résumé* of the Histories of Scotland and Modern Greece for the booksellers; and various articles in the "Revue Americaine," the "Constitutionnel," the "Globe," the "Revue Française," and the "Producteur." In 1827, he published, in his twenty-seventh year, his "Histoire de la contre Révolution en Angleterre," a work of sterling merit, and was rising into the first eminence as author and journalist, when, in 1829, Jules de Polignac was called from the embassy of London, to fill the place of president of the council of ministers in France. Carrel's eager mind, weary of what appeared to him the languor and indifference of the other journals, conceived the idea of founding the "National." He communicated his intention to Thiers and Mignet. It was agreed that they should each in turn take the place of *rédauteur-en-chef* for a year. Thiers, as the eldest of the three, was first installed, and conducted the paper with energy and spirit till the revolution of 1830 broke out. From the first the "National" set out with the idea that the dynasty was incorrigible, and that it was necessary to change it. The leading principle of the journal was Orleanism, yet at this period Thiers had never seen the Duke of Orleans, now Louis-Philippe.* The effect produced by the refusal of a budget, and the refusal to pay taxes, was immense—a

* He has stated this in his last famous speech, in the month of March, in the chamber of deputies.

refusal owing altogether to the spirited counsels and articles of the "National." The crisis and the coup d'état of the incapable ministry were hastened, if not produced, by this journal.

On the 26th of July, 1830, the editors behaved nobly. At the office of the "National" it was, that the famous protest was drawn up and signed, which proclaimed the right, and exhibited the example, of resistance. The authors of this remarkable document were Thiers and Rémusat—both afterwards ministers—and Cauchois Lemaire, a journalist and man of letters. To issue such a document was to put one's head in peril; yet it was signed, and speedily, too, by the soldiers of the pen. On the following day the office of the paper was surrounded by the police, aided by an armed force, and there the presses of the journal were broken, Thiers and Carrel protesting against this illegal violence. It was Carrel's turn, after the revolution had been happily accomplished, to take the conduct of the paper, for Thiers and Mignet had both received employments in the new government. Ably for some time did he fulfil his task, till public opinion pointed him out as the fittest person to be sent on a pacific mission to the insurgent west. On his return from this mission he was named Prefect du Cantal, and also offered promotion in the army; but he rejected both offers, and resumed the editorship of the "National," now the firmest as well as the ablest organ of the democracy. In the columns of the journal, which he conducted with such surpassing ability, he never concealed or mitigated his radical and republican tendencies. His idea of a supreme magistrate was, that he should be elective and responsible; that the second chamber should be elective, and the press inviolable. Political reforms were, in his opinion, the only sure logical and legitimate mode of producing social reforms. To the arbitrary and high-handed ministry of Périer he opposed a vigorous resistance. When the rich banker, merchant, manufacturer, and minister, who had all the arrogance of a nouveau riche, and all the insolence of a vieux talon rouge, wished to proceed to extremities against the press, Carrel said, in the "National," "that every writer, with a proper sense of the dignity of a citizen, would oppose the law to illegality, and force to force—that being a sacred duty, come what might." The minister hesitated in his plans, and Carrel remained victor. The masculine breadth of Carrel's style—his bold, brave, and defiant tone—which, to use the graphic description of his friend, M. de Cormenin, "semblait sonner du clairon et monter à l'assaut," procured him many enemies; and there were not wanting those who speculated to rise in life, by coming into personal encounter with a man so formidable, and filling so large a space in the public eye. Just, generous, disinterested, Carrel was intrepid as a lion—chivalrous, and, like all noble natures, somewhat touchy on the point of honor; prompt to take offence, yet forgetful of injuries. He became engaged in a miserable quarrel or squabble, which was not his, and this remarkable man, and most eminent writer—to the irresistible ascendancy of whose character all who came in contact with him bowed down—was shot, in 1836, by the hand of M. Emile Girardin, the editor of "La Presse."

Thus perished, in his thirty-sixth year, the founder—the creator—the life and soul of the "National"—a person of rare courage—of a bold

and manly eloquence—the eloquence of feeling, not of phrases or of words—and a political writer of the very highest order. There was a simplicity, a clearness, a firmness, and a noble coloring and grandeur in all he said and in all he wrote, for he was a man of heart and conviction, simple, sincere, and straightforward. The two greatest geniuses of France—representing the poetry and prose of our epoch—followed him to the tomb. His friends Béranger and Chateaubriand wept over his mangled remains, and have recorded—the one in undying verse, the other in imperishable prose—their deep and mournful sense of the loss which France sustained in his premature and melancholy end. Carrel was tall and handsome, with a countenance sicklied over with the pale cast of thought. His air was chivalrous, and that of a soldier, but his manners were somewhat haughty and stern. His habits and tastes were what would be called aristocratic, and he was no lover of equality or of communism. He had engaged, a few months before his death, to write the life of Napoleon, and had he lived he would have produced a work worthy of the subject—worthy of himself. It was so arranged, also, that if he had been spared a month longer, the chamber would have resounded with his earnest and eloquent voice, but the hopes of his friends and his country concerning him were soon to be forever blighted. Since the death of Carrel the "National" has been conducted with much less talent, and with a total absence of judgment. It has ever remained a pure republican paper, and conscientiously so; but it is possible to be purely republican without sowing noxious national hatred, or seeking to set Englishmen and Frenchmen by the ears, as it now does designedly, and with malice prepense. We desire a good intelligence with all the world, but a friendly, a kindly intelligencé with France. "The Douglas and the Percy both together" are more than a match for all the other nations of the earth. The "National" now reflects the opinions of a portion of the French working classes, but it has not above 3000 or 4000 abonnés. In 1836, before Carrel was killed, it had 4300 abonnés. But though the number of subscribers was then small, the influence of the journal was immense. This is no uncommon thing in France. The "Globe," under the restoration, though far from having so many subscribers as the "Constitutionnel," had much more influence—influence not merely upon the men, but upon the ideas of the epoch. A journal may have a great and wide publicity, without a great many subscribers. The publicity of the "Reforme" and the "National" is as real and as great as the publicity of the "Siècle" and the "Presse." They may have less abonnés, but they have as many readers. It were a great mistake to suppose that the numbers of a French journal subscribed for, or sold, is any test of the number of its readers. The "Débats," for instance, has about 9000 subscribers, and probably not above 20,000 readers, i. e., two and a fraction to each paper, whereas, the "National," with only 4000 abonnés, probably has 24,000 readers, or six to each paper.

Every Frenchman, high or low, is more or less of a politician, and therefore newspapers are in greater number, and circulate through infinitely more hands than in England. This is true of the dearest among them, the organ of every government, the "Débats;" but it is true in a ten-fold degree, of a paper appealing to popular style, and

advocating doctrines which obtain a ready acquiescence and favor among the working classes. In every cabinet de lecture—in every restaurant—in every café—in every gargote—in every guinguette—on the counter of every marchand de vin—in every workshop where ouvriers are congregated—such a paper is to be found. In the workshop it is read aloud by some one workman, pro bono publico—in the restaurant, the café, the gargote, and the guinguette, it is eagerly passed from hand to hand. Though, therefore, it may be admitted that the “Débats” has more abonnés than the “National,” and makes more money, yet the “National” makes more converts, for its sentiments are diffused more widely and take deeper root. La Roche and Marrast, formerly of the “Tribune,” conducted the “National” subsequently to the death of Carrel. It is now, we believe, conducted by Bastide and Thomas.

The “Siècle” is a paper which, though established within the last eleven years, has a greater circulation than any journal in Paris. This is owing partly to its having been the first journal to start at the price of forty francs a year, at a period when every other journal was published at a cost of from seventy to eighty francs; partly to its being published under the auspices of the deputies of the constitutional opposition—and partly to its being what the “Constitutionnel” was, from 1820 to 1825, the journal of the shop-keepers and epicier. Since it started into being, every journal in Paris, with the exception of the “Débats,” has lowered its price, and all of them have enlarged their form; but these mutations and transformations have not injured the “Siècle,” because it represents the opinion of the majority—the opinion, in a word, of la petite bourgeoisie—the small shopkeepers in cities and towns, and the proletaires throughout the country. The “Siècle” is said to have 42,000 abonnés, and the shares of 200 francs, which have always borne an interest, have been nearly reimbursed to the proprietors, and are now worth five or six times their original cost. Ten years ago there were only two journals which paid, as a literary and commercial speculation; these were the “Gazette des Tribunaux” and the “Constitutionnel;” but now the “Siècle” and the “Presse” are the most successful as commercial speculations. To show the vicissitudes of newspaper property in France, it may be here stated, that in 1839 the “Presse” was sold for 1200 francs, but in 1841, two years afterwards, it was worth a million to its new proprietors.

The editor of the “Siècle” is M. A. Chambolle, a member of the chamber; and M. Gustave Beaumont, the author of a work on Ireland, forms a portion of the conseil de rédaction. The painstaking and laborious Leon Faucher also writes in the political department. That very dull, common-place, pompous, overrated man, Odillon Barrot, to whose family comprising brothers, brothers-in-law, uncles, and nephews, the revolution has given 110,000f. a year, and concessions of land in Africa, valued at 42,000f. a year, is the object of the “Siècle’s” idolatry. This is not to be wondered at. Ferdinand Barrot, brother of Odillon, a writer, and a share-holder in and supporter of the “Siècle,” received 24,000f. as avocat du Trésor; and on the first of May, in the past year, one of the editors of the “Siècle” obtained the decoration of the Legion of Honor. No wonder, then, that the writers in this journal call the ex Volontaire Royal, who wept over the boots of Louis the

Eighteenth the night of his departure for Ghent, and who received in recompense of his loyal tears, at the period of the second Restoration, as a gift from the king, a place which he afterwards sold to the Jew advocate, Crémieux, for 300,000f.—no wonder that they call this patriotic recipient and dispenser of good fat sinecures, “orateur eminent, homme politique considerable.” If a pompous and prophetic tone, a magisterial and solemn air, and common-place ideas and sentiments, suffice to make an eminent orator, and the postponing of electoral reform till liberty is secured by the erection of the enceinte continuée, a considerable politician—what an anti-climax!—then is Odillon Barrot an eminent orator and a considerable politician.

The “Siècle” has not enlarged its size. It consists of twelve columns, exclusive of advertisements, and is about eighteen inches long, and twelve and a half broad. The feuilleton consists of six columns, and is much better written than any other portion of the paper. Alphonse Karr, the author of the “Guêpes,” is one of the principal contributors, and Frederic Soulié has sold his pen as a feuilletoniste for six years to the “Siècle” and the “Presse” conjointly. The “Siècle” has always appeared to us a dull paper—probably it is necessary that the writers should level themselves down to the intellect of the genre epicier—and indifferently written. The review of Thiers’ History, which made some noise, was by Chambolle, the editor, as the review in the “Constitutionnel” was written by Merruau, the friend of Thiers. But a far more correct, comprehensive, copious and fairer review of this work, appeared just after its publication, in No. 69 of the “Foreign Quarterly Review,” published in the month of April, last year.

We are now to speak of the oldest of the new order of journals—we mean “La Presse.” This paper was founded in June, 1836, by M. Emile de Girardin, said to be a natural son of the Count Alexander, or his brother, Stanislas Girardin, by an English mother. The revolution of 1830 saw Emile de Girardin an Inspector des Beaux Arts. Shortly after that event, he became the editor of the “Journal des Connaissances Utiles,” of the “Panthéon Littéraire,” of the “Musée de Familles,” and of the “Voleur;” but all these journals died in quick succession. He then published a book called “Emile,” which had no great success.

This is certainly no proof of want of talent, or, at best, but negative proof, while it affords positive evidence of no common energy, and very great industry. As M. Girardin had no fortune, and had married the pretty Delphine Gay, (daughter of Sophie Gay,) who had nothing but her pen and poetry, it was necessary he should do something to create an existence, or a name and an existence, if that were possible. Conjointly, then, with an homme à projets, one M. Boutmey, who had invented a machine called paracrotte, or mud-defender, which was to be attached to the heels of pedestrians, and another instrument, called a physiotype, the ingenious Emile launched on the waters of the Seine, the project of the “Presse.” As the journal was larger and cheaper than all other French journals—as it was a joint-stock company on a new plan, as applied to newspapers—as, in a word, there was a garish, slap-dash flourish, and melodramatic charlatanism about the thing, and a certain varnish of cleverness, shrewdness, modest assurance, novelty, and rouerie—the prospectus took; the shares went off briskly; and,

lo, and behold! the journal was born, a strong and healthy babe, after no long or painful gestation. In 1837, when only a year old, it had 15,000 abonnés; and in 1838, the product of its advertisements amounted to 150,000 francs. It must, in justice to this journal, be stated, that it was the first to teach the French public the use and advantage of advertisements. Twenty years previously, there were not two columns of advertisements in any French paper; whereas, two years after the existence of the "Presse," it could boast of five columns well-filled. The mother of Mde. Emile de Girardin—Sophie Gay, née Lavalette—had published, under the title of "Causeries du Monde," a periodical work, of which she had sold the copyright to Alphonse Karr, the sharp writer of the "Guêpes." This maternal precedent, doubtless, suggested to the daughter, then of the ripe age of thirty, but of considerable beauty, no mean accomplishments, of rare talents, and already favorably known as a poetess, to help her husband Emile in his new avocation. She started accordingly in the "Presse," with a series of articles called "Causeries Parisiennes," signed the Vicomte de Launay, which papers had immense success. Many of the vulgar-minded and title-worshipping of our countrymen—and their name is Legion—will suppose that this was from the aristocratic pseudonym with which the articles were signed; but no human being in France cares a rush for a title, unless the bearer of it has something better to recommend him. In Paris, and, indeed, in all France, society has agreed that—

"The rank is but the guinea's stamp,
The man 's the *good* for a' that."

If De Beranger, Chateaubriand, and De la Martine, were in a salon in France with the De Montmorencys, the De Levis, the De Guiches, the poets and men of genius would march to the *salle à manger* before the feudal, territorial, and mentally undistinguished aristocracy; and the place of honor would be assigned them in any assembly. Not so, indeed, in free and liberal England. It was not therefore, because of the aristocratic name attached, that the "Causeries" were read, but because of the ease, grace, spirit, and talent, which they disclosed. That they were what is called a "lucky hit," and pleased readers, there can be no doubt. Meanwhile the paper was practically conducted, and in a most mercantile spirit. The interests of the commercial and shopkeeping classes, as well as of the very numerous class of *petits rentiers*, were considered, sustained, and pandered to. In the political department, the journal had no very fixed or staple principles, and took for its motto, "Au jour le jour." As to political creed or conviction, the thing never entered into the head of Girardin, unless as a means to wealth, consideration—and what the French call, a position. But the man was adroit, confident, ready, and full of resources, and never despaired even when his prospects were of the gloomiest. With all his address and management, he barely paid his expenses. The Russian emperor and the Russian system of government, however, were without a champion at the Parisian press, and Girardin entered the lists. That this was done from pure love and affection, all Paris believes; for everybody knows that the Russian emperor never pays literary men either in paper roubles or silver roubles. Whether they are ever paid by him in Dutch ducats, or malachite vases,

or bills drawn by the Baron Stieglitz, the Jewish banker, on the English Quay, at Petersburg, is best known to those who pay and to those who receive, what Frederic of Prussia called the "yellow hussars." Though variable in other sentiments, feelings, and opinions, Girardin has ever been true to the monster Nicholas, and his system; and whenever he dare say a word in favor of either the one or the other, he is sure to do so. His pure love for the Cossack might be pardoned, and would be unsuspicious, if it were not contemporaneous with a fierce resentment against England, and the English. There is not a vile or a base imputation, which the "Presse," in its murky malignity, does not calumniously cast at perfidious Albion. Inhumanity, savage barbarity, fraud, trickery, hypocrisy, avarice, and corruption, are weekly, if not daily, imputed to us, by a man whose journal is conducted in the most shopkeeping spirit—by a print which seeks to put all classes under contribution, from the autocrat of the Russias to the smallest actor and actress of the Odeon or Porte St. Martin, or to the most miserable tailor who pants for notoriety. If this be doubted, the proofs are at hand. Among the works placed at the head of this article, is a pamphlet, intitled, "Venalité des Journaux, par Constant Hilbey, Ouvrier." This poor tailor tells us, at p. 12 of his pamphlet, that not only did he pay two francs a line for the insertion of a poem in the "Presse," according to the tenor of the receipt in the marginal note at foot,* but that at the request of one of the editors, (Granier de Cassagnac) who had noticed his volume of poems, he sent that person, who first wished for a silver teapot, value 200 francs, four couverts d'argent and six small spoons. A couvert d'argent, as the reader is aware, means a silver fork, a silver spoon, and a silver-handled knife. Thus was the tailor put under contribution for four silver forks, four silver spoons, four silver-handled knives, and six small spoons, the cost of which, at the very least, must have been 200 francs. This was pretty well for a column and a half of criticism, even though the critic spoke of the author (as he did) in conjunction with Brutus, Cassius, Staberius, Quintus Remius, Quintus Cecilius, Atticus, Abelard, Cardinal d'Ossat, St. Paul, the Magdalen, and Victor Hugo.

Perfidious Albion should not, however, despair. If she should ever think the advocacy of the "Presse" worth the having—a not very likely supposition—Emile will take her brief, if the quidam honorarium be forthcoming. What though he be now the most untiring vilipender of our name and our country—calling us robbers in China, and butchers in India; what, though he be the most curt and contumelious in his epithets of abuse, crying, Death and hatred to the English government! what though he revel in prosperous and well-paid malignity, offer him but the brief to-morrow, and he will straightway become our zealous advocate. The scales will then fall from his eyes, and our sanguinary and sordid policy will not appear so utterly indefensible as it did when he had a retainer from Russia only. The financial prosperity of the "Presse" is said to have been in a great measure due to M. Dujarrier.

* "La Presse, Rue St. George, 16.

"Reçu de M. Hilbey la somme de cent soixante francs, pour insertion dans le journal. Nature de l'insertion, poésie; A la Mère de celle que j'aime.

"Le Caissier, PRAVAs.

"Paris, 7 Septembre, 1839."

Though M. Emile lived in 1839, "en grand train," possessing a fine, well-furnished house; or, to use the words of Jules Janin, "aussi bien logé que les agents de change,"* with pictures, livery-servants, carriages, horses, &c., yet somehow or other there was nothing to justify this; for the journal was sinking by little and little, and the shareholders were perpetually required to pay fresh calls. From the moment M. Dujarrier entered the concern, however, things wore a flourishing aspect; and though the expenses of management amount to 282,000 francs annually, yet each cinquantième share originally negotiated at 4000 francs, now sells from 30,000 to 35,000, albeit the shareholders have yearly received ten per cent. for their money. An unlucky fatality seems, however, to hang over this journal. In 1838, as we before stated, Girardin, the principal editor of the "Presse," shot, in a duel, the able and eloquent Carrel; and in March, 1845, Dujarrier, the associate and co-editor of Girardin, lost his life in a duel with a person of the name of Rosemond de Beauvallon, till within the last three weeks an exile in Spain,† in consequence of an arrêt of the Cour Royale de Rouen, which declared that he committed "un homicide volontaire sur la personne de M. Dujarrier, et d'avoir commis cet homicide avec préméditation."

In 1843, at the suggestion of Dujarrier, the "Presse" published, under the title of a supplement, "Le Bulletin des Tribunaux," adding 20 francs to its price. Six thousand additional subscribers were in consequence obtained in a very few months. The last accounts published by the "Presse" place its profits at 200,000 francs, or £8000 a year; and if its agreement with the "Compagnie Duveyrier" prove a successful speculation, it is estimated that its net profits will be 300,000 francs, or £12,000 a year, at the end of 1846.

To the English reader, some explanation of the "Compagnie Duveyrier" is quite indispensable. This company farms out the advertisements of certain journals, allowing the proprietors so many thousand francs a year net. To the "Presse," for instance, Duveyrier and Co. allow 100,000 francs, or £4000; and for this sum, the "Société General des Annonces," as it is called, has a right to so many columns of the journal. The head office of the society is in the Place de la Bourne, No. 8; but there are 214 bureaux d'insertion in various quarters of Paris, or from five to a dozen in each arrondissement, according to its population, commerce, &c. There is a scale of charges peculiar to the society. What are called "les annonces agréées," are charged at two francs la petite ligne, or twelve francs la grande ligne, en petit texte. It is a great problem whether this company will be successful—a problem which time alone can solve; but it is the opinion of an excellent friend of ours—the editor of the "Constitutionnel"—M. Merriau—that the undertaking will be successful. Though the small teasing and worrying usually thrown at the English by the "Presse," may have made it popular with a portion of the populace of Paris, yet its greatest success (apart from the Roman feuilleton) is owing to its com-

mercial intelligence, to its dramatic accounts of robberies, murders, fires, and sudden deaths; not forgetting its chronicle of affairs before the Police Correctionnelle.

What is the Roman feuilleton! our readers will naturally ask. It is a novel or tale, written in the most ad captandum and exaggerated fashion, from seven to fifteen small columns of which is published daily, with a view to obtain readers, and, by necessary implication, advertisements; for the advertiser will assuredly go to the journal which is most read. The "Presse" was the first to invent this execrable system, by which literature is made alternately the prostitute and decoy duck of the most sordid venality. Before 1830 the main feature and distinguishing characteristic of each French paper was its political party or color. The greedy spirit of speculation has changed this. The desire of the traders in newspapers now is by the feuilleton to absorb all literature, unless such as is published in their own pages, and to render such literature as they put forth, tributary to this soul-degrading money-grubbing. The great object of the Girardins and Cassagnacs is to get money, money, money. "Rem quocunque modo rem" is their stereotyped motto. In their anxiety to procure customers—i. e. readers and advertisements—they may be likened to the Hebrews of Holywell street, or the old-clothes men of Monmouth street and Rag-fair, who, to use the cant of the trade, are of the "pluck you in" school. The "Presse" and the "Epoque" are of the "pluck you in" and frippier school in literature. In their morality any trick is fair to gain an abonné or an annonce at two francs the "petite ligne," or, still better, at twelve francs "la grande ligne en petit texte." Journalism and literature run equal dangers from these tricky tradesmen. In seeking to make newspapers books, and books newspapers, these men destroy the distinctive character and nature of books and newspapers. The book in being cut up into fragments, and written not to portray truth and nature, but to suit the journal and its customers, is written to sample and pattern. At the end of the tenth, or twelfth, or seventh column, as the case may be, there is an interesting situation, where the tale breaks off, on the Monday. The grocer's daughter, the dyer's wife, the baker's cousin, and the priest's niece, are in raptures, and look for the paper on Tuesday with eager expectation. The tale or the novel is therefore like Peter Pindar's razors, not made to shave, but to sell; not written to represent life as it really is, but to present it as a series of startling incidents and surprising contrasts. It will result from this system that as a political authority the journal must be lowered, and as a literary effort the book discredited. Independently of this consideration the public taste becomes as a consequence daily more and more vitiated and perverted. All relish for serious literature, or matured, well reflected productions, is lost. The moral, the political, and the literary views of the question are sacrificed to the mercantile, mechanical, and money-getting. Romances are now ordered by the wholesale houses, in the journal line, by the square yard or the square foot, with so many pounds of abuse of priestcraft; so many grains of double adultery; so many drachms of incest; so many ounces of poisoning; so many scruples of simple fornication or seductions of soubrettes; and so many pennyweights of common sense to knead

* Lettre à Mde. Emile de Girardin, par Jules Janin.

† Since this was written M. Beauvallon has returned to France and taken his trial.—See the "Journal des Débats" of the 27th, 28th, 29th, 30th and 31st March; the "Morning Chronicle" of the 3d, and the "Daily News" of the 4th April.

together the horrid and disjointed masses of parricide, fratricide, incest, murder, seduction, suicide, fraud, covin, gambling, robbery, and rouverie of all sorts, of which the odious whole is compounded. The Girardins and Cassagnacs, notwithstanding all their shrewdness and sharpness, are of that vulgar order of men who think that with money at command they can do anything and obtain everything. Hence it is that the "Presse" pays nearly 300 francs per day for feuilletons to Alexandre Dumas, George Sand, De Balzac, Frederic Soulié, Theophile Gautier, and Jules Sandeau. But what will be the result in 1848! That each of these personages will have made from 32,000 to 64,000 francs per annum for two or three years for writing profitable trash of the color of the foulest mud in Paris; marked with the mark of the beast, and furnished according to sample, as per order of Girardin, Cassagnac and Co. They will have had little labor and much money, it is true; but they will also have forever lowered their names and fame; and, what is worse, they will have lowered literature and literary men for many a long day to come. To be the hack of booksellers is no doubt to suffer unutterable bondage; but to be the hack of scheming political adventurers and chevaliers d'industrie is the last and worst of human calamities. The literary men of France may well say, with our own Cowley—

"Come the eleventh plague rather than this should be;

Come sink us rather in the sea,
Come rather pestilence, and reap us down,
Come God's sword rather than our own.

In all the bonds we ever bore

We grieved, we sighed, we wept; we never blushed before."

It is not only with existing literary celebrities that the "Presse" plays these gainful pranks, but the death of men of eminence is speculated upon during their lifetime, and an ostentatious post obit publication of the memoirs of Chateaubriand, and the souvenirs of La Martine is promised so soon as these illustrious authors shall have ceased to breathe. That the feuilletonists of the "Presse" are all men and women of genius and talent cannot be denied; but one of them, with all his genius and talent, is an arrant literary imposter and quack. Only think of Honoré Balzac, who came to Paris in 1820, a poor printer of Touraine, sporting the "gentilhomme d'ancienne souche," and wearing a cane studded with precious stones, worth £80, to which Mde. de Girardin has consecrated a volume. The pretentious, aristocratical airs of this very foolish man, but who as a writer may be called a literary Rembrandt, or Albert Dürer, so bourgeoisie and Flemish is his style, so detailed and minute his finishing, were properly treated, according to the Gazette of Augsburg, by a monarch, for whom we have no love, but who, for once in his life, was right. After the admirable and truthful book of M. de Custine had laid bare the infamies and atrocities of the Russian system, the Czar expressed a desire that it should be answered by a Frenchman. Balzac, on this hint, started for Petersburg, and on his arrival forwarded to his imperial majesty a note, of which the following is a copy:—

"M. de Balzac l'écrivain et M. de Balzac le gentilhomme sollicitent de sa majesté la faveur d'une audience particulière."

On the following day, one of the gentlemen in

ordinary of H. M. suite delivered to Balzac a letter written in the royal and imperial hand, to the following effect:—

"M. de Balzac le gentilhomme et M. de Balzac l'écrivain peuvent prendre la post quand il leur plaira."

The fault of Balzac is the incorrigible permanency, notwithstanding ten thousand humiliations and exposures, of a most glowing, yet most despicable vanity. The foolish fellow believes himself poet, historian, metaphysician, statesman, dandy of the first water, journalist, dramatic author, man of family, man of fortune, and, above all, charmant et beau gargon! Not content with being one of the cleverest observers and painters of manners of a certain class or classes, he aspires to be as diplomatic as Talleyrand and Metternich combined; as poetic as De Beranger, Chateaubriand, and La Martine; and as fashionable and foppish as the De Guiches, D'Orsays, Septeuils, and Canouvilles. This universal pretension has destroyed the little that remained of De Balzac's waning reputation; and the man whose productions, a dozen years ago, were read in every clime, is now fast sinking into unpitied obscurity.

"The nations which envied thee erewhile
Now laugh, (too little 'tis to smile,)
They laugh, and would have pitied thee, (alas!)
But that thy faults all pity do surpass."

To return, however, to the "Presse." For a short time Girardin, the editor, was deputy of the Meuse. At his election, his civil rights as a Frenchman were ungenerously and unjustly attempted to be called in question. For many years the influence of Count Molé was paramount at the "Presse," and even still his opinions are visible in some articles; but at present this journal must be considered as the organ of M. Guizot, and of his forty or forty-five personal adherents, who think him the only possible minister. We have said that the "Presse" is an authority on commercial subjects. M. Blanqui writes much on these topics, and his name is sufficient to create a reputation.

As to general intelligence, this paper is well made up. There is not a fact of the least importance, nor a promotion in the army, navy, the clergy, the municipal body, &c., which is not published. There is not a scientific, mechanical, or commercial discovery, nor an important cause pleaded, nor a change in the value of merchandize or commodities, of which it does not give an account. Yet it is neither a respectable, nor an honorable, nor a truth-speaking, nor a purely, nor honestly conducted newspaper; and it has done more to degrade the press and literature, and to corrupt and debase literary men, than any other journal, always excepting the "Globe," and the "Epoque."

The "Globe," commenced in 1841 by Granier de Cassagnac, when that person quarrelled with his co-editor, Girardin, cannot be said to have died, though it never had above 2000 abonnés. The "Globe" fell to 1800 before it expanded into the "Epoque," which arose from its ashes. Cassagnac wrote under or conjointly with Girardin in the "Presse," but now they are deadliest enemies, and in their war of ribald personalities have disgraced themselves, and degraded the press.*

* Girardin says that Cassagnac is an impudent Gascon, who was struck at Toulouse, and flogged in the public street till he took refuge in a diligence; and Cassagnac replies that Girardin, "tiring by his wife, the pretty and

Cassagnac was originally the editor of the journal "Politique et Littéraire de Toulouse," and transferred his services from this provincial journal to the Parisian press. He is a writer of considerable talent and incontestable sharpness, but prone to personalities and utterly unscrupulous. As to Bohain, his associate, he is well known—too well known in our own metropolis, as the editor of the "Courrier de l'Europe." The "Epoque" is an immense journal, the size of a "Morning Chronicle," before that journal adopted a double sheet, and consists of ten separate departments; 1. Journal politique; 2. Journal de l'armée et de la flotte; 3. Journal des cultes; 4. Journal des Travaux publics; 5. Journal administratif et commercial; 6. Journal de l'instruction publique; 7. Journal des sciences et médecine; 8. Journal du droit et des tribunaux; 9. Journal commercial et agricole; 10. Journal littéraire, (feuilleton.) The price half yearly is 22f., and the price of advertisements is in proportion to the number of abonnés—one centime for every 1000 abonnés for the annonces omnibus; three centimes for every 1000 abonnés for book-sellers' and commercial advertisements; four centimes for railways, &c.

Cassagnac is the political editor of the "Epoque." He is devoted to Guizot. Desnoyers is the rédacteur of the feuilleton, at a salary of 8000f. a year, assisted by Eugene Guinot.

The theatres are under the supervision of Hippolyte Lucas, formerly of the "Siècle." The rédacteur en chef receives 12,000f. a year; and the feuilleton is paid at 150f. or 5l. 5s. per day. The circulation of the "Epoque" fluctuates considerably; but we believe it has never exceeded 3000.

"La Democratie Pacifique" is a journal published at forty francs a year, which is not sold, but given away. It is the organ of the communists, and is conducted by the disciples of Charles Fourier, of whose life and theories we should wish to have given some account, but we have already exceeded the space allotted to us. The doctrines proclaimed are not unlike those of Robert Owen. The founder and principal editor of this journal is Victor Considerant, an élève of the Polytechnic School, and an ex-officer of engineers. He is assisted in his labors by Dr. Pellarin, author of a life of Fourier; by La Vernaude, a native of the Mauritius; De Permont; Victor Daly, an architect, of Irish origin; Hugh Doherty, a writing master; Brisbane, an American; Meill, a German; and a John Journet, a working man. The "Democratique" is, as the reader will see, a universal cosmopolitan journal. There are editors of all coun-

tries. Doherty, an Irishman, writes the French language, if not with purity, at least with originality; but when he touches on religious subjects, he is "sou à liér." Brisbane has established many Fourierist journals in America, and comes every year to France, but does not write in the French language. Meill, the German, is a tailor by trade, and a Jew by religion. He is a self-educated man, and writes French like Doherty, more originally (so to speak) than correctly. He is a lively, active, turbulent man, who would play an important part in any civil commotion. Journet is a working man, who travels through France from end to end, proclaiming the doctrines of the sect. He is dressed in a paletot à capuchon, and wears a long beard, like all good Fourierists.

Every Wednesday evening there is a soirée at the office of the "Democratique Pacifique"—a soirée of men only—where the initiated talk and weary themselves and others, and drink large tumblers of eau sucrée and rum cobbler. Sometimes the soirées are diversified by a wonder in the shape of a musician, a traveller, a somnambulist, or a mesmerist, who relieves the natural dullness of the assembly. Several eminent avocats and hommes de lettres are members of this sect, and among others, M. Hennequin, the son of unquestionably the most learned advocate of France. We may be thought to have paid too much attention to the reveries of these enthusiasts, but the professors of these doctrines may play a most important part in France before the end of 1850.

As the "Epoque" rose out of the ashes of the "Globe," so did the "Esprit Public" out of the ashes of the "Commerce."* The "Commerce," some years ago, was the property of our friend Mauguin, who purchased it, it is believed, at the request, if not with the money, of the ex-king of Spain. It was then a journal avowedly in the interest of the Bonaparte family; but after the insane attempt of Prince Louis, at Boulogne, in July or August, 1840, this cause seemed hopeless, and the abonnés of the "Commerce" rapidly declined. The pecuniary embarrassments of Mauguin induced him to part with the property to a proprietary imbued with Napoleonic ideas. Subsequently, M. Guillemot, who had managed the "Capitole," the avowed organ of Prince Louis, became the editor. It then passed into the hands of the eloquent and philosophic De Tocqueville, deputy for La Manche, and author of the very able work, "De la Democratie en Amerique." It represented the jeune gauche in opposition to the gauche Thiers. Not proving successful, however, it fell into the hands of M. Lesseps, who had formerly been secretary to M. Mauguin. M. Lesseps is a middle-aged Basque, smart, self-willed, and with some talent as a writer, but the "Commerce" did not, under his auspices, improve. In fact, it was a journal which had obtained a bad name, and, as we before observed, it requires the pen of an angel to write such a journal up. On the 1st August, 1845, the paper was put up to auction at 100,000 francs, but could find no purchasers. It was ultimately sold at 6000 francs, or 240l., with a burden of debt of 400,000 francs, or 16,000l. of our money. Out of the débris of the "Commerce" arose the "Esprit Public," of which Lesseps is the acknowledged editor. It is the cheapest daily journal in Paris, being published at a cost of

clever Delphine Gay, was struck at the opera before 3000 persons. Girardin says that Bohain, Solar, and Cassagnac, the proprietors of the "Epoque," sent about loads of prospectuses of their journal to the subscribers of other papers by itinerant commis voyageurs; Cassagnac replies, that the electors of Bourganau preferred Vidocq, the police spy, to Emile de Girardin, and twits the latter with the affair of the coal-mine of St. Bérain, and asks who pocketed the money. Girardin says, that Cassagnac ordered gaiters of a particular cut for the colporteurs of his journal, to excite attention, for which gaiters he afterwards refused to pay; Cassagnac rejoins, that Girardin went on a hot July day to his bedchamber, took off his sweltering shirt, and thinking clean linen comfortable, clothed himself in one of his (Cassagnac's) best chemises. Lest our readers should think we invent or exaggerate, we refer them to the "Globe," (now the "Epoque"), of the 19th August, 1845. Such are the "saquins de bas étage," the Peachums and Lockits of the press, who strut and fret their hour now on the great stage of literature.

*The "Commerce," we believe, still lingers on, but so much "in extremis" that it may be said to be dead.

twenty eight francs, or 1*l.* 2*s.* 6*d.* yearly. Its *capital social* is fixed at 500,000 francs. As the "Esprit Public" has been barely six months in existence, it is difficult to pronounce on its chances of vitality, and no easy matter to obtain an accurate account of its *bonâ-fide* circulation. We believe it to be very small—in fact, of the *infinitum* *petit*.

"La Réforme" is a journal of extreme opinions, appearing every day. It pays considerable attention to provincial questions, and to matters connected with electoral reform. Godefroy Cavaignac was, till his death, the editor; but it is now chiefly sustained by the pens of Guinard Arago, and Etienne Arago. It is understood that Ledru Rollin, the advocate and rich deputy for Sarthe, pays the expenses. Dupoty—the unfortunate Dupoty, formerly editor of the "Journal du Peuple," and who, under the ministry of Thiers, was tried and sentenced to five years' imprisonment as a regicide, because a letter was found open in the letter-box of the paper of which he was editor, addressed to him by a man said to be implicated in the conspiracy of Quenisset—wrote, and, it is said, still writes in the "Réforme."

The "Univers" is a daily paper quite in the interests of the Jesuits. The editor is M. Jules Goudon, author of a pamphlet on the recent religious movement; and M. Louis Veuillet, author of "Rome Moderne."

The "Nation" is a three-day paper, which appears every Tuesday, Thursday, and Sunday, at a cost of twenty-five francs the year. The programme of this paper is as follows:—

SOUVERAINETÉ NATIONALE.

ORDRE, LIBERTÉ, GLOIRE.

Le loi se fait par le consentement du peuple.
En fait et en droit, les Français ne peuvent être imposés que de leur consentement.
L'impôt doit être voté par ceux qui le paient.
Tout contribuable est électeur, tout électeur est éligible.

The "Nation," therefore, proclaims electoral reform in the largest and widest sense—for all, in a word, who pay taxes—i. e., eight millions of Frenchmen; but, knowing that M. de Genoude, of the "Gazette de France," is the editor of this journal, we confess we look on the programme with more than suspicion. M. the Abbé de Genoude, however, makes every effort to push the paper, as he also does to push the sale of his translation of the Bible, in twenty-two volumes! But though the "Nation," like the "Figaro" of Bohain, of 1841, is to be sold in the shop of every grocer and baker of Paris and the banlieu, yet it has been found that this forced sale does not answer the expectations of the projectors.

There are in Paris a number of papers specially devoted to law, the fine arts, &c., but it cannot be expected that we should enter at any length into the literary history and circulation of these periodicals. The "Journal des Tribunaux" and the "Courrier des Tribunaux" are both conducted by advocates, and have a very large circulation. There are also a number of small satirical papers, conducted with infinite talent, wit, and esprit—as the "Figaro," the "Charivari," the "Corsaire," the "Corsaire Satan." Articles have occasionally appeared in the "Figaro" and "Charivari" worthy of Voltaire, Beaumarchais, or Champfort; but although these journals have existed, almost at our door, for a period of more than twenty years,

no attempt was made to imitate them in England, till our able and facetious contemporary, "Punch," entered the field. There are also a number of small theatrical journals, but on these it is not needful to dwell.

No account of the French press can aspire to the praise of fidelity or correctness without making mention of the "Revue des Deux Mondes," one of the best conducted periodicals in the world, and of as much authority in France as the "Edinburgh Review" or "Quarterly Review" in their very best days—in the days of Sidney Smith, Jeffrey, McIntosh, Horner, and Canning, Walter Scott, Southey, and Gifford. This periodical was established by Count Molé, and the first literary men in France write in its pages. The proprietor of this review is the patentee of the Theatre Français. Within the last three or four years, the "Revue des Deux Mondes" has assumed a political character. The "Political Chronicle," which excites much attention, was, a couple of years ago, written by a very over-rated, and eminently servile Genoese, named Rossi, now envoy of France at the court of Rome. A personal favorite of Louis Philippe, and a friend and formerly brother professor of Guizot, this very ordinary person has risen, without commanding talent of any kind, to some of the highest employments in the state.

The "Revue de Legislation et de Jurisprudence" has been eleven years established, and is also a well-conducted miscellany. It is published under the direction of Troplong, Giraud, and Edouard Laboulaye, members of the Institute; Faustin Hélié, chef du Bureau des Affaires Criminelles; Ortolan, professor at the Faculty of Law; and Wolowski, professor of Legislation, Industrielle au Conservatoire des Arts et Metiers.

It were no easy task to fix with precision the number of journals at present existing in Paris—a capital in which newspaper births and deaths are equally sudden and unexpected, and in which the journal of to-day may be dead to-morrow, and the journal of to-morrow may jump, *unclo* *statu*, into a prosperous manhood—but the following resumé approximates nearly to the truth:—

There are daily journals of admitted repute, . . .	21
Smaller satirical journals, . . .	6
Journals not daily, (such as weekly, monthly, &c.) . . .	27
Journals Religious and Moral, of which twelve are Protestant, . . .	24
Journals of Legislation and of Jurisprudence, . . .	38
— of Political Economy and Administration, . . .	3
— of History, Statistics, and Travels, . . .	12
— of Literature, . . .	44
— of Fine Arts, Painting, and Music, . . .	9
— of Theatres and Theatrical Matters, . . .	8
— of Mathematical and Natural Sciences, . . .	13
— of Medicine, . . .	28
— of Military and Naval Art, . . .	12
— of Agriculture and Rural Economy, . . .	22
— of Commerce and Industry, . . .	23
— of Public Instruction, . . .	7
— of Women, Girls, and Children, . . .	20
— of Fashions, . . .	11
— of Picturesque Sites, Landscapes, &c. . .	4
— of Advertisements, . . .	17

343

This astonishing number comprises Paris only, for the departmental press, ten years ago, counted 258 journals, which the statist thus divided:—

Political and Administrative journals, . . .	153
Literary Miscellanies,	4
Newspapers solely devoted to Local News, . . .	101
	—
	258

Provincial journals have, since 1836, considerably increased. Two or three departments which were then without broad sheets have now obtained them, and we should probably not err in stating that the provincial journals of France now amount in round numbers to 280.¹

The Chevalier F. de Tapiès has calculated that in 1835, there were 82,208 "broad sheets" printed. This number, multiplied by 1500, the medium circulation, would give a result of 120,000,000 of printed papers, and as it is no extravagant supposition that each newspaper has at least five readers at home and abroad, we conclude that there must be 600,000,000 of readers of French newspapers in and out of Europe. The same ingenious statistic to whom he have before referred, calculates that the matter of 20 volumes, in 8vo., is daily published in Paris, by the journals, and that the French press produces, in the year, 2,500,000 pages. Not content with these particulars, he further informs us that 500,000 reams of paper are destroyed every twelve months by the pens and ink of the gentlemen of the press, and he goes on to add, (for which many of our readers will think that he ought at once to be sent to Coventry)—that if all these sheets were folded together, so as to form an immense riband—these are his very words—this fillet of fustian and feuilleton would thrice go round the broad circumference of the habitable globe.

It remains for us now, before we conclude, to make a very few remarks on the character of the French journals and journalists, as contrasted with the press of England.

The different rank held in their respective countries, by the French and English journalists, has been matter of comment and remark, not merely to enlightened men, but even to the observer the least instructed and most superficial.

"In England," says Mr. H. L. Bulwer,* writing in 1838, "a paper has immense consideration, but the editor, however respectable, little. You rarely hear him spoken of—in few cases is he known, unless petted on some accidental occasion by public abuse into notoriety. As for newspaper writers, they are generally held below surmise. We do not think it worth while even to guess who they are."

This was perfectly true ten or twelve years ago, but it is true now to just the same extent. In England now, as then, in consequence of the newspaper stamp tax, of the system of government and the state of property, it requires an immense capital to establish a newspaper, and a still greater capital to start a competitor to an established favorite journal. These are the circumstances which in this money-getting-money-woolshipping country render the firm—the establishment—the company—the fraternity of tradesmen bound together by the strong links of sordid self-interest—and able by their dividends to keep their carriages, horses, livery servants, &c., peradventure to become senators and persons of some small title—these are the circumstances, we say, which render them powerful, and the editors, writers, and contributors, the very reverse. The

proprietors are respected, flattered, and feared, because they have a two-edged weapon at command, and swordsmen prepared to use it at their bidding. The writers are, for the most part, neither respected nor flattered—however they may be occasionally feared—because there is not one among them worth even £1000 a year, for they chiefly live "au jour le jour." Everybody has heard of Mr. John Walter and of Sir John Easthope—both are rich and prosperous men—one is, and the other was, an M. P.; but who has ever heard, within the last five years, of the editor of the "Times" or "Chronicle," or of the names of the writers in these papers! Yet the editors of the "Times" and "Chronicle" must be, undoubtedly, men of talent and information, and some of the writers are among the ablest men in England. Who, however, knows them as writers! In England, a newspaper is powerful first, and chiefly, as a successful commercial establishment, having large capital at command, which capital enables it to obtain correct, copious and early intelligence; and secondly, by its articles, or, in other words, by the literary ability of its writers. A daily paper in England may be powerful, and of great circulation, when most indifferently written, but a daily paper may be written with the eloquence of Burke and Macaulay combined, and fail from lack of readers, unless it have a great capital to sustain it; in other words, is enabled to obtain correct, copious, or exclusive intelligence.

Mr. Edward Baldwin, the proprietor of the "Morning Herald," acting on this view of the matter, is said to expend £10,000 a year for the overland Indian mail, while it is clear that the tenth of this cannot be paid by him for leading articles, if these latter be estimated at their proper value. In France, ten or twelve years ago, a daily newspaper depended altogether—and in a great degree it still depends, though not by any means to the same extent as formerly—on the goodness of its writing. In France, good writers are indispensable to good newspapers; in England, though highly desirable, they are not absolutely indispensable. It is impossible to establish a daily newspaper in England without an immense capital; but, heretofore, a daily newspaper might be established in France without any very considerable capital, and may, to a certain extent, still be established, if there be superior talent engaged in the "rédaction." In England, on the contrary, the money and the management are the main springs of success in this field of enterprise. In France, generally speaking, the talent and the political opinion are the real motive forces; whereas money and management, though also necessary, are yet subsidiary to talent and political opinion. In France, talent commands money; in England, money commands talent. Hence newspaper writers are *somebodies* in France and *nobodies* in England.

The recent laws directed against the press in France, have, however, rendered the establishment of newspapers much more expensive and difficult than formerly. To secure the payment of the highest fine, the security, or cautionment, for a journal has been raised to 100,000 francs, or £4000, and the responsible editor must be proprietor of one third of that sum. In a country where capital is so limited, the necessity of paying £4000 operates very unfavorably to enterprise in journalism, and may be considered almost as a prohibition, when it is remembered that this money is at

* The Monarchy of the Middle Classes, 1836.

the mercy of a government whose judges may interdict the publication of the paper after two judicial condemnations. But notwithstanding the sinister influence of this law, and the efforts used by the government to corrupt public writers, these combined causes do not operate to raise the rich proprietor of a journal above the poor but able writer, as in England. The main cause of this lies in the social habitudes and institutions of France, which are more favorable to talent, and far less favorable to the power and influence of mere wealth than the social system of England. Ministers in France seek to bribe and debauch writers in newspapers, and too often succeed—ministers in England, if there be a favor to confer, or a good thing to bestow, confer it on the proprietors of journals, not on the writers of them. In England, the proprietor of such a paper is made a deputy lieutenant, the proprietor of such another is created a baronet, the proprietor of a third is appointed a local magistrate. In France, it is the writers, and not the proprietors, who are rewarded; and the Bertins are no exception to this rule, for they were far more celebrated as writers than as proprietors. Fievée, Etienne, Keratry, and Chevalier, with many others, were made councillors of state, while at least twenty other writers were made prefects, sub-prefects, maître des requêtes, &c. The number of newspaper writers who have taken a still higher flight over the heads of proprietors, and attained ministerial "portfeuilles," or the peerage, is by no means inconsiderable. Chateaubriand, Salvandy, Guizot, Thiers, Duchâtel de Rémusat, Villemain, Cousin, and many others, may be numbered. Thus is a homage paid to talent, both by government and people in France, which in England is reserved for wealth or title. The late Mr. Thomas Barnes, of the "Times," though not a man of genius, like Chateaubriand, nor a man of such varied attainments as M. Guizot, was yet far superior, both as a scholar and a writer, to all the other French newspaper writers who attained the rank of minister. But Mr. Barnes was born in a wealth-owning and aristocratic land; never was an M. P.—never was a privy councillor—never was a minister in a country which has had a Knatchbull, a Lincoln, and an Ellenborough in the cabinet, and an Addington, a Goderich, and a Peel, for prime ministers.

We do not deny, with all these facts before our eyes, that the influence of the press in France has diminished, and is daily diminishing; but this is owing, in a great degree, to the abuse of its power and the prostitution of its office. The greater portion of the French press raised no warning voice against the embastillement of Paris, whilst all the journals, excepting two, were in favor of a scheme which, without being formidable to the stranger, may, in the end, prove the grave of French liberty and the tomb of free discussion. The press of France, too, cried for war, when all the best interests of the nation demanded peace. The press of France cried for glory and conquest, when railways stood still, and the internal communication of the country was disgraceful to the age in which we live. The press of France called for an increase of sailing ships, and for an increased steam navy, when the greater number of the communal and vicinal roads of France were impracticable, and while her luxurious capital remained unsupplied with water. The press of France called for an in-

creased war expenditure in Algeria, and disaster and disgrace have been the result. The press of France called for hostilities with England, at a time when every sane man in England and France wished for peace, and when hundreds of thousands of pounds of English capital had been, on the faith of the subsistence of friendly relations, invested by Englishmen in French railroad speculations. The press of France, with one or two exceptions, has for fifteen years remained silent on electoral reform, at a time when the electors are only a few hundred thousand among a population of thirty-four millions. These are a few of many grave and serious errors, not to say crimes and misdemeanors, which must be laid to its charge. A long time—a very long time—must elapse, ere the French press regains the ascendancy which it possessed, and properly possessed, before the Revolution of 1830.

The press of England, with all its faults, is free from these grave errors: and the daily press of England, and indeed, the whole press, daily and weekly, with one infamous exception, is free from the odious personality which has marked the literary rivalry and encounter of Girardin and Cassagnac. The press of England is free, too, with one or two exceptions, we believe, from the charge of personal corruption. No one would sell praises, as M. Constant Hilbey says M. Viollet sold them, at so much the line, in the "Patrie," in "La France," and in "Le Droit." It is true, Viollet received nothing for himself from the hands of the poor tailor, but he had, says Hilbey, a *remise* or percentage on each insertion. There is no respectable journal in England which would sell a whole feuilleton to this same Hilbey for 150 francs, as he avers the "Droit" did, in page 31 of his pamphlet.

Hilbey flies at much higher and "nobler quarry," than the "Droit." He avers in all the permanency of print, and with all the convenient certainty of time and place, necessary in an English indictment, that one De Moléon, who lives at 26, Rue de la Paix, offered to have his book reviewed in the feuilleton of the "Débats" for 400 francs—an offer which the tailor refused, inasmuch as he could have the thing done by an scrivain fort connu; trop connu même!—(does he mean the famous J. J. of the "Feuilleton"?) for 500 francs.

This statement has been published for months, and has never been, that we are aware of, contradicted by the "Débats." If any man had said such a thing of our "Times," how the calumniator would have been handled next day in *Sterling Saxon*. The aspiring tailor also gives, at page 53 of his pamphlet, a list of the sums paid to the "Siècle," "Courrier Français," "Commerce," "National," and "France," and we do not believe that his statement has been impugned by any one of these journals.

But with all its grievous errors and imperfections, and occasional corruption, both political and personal, the newspaper press of France has obtained, and must ever maintain, unless it shall most grossly degrade itself, and willfully continue to pervert its functions, a large place and a high position in the literature of the country. The instrument by which, as De Tocqueville says, the same thought can be presented to a hundred thousand minds at the same moment, is a noble instrument, and should not be trifled with, or misused, or perverted. A grave responsibility weighs, in-

deed, on the conductors of this great engine. For the abuse of their power they must answer, sooner or later, at the bar of public opinion.

The press of France, unlike the press of England, is distinguished by a strong esprit de corps. They are a formidable body, not so much because they are men of undoubted ability and information though these qualities are not without their influence—as because they are a compact and serrid body, and feel that a stain cast upon a brother of the craft, is a wound inflicted on the whole corps. Their union is their weapon and their strength, and by it they vanquish all opposition, and rise to “pride of place and power.”

No pampered proprietor, the spoiled child of blind Fortune, would attempt to ride the high horse with men of this stamp; for Paris is the limbo of proprietors, and the heaven of editors, contributors, and public writers. England, on the contrary, is the paradise of proprietors, and the inferno of editors and writers. The press in England has made the fortune of many of its proprietors, and sent many of its contributors to the rules of the bench or to the prison of the fleet. The press in France has made the fortune of its best contributors, and ruined, in a pecuniary sense, the proprietors. Coste and Bethune have made the fortunes of hundreds of literary men, but have lost their own. Till there is more union, more esprit de corps, and a kindlier and a better spirit amongst literary men in England, proprietors must continue to have the upper hand, to assume the airs of grand seigneurs, and occasionally to maltreat writers and contributors.

There are in France, as in England, various classes of persons, and of different degrees of merit and intellect, connected with the public press. Some there are, dull and heavy, who would fain soar into the higher regions; but the public soon whispers in the ear of these mistaken men, if it has not been previously hinted by the rédacteur en chef:

“Tu n’as point d’aile et tu veux voler! rampe.”

Others there are, (to use the words of Voltaire, in the same poem:*)

“Malin, gourmand, saltimbanque indocile.”

But these soon find their level, and sink into obscurity, or are ignominiously dismissed.

Some there are, like the Abbé Trublet, dull dogs, mere delvers, who go on and on, compiling and compiling, and supply their want of mother wit by the “trover and conversion” of the wits of others.

“L’abbé Trublet alors avait la rage
D’être à Paris un petit personnage
Au peu d’esprit que le bon homme avait,
L’esprit d’autrui par supplément servait.
Il entassait adage sur adage;
Il compilait, compilait, compilait,
On le voyait sans cesse écrire, écrire,
Ce qu’il avait jadis entendu dire.”

But these “piocheurs,” the Trublets and troubles of our epoch, are not valued more than our intrepid penny-a-liners, and give place to sharper practitioners, who have learned:

“—— comment on dépécail
Un livre entier comme on le récusait,
Comme on jugeait du tout par la préface.”

This class of critics is greatly in vogue at the

* Le Pauvre Diable.

“Presse” and “Epoque,” and among the younger and more unprincipled journals, but an honest, able, and learned critic, in every first-rate journal in Paris, will soon obtain, whatever Madame Emile Girardin, in her “Ecole de Journalistes,” may say to the contrary notwithstanding, the complete mastery.

The bitterest and the severest things that ever have been said against French journalists have been said by this lady and her then friend and ally, but now bitter enemy, Granier de Cassagnac. Both were then, (1840,) as they are now, of the school of the broad-sheet,* but they spared not their common mother, but laid bare her faults without charity, without filial tenderness, without shame as without regret. Yet, in the whole circle of the French press there were not two persons who ought to have been more cautious and circumspect and chary of giving offence to the family of journalists than these self-same Girardins and Cassagnacs. Out of the reach of danger, (as they supposed,) they were bold; out of the reach of shame, they were confident. But they reckoned without their host, for Jules Janin, to his eternal honor be it said, stepped forward in defence of the press, and in one of the neatest pieces of polished sarcasm that even the language of Voltaire can boast, told this lady, with scalding yet polite bitterness, the revolting truth.

There are now in Paris, as in the time of Mercier, a species of half authors, of quarter authors, of literary métiés, and quarterons, who disembody their small verses, or venom, their stupid prose, or their colorless criticism, into obscure or small journals, and who give themselves, in consequence, the title of men of letters. These creatures are like some of the same species at home, all pretension from head to foot, and for no other reason, that anybody knows, but because of their unmitigable nullity. They are always declaiming against an arrogant mediocrity, and they are themselves at once arrogant and mediocre. Many of them, like the ex-journeyman printer, Balzac, make a parade of their birth, often more natural, yet less equivocal, than their talents. To hear them as they enter a drawing room, with self-satisfied air repeat their names with a sounding *Dix* before them, one would think they were of the flower of earliest chivalry, and descended in line direct from the first Christian baron, or of that famous house of the De Lévis, which claimed kindred with Noah and the Virgin Mary.* To believe these men of pure “blue blood,” made of “the porcelain of earth’s best clay;” they are indifferent to money, and don’t write for it. But if they said their lucubrations did not sell for money, they would be nearer the truth.

There is no capital on earth where good newspaper writing is better paid than in Paris, and no capital where better newspaper writing is produced, if there, indeed, be any capital where so good is fabricated. The leading articles of the leading daily journals of London, such as the “Times,” the “Chronicle,” and the “Daily

* In the family of the De Lévis there is a picture of the deluge, with one of the race holding up his hand, in which is contained a roll, whereon is inscribed, “Papiers de la Maison de Lévis.” In the family gallery there is also another picture of one of the members of the house meeting the Virgin. The female De Lévis (for it was a religieuse) is proceeding to uncover her head, when there is written, as proceeding from the mouth of the Virgin, these words: “Couvrez vous, ma très chère et sainte cousine, car je sais bien le respect que je vous dois.”

News," are written with great strength, vigor, and boldness of tone, and occasional felicity of expression, but being, for the most part, composed on the spur of the moment, they bear about them, occasionally, marks of haste, and incorrectness, and inelegance, impossible to avoid under the circumstances. The French leaders in the "Débats" and the "Constitutionnel," are written more carefully, and in a more chaste and classic style. The writers in French papers have sometimes twenty-four hours, sometimes forty-eight hours, and often a week, to prune, to elaborate and polish, and they are therefore in a condition to profit by the advice of Despraux.

"Vingt fois sur le métier remettez votre ouvrage; Polissez-le sans cesse, et le repolissez; Ajoutez quelquefois et souvent effacez."

The wonder, therefore, is, not that the French editors write so well, but that the English writers, compelled to labor "currente calamo," produce so frequently articles of first-rate excellence, whether as regards subject, composition, arrangement, or disposition of the parts. It is the common practice in London to lay the proof of the first part of a leader on the table of the writer before the last slip of MS. is out of the writer's hands; yet some articles written in this breathless haste are as fine productions as ever issued from the press.

The bitterest calumnies have been heaped upon journalists and newspaper writers in France. We have admitted that they are not faultless, but speaking generally, we say without hesitancy, that they have shown themselves the enemies of abuses, and the firm friends, sustainers, and protectors of public liberty; that notwithstanding the calumnies of the worthless, the fears of the timid, and the frowns of the powerful, the French press has generally asserted the indefeasible right of their countrymen to equal and impartial government, to equality before the law, to the free expression of opinion, and that perfect religious toleration, or rather freedom, inconsistent with a dominant sect, or a dominant priesthood, or a dominant race of any kind. The author of a recent work,* who has had excellent opportunities of knowing the state of public opinion in France, not merely from his intimate acquaintance with the monarch, but with eminent men of all parties, and who is well informed in French history and literature, remarks, that the press in France had vast influence on public opinion, from the year 1825 to the Revolution of 1830. Had Mr. Mackinnon extended this vast influence over a period of ten years antecedent to 1825—i. e., from 1815 to 1830, he had been nearer the truth. He is perfectly correct, however, when he says, that since 1830 the influence of the press has been gradually lessening from the increased number of publications, and the spread of education among the community, which now exercises its own judgment. He might also have added that the influence of the press has declined from the abuse of its own power, and from the multiplication of journals, some of which are conducted without talent, and many of which are conducted without principle. Mr. Mackinnon has proved that in America the influence of the press has diminished in proportion to the number of papers; and in France, the power of the press for political purposes is

likely to be found in the inverse ratio of its extension.

SCRATCHES AT NATURE WITH A FREE GUILLOTT.*

THE AMERICAN EAGLE.

(*Aquila Repudiatrix*, LINN. *Aigle Coquin*, BUFF.)

THIS unclean bird of the ancients, though classed among the eagles, seems in its aspect and peculiarities rather to resemble the vulture tribe. It must not, however, be confounded with the "King Vulture" of Bewick, as it is a republican bird. It is distinguished from all others by being curiously marked with stripes and stars. Its flight resembles that of the Kite. Its voracity is something tremendous; it preys chiefly on the Oregon racoon, the Texas opossum, and the green snake of California; but it is also extremely fatal to the large species of goose called the creditor, (*Anser Extraordinarius*, LINN.; *Joli Marin*, BUFF.) which it decoys into accompanying it to its own haunts by an affectation of honest friendship, apparently finding means to persuade the foolish bird that more ample supplies and thorough security will be found there: the unfortunate goose, thus entrapped, is then at once despatched by its ruthless betrayer.

It is one peculiarity of this eagle, that he invariably performs the operation of plucking his victim which he does as neatly as the most accomplished cook. This process has been admirably described by that excellent natural historian, the late Rev. Sydney Smith, who was an eye-witness of the capture and plucking of several creditor geese by the American eagle, in the manner explained, somewhere in the State of Pennsylvania.

The eagle is also partial to the flesh of negroes, which it will seize with evident *gusto*. A singular antipathy is evinced by this bird to that noble animal the British lion, (*Leo Verus Cæruleus*, LINN.; *Lion Bonhomme*, BUFF.) whom, in spite of his strength and courage, it even contrives occasionally to dislodge from his own hunting-grounds, in Oregon, and elsewhere. This is performed by a number of the eagles building their unpleasant nests in his neighborhood, by which the lion is gradually driven further and further off, till at length he finds himself deprived of the whole of his accustomed haunt, merely by this "masterly inactivity" on the part of his inferior opponent. American naturalists affirm that the eagle is constantly seen to "whip the British Lion," though how this can be performed it seems impossible to explain, and the statement is commonly classed with the majority of American assertions.

A sort of alliance has been remarked to exist between the eagle and the Gallic cock (*Gallus tolerabilis bonus*, LINN.; *Coq assez-respectable*, BUFF.) owing probably, to their sharing in the antipathy to the British animal, but this is a strange and unnatural alliance, for the gallant cock, with all his faults, is a much more valuable bird.

Many eminent naturalists, who have watched the American species now under discussion, are of opinion that the race is becoming deteriorated, and losing some high distinctions which it undoubtedly possessed; the colors grow dimmer; and it is expected that (if the deterioration continues) the stars which adorn the wing of the bird will be all extinguished; the stripes on the back, however, are likely to be greatly multiplied.—*Punch*.

From Chambers' Journal.

ANIMAL HUMANITY.

It is extremely curious to observe in animals ways and doings like those of human beings. It is a department of natural history which has never been honored with any systematic study: perhaps it is thought too trifling for grave philosophers. I must profess, however, that I *feel* there is some value in the inquiry, as tending to give us sympathies with the lower animals, and to dispose us to treat them more kindly than we generally do.

The *sports* of animals are peculiarly affecting. They come home to our social feelings; and the idea is the more touching, when we regard the poor beasts as perhaps enjoying themselves when on the very brink of suffering death for *our* enjoyment.

It is reported by all who have the charge of flocks, that the lambs resemble children very much in their sports. In the mellowed glow of a June evening, while the ewes are quietly resting in preparation for their night's sleep, the lambs gather together at a little distance, perhaps in the neighborhood of a broomy knoll, and there begin a set of pranksome frolics of their own, dancing fantastically about, or butting, as in jest, against each other. The whole affair is a regular game at romps, such as a merry group of human youngsters will occasionally be allowed to enjoy just before going to bed. It is highly amusing to witness it, and to trace the resemblance it bears to human doings; which is sometimes carried so far, that a single mamma will be seen looking on close by, apparently rather happy at the idea of the young folk being so merry, but anxious also that they should not behave too roughly; otherwise, she must certainly interfere.

Monkeys have similar habits. In the countries of the Eastern Peninsula and Archipelago, where they abound, the matrons are often observed, in the cool of the evening, sitting in a circle round their little ones, which amuse themselves with various gambols. The merriment of the young, as they jump over each others' heads, make mimic fights, and wrestle in sport, is most ludicrously contrasted with the gravity of their seniors, which might be presumed as delighting in the fun, but far too staid and wise to let it appear. There is a regard, however, to discipline; and whenever any foolish babe behaves decidedly ill, the mamma will be seen to jump into the throng, seize the offender by the tail, and administer exactly that extreme kind of chastisement which has so long been in vogue among human parents and human teachers.

That there is merriment—genuine human-like merriment—in many of the lower animals, no one can doubt who has ever watched the gambols of the kid, the lamb, the kitten, or of dogs, which

“Scour away in lang excursion,
And worry other in diversion.”

But there is something to be observed in these sports still more human-like than mere sport. The principle of *make-believe*, or jest as opposed to earnest, can be discerned in many of their merry-makings. A friend of mine one day observed a kitten amusing itself by running along past its mother, and giving her a little pat on the cheek every time it passed. This must have been done

as a little practical joke. It may be added, that the cat stood it for some time very tranquilly; but at last, appearing to get irritated by the iteration of such absurd procedure, she gave her offspring a blow on the side of the head, that sent the little creature spinning to the other side of the room. The kitten looked extremely surprised at this act of mamma, as considering it very ungracious of her not to take the joke in the way it was meant. The same gentleman has observed similar fun going on in a department of the animal kingdom certainly far below the point where we would have expected it; namely, among spiders. He has seen a little spider capering about its parents, running up to it, and then away again, so as to leave no doubt upon his mind that the creature was making merry. Ants, too, have their sports. They pat each others' cheeks, wrestle and tumble, and ride on each others' backs, like a set of schoolboys.

The *kindly social acts of animals*, among themselves and towards mankind, form the next series of phenomena to which I would direct attention. Burns justly eulogizes, as a high virtue, the being disposed to hold our being on the terms, “Each aids the others.” It is the grand distinction of human society, to interpose for the comfort and protection of each other in needful cases. Many families of the lower animals are indifferent on such points; but others are not. It is not yet many months since some workmen, engaged in repairing the cathedral of Glasgow, observed an unusual concourse of sparrows coming regularly to a hole in one of the slanting walls, and there making a great ado, as if feeding some birds within. Curiosity being at length excited, the men proceeded to examine the place, and found that a mother bird, after the flight of her brood, had got her leg entangled in some of the threads composing her nest, so that she was kept a prisoner. The leg was visibly swollen by the chafing produced by her efforts to escape. In this distressing situation the poor bird had been condoled with and fed by her fellows, exactly as a human being might have been in similar circumstances.

Not long before that time, in the pleasure-grounds of Rannoch Lodge in Perthshire, a little field-bird was observed by the gamekeeper to wound itself by flying against one of the so-called invisible fences; whereupon a companion, not stated to have been a mate, came and sat beside it, as it were sighing and sobbing, careless whether he himself was caught—which was easily done by the spectator of the scene. He took home the two birds, and had them carefully attended to, till the wounded bird had a little recovered; he then set them both at liberty; and, to pursue the narrative of a local newspaper, “nothing could have been more touching than the affectionate solicitude with which the one watched the progress of the other—now lending it a wing, and again cheering it while it rested, until both were at length lost to the view of the kind-hearted gamekeeper.”

Instances like these could be multiplied indefinitely. They are the daily habits of some creatures. The dugong, a whale-like animal, but herbivorous, has the social feeling so strong, that, when one is harpooned, the others flock around, regardless of their own danger, and endeavor to wrench out the weapon with their teeth. In what is this different from a soldier shielding a comrade, or endeavoring to rescue him from being of his

wounds on the field of battle? Of the many anecdotes told respecting rational-looking proceedings of animals for the benefit of each other, I shall adopt one related by Monk Lewis in one of his letters. "About ten days ago, [writing in Jamaica,] one of the farm-keeper's wives was going homeward through the wood, when she saw a roebuck running towards her with great speed. Thinking that it was going to attack her with its horns, she was considerably alarmed; but, at the distance of a few paces, the animal stopped, and disappeared among the bushes. The woman recovered herself, and was proceeding on her way, when the roebuck appeared again, ran towards her as before, and again retreated, without doing her any harm. On this being done a third time, the woman was induced to follow it, till it led her to the side of a deep ditch, in which she discovered a young roebuck unable to extricate itself, and on the point of being smothered in the water. The woman immediately endeavored to rescue it, during which the other roebuck stood quietly by, and as soon as her exertions were successful, the two animals galloped away together."

The same measures have often been adopted by dogs on account of a master who has fallen into any kind of trouble. Leaving him, they run home, scratch at the door, and, on gaining admittance, pull the skirts of wife or servant, to induce her to come to the spot for his relief. The horse, too, sometimes shows this species of sagacious kindness. Not three months before the time when this paper was written, the horse of a man called Graham, belonging to the Stainmore collieries, came home in the evening without him. According to a local chronicler, the animal "proceeding direct to the house-door, and commenced neighing, and seemed greatly distressed. Being a docile, playful animal, Graham's family did not at first take much notice of its complaints, not thinking but that Graham himself was not far distant; he, however, not arriving in a short time, and the horse still continuing its wailings, they became a little alarmed, and a person was therefore despatched on the road in search of him. He was found lying on the road near Coupland Beck, a distance of two miles from Appleby, with his head severely cut, and in an insensible state. The evening was extremely cold, and a pinching frost having set in, he would doubtless have perished had he lain much longer." It appeared that the poor man had fallen asleep, and in that state tumbled from his cart.

The sense of *duty* is another of the human-like characteristics of animals, and one of those best known. A dog will take a trust, and fulfil it as well as a man. A very affecting instance was presented about two years ago by a female dog belonging to a shepherd near Dunning in Perthshire. The man had bought for his master, at Falkirk, four score of sheep, which he immediately despatched homewards, *under the care of his dog alone*, though the flock had to go seventeen miles through a populous country. The poor animal, when a few miles on the road, dropped two whelps; but, faithful to her charge, she drove the sheep on a mile or two farther; then, allowing them to stop, returned for her pups, which she carried for about two miles in advance of the sheep. Leaving her pups, the collie again returned for the sheep, and drove them onwards a few miles. This she continued to do, alternately carrying her young ones, and taking charge of the

flock, till she reached home. The manner of her acting on this trying occasion was afterwards gathered by the shepherd from various individuals, who had observed these extraordinary proceedings of the poor animal on the road. It is painful to add, that she did not succeed in bringing her offspring alive to her master's house. As a pendant to this tale, take one relating to a Newfoundland dog, which lived a few years ago with a family in one of the southern States of the American Union, and which had rescued one of its master's daughters from drowning. The family had to proceed in a schooner for the city of St. Augustine: they had embarked, and the vessel was swinging off from the pier, when the dog was missed. To quote a newspaper narrative:—"They whistled and called, but no dog appeared; the captain became restive, swore he would wait no longer, gave the order, and the craft swept along the waters with a spanking breeze, and was soon a quarter of a mile from the shore. The girl and her father were standing at the stern of the vessel, looking back upon the city, which they had probably left forever, when suddenly Towser was seen running down to the edge of the wharf with something in his mouth. With a glass, they discovered that it was his master's pocket-handkerchief, which had been dropped somewhere upon the road down to the vessel, and which he now recollected, with some compunctions of conscience, he had sent his shaggy servant back to look after. The dog looked piteously around upon the bystanders, then at the retreating vessel, and leapt boldly into the water. His master immediately pointed out the noble animal to the captain, and requested him to throw his vessel into the wind, until the dog could near them. He also offered a large sum if he would drop his boat, and pick him up; told him of the manner in which he had preserved the life of his daughter; and again offered him the price of a passage if he would save the faithful creature. The girl joined her entreaties to those of her father, and implored that her early friend might be rescued. But the captain was a savage; he was deaf to every appeal of humanity; kept obstinately on his course; and the better animal of the two followed the vessel until, his strength exhausted, and his generous heart chilled by despair, he sank among the more merciful billows."

The high degree in which animals are susceptible of *attachment*, needs little illustration; for every one knows the dog and horse. One is, however, less struck by the general fact, that these animals, and some others, devote themselves to a kindly and servile association with man, than by the particular friendships which certain animals form with individuals of our species, as if from some peculiar, though inscrutable election of qualities, or, it may be, merely from accidental contact. We can even, in some instances, see this attended by a demonstration of an *ould lang syne* feeling, such as usually attends the rencontres of human friends long separated. For example—A few years ago, a sailor, entering a show of wild beasts at Plymouth, was surprised to find a tiger very much agitated at his approach, acting always with the greater violence the nearer he came to its cage. The keeper, to whom he pointed out the circumstance, remarked that the beast must either be greatly pleased, or as much annoyed. Upon this the sailor went close up to the den, and, after a few minutes, during which the animal lashed its sides with its tail, and uttered the most frightful

bellowsings, he discovered that it was a tiger which had been brought home to England a few years before under his especial care. It now became Jack's turn to be delighted, as it appears the tiger was, in thus recognizing his old friend; and, after making repeated applications to be permitted to enter the den, for the purpose, as he said, of "shaking a fist" with the beautiful animal, he was suffered so to do: the iron door was opened, and in jumped Jack, to the delight of himself and striped friend, and the astonishment of the lookers-on. The affection of the animal was now shown by caressing and licking the pleased sailor, whom he seemed to welcome with the heartiest satisfaction; and when the honest tar left the den, the anguish of the poor animal appeared almost insupportable. Was not this the very same sentiment which makes us sing, "Should auld acquaintance be forgot?" But animals of much lower grade will strike up friendships with men. There is an anecdote of a goose which became unaccountably attached to a farmer in Ireland, inasmuch that it raised a joke at his expense. One day it followed him to a court, which he was attending upon public duty, and so irritated was he, that he twisted his whip about its neck, and swung it round till he thought it dead. Some time after, when he was lying dangerously ill, he was horror-struck to observe the same goose looking in at his window. His daughter told him it had waited there, with an air of the greatest concern, during the whole time of his illness. Of course there was no standing this disinterested attachment, and the poor goose was instantly admitted into favor.

This predilection of animals for particular persons was once the means of deciding, very amusingly, a case before a court of justice. It was a Dublin police-office, and the object of dispute was a pet parrot, which had been stolen from a Mr. Davis, and sold to a Mr. Moore. The plaintiff, taking the bird upon his finger, said, "Come, old boy, give me a kiss," which the parrot instantly did. A youth in the defendant's interest, remarked that this proved nothing, as the parrot would kiss anybody. "You had better not try," remarked the plaintiff. Nevertheless the young man asked the parrot to kiss him. Poll, Judas-like, advanced as if to give the required salute, but seized the youth's lip and made him roar with pain. This fact, and the parrot's obeying the plaintiff in several other requisitions, caused it to be instantly ordered into the possession of its original master.

Human foibles, too, are participated by animals. The dog, I grieve to say, is capable of both envy and jealousy. A gentleman, calling one day upon Dr. Gall, at Paris, found that most original observer of nature in the midst of birds, cats, and dogs, which were his pets. "Do you think," said he, turning his eyes to two beautiful dogs at his feet, which were endeavoring to gain his attention—"do you think that these little pets possess pride and vanity like man?" "Yes," said the other, "I have remarked their vanity frequently." "We will call both feelings into action," said he. He then caressed the whelp, and took it into his arms. "Mark that mother's offended pride," said he, as he walked quietly across the chamber to her mat. "Do you think she will come if I call her?" "Oh yes," answered his friend. "Not at all." He made the attempt; but she heeded not the hand she had so earnestly endeavored to lick but an instant

before. "She will not speak to me to day," said Dr. Gall.* Not long ago, it was stated in a Plymouth newspaper that two dogs, a setter and a little spaniel, being kept in the same kennel, the larger animal manifested a great jealousy of the smaller. At length the little dog was missing, and the setter was found to have taken ill. The latter dying very quickly, was opened, when the little dog was found almost entire in its stomach.

Revenge is not a conspicuous animal passion. The incapacity of deep impressions is perhaps a preventive to it. But it is not quite unknown. James Hogg tells a story of a dog which was much annoyed by the persecutions of a larger animal of his own species, till one day he brought a still more powerful friend, which set upon, and gave the persecutor such a worrying, as served to deter him from his cruelty in future. Mr. Thomson, in his *Note-Book of a Naturalist*, relates a similar circumstance as occurring some time since at the seat of a noble lord in Surrey. "In the park are two large pieces of water divided by a small isthmus, which widens considerably at one extremity, and at the time in question, a pair of swans were the occupants. A doe and her fawn, belonging to a herd of deer in the park, coming down to one of the pieces of water to drink, were immediately set upon by the swans; and the fawn, by their joint efforts, was got into deep water, and drowned. After a considerable interval of time, when the swans were one day on the wide part of the isthmus, and thus separated from their element, and at a disadvantage, a rush was made upon them by a number of the deer, which trod under foot, and destroyed one of them. The bereaved doe must have had some means of communicating her loss to the other deer, and of urging them to help her in her revenge; and the most remarkable part of the transaction is, that the deer must have a kind of consciousness of the fitness of the moment, when the swans were, to a great extent, defenceless, or at least deprived of their greatest advantage, and had no means of effecting their retreat to the water."

An anecdote was lately given in a newspaper, which would show animals to be even capable of a sense of equity; but perhaps there is some exaggeration about it. A gentleman, visiting a menagerie at Penrith, found there a fine lioness with two cubs. While he was observing her, the keeper handed in a sheep's head to the cubs, which instantly began to quarrel over it, as if each desired exclusive possession of the prize. In the midst of the turmoil the lioness rose and advanced, and with two well-directed cuffs, sent them cowering into the corners of the den. She then lay down, and deliberately dividing the spoil into two equal parts, assigned one to each of her young ones; after which, without taking a morsel to herself, she retired, and lay quietly down again. If the fact was exactly as thus related, it certainly forms one of the most curious illustrations of animal humanity which we have on record.

But, it might be asked, what class of ordinary human actions is not imitated by animals? A gentleman comes home late at night, and uses the knocker to gain admission; a cat belonging to a friend of ours used to do the same. A weary pedestrian rejoices to get a cast in a passing omnibus; in the *Magazine of Natural History* (1833,) is an anecdote of a dog which, being in like cir-

* Medical and Physical Journal, November, 1839.

cumstances, came into such a vehicle on one of the London thoroughfares, and could not be induced to come out, till he voluntarily left it at a place which seemed to be his home. An innkeeper's son will take a drive for half a stage in one of his father's coaches, and come back in another; this also did Ralph, a famous raven of the Elephant and Castle public house; he knew all the coach-drivers who plied at that inn, and would take short jaunts on the coach-top with them, till he met some other coach coming the contrary way, when he would change coaches, and return. To pass to something very different:—The persecuted Covenanters, when met for worship in the lonely glens of Ayrshire, used to plant a sentinel to watch the approach of the dragoons. This also do the red-deer in the Highlands. The youngest of the herd is set to watch, while the rest browse; and if he leave his post, they butt him till he shows he is corrected. Men make hay—with and without favor of sunshine—knowing it is needed for winter store. The marmot of the Altaic mountains makes hay also, to serve as winter fodder. He plies it in stacks as high as a man, and the selection of herbs for the purpose is far beyond what human hay-makers can pretend to. "If at first you don't succeed," says the moralist, "try, try, try again." The spider did this nine times in the sight of the fugitive Bruce, and taught him to regain a kingdom. So also has the lion been seen, after failing in a leap at his prey, to go back to try it over again, though the prey was gone, as anxious to investigate the cause of failure, and to train himself up to the proper pitch of power for a future occasion. To emigrate for better subsistence and climate has been a practice of the human family since its earliest ages. It is now fully admitted that the migrations of animals are prompted by precisely the same motives. And as men, in the infancy of navigation crept along the shore, or navigated from headland to headland, or, in crossing, chose the narrow passes, and those which were assisted by intervening islands, so birds of passage adopt all these facilities. Those which move from Scotland to Ireland, proceed by the straits of Portpatrick. They wait for a side wind, too, to aid them. So also Capri is used as a resting-place in crossing the Mediterranean; as the bishop knows by the title of quails, which is said to form an important part of his revenue. In what, moreover, does the return of continental tourists in winter, each to his particular brick dwelling in London, differ from the resumption of particular residences by the swallows in spring? The absence of title-deeds and rent makes the only distinction. There is even some inscrutable means of communicating ideas amongst animals. The deer, in the anecdote already given, must have had a talk about the swans. Even creatures of different families, as cows and horses, have been ascertained to interchange their thoughts.

There is a disposition amongst us to deny all that assimilates animals to ourselves, as if there were something derogatory in it. Miserable pride and delusion, to suppose there can be any good in battling off one of God's facts! When I hear of men endeavoring to extinguish the idea of animal intellectuality and sentiment, by calling it instinct, I am always reminded of the weak creatures of the desert, which get their heads into a bush, and then think that they cannot be seen. What imaginable benefit can there be in any such falsity! Rather let us acknowledge the beautiful and

ingenious qualities of animals, as they actually are, seeing in them the hand of a Divine author, and something which even we ourselves may occasionally imitate with advantage.

From Chambers' Journal.

ADVENTURES OF DANIEL BOONE.

It does not seem to us many years since we read in the papers an obituary notice of Daniel Boone, the founder of the state of Kentucky. Need we say what Kentucky now is? A state as large as Scotland, fertile and beautiful, and containing not much less than a million of people. Yet the first white man who set himself down to live in this grand country, only died at the end of the reign of George III.; so rapidly does the world advance in some of its districts. Boone's history is interesting, because it realizes almost in our own day some of those first processes of civilization which, in the elder world, passed long before history existed. It is the story of Jew and Canaanite—as far as that was a mere conflict for land—brought almost before our living eyes.

The spring of 1769 rose calmly over the broad woodlands which lay immediately beyond the mountains to the west of Virginia. It was a beautiful wilderness, known as yet only to the red Indian, but abounding in game and wild fruits, and whatever can form a temptation to man seeking for a residence. At that time there lived in Yadkin valley, in North Carolina, a hardy peasant of about thirty-seven years of age, a native of the county of Somerset in England, but long naturalized to America, and now married, with a family of several children. A born hunter Daniel was, and fond of nothing but hunting—a man who preferred to roam the mountain, and sleep in a cavern, or camp by a rushing spring, to the dull farm life and the home fire-side. We say he was a born hunter; he possessed the instinct of the bee, and could go to his own dwelling in a *bee-line* from any point to which his wanderings might carry him. Fatigue, hunger, and exposure, he could bear like any Indian. Strong, but light, active as a deer, courageous, but cautious, kind, silent, thoughtful, he was the very man to act the part of pioneer. Two years before the above date, a man named Finlay had gone afar in the land of the red man upon a mercantile expedition. Him Daniel sought out, and learned that of a truth there was a country to the north-west where buffalo swarmed like flies in summer, and where the wild turkey and the deer were scarce worth wasting powder upon. He meditated and dreamt upon it for a year, talked with his wife about it, who endeavored to drive it from his mind; and finally, tightening his belt, and putting a new edge upon his knife, he shouldered his rifle, bade his little family good-by, and, in company with five comrades, started in quest of the country of Kentucky.

Finlay led the way. For five weeks did the little band toil on and on through hill and valley, gushing stream and tangled woods, enduring all the inclemency of the elements, till at length they came to the Red river, a branch of the Kentucky. For months they hunted with success; but at length, in December, Boone and one of his companions fell into the hands of the Indians, from whom they only escaped by stratagem. On returning to their camp, they found it deserted by the rest. Determined to persevere, they remained in it, using great precautions against the hostile

Indians; until Squire, a brother of Boone, joined him with another man, and entered upon the same kind of life. A few months after, by the death of one man and the desertion of another, the two Boones were left alone; and thus they continued to be for several months, when Squire was compelled to return to the settlements for a supply of ammunition, and Daniel was left without a dog for company—the sole white man in all that vast region.

It is impossible for men who have grown up in our tame civilization to enter into the feelings of one so situated. Many hundred miles from all to whom he could look for aid; in a boundless wood, filled with subtle and cruel enemies; dependent upon his gun, yet with a scanty store of ammunition; without a comrade, or the hope of one—and still contented and cheerful, nay, very happy. Every day he changed his position; every night he slept in a different place from the one he had occupied the night before; constantly in danger, he was forced to be constantly on his guard; but freedom, the love of nature, the excitement of peril, and the pleasures of the chase, appear to have repaid him for all his trials, toils, and watchfulness. One circumstance, which helps us to explain Boone's security while among the bands of roaming savages, and, as we should suppose, in hourly dread of losing his life, was this: the forests of Kentucky, at that early period, were filled with a species of nettle, which, being once trodden on, retained for a long time the impression of the foot, even a turkey might with ease be tracked in it. This weeded the Indians, numerous and fearless, took no pains to avoid, while the solitary hunter never touched it: it thus became to him a sure and easy means of knowing the presence, position, and numbers of his enemies, without betraying his own whereabouts. There is an anecdote of Boone, referable to a different period, which gives a striking idea of such a stealthy life as he now led. He had approached the Licking river from the west, at the same time that another adventurer, Simon Kenton, had reached the borders of the valley from the east. Each paused to reconnoitre, before he left the covert of the woods; and each ascertained the presence of another human being in the neighborhood. Then commenced a process on the part of each for learning who the other was, without revealing himself; and such was their mutually baffling power of concealment, that forty-eight hours passed before either could satisfy himself that the other was not an Indian, and a foe!

Squire Boone returned at the end of June, (1770,) and the two brothers continued to hunt together. Meanwhile a band called the Long Hunters, led by Captain James Knox, entered the territory on the south, and spent some time in it; but Boone knew nothing of their proceedings. He and his brother remained about the vale of the Kentucky till the ensuing March, and then returned home, in order to bring more settlers, including Daniel's family.

In the autumn, Boone was passing again into Kentucky, with five families besides his own, and forty other men, when, upon the 10th of October, unlooked for as thunder from a clear sky, a band of Indians poured upon the rear of the little emigrant army a deadly fire. Women shrieked, children squealed, the cattle broke and ran, horses reared and plunged, the young men drew their rifles to their shoulders, and the old "treed" instantly. A few moments decided the matter: the

whites were victors: but six dead men, and one badly wounded, gave them an idea of the nature of frontier life. Among the dead was Daniel's eldest son. The party retreated, and Boone spent another year in inactivity. During this time land-speculators and surveyors poured into the land of Kentucky, and roused the hostility of the Indians to a high pitch. A party of eight hundred of them were only saved from destruction by Boone's undertaking, at the request of the governor of Virginia, (the Earl of Dunmore,) to bring them off; in which duty he was perfectly successful.

The contention between the colonists and the mother country was now coming to a head; and it was in the midst of terrors, inspired by the policy of the British in employing the Indians as allies, that the colonization of Kentucky took place. James Harrod was the first to build a house in that region; this was in 1774. Then one Richard Henderson, a Carolinian, by Boone's assistance, made a treaty with the Cherokees for certain lands lying between the Kentucky and Cumberland rivers, where it was proposed to establish a colony. The ground had still to be fought for with other tribes; but, in spite of all obstacles, a fort of block-houses and cabins was planted in the summer of 1775, at Boonesborough—the pioneer working with his axe in one hand and his rifle in the other. A sort of legislative council made laws for the new settlement, which was regarded as an offshoot from the state of Virginia.

Boone then returned to his family, which, with three others, he brought into Kentucky in September. The four women of this party—Mrs. Boone, Mrs. M'Gary, Mrs. Denton, and Mrs. Hogan—were the first of white complexion who entered the country—the "mothers of the west." The war just then breaking out, and all the horrors of Indian hostility impending, the heroism of these women deserves especial honor.

We pass over much detail as to the various settlements which were formed, and entirely overlook the doings of a remarkable man, George Rogers Clark, who had much to do with the infancy of Kentucky. It soon became necessary to keep a careful watch upon the movements of the Indians. All along the border the impression gained strength that the savages, instigated and backed by the British, would suddenly swoop down and lay all waste. The hated race of "cabiners," those speculators who came out to obtain a pre-emption right by building a cabin and planting a crop; the wretched traders who were always wandering about the frontier; the hunters, who were revelling among the countless herds of game, now for the first time seen—all began, during the winter and spring of 1776, to draw closer to the stations. And within these stations men sat round the fire with loaded rifles, and told their tales of adventure and peril with new interest, as every sound reminded them how near their deadly enemies might be. And from hour to hour scouts came in with rumors of natives seen here and there; and parties of the bold rangers tightened their belts, and left the protection of their forts, to learn the truth of these alarms. But there was one who sat at such times silent, and seemingly unheeding, darning his hunting-shirt, or mending his leggins, or preparing his rifle-balls for use; and yet to him all eyes often turned. Two or three together, the other hunters started by daylight to reconnoitre: silently he sat working until nightfall. Then noiselessly he went: none saw

him go. But when they observed him gone, they would say, "Now we shall know something sure, for old Daniel's on the track." And when, by and bye, some one yet wakeful saw the shadow of Boone, as he reëntered the cabin, he found, as usual, that the solitary scout had learned all that was to be known, and the watchful slept in peace.

In July the storm broke upon the poor colonists, most of whom fled before the wrath of the Shawanese and Cherokees, leaving only a few determined little bands in the forts. It was a terrible time; yet Daniel Boone was never dismayed. One day his daughter and two other young girls were amusing themselves in a skiff on the Kentucky, while several of the male settlers looked on. Suddenly they felt the boat taking a direction for the opposite shore. A lurking Indian had swum in, and caught hold of it, and the poor children quickly found themselves prisoners amongst a band who had posted themselves in a little thicket close to the river. The settlers heard their scream as they were caught and hurried off. It was some time before Boone, and a little party of friends, could cross to commence a pursuit, so that the Indians got the start for several miles. At daybreak he recovered their trail, but soon lost it again in a thick wood, to penetrate which would have sadly impeded him. Life and death, freedom or captivity, hung upon the right use of every moment. Boone was not long at a loss: turning southward with his companions, so as to leave the track upon his left, having carefully observed its general direction, and feeling sure that the captors would take their prisoners to the Indian towns upon either the Scioto or Miami, he boldly struck forward, and travelled with all speed thirty miles or more; then turning at right angles towards the north, he looked narrowly for marks of the passage of the marauders. It was a bold and keen device, and the event proved it a sagacious one; for, after going a few miles they came upon the Indian trail in one of the great buffalo paths. Inspired with new hope and strength, the whites pushed forward quickly, but quietly, and on the alert, lest unexpectedly they might come upon the red men. And well was it that they used great caution; for when, after going ten miles, they at length caught sight of the natives as they were leisurely, and half-stripped, preparing their dinner, the quick-eyed sons of the forest saw them as soon as they were themselves discovered. Boone had feared that, if their approach was known, the girls would be killed instantly, and he was prepared for instant action. So soon, therefore, as the savages were seen, he and his companions fired, and then the whole body rushed forward so suddenly, as to cause their opponents to take to their heels, without waiting for scalps, guns, knives, moccasins, or blankets; and the three terrified girls were recovered unhurt.

For two years the gallant Kentuckians maintained their posts amidst incredible hardships and dangers. It became difficult to supply themselves with food, as there was hardly any safety for cattle; and in hunting, men were frequently cut off by the prowling enemy. One day, as the women of Logan's fort were milking the cows, attended by a guard of men, the Indians made a sudden attack, and killed several persons. Such incidents were very harassing. The commander of this fort, after being beleaguered by the savages for some weeks, found himself running short of pow-

der and shot, so that, unless relief should come soon, it seemed inevitable that they should have to surrender. The required ammunition could only be got two hundred miles off, across a wild and mountainous country. Yet he resolved to make the attempt; and he succeeded. Over mountain and vale, through tangled wood and brake, this man sped his way with two companions, and on the tenth day he was once more within the fort. It is pleasant to know that the party was thus able to hold out till relieved.

At the beginning of 1778 there were but three stations left, containing in all a hundred and ten men; but the Indians had been baffled, and forced to retire behind the Ohio; so that a small breathing-time was afforded to the settlers. At this time Boone was compelled to go, with thirty men, to the Blue Licks, in order to prepare salt for the use of his people. He had succeeded so far in his object, when a band of Indians fell upon him as he was hunting singly in the woods. He fled, but was soon overtaken, and made prisoner. His companions, obeying gestures made by him at a distance, surrendered, and the whole party was then marched off to a British post, where several officers interceded for the ransom of Boone, but without success, for the chief had taken a fancy to him, and determined to make him one of themselves. Boone was actually obliged, for some months, to act the part of a Shawanese Indian, and to affect a reconciliation to their habits. He was made a son in some family, and caressed by father and mother, brothers and sisters, till he was thoroughly sick of them. Yet, to appearance, he was cheerful and happy. He took his part in their games and romps; shot as near the centre of the target as a good hunter ought to do, and yet left the savage marksmen a chance to excel him; and smiled, in his quiet eye, when he witnessed their joy at having done better than the best of the Long Knives. He grew into favor with the chief, was trusted, treated with respect, and listened to with attention. After some months of captivity, he was called upon to accompany a salt-making party to Chillicothe; there he saw a body of 450 painted warriors, whom he guessed to be on their way to Boonesborough, to make final work of it. Could he do nothing to save his family and friends? It was 160 miles of wild country to Boonesborough, and not a friend by the way. Yet it was necessary he should try. So, on the morning of the 16th June, he stole away without any breakfast, leaving an Indian father and mother inconsolable for his loss. Over hill and valley he sped, for four successive days, forty miles a day, eating but one meal all the way. Such power there is in the human frame of withstanding all fatigue and hunger when the soul is alive and strong within us.

He reached Boonesborough—and where was his wife? Why did she not rush to meet him? "Bless your soul," said his old companions, as they hailed him like one risen from the dead, and shook his hand till it tingled, "she put into the settlements long ago; she thought you was dead, Daniel, and packed up, and was off to Carolina, to the old man's." There was no time for regrets, for the Indians were expected. Days, however, passed without showing them; and it was then ascertained that they were brought to a stand by his flight, believing that he must have given warning of their approach. Some weeks after, learning that the country was clear of the Indians, he start-

ed with a party of nineteen for the town on Paint Creek, intending probably to make some kind of reprisals. But this had nearly proved a fatal step, for, by the way, he suddenly popped upon an Indian party going in the contrary direction. Judging from this circumstance that a larger body must be on its way to attack the settlements, he immediately turned back; and it was well he did so just then, as he only got back a day before the Indians and British appeared in strength at Boonesborough.

It was on the 8th of August that, with British and French flags flying, the dusky army gathered round the little fortress of logs, defended by its inconsiderable garrison. Captain Duquesne, on behalf of his majesty King George III., summoned Captain Boone to surrender. It was, as Daniel had acknowledged in his journal, a critical period for him and his friends. Should they yield, what mercy could they look for! and he especially, after his unkind flight from his Shawanese parents! Should they refuse to yield, what hope of successful resistance! And they had so much need of all their cattle to aid them in sustaining a siege, and yet their cows were abroad in the woods. Daniel pondered the matter, and concluded it would be safe, at any rate, to ask two days for consideration. It was granted, and he drove in his cows! The evening of the 9th soon arrived, however, and he must say one thing or another; so he politely thanked the representative of his gracious majesty for giving the garrison time to prepare for their defence, and announced their determination to fight. The British officers professed so much apparently sincere regret for this resolution, that Daniel was induced, after all, to come to a negotiation. It was to take place immediately beyond the walls of the fort, between nine of the garrison and a party of the enemy. To guard against treachery, the sharpest shooters stood upon the walls, ready to defend their friends. The treaty was made and signed; and then the Indians, saying it was their custom for two of them to shake hands with every white man when a treaty was made, expressed a wish to press the palms of their new allies. Boone and his comrades must have looked rather queer at this proposal; but it seemed safer to accede than to refuse; so they presented each his hand. As anticipated, the warriors seized them with rough and fierce eagerness; the whites drew back, struggling; the treachery was apparent. The rifle-balls from the garrison struck down the foremost of the assailants of the little band; and, amid a fire from friends and foes, Boone and his fellow-deputies bounded back into the station, with the exception of one, unhurt.

The treaty-trick having thus failed, Captain Duquesne had to look to more ordinary modes of warfare; and opened a fire, which lasted ten days; though to no purpose, for the woodsmen were determined not to yield. On the 20th of August the Indians were forced unwillingly to retire, having lost thirty-seven of their number, and wasted a vast amount of powder and lead. The garrison picked up from the ground, after their departure, one hundred and twenty-five pounds of their bullets.

It was amidst such scenes that the foundation of the state of Kentucky was laid, by a mere handful of rough, but high-spirited men. The year '78

was the crisis of its fate. But for the stand then made, it would probably have been no part of the American Union. Animated by the reports of the courage of the first settlers, multitudes now poured in, and soon placed it beyond all danger. In the ensuing events, the conspicuous man was George Rogers Clark, who took the British governor, Hamilton, prisoner at Vincennes. It is undoubted, however, that the real hero of the settlement was he who had first entered upon it, and who had stood by it through all its earliest and worst struggles—Daniel Boone.*

This remarkable man closed his career in 1818, having lived to see Kentucky one of the most flourishing and populous states of the Union.

SONG.

BY BARRY CORNWALL.

How many summers, love,
Have I been thine?
How many days, my dove,
Hast thou been mine?
Time, like a winged bird,
When it bends the flowers,
Hath left no mark behind
To count the hours!

Some weight of thought, though loth,
On thee he leaves:
Some lines of care round both,
Perhaps he weaves:
Some fears, a soft regret
For joys scarce known;
Sweet looks we half forget;
All else is flown!

Ah! with what thankless heart
I mourn and sing;
Look, where your children start,
Like sudden spring;
With tongues all sweet and low,
Like a pleasant rhyme,
They tell how much I owe
To thee and thine!

THE EMPEROR OF RUSSIA AND THE JEWS.—The operation of the ukase, commanding all Jews to remove from the frontier, and relinquish their occupation as hawkers, will, it is believed, be delayed for four years; not, however, as the result of Sir Moses Montefiore's intercession, but because the scarcity, amounting nearly to famine, of several districts, the result of two successive bad harvests, (followed by insurrection and military occupation of the frontier,) renders Jewish activity, local knowledge, and erratic habits so advantageous to the Russian population, in the way of ferreting out and procuring supplies of provisions, as to make a suspension of the ukase a matter of good, if not necessary policy; and these circumstances were announced as likely to lead to the postponement of the infliction before Sir Moses had left London on his benevolent mission. It is, however, far from being improbable that the emperor will make a grace, not a virtue of necessity.—*Times*.

* Abridged from the North American Review for January, 1846.

From the Spectator.

MR. B. PHILLIPS ON SCROFULA.

THE subject of scrofula has inspired an interest less for its own effects, though they are bad enough in ruined health, diseased glands, and yet more painful affections, than for its supposed connexion with consumption. The tubercular deposit in the lungs has been held by the highest authority, as well as by popular opinion, to be merely a varied mode of that deposit in the glands of the neck, which, first swelling and then suppurating, not only injures beauty by its scar but leaves in legible hand-writing the warning of a tainted blood. This identity Mr. Phillips denies. After a minute examination of the anatomical characteristics and the statistics of consumption and scrofula, he says—

"I apprehend it has now been shown, by abundant evidence, that, with the exception of the deposit itself, which, whether found in the lungs or in a cervical gland—whether examined by the naked eye, by the microscope, or by chemical analysis—is very similar, the circumstances attendant upon the development of scrofula and phthisis are widely different. In scrofula, the gland undergoes considerable change, inflammatory in its nature, before the matter is deposited in it; in the lung we commonly find the tissue around a recent tubercular deposit unchanged by inflammation. We find, further, that in districts where the causes of phthisis act with most intensity, those of scrofula fall lightest; that the age when the ravages of scrofula are most keenly felt is precisely that when the visitation of phthisis is least to be apprehended; that the sex which suffers most severely from one of those diseases is least affected by the other. And beyond all this, there is the fact, that among the numerous victims of phthisis, at least eighteen out of every twenty exhibit no marks of having suffered from scrofula. It seems to me, therefore, that these facts constitute so clearly-marked a difference between the two affections, that it will be most convenient, most conducive to scientific correctness, to consider them as affections possessing a certain general similarity of character, but no identity."

It is probable that there is more of distinction than of difference here. According to actual constitution, influencing circumstances, and the intensity of the cachexia, (bad habit of body,) the strumous blood may sometimes end in one form of disease, sometimes in another. If all circumstances tend to produce scrofula in the direct form, the patient possibly dies before the age of consumption; if the virus, or whatever it be, remain latent longer, the lungs alone may become the seat of the deposit, and the morbid anatomy be differently modified. This is not the only occasion in which Mr. Phillips runs apparently counter to received opinion. He denies hereditary disease, (except in two disorders, where the affection is present at the birth,) though he admits that parents may transmit a weakly constitution, in which scrofula or any other disorder may be more readily set up. Unless he is also prepared to deny in individuals a constitutional tendency to one disease more than another, we cannot admit the cogency of his view. Likeness and character we all know are transmissible, though not always transmitted, and sometimes so strongly that we recognize a son by some trifling act of deportment; but it would scarcely be philosophical to deny the transmission of paren-

tal manner because an infant does not bow at its birth.

The fact is, we know no more of physics than we do of metaphysics; it is mere observation or reflection upon results, causes being altogether hidden. Why do the same circumstances induce one disease in one man, and in another some different disorder? We may say it is a constitutional disposition or predisposition: which is a truth in one sense; but, beyond such obvious considerations as stature, muscular development, and vigor, we cannot tell what this constitution is, still less what causes it, unless we take refuge in "organization;" when the same puzzle will remain if we seek for a further resolution. We do not even know what disease is, other than by reference to its results, still less what produces it. Mr. Phillips admits that he cannot tell the *modus operandi* of the medicine he administers. It savors of pedantry to deny the existence of a thing because the nature of the case does not admit of its being directly proved by positive evidence. Upon these two points Mr. Phillips resembles those philosophers who class a constitution with a law-deed, and require it to be produced for inspection.

In all other matters Mr. Phillips is remarkably free from narrowness or prejudice; and his treatise on Scrofula is entitled to great praise, as containing the results of elaborate research, extensive inquiries, and considerable observation. Perhaps his resuscitation of ancient opinions and practices, as well as his notices of former superstitions on the "evil," may be pushed too far, as encumbering the reader with dead matter. But it renders the treatise more complete, and collects together a good deal of curious reading, neatly and briefly compiled. The statistics are voluminous, and sometimes rather collateral than direct; but they bring together from many quarters—British, Continental, American, and Colonial—a large amount of well-selected matter, bearing upon health, parentage, diet, and so forth, as relating to scrofula; leading to the conclusion that our island is not preëminently obnoxious to the complaint; and that the percentage ratio of deaths from consumption is reduced, according to our only evidence, the bills of mortality. Thus,

In 1750, the deaths from consumption were 1 in 144	
1801,	1.. 154
1811,	1.. 194
1821,	1.. 233
1833,	1.. 258

The statistical research also throws up some information respecting the past and present condition of the people; which Mr. Phillips thinks, with Dr. Twiss, has advanced; but he doubts whether the improvements in towns, recommended by the poor-law commissioners, will prevent death at anything like the rate which Mr. Chadwick asserts, (however excellent and proper they may be in themselves); destitution, and not dirt or foul air, being the real cause of the low expectation of life among the poor.

The more strictly medical view of Mr. Phillips on scrofula may be stated thus. He considers the deposition of scrofulous matter (a cheesy sort of substance found in various glands) as the only sure test of scrofulous disease: till then it is rather a constitutional disposition or taint than actual scrofula, at least such as we have *proof* of.

"In a constitution favorable to the deposit of scrofulous matter, I believe there are no features,

in the absence of the tumor, so constant and so conclusive as to justify a reliance upon them in pronouncing an opinion whether a constitution be scrofulous or not. It is certain that the ordinary tests are fallacious: I know that the major part of them may be observed, again and again, without any other evidence that the constitution is tainted with scrofula. We may even have enlarged glands, while no product such as that which I have alluded to is deposited; although, in the absence of any source of irritation, enlarged subcutaneous glands constitute grounds for grave suspicion that the constitution is scrofulous. Thus, whatever may be the constitutional peculiarity, however marked may be the general physiognomy by what is called the scrofulous diathesis, we have no certain sign of the existence of the disease until sufficient evidence can be obtained that the deposit has taken place. The constitution may suffer long before such a deposit is made, and the glands themselves may be swelled without presenting in their substance a scrofulous deposit: indeed, the deterioration of the system proceeds so slowly, that although the tendency be directly onwards from the period when the gland is simply enlarged to that when the deposit would ordinarily occur, in that interval favorable or unfavorable circumstances may be experienced, and no deposit may take place: on the one hand, the constitution may improve and the glandular swelling may subside; on the other, the ailing child's life may be cut short by other diseases before the proof of scrofula is complete.

"In childhood, the time necessary for the perfect development of the disease is, I believe, very long; so long as to build up the whole body with bad materials. In adult life, the time is still more considerable; so that, although in each case, the causes of the disease may be efficient, their influence may not be continued long enough to bring about such a change in the constitution as fits it for the development of scrofula; and if they be not so continued, the swelling glands may subside, and the person may escape the deposit, or, the causes of ill health becoming more intense, he may die of some more acute disease."

"The cause of the scrofulous deposit, Mr. Phillips thinks, is to be found in a depraved state of the blood; this much is certain, that the blood of a scrofulous person undergoes a change. Whether this change "does really stand to scrofula in the relation of cause," he says, "I cannot conclusively prove, though I believe that it does." Could it be proved, however, there would still be the further questions—Do circumstances cause the change? or do they induce changes in the body, that act upon the blood? does the depraved blood act directly by depositing the particles with which it is charged, or previously let down the constitution, and indirectly prepare the glands for the reception of the foreign matter. The primary if not the sole cause of scrofula, in the opinion of Mr. Phillips, is insufficient nutrition—deficient or improper food; and to food alone he looks for a cure. Change of air and change of scene are useful as aids; treatment may correct deranged health, or assist the digestion, weakened or impaired; certain medicines, during the fine season (from May till October) may improve the scrofula, though the patient would probably have improved as much without them; but as soon as use has blunted or exhausted the effects of these things, the patient will fall back

to his former condition, unless he can be *efficiently nourished*. Hence, with the poor the case is almost hopeless.

This, of course, is only to be received as the merest outline of the writer's views: the filling up involves many questions on the nature of the disease, and its preventive management and treatment, which somewhat qualify the general proposition laid down so broadly as we have laid it: good air and exercise, for example, enabling a person to struggle against the taint better than one whose concomitants as well as his food are deleterious. Many curious conclusions and useful hints are also thrown out in the course of the discussion; of which we quote a sample.

INFANT SCHOOLS.

"A great social experiment is now in progress, from which most important consequences must follow. The truth seems deeply fixed in the minds of thinking men, that the character of our people is to be determined by the education or mental training they receive in childhood; and as the conviction is strong that the work cannot be begun too early, children are collected into infant schools almost as soon as they can walk. And as I have had large opportunities (by which I have endeavored to profit) of estimating the effect of such training upon the bodily health of the child, I will now express the conviction at which I have arrived.

"I believe, then, the effect is prejudicial. I know that the health of those infants who are suffered to amuse themselves as they please during the day, is better, *ceteris paribus*, than that of those children who have been for many months regular attendants at infant schools. And the reason of the difference I apprehend to be this, that in children the blood is vigorously circulated through the entire frame by means of the exertion of the muscular system; and this exertion of the muscular system can only be maintained by providing such amusement as will keep the body in motion. The listless walk around the school-rooms, though repeated many times a day, will not quicken the heart's action, and will not warm the hands and feet. And so long as the hands and feet and the surface of the body remain cold for many hours of every day, so long the child will have congestion of some internal organs; and a state of permanent disease is readily induced, digestion is ill-performed, nutrition is defective; and if this state of things be long-continued, scrofula may be the consequence."

THE STRUMOUS IN THE FIELD.

"There is commonly a general want of tone and energy in the solids which incapacitates the sufferer for proper exercise; the muscular system is quickly exhausted, and incapable of sustained exertion—this is a consequence of impaired nutrition. The splendid-looking corps of Dutch Grenadiers, which constituted, when on parade, so distinguished an ornament of Napoleon's army, and which was said to be greatly tainted with scrofula, suffered more from fatigue, cold, and hunger, during the disastrous retreat from Moscow, than any other portion of the French army; few of them, indeed, survived the retreat. It is a matter of remark in the army, that fair, lymphatic-looking men, apparently enjoying brilliant health, frequently present a dragged, broken-down appearance, after two or three days' severe marching."

CORRESPONDENCE.

WE copy from the New York Express a notice of the death of an old and true friend, to whom we have often been indebted for counsel and encouragement—and whose aid was effectually given to us in establishing the "Living Age."

DEATH OF THE VENERABLE THEODORE DWIGHT.

It is with the deepest sorrow that we announce the death of this venerable and worthy man, aged 81 years. He died at the house of his son, Theodore Dwight, jr., this morning, at 4 o'clock, after an illness of a few weeks. For a number of years he had enjoyed unusually good health, with the exception of a rheumatic affection, which caused him to be quite lame. The death of his wife, a few weeks since, also at a very advanced age, and with whom he had lived more than half a century, had the effect to depress his spirits, and he had rarely left the house since. About two weeks ago, he became so prostrate that he has been confined to his bed, since which, without any painful disease, he had become weaker and weaker, until he breathed his last, surrounded by all his children. In his last illness he has been favored with the full vigor of his mind, and has enjoyed, in an unusual degree, the consolations of the Christian religion, which was the rule and guide of a long life. Mr. Dwight has filled a wide space in public affairs, having been an editor of a paper for nearly half a century. He was, since the death of Major Benjamin Russell, formerly of the Boston Sentinel, and Mr. Goodwin of the Hartford Courant, probably the oldest editor living. He was born at Northampton, in 1765. His mother, the daughter of President Edwards, during the trying scenes of the Revolution, was his principal instructor; his brother, the late President Timothy Dwight, of Yale College, being absent as chaplain in the revolutionary army.

His father, about the year 1778, was a pioneer down the Mississippi, and died near Natchez. At the close of the Revolution he entered his uncle's office, the late Judge Pierpont Edwards, as a student at law; and having finished his course, he settled at Hartford, where he soon rose to the head of his profession. He was a great favorite of Chief Justice Oliver Ellsworth, and when that eminent jurist was appointed minister to France, he selected Mr. Dwight to be his private secretary, a post, however, which he declined. Early in life, he was associated with Lemuel Hopkins and Richard Alsop, in a series of poetical numbers, under the title of the Echo and Green House, and which appeared in the Hartford Mercury. They were political and satirical, and were considered of a high order. Mr. Dwight, although in some degree celebrated as a poet, rarely indulged in that branch of literature. He directed his pen more to political writing, and, in high Federal times, became very prominent. He was a great admirer of the politics of Washington and his principles. Being a ready debater and writer, he came into public life early, and was very popular. For a great number of years he was a Senator in the state of Connecticut, and about the year 1809, was elected to Congress. He was a prominent speaker on the floor, and often received the commendations of John Randolph, for his eloquence.

He took a leading part in the debate on the bill for the suppression of that abominable traffic, the

Slave Trade, and it was one of the most gratifying acts of his life, that he was permitted to vote for the final abolition of a trade which had so long disgraced our country. Neither his increasing business at home, nor his habits permitted him to be absent from his family, and he resigned a seat where he had shone most conspicuously. Such was his talent for writing, that before the Evening Post was established, his friends Alexander Hamilton, Oliver Walcott, and other leading Federalists, selected him to preside over the columns of a journal, about to be established, which offer was declined, and William Colman was selected in his place. His pen was not permitted to remain idle, and under the advice of Timothy Pickering, George Cabot, James Hillhouse, Roger Griswold, and other distinguished men, he was called to conduct a Journal at Hartford, the Mirror, and which was the leading political journal in that State during the war.

When the celebrated Hartford Convention assembled, Mr. Dwight was selected to be their secretary, which duty he performed with signal fidelity. The selection was most fortunate, in one particular at least, as he afterwards published to the world the history of that celebrated body, which will always be the leading work in the events of those times.

We believe that, with the exception of Harrison Gray Otis, and perhaps one other member, he was the last survivor of that body of distinguished men.

After the close of the war, viz., 1815, he was induced by the leading federal gentlemen of this State, Stephen Van Renaselaer, Judge William W. Van Ness, Abin. Van Vechten, Elisha Williams and others, to commence the Albany Daily Advertiser, the first daily paper ever started in Albany. After two years' experiment, a favorable opportunity offered for establishing a journal in this city, and in 1817 he united with the writer of this article in publishing the New York Daily Advertiser, and continued associate editor and proprietor until the great fire of 1836, when he relinquished his interest in the concern, and retired, with his family, to Hartford, where he has lived until the last three years, the latter portion of which he has resided with his son.

For the period of about forty years, he was a prominent editor, and rarely passed a day without writing at least one article for the paper. There is probably no man living who has written and published so much as the subject of this article. Nor have we ever known a person to write with greater facility. He had schooled himself to write so correctly, that he never read over his article after it was written, either to correct the sentiment or to prepare it for the press. When he finished the last word, the whole was completed, rarely to be altered.

He was a great student, to the very last. His whole time, when absent from his business, was spent with his family, and always in reading. He rarely visited even his friends, and never, on any occasion, went to a place of amusement.

He made it a rule never to omit reading, daily, a portion of the Scriptures, which were always the rule and guide of his life.

His flow of spirits was most extraordinary, and his flashes of wit were unsurpassed. His society was the most charming that could possibly be conceived.

His knowledge of the political history of this

country, from the adoption of the Federal Constitution to within a few years, was perhaps not unequalled. He was the personal friend of every prominent Federalist, from John Adams the elder, to the period when that party became disbanded; and there was, perhaps, no man whom they depended on more to advocate their principles, than Mr. Dwight. The friend and companion of Pickering, Fisher Ames, Rufus King, Gov. Griswold, Goodrich, Oliver Ellsworth, Alexander Hamilton, and a host of great men, must have had talents and character of a high order. He was, indeed, among the last of those talented men and pure patriots.

Mr. Dwight was one of the purest men we have ever known. He never uttered a thought or wrote a word he did not implicitly believe. He never adopted the sentiment that "the end justifies the means." He was a sincere and devoted Christian and a patriot. His writings were always on the side of sound morals—he was a friend to law and order, and always sustained the institutions of our country.

He was one of the founders, and for a great number of years an active director, of the American Bible Society, and first drew up the project of erecting the buildings the society now occupy, which, in accordance with his plan, were put up, principally, if not wholly, by gifts made by wealthy individuals. As a father, husband, and friend, he was one of the kindest and most devoted that ever filled these relations. Thousands, who have read his writings and admired his talents, will read the account of his death with sincere regret.

It is a source of great satisfaction to know, that in his last hours he was sustained, in his hopes and confidence, by a merciful Saviour.

The conclusion of the Oregon Treaty with Great Britain, upon terms honorable to both nations, is an event of the utmost importance to them; and as we think it an indication of the future policy of Great Britain toward the United States, we look forward to a time when we may allow, without check, the full flow toward that nation of all the kindred feeling which parentage, common habits, and a common literature so naturally create.

Here is the beginning of another step to closer intimacy. We copy from the New York Tribune

FREE NAVIGATION OF THE ST. LAWRENCE.

In the Montreal Weekly Pilot we find an account of a curious discussion in the legislature of the Canadas, on an address to Queen Victoria, proposed by W. H. Merritt, a native of the United States, of the loyalist party, in which it was proposed to make the navigation of the River St. Lawrence free to the ships of all nations, on the same terms as the schooners, &c., of the United States now pass between Lakes Erie and Ontario—through the Welland Canal.

The free navigation of the St. Lawrence was an object anxiously sought after by Messrs. Adams and Clay's administration. Not much is now said about it, but on or near its banks, or the margin of the great lakes, some four or five millions of American citizens have their homes.

Mr. Moffat, a Scotch merchant, representing Montreal, I believe, was in favor of opening the

St. Lawrence to the Americans. He read a dispatch from government to show that it was willing if the measure could be shown to be advantageous.

Mr. W. B. Robinson, brother to the chief justice, believed if the St. Lawrence were to be opened, as the St. John's had been, cargoes would be taken from the West, in the summer months, to Maine and Boston.

The solicitor general (Sherwood) thought that if a measure were proposed by which Canadian vessels could carry on the United States trade, via the St. Lawrence, he would consent to it; but as to a free navigation, the Americans protected their shipping interests.

Mr. Viger (president of the executive council) "was decidedly opposed to admitting American vessels to enter into competition with Canadian. He considered that the man who would allow a foreign power to exercise the sovereignty of its waters would be a traitor to his country." [Mr. V. was confined eighteen months in Montreal jail, on suspicion of being "a traitor to his country," and he is now ready to prove his loyalty by branding others with treason!]

Mr. Baldwin, of Toronto, said, that the more trade the better; and if by opening the St. Lawrence to the Americans we can increase the traffic, the benefit will be ours. As to Mr. V.'s objections, many European rivers were freely navigated by different nations, and it was only proposed to allow the Americans the privileges on a great river which had been already conceded to them on the Welland Canal.

Mr. Cayley supposed it possible that Mr. Merritt wished to carry this address, as a mere threat to frighten the British government.

This subject is continued in the following extracts from the Liverpool correspondent of the Evening Mirror, who is reporting and commenting upon the speech of Lord Stanley against the new corn bill:

"My lords, I say again, that upon this very system of protection rests the whole of your colonial system. I say it rests upon it far more than pecuniary reasons. (Hear, hear.) I know very well the political economists say, 'Cast off protection—let there be free trade all over the world—give full advantages to free trade—let us have no protection imposed for the maintenance of our colonies—cast the colonies away.' My lords, I say adopt that system—I do not doubt the loyalty of the colonies—I do not doubt even their attachment; but I say you shall then have done all in your power to weaken the attachment, to loosen the bonds which tie the colonies to the mother country. Once grant commercial independence, and you may rely upon it, they have made a step towards political independence. I speak of your colonies: you have thrown them open to all other nations; you tell the emigrant who quits your shores, that from the time he leaves England, though he may settle in the British colonies, that he is no more to us than the Frenchman, the Dutchman, the German, or the American—(hear, hear)—you say to him and to your colonists, 'You are entitled to no favor from us; we will give you no protection; don't seek our help; trade with any other country you think fit; you are as much connected with them as with us.' (Hear.)"

His lordship then alluded in much stronger terms to the dispatch which had just been received by the government from Lord Cathcart, the governor general of Canada. For myself I do not apprehend the results which he predicted are very near at hand. The remonstrance, however, coming from such a quarter, has given rise to various surmises. Remarkable as are the circumstances under which this dispatch is published, they are not more remarkable than its contents. Lord Cathcart says :—

“The improvement of the internal communications by water in Canada was undertaken on the strength of the advantage of exporting to England our surplus wheat and flour by Quebec. Should no such advantage exist, the revenue of the province to be derived from the tolls would fail. The means of the province to pay principal and interest on the debt guaranteed by England would be diminished, and the general prosperity of the province so materially affected, as to reduce its revenue derived from commerce, thus rendering it a possible case that the guarantee given to the public creditors would have to be resorted to by them for the satisfaction of their claims.

“The larger portion, nearly all of the surplus produce of Canada, is grown in the western part of it, and if an enactment similar in principle to the duties drawback law should pass Congress, permitting Canadian produce to pass through the United States for shipment, and the English market was open to produce shipped from American ports on as favorable terms as if shipped from Canadian ports, the larger portion of the exports of Upper Canada would find its way through the canals of the State of New York, instead of those of Canada, rendering the St. Lawrence canals comparatively useless. The effect of the duties drawback law has been to transfer the purchase of sugar, tea, and many other goods to New York, from whence nearly all of these articles for the supply of Upper Canada are now imported.

“Should such a change in the export of Canadian produce take place, it will not only injure the Canadian canal, and forwarding trade, but also the shipping interest engaged in carrying these articles from Montreal.

“A change in the corn laws, which would diminish the price the Canadian farmers can now obtain, would greatly affect the consumption of British manufactures in the province, which must depend on the means of the farmers to pay for them. An increased demand and consumption has been very perceptible for the last two years, and is mainly attributable to the flourishing condition of the agricultural population of Upper Canada.

“Even if a relaxation of the system of protection in the colonies is to be adopted, it is of infinite consequence that it should not be sudden. The ruin that such a proceeding would cause is incalculable.

“The political consequences as to the government of the colony involved in the foregoing suggestions are sufficiently obvious, [viz., alienation from the mother country, and annexation to our rival and enemy, the United States,] as also must be those arising from the trade of Upper Canada being as it were transferred from Montreal to New York. This latter consideration belongs, however, less to the operation of the corn laws, though partially connected with that branch of the subject.”

The Rochester Democrat, publishes the following letter from Montreal :

The late English news in reference to the corn bill, is considered here as the greatest damper on the prospects of the Canadas than has ever taken place. The provinces cannot compete with the American States in exporting grain, for the very reason that grain is usually double from this port than from New York or Boston. Last fall, when flour was being shipped from the States to Liverpool, for 75 cents per barrel, it cost \$1 50 here, and the insurance paid on cargoes during October and November was 10 per cent—being six times as much as was paid in Boston.

The present sliding scale on grain in England, favors the Canadians 75 per cent. in duties, over the shipments from the United States. If Mr. Peel's bill becomes a law, Canadian products must be shipped through the United States, as it cannot be done by the St. Lawrence to compete with the American shipper.

This act of the British parliament had done more to foster a hostile feeling towards the mother country, than anything for years. Several of the defenders of the administration publicly expressed themselves, in language not to be misunderstood, that if Great Britain won't protect the interests of her colonies, she need not expect her provinces to exhibit loyalty. One leading member of parliament has intimated that it would better the condition of his constituency, if the Canadas were annexed to the United States.

The new drawback law now before our congress, to allow shipments of produce and merchandise from Canada, through the United States to England, is hailed with joy.

If that bill passes, all the products of Upper Canada will pass through the Erie canal, and those of Lower Canada will mostly go through Lake Champlain to New York, and thence to England.

Mr. Walsh, in his letter of 27 May to the National Intelligencer, gives us the complaint of the poor Chinese, and a French application of the doctrine of vested interests :

A few days ago I escorted two American gentlemen to the collection of Chinese articles sent by the French diplomatic mission and the commercial delegation to the department of agriculture and commerce. A permit from the secretary-general enabled us to inspect them before the stated hour of admission. One of my companions was fresh from the Celestial Empire, where he had passed twelve years, the other's residence was six. These competent judges pronounced the collection to be meagre and inferior, not better in any respect than a foreign or native merchant in Canton might casually have in his counting and store-rooms. There are specimens of Eastern tobacco and lump-tea, some peculiar tissues, and a number of sorry pictures. My general inference from all that I have heard and read (and we have very interesting communications from the French commissioners) is that a considerable time must elapse before French trade with China can become of any value and extent. Note the language of the Chinese authorities about Chusan, as reported in the latest advices from Hong Kong :

“In the treaty it is clearly stated that after receiving the total amount of twenty-one millions

of dollars, then the English should restore Ting-hai to China; but there is nothing said about giving it up after granting ingress to the city. Now they have received all the money, and yet can violate the treaty in giving back Ting-hai, which is insatiable covetousness; and moreover they eat their words, saying, let us enter the city, and then we will give up Ting-hai. This shows that they disregard good faith and equity; and are truthless. Setting aside the fact that the people will not permit them to go into the city, yet suppose they do so, still the English will not give up Ting-hai. And, in the third place, it is an old law of the country that foreigners should not enter the cities."

Macao has been declared by the Portuguese government a free port, but countervailing restrictions are imposed. The entry of tobacco is prohibited. Some of the London oracles rejoice in the information of a probable *sugar* crop in the *Punjab*, produce of *free* labor, the Sikhs being conquered.

On the 25th instant, a deputy summoned Mr. Guizot to report to the chamber what he was doing with the government of the United States in relation to the treaty of commerce which France had concluded with Texas, and by which advantages were stipulated for the importation of French products. The deputy regarded the treaty as still existing and operative under the law of nations. Mr. Guizot replied in terms which I shall proceed to translate for you from the official *Moniteur*:

"The question raised by the honorable member is, whatever he may think of it, very delicate and very difficult, and most of the precedents which might be adduced are contrary to the conclusion to which he seems to incline. He will excuse me from entering into any details at present; it is evidently for the interests of France that the treaty of commerce, which was concluded with Texas when independent, should be recognized by the United States, and should subsist notwithstanding the disappearance of Texas as an independent commonwealth. On this head we are in the same situation as England, who had also a special treaty with Texas; the question exists for her as well as for us. This question, I repeat, is very complex and difficult. We discuss it; we negotiate, and we support the interests of our country. But the honorable member cannot desire that interest should clash with right. I beg him not to insist at present; I do not wish to debate the matter here; that might prejudice the interests which I espouse."

The deputy rejoined:

"I shall not pursue the subject; but I must tell the chamber that I greatly fear that the solution of the case will not come, if ever there should be a solution, until after the treaty has been dead and buried."

Your department of state will no doubt do justice to the question, which is really important under the constitution and circumstances of our Union.

From the United States Gazette we copy a letter from a correspondent, whose speculations we have generally read with much respect: it gives a view, probably by a German, of the

STATE AND PROSPECTS OF EUROPE.

Antwerp, May 14, 1846.

We are in possession of the latest news from America up to the 19th April, and the commercial

world and the stock exchange, the true indicators of political apprehensions, have remained perfectly quiet. Rely on it fully, the peace with Europe will not be disturbed by anything that will now occur in Mexico. Both England and France will remain quiet spectators in Mexico. The idea of placing an European prince on the Spanish throne is quite given up as impracticable, inasmuch as it would necessarily lead to a very great expense without doing any permanent good, or producing effects to be relied on for the next ten years. Mexico is inflated by European promises; but Paredes will probably learn to his sorrow that a diplomatic promise is not considered binding on any party, and that promises in diplomacy are always made with a mental reserve, "if the fulfilment shall be conducive to the interest of the promising party." Now it appears that the French-English alliance has for the present reached its culminating point, and it would be dangerous even for Louis Philippe to attempt to push it much further. Louis Philippe rules by the taste for money he has instilled into the French nation; and this taste may not be gratified by a war. A war, therefore, would be suicidal to his dynasty, and as the perpetuation of the latter is the great object of his life, war will not easily be attempted. Moreover, it is sufficient to look over the French Budget of 1847—over the new extraordinary credit that is to be opened to ministers, and on the fact, that the standing deficit amounts to about 40,000,000 francs, which absorbs annually an equal amount of the sinking fund—to perceive at once that the policy of France is for peace, and not for a contest with a great power. The interference of France and England in the affairs of Buenos Ayres cannot be put in the same parallel with an armed interference in the affairs of Mexico and the United States; for the demonstration against Rosas is purely local, while a war with the United States is certain at once to derange all the relations of commerce and navigation.

But the idea that France may join England in active operations against America is preposterous. Even now that war has actually broken out between Mexico and the United States, and the notice passed by the senate, the British press forbears to make any offensive remarks, if we except that stupid paper, "The Standard," which represents an obsolete clique rather than a respectable party in England. France has a sum of 1,000 millions of francs set aside for public works, and will require continued peace to cover her deficit in 1858 (!) England must prepare for financial difficulties, and a political and social revolution from the abolition of the corn laws. This is not the time to go to war, and to entangle beforehand that very commerce which the present administration mean to liberate. France requires the prosecution of her public works for her political safety; for they alone engage a sufficient number of the electors to place the ministerial majority beyond contingency. England must have full commerce if she would compete with her continental rival, and prevent dangerous combinations among her own subjects. It is needless to deny that one of the great inducements to the abolition of the corn laws is the dangerous union of the chartists with the anti-corn-law leaguers—the fact that the systematically starved have counted heads and found the immense disparity between the number of sufferers and oppressors. This is not the time to exact new sacrifices, to levy new taxes. The next general, seri-

ous war England engages in with a great power will not be paid for by the English *people*, but by wealthy classes who provoke it; and the wealthy classes of all countries are but too peaceably disposed to risk, readily, the certain for the uncertain. England has outgrown her youthful passions, and France is satisfying them in another way. It may have been the interest of these powers to sustain Mexico by words; but Mexico will soon discover that the thing was not meant as seriously as she took it. If they send any agents abroad to solicit aid, they will be advised paternally and in a friendly, neighborly manner to keep the peace, and if they want money they will have to submit to greater sacrifices to obtain it than were demanded by the United States to regulate the Texan frontier. Paredes, if no counter revolution is going on, will find that he has challenged a superior foe, and will at last submit to necessity. The whole matter, in this quarter, is looked upon as an episode, not more likely to trouble the peace of Europe than the annexation of Texas has done it. What reason, indeed, could Europe put forward to oppose the United States, after they submitted to the annexation, which is the alleged cause of war with Mexico? England and France had acknowledged the independence of Texas, and England and France admitted that Texas, if willing to be annexed, had a right to do with herself as she thought fit. After such a declaration, the idea of an armed interference is preposterous. England and France must have a better cause to interfere in American affairs, and less at stake to venture upon a similar experiment. On the part of England, a war with the United States partakes always more or less of the character of a civil war, and is accompanied by all its miseries; on that of France, would be unnatural and opposed to those interests which alone support the present dynasty.

As to the Oregon question it has ceased to alarm the good people of Europe, who dread a war at *least* as much as we do, and want nothing more than a speedy settlement of the vexatious question. The notice which has passed the senate has, as you will have seen from the prints, produced quite a favorable impression. It is looked upon as a measure of peace, not of war; and as simplifying, not perplexing the question. I have been of that opinion all along, though perchance you may have put little faith in my predictions. I have the pleasure to repeat to you the advance of the speedy abolition of the corn laws in the course of the regular business of both houses. I am afraid I look upon the probable effect of that bill, as very different from that which is generally anticipated. The changes which in my opinion, it is likely to effect, will be *more* of a political than a commercial character, and affect the internal organization of the British empire more than its foreign relations. If bread become cheap, and the manufacturers expect to lower wages in proportion, that is if the capitalists of England continue to look upon labor as merchandize to be regulated by demand and supply, and not as the act of human beings who in return for the same have a right to demand bread, and that bread in sufficient quantity to support themselves, the abolition of the corn law, will be but the forerunner of organic changes in the British constitution, or such violent agitation as will endanger the existing government. But if the wages of labor do not decrease, then the British manufacturer will not be able to undersell his con-

tinental competitor, and thus be the more dependent for his exchanges on the American market.

But whatever may take place, the power of the merchant and manufacturer which will be increased by the abolition of the corn laws, at the expense of the landed proprietors will not be wielded against us. Merchants and manufacturers cannot, from the nature of their business, forego an immediate and direct benefit for the sake of a distant contingency, and are therefore, not likely to break with their best customers, for the purpose of adding a few square miles of woodland to this or that territory. At present the power of the landed aristocracy of England, comprises not only the nobles, but all their respectable farmers, who, being entirely dependent on them for their loaves, are disposed of, politically, like the servants of the nobility. When the corn laws shall be abolished, rents will be governed by commercial principles—by the prices of corn generally, and not by the artificial standard fixed by a privileged class. Thus land will have a market value, regulated by demand and supply, and the relation of landlord and tenant will be changed into buyers and sellers. This will virtually emancipate the farmer and uncover the nobility. The latter will become an isolate class, stripped of the best part of its patronage, and incapable of dividing the community into two great halves, of which one was entirely devoted to their interests. The consequences of such a revolution are not easily foreseen, but they cannot but be tremendous, implying greater dangers for the safety of existing institutions, than any that might attend a forcible attempt to change the condition of the laboring class. If the English nobility consent to such an arrangement, they must consider their position altogether hopeless, and a formal denial only as the means of precipitating events. These considerations lead one to believe firmly in the continuation of peace. Whatever triumph may have followed British arms in distant climes, Great Britain cannot stand much more agitation within, and no foreign war she can wage, would bring these internal agitations so soon to a crisis, as one with the United States. I have now put the finger on the sore place, which is worth an army to America, and requires the presence of one in England. Remember the chartists' petition to parliament, embraced *four millions of signatures*, and these chartists are now, partially at least, moving with the anti-corn-law league.

The Polish revolution has lost its historical character, but continues still to operate powerful changes in political economy. The relation of landlord and tenants is about to be changed all over Galicia, and in part also in Bohemia, Moravia, and the Slavonian provinces of Hungary and Transylvania. The consequence may be an amelioration of the condition of the peasant; but the government, which has been hitherto the most aristocratic in Europe, has thereby assumed a hostile attitude to the nobility, which has thus far proved its main support. And the government, by giving to the peasant what it promised him, has lost its power of contenting him in future. But the best part of the whole conduct of Austria is that she is now again reduced to borrowing money to meet her current expenditures, and that, in all probability Austria is on the eve of another, her fourth State bankruptcy.

The condition of Russia is not much better. She, too, has to contract a new loan to repair her immense losses in the Caucasus, and to defray the

expenses of the annihilation of Poland. Russia may find amateurs on the various exchanges of Europe; but Amsterdam and Berlin, heretofore the bankers of the Czar, have declined henceforth to be distinguished by that honor.

Prussia has opened a vent to her difficulties by issuing 10,000,000 thalers through the bank of Berlin; but the measure is new, and may lead to embarrassments in the future. Let the cabinet at Berlin be once in the power of the moneyed men, and it will soon receive, not make, the laws of the country. No one has as yet conjured up the power of money without becoming in the end its slave. All constitutional governments of Europe, all revolutions in the old world, owe their origin to financial embarrassments. The deficit produced the convocation of the national congress, and even protestant Holland did not revolt against bigoted Spain till the exaction of the tenth penny! We wish Prussia luck on her setting out on her new career. It is quite time she should give up playing soldiers and take an active share in the appropriate improvements of the times.

It is now almost certain that Baron Roenne will, after all, resign the presidency of the newly organized chamber of commerce in Berlin, and that the director of imposts Mr. Kruse, will take his place. The latter is a free trader, and a most thorough creature of Great Britain. Political, not commercial motives, are supposed to be the origin of this movement. The King of Prussia, who is everything by halves, is afraid of lending his influence to a policy which might be considered as offensive to England, while, on the other hand, he is equally undetermined to assume publicly the part of an opponent of protection. In this unsettled state of things, the new Zollverein conferences convoked at Berlin do not promise to become very interesting, or decisive to German industry. Nothing serious will be attempted on either side. But it is quite likely the Verein itself may undergo some changes, the south uniting with Austria, and the north with Prussia, in a peculiar system of customs.

In proportion as the particulars of the contemplated constitution for Prussia become known, the project itself ceases to have any meaning. The Prussian parliament will contain advising, not deliberating members, who will talk, write and publish, but do nothing as becomes the philosophers of the Kepsic school. As an offset the liberal king—the comedian I mean—has ordered the extradition of the Polish prisoners who were not taken by the Prussians; but who voluntarily surrendered to Prussia, as the most civilized and enlightened of the three powers who had united to effect her ruin. This dastardly act of the impotent man has produced an incredible sensation in Germany; but the patience of the Germans will long endure what their hearts abominate, and their heads despise. The mean spirit of the king is the more reprehensible as he has of late been subjected to every species of humiliation from the Emperor of Russia, (his brother-in-law,) who first lectured him like a schoolboy, as to the best mode of governing his country, and then left him without ceremony; having since repeatedly visited almost every country in Europe except that of his brother-in-law, and having prohibited the empress on her return to St. Petersburg, to visit her brother in Berlin. So you see Prussia, as I always told you, is still wavering between England and Russia, but equally though not overtly opposed to France and the United States.

The revolutions in Spain and Portugal are again put down at much expense of blood and treasure; but it is difficult to tell the number of days and hours Isturiz is about to govern. I believe his days are numbered, and that Spain will not be quiet until the queen mother who sets her virgin daughter the most infamous example of political treachery and lewd debauch, shall have been banished the country. This is the opinion in part of the conservative journals of England and France, and shows the degree of moral detestation entertained for her life and character. Narvaez has gone as minister to Naples; the queen refusing the blood money he asked beforehand for undertaking to quell the insurrection. The species of negotiations however, remains unique in the annals of constitutional governments. Italy continues forcibly quiet, so is the rest of Europe by mere force. These governments are all the time sailing under high pressure; having at each stroke to overcome the resistance of the common medium, and yet there are many who believe that because a great power is active somewhere, that power must also be productive of corresponding results.

Of the Mexican war, the Spectator of the 30th May thus speaks:

The United States and Mexico are fairly at war. Mexico strikes the first blow; crossing the Texan frontier, and inflicting on the American general something very like defeat. General Scott and reinforcements of men and treasure are to be hurried to the boundary. Of course the United States will conquer eventually—that is, if they manage to avoid giving European states occasion to mingle in the quarrel; for, independently of superior determination of purpose, the United States could expend resources in the war, dollar for dollar, in a sanguinary game at “beggar my neighbor,” and bankrupt their antagonist without sustaining any vital injury. But there may be much trouble in the process: the wolf seems likely to find that *this* lamb may bite. And, biting or not, the slaughter will be costly. Congress has voted ten millions of dollars, and much more will be needed: voting money is easy, collecting it is a different matter. “Base is the slave that pays,” and brother Jonathan is no “nigger;” he detests paying taxes; and so congress must borrow. Borrow!—of whom? who will lend on American securities? The credit of Mexico herself is not so low in the European markets.

Pictures from Italy. By CHARLES DICKENS. (No. LXIII. of Wiley & Putnam's Library of Choice Reading.)

THE greater part of these descriptions, as the author informs us, were written on the spot, and sent home, from time to time, in private letters. As penned in the fulness of the subject, and with the liveliest impressions of novelty and freshness, they will be all the more acceptable to those who have been wearied out by the stiff and formal delineations contained in the great mass of books of travel, upon Italy especially. The peculiar life and humor of Mr. Dickens are everywhere agreeably exhibited. “If my book,” he says, “has even a fanciful and idle air, perhaps the reader will suppose it written in the shade of a sunny day, in the midst of the objects of which it treats, and will like it none the worse for having such influences upon it.”—*Protestant Churchman.*

From Chambers' Journal.

HORACE MANN'S EDUCATIONAL TOUR.

SOME of our readers may recollect an account of the *Rauhe Haus* of Hamburg, which appeared in the *Journal* for 30th August last year. It was extracted from a report on education in Europe, written by Mr. Horace Mann, the Secretary of the Board of Education in the State of Massachusetts. We are glad to find that this remarkable document has now been reprinted for the British public, under the care of Dr. Hodgson, principal of the *Mechanics' Institution* of Liverpool.* It is the production of such a mind as, unfortunately, we see but rarely devoted to the subject of education; one expressing, we would say, the highest tone of moral and intellectual culture, and yet as careful respecting the practical details of its subject, as it is profoundly reflective on general aims and results.

The immediate object of Mr. Mann in his tour was to describe teaching arrangements, and modes in use, in European countries, which he thought might be advantageously transferred to his own. His report is therefore mainly of a practical character, and calculated to be directly useful to teachers, and all who have any charge in educational institutions; for which reason we strongly recommend the present volume to their attention. Yet such is the character of the author's mind, that the whole reads like a philosophical treatise.

A considerable portion of the volume is occupied with memoranda on the schools of Germany, which Mr. Mann describes as superior to the character of the existing institutions of the country, but such as must soon force improvements in these, whether the governors choose or not. We cannot go into any comprehensive view of this subject; but the reader, we think, may obtain some idea of the interest which the author imparts to all his details, by the following account of the manner in which he found geography taught in a Prussian school. "The teacher stood by the black board with the chalk in his hand. After casting his eye over the class, to see that all were ready, he struck at the middle of the board. With a rapidity of hand which my eye could hardly follow, he made a series of those short, divergent lines, or shadings, employed by map-engravers to represent a chain of mountains. He had scarcely turned an angle, or shot off a spur, when the scholars began to cry out—Carpathian mountains, Hungary; Black Forest mountains, Wirtemberg; Giant's mountains (Riesen-Gebirge,) Silesia; Metallic mountains (Erz-Gebirge,) Pine mountains (Fichtel-Gebirge,) Central mountains (Mittel-Gebirge), Bohemia, &c., &c.

"In less than half a minute, the ridge of that grand central elevation which separates the waters that flow north-west into the German Ocean from those that flow north into the Baltic, and south-east into the Black Sea, was presented to view—executed almost as beautifully as an engraving. A dozen crinkling strokes, made in the twinkling of

an eye, represented the head waters of the great rivers which flow in different directions from that mountainous range; while the children, almost as eager and excited as though they had actually seen the torrents dashing down the mountain sides, cried out—Danube, Elbe, Vistula, Oder, &c. The next moment I heard a succession of small strokes or taps, so rapid as to be almost indistinguishable; and hardly had my eye time to discern a large number of dots made along the margins of the rivers, when the shout of Lintz, Vienna, Prague, Dresden, Berlin, &c., struck my ear. At this point in the exercise, the spot which had been occupied on the black board was nearly a circle, of which the starting point, or place where the teacher first began, was the centre; but now a few additional strokes around the circumference of the incipient continent extended the mountain ranges outwards towards the plains—the children responding the names of the countries in which they respectively lay. With a few more flourishes, the rivers flowed onwards towards their several terminations; and by another succession of dots, new cities sprang up along their banks. By this time the children had become as much excited as though they had been present at a world-making. They rose in their seats, they flung out both hands, their eyes kindled, and their voices became almost vociferous, as they cried out the names of the different places which, under the magic of the teacher's crayon, rose into view. Within ten minutes from the commencement of the lesson, there stood upon the black board a beautiful map of Germany, with its mountains, principal rivers, and cities, the coast of the German Ocean, of the Baltic and the Black Seas; and all so accurately proportioned, that I think only slight errors would have been found had it been subjected to the test of a scale of miles. A part of this time was taken up in correcting a few mistakes of the pupils, for the teacher's mind seemed to be in his ear as well as in his hand; and notwithstanding the astonishing celerity of his movements, he detected erroneous answers, and turned round to correct them. The rest of the recitation consisted in questions and answers respecting productions, climate, soil, animals, &c.

"Many of the cosmogonists suppose that, after the creation of the world, and when its whole surface was as yet fluid, the solid continents rose gradually from beneath the sea. First the loftiest peaks of the Andes, for instance, emerged from the deep, and as they reached a higher and a higher point of elevation, the rivers began to flow down their sides, until at last—the lofty mountains having attained their height, the mighty rivers their extent and volume, and the continent its amplitude—cultivation began, and cities and towns were built. The lesson I have described was a beautiful illustration of that idea—with one advantage over the original scene itself, that the spectator had no need of waiting through all the geological epochs to see the work completed.

"Compare the effect of such a lesson as this, both as to the amount of the knowledge communicated, and the vividness, and of course the permanence, of the ideas obtained, with a lesson where

* Simpkin, Marshall, & Co., London.

the scholars look out a few names of places on a lifeless atlas, but never send their imaginations abroad over the earth, and where the teacher sits listlessly down before them to interrogate them from a book, in which all the questions are printed at full length, to supersede on his part all necessity of knowledge."

All this must be equally new and interesting to the greater portion of our public. So, we thoroughly believe, will be the following account of the general conduct and bearing of the Prussian teachers amongst their pupils. It is even, we would say, affecting to hear of the activity and self-devotion of these most useful ministers, paid as they generally are below the gains of many ordinary tradesmen. "I have said that I saw no teacher *sitting* in his school. Aged or young, all stood. Nor did they stand apart and aloof in sullen dignity. They mingled with their pupils, passing rapidly from one side of the class to the other, animating, encouraging, sympathizing, breathing life into less active natures, assuring the timid, distributing encouragement and endearment to all. The looks of the Prussian teacher often have the expression and vivacity of an actor in a play. He gesticulates like an orator; his body assumes all the attitudes, and his face puts on all the variety of expression, which a public speaker would do, if haranguing a large assembly on a topic vital to their interests.

"It may seem singular, and perhaps to some almost ludicrous, that a teacher, in expounding the first rudiments of handwriting, in teaching the difference between a hair-stroke and a ground-stroke, or how an *l* may be turned to a *b*, or a *u* into a *w*, should be able to work himself up into an oratorical fervor, should attitudinize, and gesticulate, and stride from one end of the class to the other, and appear in every way to be as intensely engaged as an advocate when arguing an important cause to a jury; but strange as it may seem, it is nevertheless true; and before five minutes of such a lesson had elapsed, I have seen the children wrought up to an excitement proportionally intense, hanging upon the teacher's lips, catching every word he says, and evincing great elation or depression of spirits as they had or had not succeeded in following his instructions. So I have seen the same rhetorical vehemence on the part of the teacher, and the same interest and animation on the part of the pupils, during a lesson on the original sounds of the letters—that is, the difference between the long and the short sound of a vowel, or the different ways of opening the mouth in sounding the consonants *b* and *p*. This zeal of the teacher enkindles the scholars. He charges them with his own electricity to the point of explosion. Such a teacher has no idle, mischievous, whispering children around him, nor any occasion for the rod. He does not make desolation of all the active and playful impulses of childhood, and call it peace; nor, to secure stillness among his scholars, does he find it necessary to ride them with the nightmare of fear. I rarely saw a teacher put questions with his lips alone. He seems so much interested in his subject, (though he might have been teaching the same lesson for the hundred or five hundredth time,) that his whole body is in motion—eyes, arms, limbs, all contributing to the impression he desires to make; and at the end of an hour, both he and his pupils come from the work all glowing with excitement.

"Suppose a lawyer in one of our courts were

to plead an important cause before a jury, but instead of standing and extemporizing, and showing by his gestures, and by the energy and ardor of his whole manner, that he felt an interest in his theme; instead of rising with his subject, and coruscating with flashes of genius and wit, he should plant himself lazily down in a chair, read from some old book, which scarcely a member of the panel could fully understand, and, after droning away for an hour, should leave them, without having distinctly impressed their minds with one fact, or led them to form one logical conclusion—would it be any wonder if he left half of them joking with each other, or asleep? Would it be any wonder—provided he were followed on the other side by an advocate of brilliant parts, of elegant diction, and attractive manner, who should pour sunshine into the darkest recesses of the case—if he lost not only his own reputation, but the cause of his client also?

"In Prussia and in Saxony, as well as in Scotland, the power of commanding and retaining the attention of a class is held to be a *sine qua non* in a teacher's qualifications. If he has not talent, skill, vivacity, or resources of anecdote and wit sufficient to arouse and retain the attention of his pupils during the accustomed period of recitation, he is deemed to have mistaken his calling, and receives a significant hint to change his vocation.

"Take a group of little children to a toy-shop, and witness their outbursting eagerness and delight. They need no stimulus of badges or prizes to arrest or sustain their attention; they need no quickening of their faculties by rod or ferule. To the exclusion of food and sleep, they will push their inquiries, until shape, color, quality, use, substance, both external and internal, of the objects around them are exhausted; and each child will want the showman wholly to himself. But in all the boundless variety and beauty of nature's works—in that profusion and prodigality of charms with which the Creator has adorned and enriched every part of his creation—in the delights of affection—in the ecstatic joys of benevolence—in the absorbing interest which an unsophisticated conscience instinctively takes in all questions of right and wrong—in all these, is there not as much to challenge and command the attention of a little child as in the curiosities of a toy-shop? When as much of human art and ingenuity shall have been expended upon teaching as upon toys, there will be less difference between the cases.

"The third circumstance I mentioned above, was the beautiful relation of harmony and affection which subsisted between teacher and pupils. I cannot say that the extraordinary fact I have mentioned was not the result of chance or accident. Of the probability of that others must judge. I can only say that, during all the time mentioned, I never saw a blow struck; I never heard a sharp rebuke given; I never saw a child in tears, nor arraigned at the teacher's bar for any alleged misconduct. On the contrary, the relation seemed to be one of duty first, and then affection, on the part of the teacher—of affection first, and then duty, on the part of the scholar. The teacher's manner was better than parental; for it had a parent's tenderness and vigilance, without the foolish dotings or indulgences to which parental affection is prone. I heard no child ridiculed, sneered at, or scolded, for making a mistake. On the contrary, whenever a mistake was made, or there was

a want of promptness in giving a reply, the expression of the teacher was that of grief and disappointment, as though there had been a failure not merely to answer the question of a master, but to comply with the expectations of a friend. No child was disconcerted, disabled, or bereft of his senses through fear. Nay, generally at the ends of the answers, the teacher's practice is to encourage him with the exclamation, 'good,' 'right,' 'wholly right,' &c., or to check him with his slowly and painfully-articulated 'no;' and this is done with a tone of voice that marks every degree of *plus* and *minus* in the scale of approbation and regret."

From the Daily News.

AN IRISH PIG-FAIR.

In order to enter into the scene of an Irish pig-fair with the proper spirit, it is requisite that the reader, besides encouraging a mirthful disposition, and a love for the study of character, should possess a duly-instructed mind on certain precursory principles and facts of the subject now proposed to be treated. It will therefore be necessary to offer a few remarks on the character and the circumstances which have combined to form and establish the character of an Irish pig.

Born in the warmest nook of the peasant's domestic circle—in the very bosom of his family, we may say—an Irish pig begins life under the most flattering circumstances which could be imagined. He may, indeed, be said to suck flattery with his mother's milk. His bringing-up hath a smack of royalty in it. As everything within the immediate range of his experience is made subservient to him, both in respect of his needs and his humors, he naturally and inevitably comes to the conclusion that he is the most important person in existence, and that the world was made for his use. His mother was reared amidst the same illusory impressions. The whole object of the family he lives with is to fatten him, and do him honor. In fact, honor and fat react upon each other, and he is crowned with favor in proportion to his obese demonstrations of having been graciously pleased to receive the offerings of his humble servants. * *

The pig takes his meals with the rest of the family, whom, at best, he regards as his poor relations. He sits down with the circle of the family board, (often literally a board for a plate,) and eats with them from the same dish, from which they usually select for him the largest potatoes. Instances, it is true, have been known where a disloyal peasant has endeavored to persuade the pig to eat a few potato-peelings mashed up with the rest; but seldom with success. Far more common is it to give the pig something in addition—such as porridge, bran and cake, and cabbage. Not merely is the pig better fed than the peasant, with his wife and children, but in several districts it is the only animal that is sufficiently fed. This is more especially the case in Sligo and Roscommon. The pig, meantime, knows how matters stand, and is quite aware of his own importance. If he happens to be coming in at the door of the cabin at the same time that one of the children is coming out, he tries to make it appear that there is not room enough for both, and gives a hunch with his shoulder in passing, like a surly brute who would growl, "Get out of the way—don't you see me coming!" A traveller in the provinces told me that he once overheard a sort of dialogue between

a peasant girl and the pig of the house. The pig had absconded, or at least had not returned all night; and the girl, who had been out searching for him since daybreak, was now bringing him home, reproaching him with his ingratitude as they walked along—the pig returning a sort of grudging acquiescence to each touching interrogatory. "Did n't I always get you enough straw at night to cover round you, and a wisp to stick in the chink o' the wall to keep the wind out?" *Ouff*, said the pig. "Have n't I given you the best practices, and leaves, and warm mash, and often gone without a meal myself for you—eh, now?" *Ouff*, said the pig; but the grudging acquiescence did in some degree partake of an "Oh, don't bother me." "And would n't I always do my duty by you—eh?—would n't I? How could you have the heart to leave your own home—eh? Will I tell you of all your ingratitude, eh?" *Ouff*, said the pig; meaning in this case, "Well, I don't care if I do hear about that."

What should an education like this produce? What could be expected from such circumstances surrounding a creature from its birth? What should all this incessant pampering of body and mind produce in the character of the individual? I speak it with regret in the present case—what but a brutal, gross, morose, selfish hog!

Now then imagine, oh, reader!—if, after what has been said, thou canst imagine such a thing—that the day at length arrives when this pampered pig has to be taken to the fair, whether he is graciously pleased or not, there to be criticized and sold! Yes; the right honorable gentleman "who pays the rent" has to walk, perhaps for several miles, with a certain indignity round one of his hind legs; and the disloyal, false knave, his owner, urging him, after divers base expedients, from behind or laterally, on the highway, to a public mart—there to be weighed, pinched, or fumbled all over, and then sold!—to what "end," let the classic muse of pie and sausage, pot, oven, iron-spit, or brine-tub, in fitting verse recite. * * *

The fair is held usually in the ordinary marketplace, being in itself no more than a market, except from the dignity and importance, and, we may add, contumacious excitement of the chief thing sold. There are a few poor stalls for the huckster or pedlar trade; one gambling turn-about with half-penny stakes; a little stage on a cart for the hoaxing sale of good-for-nothing haberdashery; no shows of any kind, no toys, and only three most unattractive stalls for stale-looking cakes and commonplace gingerbread with no gilt upon it, nor even the shining brown varnish which is the only admissible substitute. The fair is devoted to higher purposes.

We have seen the pig in his domestic circle, and have come to right understanding of his inevitable character—the pampered creature of circumstances. From his earliest infancy he was the heir-apparent of the grossest egotism, selfishness, and ignorance. Now, let the reader of this historical, philosophical, severe, yet not unloving sketch, imagine himself, if he can venture such a thing, in the midst of three or four hundred pigs like these! Three or four hundred outraged country nobles, partly driven, and partly seduced away from their cabins, vassals, and baronial bogs, and here assembled in public. Be it understood they are not in a drove, not under any discipline, not in any degree even of swine-herd order. No man dares to exercise his whip; nothing but a thin,

playful, smooth switch occasionally. And as for dogs!—I should like to see a dog show his face among nobility, and under exasperating circumstances: he would be torn to pieces, and trampled into mud before their wrath. They are not here, in any sense, a "drove" nor a "herd," but each one asserts his own individual state of mind and passion. This may be defined as a state of equal indignation, rage, and the worst suspicions all fusing together. The pigs have found out that some mischief is intended to them! They have, in their brusque way, laid their heads together by threes and fours, and the conviction has spread among them. They have literally become wild beasts, and like wild beasts do they behave. They snarl, and squeak, and scream, and yell, and growl, and utter curses, and gnash, and foam at the mouth, and bite, and brawl, and rush, snout-foremost, under the wheels of carts, or between the most crowded legs of men. They are brought back in vain; for they struggle, and shriek, and gnash, and burst away; and when two by accident meet suddenly face to face, they seek instant relief of their feelings by a fight, to which they stand up in lion-and-unicorn fashion. While thus they gnash and bite, behind each one you see an excited peasant, embracing the loins of his warlike pork, in anguish lest the price should be lowered in the buyer's eye by the unseemly disfigurements of battle. * * *

But who are the buyers of all these alarming pigs? Behold him standing there, with one hand in his pocket, the finger of the other pointing contemptuously at a very good pig. He has a short *dudeen* in his mouth, and smokes and speaks carelessly at the same time. Smoke issues with nearly all his words. The man who buys the pig has a knowing, satirical, purse-proud, knavish, remorseless face and air. He has, moreover, a tongue to match it—wily, would-be-witty, overbearing, false, unfeeling, and dishonest. He is evidently an agent in the matter, and gets a percentage. This makes a clever screw of him. It is not his own money he so vulgarly displays, to dazzle the eyes of poor Pat, and make him catch at the first offer, however inadequate, as it is sure to be, first or last—unless Pat happens to be very sharp indeed, which sometimes proves to be the case. In general, however, he has little chance with these buyers. The buyer makes his first offer, after sufficiently depreciating the pig. The peasant knows it is worth more, and refuses. A little haggling ensues, and the buyer venting yet further contempt on the pig in question, walks carelessly, scoffing and smoking, in an opposite direction, and immediately commences a negotiation touching other pigs. The buyers are manifestly in league with each other; so that although there is some competition, it is not fair competition; and the screw and pressure of a secret monopoly of the market is at work. If the peasant does not accept the offer of the first bidder, the second bidder may offer less, and usually does. The peasant looks after the careless smoking screw who is now so busily engaged a little way off, affecting to have quite done with him. He looks—he begins to walk towards him—the buyer walks away—the peasant follows. Again he addresses him on the subject of his pig. In the end, the screw has him at his own price. Now and then, however, the poor peasant repeats his first demand, and holds to it with melancholy firmness. He speaks in a sad

voice. He knows the fair value of the pig, and asks it. He cannot obtain it; and yet he does so want to sell the pig.

The only "fun of the fair" is the pig's invariable resistance to the examination of the buyer's hand, with the perversity of the buyer, after he is held fast, in persisting to feel those parts where he is least fat, instead of those which are most plump, and to which, with ludicrous anxiety and eloquence, the peasant in vain endeavors to direct the buyer's attention. Amidst this the pig often crouches close down to the ground, and screams with all his might. Perhaps, however, he may be docile from cunning, and some *finesse* in his mind, in which case he only holds down his head coyly. But generally he is in a rage, and has to be soothed and scratched, as he sits up on his haunches with a savage unappeasable countenance.

At length a bargain is made complete—a pig is sold. The buyer marks him with his especial mark—some mark with scissor-lines cut in the bristles, some with red ochre, some with black chalk—and ostentatiously displays money while paying, and talks of much more. A poor, little old woman in rags, and with a small, pale face, comes meekly to listen, and is attentive to the talk of all this money. She goes away very humbly, but seems all the better for what she has heard. A deplorable ballad-singer, more than half-naked, fills up any temporary diminution that may occur in the noise of the fair.

On the outskirts of the town, peasants are seen driving sold pigs to the buyers' carts or quarters. You may know to a certainty by the man's face and air if he has sold the pig according to his previous mind. Not often will you see a satisfied smile lurking round his mouth; but the corners drawn straight with disappointment, as he looks down reproachfully at the pig for having misbehaved himself at the fair—in not rendering himself docile to the buyer's fingers, and more entertaining in all his natural blandishments.

A fiddle sounds from a little coffee-shop in the fair. All the business then is done. There is a crowd yonder, at one side of the market place, standing in a circle. Is it a fight—not of pigs, but of men? What occasions the disturbance? No; it can be no fight—no disturbance; for everybody is standing quietly, and silently too; and there is one man who has a very sad face of sorrow and perplexity, as though he had lost something. Let us approach.

All is explained. Upon several planks and half a door lies some huge form, covered over with a large, coarse, white sheet. At one end, beyond the covering cloth, there appears a quiet hoof sticking out like a pointed moral; and at the other end the tip of a pale snout, with a crimson stain in the nostril, pathetically pokes forth. It is the Roman emperor who, a brief hour ago, sat with terrific countenance in the middle of the fair. A deed has been done. He has been bought and sold; but they could not lead him into captivity. The debt of nature is paid—so is the poor man's rent; and death and the landlord can now do what they like with their own. As for the fallen hero, let his faults die with him. There is nothing coarse in him now—nothing gross is here, in this scene before us—nothing selfish and brutish. All is hushed, philosophical and suggestive—refined by the hand of the universal steel-bearer, the quieter of us all.

CHAPTER XXVII.

WHEN Snipeton turned his horse's head from Dovesnest—for the which incident we must send back the reader some dozen chapters—he resolved, as he rode, upon closing his accounts with the world, that freed from the cares of money, he might cherish and protect his youthful, blooming partner. Arrived in London, seated at his books in St. Mary Axe, the resolution was strengthened by the contemplation of his balance against men. He had more than enough, and would enjoy life in good earnest. Why should he toil like a slave for gold-dust, and never know the blessings of the boon? No: he would close his accounts, and open wide his heart. And Snipeton was sincere in this his high resolve. For a whole night, waking and dreaming, he was fixed in it; and the next morning the uxorious apostate fell back to his first creed of money-bags. Fortune is a woman, and therefore where she blindly loves—(and what Bottoms and Calibans she does embrace and fondle!)—is not to be put aside by slight or ill-usage. All his life had fortune doted upon Snipeton, hugging him the closer as she carried him up—no infant ape more tenderly clutched in ticklish places—and he should not leave her. And to this end did fortune bribe back her renegade with a lumping bargain. A young gentleman—a very young gentleman—desired for so much ready metal, to put his land upon parchment, and that young gentleman did fortune take by the hand, and, smiling ruin, lead him to St. Mary Axe. In few minutes was Snipeton wooed and won again: for to say the truth his weakness was a mortgage. The written parchment, like charmed characters, conjured him; put imagination into that dry husk of a man. He would look upon the deed as upon a land of promise. He would see in the smallest pen-marks giant oaks, with the might of navies waiting in them; and from the sheepskin would feel the nimble air of Arcady. There it lay, a beautiful bit of God's earth—a sweet morsel of creation—conjured and conveyed into a few black syllables.

And so, Snipeton made his peace with his first wife Fortune, and then bethought him of his second spouse, Clarissa. That he might duly attend to both, he would remove his second mate from Dovesnest. There were double reasons for the motion; for the haven of wedded bliss was known to the profligate St. James; who, unmindful of the sweetest obligation money at large should ought to confer upon the human heart, dared to accost his creditor's wife. Let Dovesnest henceforth be a place for owls and foxes, Clarissa should bring happiness within an hour's ride of St. Mary Axe. The thought was so good, sent such large content to old Snipeton's heart, that with no delay it was carried out, and ere she well had time to weep a farewell to her favorite roses, Mrs. Snipeton left Dovesnest to the spiders.

Was it a wise change, this? Had Snipeton healthy eyes; or did avarice, that jaundice of the soul, so blear his vision, that he saw not in the thin, discolored features of the wife of his bosom, ought to twitch a husband's heart? She never complained. Besides, once or twice he had questioned her; and she was not ill. No, well, quite well; and—this too he had asked—very happy. Nevertheless, it would the better satisfy him if Crossbone could see her. Crossbone knew her

constitution, and—and so that meek and knowing man was summoned to London.

In a green, sequestered nook, half-way between Hampstead and Kilburn, embowered in the middle of a garden, was a small cottage; so hidden, that oft the traveller passed, unheeding it. In this cottage was Clarissa. To this retreat would her husband amble every day from St. Mary Axe, quitting his money temple for the treasure of his fireside, his pale and placid wife; and resolved to think himself blessed at both places.

"Mr. Snipeton is late to-day," said Mrs. Wilton, the mother housekeeper.

"He will come," replied Clarissa, in the tone of one resigned to a daily care. "He will come, mother."

Mrs. Wilton looked with appealing tenderness in her daughter's face; and in a low, calm voice, controlling her heart as she spoke, she said—"This must not be: do not repeat that word—not even when we are alone. Some day it may betray me to your husband, and then"—

"What then?" asked Clarissa.

"We should be parted; forever—forever," cried the woman, and with the thought she burst into tears.

"Not so. Nothing parts us; nothing but the kindness of death," said Clarissa. "And death is kind, at least"—

"At least, my child, the world with you is too young to think it so."

"Old, old and faded," said Clarissa. "The spirit of youth is departed. I look at all things with dim and weary eyes."

"And yet, my child, there is a sanctity in suffering, when strongly, meekly borne. Our duty, though set about by thorns, may still be made a staff, supporting even while it tortures. Cast it away, and like the prophet's wand, it changes to a snake. God and my own heart know, I speak no idle thoughts, I speak a bitter truth, bitterly acknowledged."

"And duty shall support me on this weary pilgrimage," said Clarissa. Then taking her mother's hand, and feebly smiling, she added, "Surely, it can be no sin to wish such travel short: or if it be, I still must wish—I cannot help it."

"Time, time, my child, is the sure conciliator. You will live to wonder at and bless his goodness."

"You say so—it may be," said Clarissa, with a lightened look, "at least, I'll hope it." And then both smiled gaily—wanly; for both felt the deceit they strove to act but could not carry through. Words, words of comforting, of hope were uttered, but they fell coldly, hollowly; for the spirit of truth was not in them. They were things of the tongue, passionless, mechanical; the voice without the soul. At this moment, old Dorothy Vale entered the room; and she was welcome: even though she announced the coming of the master of the house.

"Master's coming up the garden," said Dorothy, each hand rubbing an arm crossed before her. "Somebody's with him."

"A stranger here! Who can it be?" cried Clarissa.

"Don't say he's a stranger; don't say he is n't; can only see a somebody," answered Dorothy, in whom no show whatever of this world of shows could have awakened a momentary curiosity. Her inheritance, as one of Eve's daughters, was this

beautiful earth, sky-roofed; yet was it no more to her than a huge deal box, pierced with air-holes. A place to eat, drink, sleep, and hang up her bonnet in.

Another minute, and Snipeton entered the room. The husband had returned to the haven of his hopes, and was resolved that the world—then comprised in the single person of Peter Crossbone, who followed close at the heels of his host—should bear witness to his exceeding happiness; to the robust delight that, as he crossed his threshold, instantly possessed him: for with an anxious look of joy, he strode up to his wife, and suddenly taking her cheeks between both his hands, pursed out her lips, and then vigorously kissed them. He was so happy, he could not, would not feel his wife shrink at his touch—could not, would not see her white face flush as with sudden resentment, and then subside into pale endurance. No: the husband was resolved upon displaying to the world his exceeding happiness, and would not be thwarted in his show of bliss, by trifles. He merely said, still dallying with his felicity—“Never mind Crossbone; he’s nobody; a family man—has been married, and that’s all the same.” Now Crossbone in his wayward heart, felt tempted to dispute such position; it was not all the same—to him. Nevertheless, he would not be captious. It was a poor, an ignorant opinion, and therefore his host and customer should have the free enjoyment of it.

“Mrs. Snipeton,” said the apothecary, “though I do not feel it professional to hope that anybody is well, nevertheless in your case, I do hope that—well, well, I see; a little pale, but never fear it—we’ll bring the roses out again. In a little while, and you’ll bloom like a bough-pot.”

“To be sure she will,” said Snipeton. “I thought of buying her a pretty little horse; just a quiet thing?”

“Nothing could be better—perhaps. As I often say, horse-flesh is the thing for weak stomachs. I may say as much to you as a friend, Mr. Snipeton; folks often go to the doctor’s, when they should go to the stable. Yes, yes—horse exercise and change of air!”

“We’ll talk of it after dinner,” said Snipeton, suddenly wincing; for his heart could not endure the thought of separation. Business and love were delightful when united; they gave a zest to each other; but certainly—at least in the case of Snipeton—were not to be tasted alone. Granted that he sat in a golden shower in St. Mary Axe; how should he enjoy the luck falling direct from heaven upon him, if his wife—that flower of his existence—was transplanted to a distant soil? Would not certain bees and butterflies hum and flutter round that human blossom? Again, if he himself tended the pretty patient, would not ruin—taking certain advantage of the master’s absence—post itself at his door-step? Doating husband—devoted man of money! His heart-strings tore him one way—his purse-strings another. “We’ll talk of it after dinner,” he repeated. “And, Master Crossbone, we’ll have a bottle of excellent wine.” In some matters Crossbone was the most compliant of men: and wine was one that, offered cost-free, never found him implacable. And, the truth is, Snipeton knowing this, hoped that the wine might contain arguments potent over the doctor’s opinions. After one bottle, nay two, it was not impossible

that Crossbone might reconsider his judgment. The air of Hampstead might be thought the best of airs for Clarissa. Wine does wonders!

The dinner was served. Crossbone was eloquent. “After your labors in town, Mr. Snipeton, you must find it particularly delightful,”—he said—“particularly so to come home to Mrs. Snipeton,”—the husband smiled at his wife—“and dine off your own greens. One’s own vegetables is what I consider the purest and highest enjoyment of the country. Of course, too, you keep pigs?”

Snipeton had prepared himself for a compliment on his connubial happiness; and therefore suffered a wrenching of the spirit when called upon to speak to his cabbages. With a strong will he waived the subject; and merely answered, “We do not keep pigs.”

“That’s a pity; but all in good time. For it’s hardly possible to imagine a prettier place for pigs. Nothing like growing one’s own bacon. But then I always like dumb things about me. And, Mr. Snipeton, after your work in town, you can’t think how ’t would unbend your mind—how you might rest yourself, as I may say, on a few pigs. It’s beautiful to watch ’em day by day; to see ’em growing and unfolding their fat like lilies; to make ’em your acquaintance as it were, from the time they come into the world to the time they’re hung up in your kitchen. In this way you seem to eat ’em a hundred times over. However, pigs are matters that I must not trust myself to talk about.”

“Why not?” asked Snipeton, with a porker-like grunt. “Why not?”

“Dear Mrs. Crossbone! Well, she *was* a woman!” (It was, in truth, Crossbone’s primeest consolation to know that she *was* a woman.) “Our taste in everything was just alike. In everything.”

“Pigs included?” asked Snipeton, with something like a sneer.

But Crossbone was too much stirred by dearest memories to mark it. He merely answered, “Pigs included,” after a pause. “However, I must renounce the sweeter pleasures of the country. Fate calls me to London.”

“It delights me to hear it, Mr. Crossbone; for we shall then be so near to one another,” cried Snipeton. “Charming news this, is n’t it, Clary?” And the old husband chucked his wife’s chin, and would smile in her pale, unsmiling face.

“Well, as an old friend, Mr. Snipeton, I may perhaps make no difference with you. Otherwise, my practice promises to be confined to royalty. To royalty, Mr. Snipeton. Yes; I was sure of it, though I never condescended to name my hopes—but I knew that I should not be lost all my life among the weeds of the world. Reputation, Mr. Snipeton, may be buried, like a potato; but, sir, like a potato”—and Crossbone, tickled by the felicity of the simile, was rather loud in its utterance—“like a potato, it will shoot and show itself.”

“And yours has come up, eh? Well, I’m very glad to hear it,” said Snipeton, honestly, “because you’ll be in London. Your knowledge of Clarissa’s constitution is a great comfort to me.”

“I have studied it, Mr. Snipeton; studied it as a botanist would study some strange and beautiful flower. It is a very peculiar constitution—very peculiar.” The dinner being over, Clarissa rose.

“You’ll not leave us yet, love?” cried Snipe-

ton, taking his wife's hand, and trying to look into her eyes that—wayward eyes!—would not meet the old man's devouring stare.

"Pray excuse me," said Clarissa, with a politeness keen enough to cut a husband's heart-strings. "I have some orders—directions—for Mrs. Wilton. You must excuse me."

"That's a treasure, Crossbone!" exclaimed Snipeton, with a laborious burst of affection, as Clarissa left the room. "A diamond of a woman! A treasure for an emperor!"

"Don't—don't!"—cried Crossbone, hurriedly emptying his glass.

"I said a treasure!" repeated the impassioned husband, striking the table. Crossbone shook his head. "What," cried Snipeton, knitting his brow, "you question it? Before me—her husband?"

"Pray understand me, dear sir," said Crossbone, tranquilly filling his glass. "Mrs. Snipeton is a treasure. She'd have been a jewel—a pearl of a woman, sir, in the crown of King Solomon: and that's the worst of it."

"The worst of it!" echoed Snipeton.

"In this world, my good friend, if a man knew what he was about, he'd set his heart upon nothing." The apothecary drained his glass. "Looking, sir, as a moralist and a philosopher, at what the worth of this world at the best is made of—what is it, but a large soap and water bubble blown by fate? It shines a minute"—here the moralist and philosopher raised his wine to his eye, contemplating its ruby brightness—"and where is it!" Saying this, Crossbone swallowed the wine: a fine practical comment on his very fine philosophy. "I ask, where is it?"

"Very true," observed Snipeton, taking truth as coolly as though he was used to it. "Very true; nevertheless"—

"Mr. Snipeton, my good friend," cried Crossbone—his hand lovingly round the neck of the decanter—"Mr. Snipeton, he is the wisest man who in this world loves nothing. It's much the safest. Did you ever hear of the river Styx?"

"Humph! I can't say," growled Snipeton. "Is it salt, or fresh?"

"One dip in it makes a man invulnerable to all things; stones, arrows, bludgeons, swords, bullets, cannon-balls."

"'T would save a great deal in regimentals if the soldiers might bathe there," said Snipeton, grinning grimly.

"So much for Styx upon the outward man," cried Crossbone: "but I have often thought 't would be a capital thing, if people could take it inwardly; if they could drink Styx."

"Like the Bath waters," suggested Snipeton.

"Exactly so. A course or two, and the interior of a man would then be insensible of foolish weakness," said Crossbone.

"You'd never get the women to drink it," remarked Snipeton, very gravely.

"'T would not be necessary, if man, the nobler animal—for as Mrs. Snipeton is not here, we can talk like philosophers"—Snipeton grunted—"if man, the nobler animal, for we know he is, though it would not be right, perhaps, to say as much before the petticoats—if man could make his own heart invulnerable, why, as for woman, she might be as weak and as foolish as she pleased; which, you must allow, is granting her much, Mr. Snipeton." And here the apothecary would have

laughed very jovially, but his host looked grave, sad.

"It seems, Mr. Crossbone, you are no great friend to the women," said Snipeton. "Yet you must allow, we owe them much."

"Humph!" cried Crossbone, in a prolonged note. He then hastily filled his glass: as hastily emptied it.

"You seem to dispute the debt!" said Snipeton, gallantly returning to the charge.

"Look here, Mr. Snipeton," cried Crossbone, with the air of a man determined for once to clear his heart of something that has long lain wriggling there—"look here. The great charm of a bottle of wine after dinner between two friends is this: it enables them to talk like philosophers; and so that the servants don't hear, philosophy with a glass of good fruity port—and yours is capital, one tastes blood and fibre in it;—philosophy is a very pleasant sort of thing; but like that china shepherdess on the mantel-piece, it is much too fine and delicate for the outside world. No, no; it is only to be properly enjoyed in a parlor; snug and with the door shut."

"Very well. Perhaps it is. We were talking of our debts to woman. Go on," said Snipeton.

"Our debts to woman. Well, to begin; in the first place we call her an angel; have called her an angel for thousands of years; and I take it—but mind, I speak as a philosopher—I take it, that's a flim that should count as a good set-off on our side. Or I ask it, are men, the lords of the creation, to go on lying for nothing?" It was plain that this wicked unbelief of Crossbone a little shocked his host, and therefore, as the bottle was nearly out, the apothecary felt that he must regain some of his ground. Whereupon he sought to give a jocular guise to his philosophy; to make it, for the nonce, assume the comic mask. "Ha! ha! Look here: you must allow that woman ought, as much as in her lies, to make this world quite a paradise for us, seeing that she lost us the original garden." Snipeton just smiled. "Come, come," cried the hilarious apothecary, "we talk as philosophers, and when all's said and done about what we owe to woman, you must allow that we've a swinging balance against her. Yes, yes; you can't deny this: there's that little matter of the apple still to be settled for."

"'T is a debt of long standing," said Snipeton with a short laugh.

"And therefore, as you know—nobody better"—urged Crossbone—"therefore it bears a heavy interest. So heavy, Mr. Snipeton—by-the-hye, the bottle's out—so heavy they can never pay it. And so we mustn't be hard upon 'em, poor souls—no, we mustn't be hard upon 'em; but get what we can in small but sweet instalments. I—for all I talk in this philosophic way—I was never hard upon 'em—dear little things—in all my life."

For a few minutes philosophy took breath, whilst wine, the frequent nutriment of that divine plant, as cultivated by Crossbone, was renewed. At length, the apothecary observed—"To serious business, Mr. Snipeton. Having had our little harmless laugh at the sex, let us speak of one who, is its sweetest flower, and its brightest ornament. Need I name Mrs. Snipeton?"

The old man sighed; moved uneasily in his chair; and then with an effort began. "Mr. Crossbone, my friend—I cannot tell you—no words can tell you, how I love that woman."

"I can imagine the case—very virulent indeed," said the apothecary. "Late in life it's always so. Love with young men, I mean with very young men, is nothing; a slight fever. Now, at mature time of life, it's a little short of deadly typhus. Of course, I speak of love before marriage; that is, love with all its fears and anxieties; for wedlock's a good febrifuge."

"I have struggled, fought with myself, to think—but you shall tell me—yes, I will strengthen myself to hear the worst. Now, man"—and Snipeton grasped the arms of his chair with an iron hold, and his breast heaved as he loudly uttered—"now, speak it."

"Look you here, Mr. Snipeton. Do you think me a stock, or a stone, that I could sit here quietly and comfortably drinking your wine, if I could n't give you hope—a little hope in return?"

"A little hope!" groaned the old man.

"A man in my position, Mr. Snipeton—with glorious circumstances, as I have observed, opening upon him—cannot be too cautious. I should be sorry to compromise myself by desiring you to be too confident. Nevertheless, she is young, Mr. Snipeton; and the spirit of youth does sometimes puzzle us. In such spirit then—strong as it is in her—I have the greatest faith."

"You have!" exclaimed Snipeton, starting from his seat and seizing Crossbone's hand. "Save her and—you shall be rich; that is, you shall be well recompensed—very well. My good friend, you know not the misery it costs me to seem happy in her sight. I laugh and jest"—Crossbone looked doubtfully—"to cheat her of her melancholy; yet"—

"Yet she does not laugh and joke in return?" observed Crossbone. "But she will—no doubt she will."

"And then, though I know her to be sick and suffering, she never complains; but still assures me she is well—very well."

"Dear soul! You ought to be a happy man—you ought but you won't. Can't you see that she won't confess to sickness because—kind creature!—she can't think of paining you? She'd smile and say 't was nothing—I know she would, if she were dying."

"For God's sake, speak not such a word," cried the old man, turning pale.

"She must die some day," said Crossbone. "Though, to be sure, according to the course of nature, that is, if I save her—of which, indeed, to tell you truly, I have now no doubt—I will stake my reputation present and to come upon the matter."

"You give me life, youth," exclaimed Snipeton, with sudden happiness.

"But I was about to say that, if saved, the chances are you may leave her yet young and blooming, behind you." The old man's face darkened. It was a bitter thought that. Was there not some place in the East, where, when a husband died, his wife even through the torture of fire, followed him? This horrid thought—how, poor man! could he help it? for, reader, how know you what thought you shall next think!—this thought, we say, passed through Snipeton's brain. But Clarissa was no Hindoo wife. She might—as the prating doctor said—she might be left, yes, to smile and be happy, and more, to award happiness to another on this earth, when her doating, passionately doating husband should have his limbs composed in the grave. Again; he might live

these twenty years. And in twenty years that beautiful face would lose its look of youth—those eyes would burn with sobered light—that full scarlet lip be shrunk and faded. And then—yes, then he thought, he could resign her. In twenty years—perhaps in twenty years. With this cold comfort, he ventured to reply to the apothecary.

"Never mind my life, that's nothing," he said. "All I think of is Clarissa; and there is yet time—she is safe, you say!"

"It's very odd, very droll, that just now you should have named Bath—the Bath waters, you know," smirked Crossbone.

"Wherefore odd—how droll! I do not understand you." And yet he had caught the meaning.

"She must go to Bath; she must drink the waters. Nothing's left but that," averred the apothecary.

"I tell you, man, for these three months I cannot quit London. A world of money depends upon my stay."

"And why should you budge? You don't want your wife, do you, at St. Mary Axe? She does n't keep your books, eh?" Snipeton frowned, and bit his lip, and made no answer. Then Crossbone, his dignity strengthened by his host's wine, rose. "Mr. Snipeton," he said, "I have studied this case, studied it, sir, not only as a doctor but as a friend. I have now, sir, done my duty; I leave you as a husband and—I was about to say as a father, but that would be premature; as a husband and a man to do yours. All I say is this: if your wife does not immediately move to Bath,"—Crossbone paused.

"Well," snarled Snipeton, defyingly, "and if she does not?"

"In two months, sir—I give her two months—she'll go to the churchyard."

"And so she may—so she shall," exclaimed Snipeton, violently striking the table—his face blackening with rage, his eyes lurid with passion. "So she shall. An honest grave and my name clear—I say, an honest grave, and a fair tombstone, with a fair reputation for the dead. Anything but that accursed Bath. Why, sir,"—and Snipeton, dilating with emotion, stalked towards the apothecary—"what do you think me?"

Now this question, in a somewhat dangerous manner tested Crossbone's sincerity. In sooth, it is at best a perilous interrogative, trying to the ingenuousness of a friend. Crossbone paused; not that he had not an answer at the very tip of his tongue: an answer bubbling hot from that well of truth, his heart—and for that reason, it was not the answer to be rendered. He therefore looked duly astonished, and only asked—"Mr. Snipeton, what do you mean?"

"I tell you, man, I'd rather see her dead, a fair and honest corpse, than send her to that pest-place," cried the husband.

"Pest-place! Really, Mr. Snipeton; this is a little too much to wipe off the reputation of a city—the reputation of hundreds of years too—in this manner. Reputation, sir, that is, if it's good for anything—does n't come up like a toad-stool; no, sir, the real thing's of slow growth. Bath a pest-place! Why, the very fountain of health."

"The pool of vice—the very slough of what you call fashion. And you think I'd send my wife there for health! And for what health? Why, I'll say she returned with glowing face and sparkling eyes. What then? I should loathe her."

"Lord bless me!" exclaimed Crossbone.

"Now, we are happy, very happy; few wedded couples more so: very happy"—and Snipeton ground the words beneath all the teeth he had, and looked furiously content. Crossbone stared at the writhing image of connubial love.

"You certainly look happy—extraordinarily happy," drawled the apothecary.

"And whilst we live, will keep so. Therefore no Bath-insects—no May-flies, no June-bugs."

"'Tis n't the Bath season for 'em," put in the apothecary. "They're all in London at this time."

"All's one for that. I tell you what—here, Dorothy, another bottle of wine—I tell you what, Master Crossbone, as you say, we'll talk the matter over philosophically, I think that's it; and therefore, no more words about Bath. Come, come, can there be a finer air than this!" cried the husband, rubbing his hands, and trying to laugh.

"My dear sir, the quality of the air is not the thing—it's change that's the medicine. And then there's the waters!"

"We have an excellent spring at Hampstead. Years ago I'm told the nobility used to come and drink it."

"Then, sir, the waters hadn't been analyzed. Since then they've been found out; only fit for cattle, sir, and the lower orders. Never known now to agree with a person of gentility of stomach—that is, of true delicacy. And for the air, it's very good, certainly, just for the common purposes of life; but as I say, it's not the quality, it's the change that's the thing. There's cases, sir, in which I'd send patients, ay, from Montpellier to the neighborhood of Fleet-ditch. The fact is, sir, there can't be at times a better change than from the best to the worst. The lungs, sir, get tired—heartily sick of good air if it's always the same; just as the stomach would get tired of the very best mutton, had it nothing but mutton every day."

Snipeton was silent; pondering a refutation of this false philosophy. Still he tugged at his brain for a happy rejoinder. He felt—he was certain of it—that it would come when the apothecary had gone away, but unhappily he wanted it for present use. He felt himself like a rich man with all his cash locked up. Now wit, like money, bears an extra value when rung down immediately it is wanted; men pay severely who want credit. Thus, though Snipeton knew he had somewhere in that very strong box his skull, a whole bank of arguments, yet because he could not at the moment draw one, Crossbone—the way of the world—believed there were absolutely no effects. Snipeton, however, got over a difficulty as thousands before him—and thousands yet unborn will jump an obstacle;—he asked his opponent to take another glass of wine. If Bacchus often lead men into quagmires deep as his vats, let us yet do him this justice, he sometimes leads them out.

"I believe you said something about horse exercise, Crossbone! Now with a horse—you don't drink"—a hospitable slander this on the apothecary—"with a horse there's change of air at will, eh?"

"To be sure there is. And then there's Highgate and Finchley, and—well, that might do, perhaps," said Crossbone.

"And in the evenings"—and Snipeton brightened at the prospect—"we could ride together."

"Death, sir—certain death"—and Crossbone

gave one of his happiest shudders. "The night air is poison—absolute poison. No, the time would be from—let me see—from eleven to three."

"Impossible; quite impossible. Can't leave business—certain ruin," cried Snipeton.

"Certain death, then," said Crossbone, and he slowly, solemnly drained his glass. "Certain death," he repeated.

"Don't say that, Crossbone," cried Snipeton, softened. "Mrs. Wilton, perhaps she rides, and then"—

"As for Mrs. Wilton, I trust you are under no particular obligation to that person!"

"Obligation," cried Snipeton; as though the thought implied an insult. "Why do you ask?"

"Nothing but for your wife's health. The fact is, Mrs. Wilton always seems melancholy, heavy; with something on her mind. Now, my dear sir, it is a truth in moral philosophy not sufficiently well known and attended to, that dumps are catching." And Crossbone looked the proud discoverer of the subtlety.

"Indeed—are they? Perhaps they may be. Well, there's a wench coming up from Kent—somewhere near Dovesnest. I've been coaxed to consent to it. She may make a sort of merrier companion."

"She may," said Crossbone; "but what you want is an honest, sharp fellow—for honesty without sharpness in this world is like a sword without edge or point; very well for show, but of no real use to the owner."

"Go on," cried Snipeton, bowing to the apothecary's apothegm.

"Now, I have the very man who'll suit you. The miracle of a groom. Honest as a dog, and sharp as a porcupine."

"Humph!" cried Snipeton, marvelling at the human wonder.

"Your servant, Mr. Crossbone"—said Dorothy Vale, opening the door—"has called as you desired."

"Tell him to come in," cried Crossbone: who then said to Snipeton—"At least you can see the fellow."

CHAPTER XXVIII.

It may be remembered that Snipeton and St. Giles had met before. And certainly St. Giles had not forgotten the event; his somewhat anxious look declared his recollection of the scene at Dovesnest, in which he played the part of rogue and vagabond according to the statute; but as Snipeton had no corresponding interest in the circumstance, he had wholly forgotten the person of the outcast in the candidate for service. But in truth, St. Giles was not the same man. At Dovesnest he was in rags; fear and want had sharpened his face, withering, debasing him. And now, he breathed new courage with every hour's freedom.—He was comfortably, trimly clad; and his pocket—too oft the barometer of the soul—was not quite at zero. Hence, in few moments, he looked with placid respect at Snipeton, who stared all about his face, as a picture-dealer stares at an alleged old master; with a look that in its cunning, would even seem to hope a counterfeit. Was St. Giles really the honest fellow that he appeared; was there in truth the original mark of the original artist upon him; or was he a fraudulent imitation especially made to gull a trusting gentleman!—Was there really no flaw in that honest

seeming face!—And Snipeton as he looked half-wished that all men—or all servants at least—were fashioned like earthen vessels; that, properly filleted, they should perforce reveal a damning fracture. Certainly, such sort of human pottery, expressly made for families, would be an exceeding comfort to all housekeepers. Snipeton thought this; to his own disappointment thought it; for there being no such test of moral soundness, he could only choose the domestic, two-legged vessel before him by its looks. Alas! why was there no instant means of trying the music of its ring!

"That will do; you can wait," said Crossbone to St. Giles, who thereupon left the room.

"And what can you say for this fellow? Do you know all about him—who begot him—where he comes from?" asked Snipeton.

Crossbone was a man of quick parts: so quick, that few knew better than he, the proper time for a complete lie. We say a complete lie; not a careless, fragmentary flim, with no genius in it; but a well-built, architectural lie, buttressed about by circumstance. Therefore, no sooner was the question put to him than, without let or hesitation, he poured forth the following narrative. Wonderful man! falsehood flowed from him like a fountain.

"The young man who has just quitted us is of humble but honest origin. His parents were villagers, and rented a little garden-ground whereon they raised much of their lowly but healthy fare. Far, far indeed was the profligacy of London from that abode of rustic innocence. His playmates—I mean the young man's—were the lambskins that he watched, for at an early age he was sent out to tend sheep: his books the flowers at his feet, the clouds above his head. Not but what he reads remarkably well for his condition, and writes a good stout servant's hand. He was seven years old—no, I'm wrong, eight, eight years—when he lost his father, who, good creature, fell a victim to his humanity. A sad matter that. He was killed by a windmill."

"I thought you said 't was his humanity," observed Snipeton.

"And a windmill," averred Crossbone. "A neighbor's child was gathering buttercups and daisies, and had strayed beneath the mill's revolving sails. The young man's father, obeying the impulse of his benevolent heart, rushed forward to save the little innocent. His humanity, not measuring distance, carried him too near the sails; he was struck to the earth with a compound fracture of the skull, and died."

"This you know?" muttered Snipeton, looking with a wary eye.

"'T was when I was an apprentice. The man being poor, and the case desperate, 't was given up to me to do my best with it. I learned a great deal from that case, and from that moment felt a natural interest in the orphan. And he has been worthy of it. You'd hardly believe the things I could tell you of that young man. You can't think how he loves his mother."

"No great credit in that—eh?" said Snipeton.

"Why, no; not exactly credit; but you must own it's graceful—very graceful. He makes her take nearly all his wages. Hardly saves enough for shirts and pocket-handkerchiefs. Now, this strikes me as being very filial, Mr. Snipeton!"

"And you think he'd make a good groom, eh?" asked the cautious husband.

"Bless you! he knows more about horses than

they know themselves. But all he knows is nothing to his honesty. I've trusted him with untold gold, and he has never laid his finger upon it."

"How do you know, if you never counted it?" asked Snipeton.

"That is"—said Crossbone, a little pulled up—"that is, you know what I mean. And—the thought's been working in me, though I've talked of other matters—I do think that a horse, with the quick and frequent change of air a horse can give, may do everything for Mrs. Snipeton; for, as I have said before—she's young, very young; and youth takes much killing. And therefore, you'll make yourself easy; come, you'll promise me that!"

"I will," said Snipeton, a little softened.

"You give me new heart. Come, another glass."

"Not another drop. Pen and ink, if you please. I must write a little prescription for a little nothing for your good lady; not that she wants medicine," said Crossbone.

"Then why poison her with it?" asked Snipeton with some energy.

"She would n't be satisfied without it. Therefore, just a little colored negative; nothing more." Pen and ink were ordered, brought; and Crossbone strove to write as innocently as his art allowed him. "There must be an apothecary at Hampstead, and I'll send the man with it;" and Crossbone folded the prescription, and rose.

"And when shall we see you again?" asked Snipeton.

"Why, in two or three days. But I have done all the good I can at present. You'll try the horse!"

"I will."

"And the man?"

"I'll think of him.—Tell me, does he know anybody in London?"

"Any calf you like, brought to Smithfield, knows more of the ways—more of the people of town. He's a regular bit of country turf. Green and fresh. Else do you think I'd recommend him!" asked Crossbone very earnestly.

"I almost think—I mean I'm pretty sure—that is, I will try him," said Snipeton.

"Then between ourselves, I've recommended you a treasure. And—stop; I was about to go, forgetting the most important thing. You heard me say that dumps were catching? I hope you've thought of that. Now, that Mrs. Wilton—the housekeeper—she'd ruin any young woman. Bless you! She's hypochondria in petticoats."

"Humph! I don't know; I prefer a serious woman for her calling. Perhaps a little over melancholy to be sure, nevertheless!"

"Well, I'll say no more. After all, she may only seem melancholy to us. There may be a great deal of fun in her, for all we know. Some people remind us of mourning coaches at a funeral: the outside's dull and solemn enough; and so, folks never think of the jokes that's flying inside of 'em. As a professional man I know this, Mr. Snipeton; and therefore I hate your very grave-looking people. If they really are what they look, they're bad; if they aren't they're worse. And in a word—I might say more if I chose, but I won't—in a word, I don't think that Mrs. Snipeton will ever get any good from your housekeeper. Good bye, God bless you;—the man shall bring the medicine." So saying, and looking deepest mystery, Crossbone departed.

The apothecary had achieved more than he had

hoped. It was very true, thought Snipeton, the woman was cold—melancholy. Again, she had never looked upon him with pleasant looks. Her respect seemed wrung from her: it was not free—natural. And yet her eye watched his wife with unceasing regard. Every moment—when least wanted, too—she was hovering near her. How was it, he had never seen this before? It was plain the woman had some false influence; exercised some power that estranged his wife from him.

Let us leave Snipeton for a brief time struggling and weltering in this sea of doubt; now trying to touch certain ground, and now carried away again. Let us leave him, and follow the apothecary. He had had just wine enough; which circumstance was to him the most potent reason for having more. He had put up at the Flask at Hampstead; and to that hostelry he strode, St. Giles silently following him.

"My man," said Crossbone, "who was your father—where were you born—what have you been doing—and where do you come from? An answer if you please to each of these questions."

St. Giles, plucking up courage, simply replied—"I am his lordship's servant; and have his orders to follow you."

"There 's not the slightest doubt, his lordship's servant, that you 're a convenient rascal of all work, and quite up to the business we shall put you on." Let not the reader imagine that these words were uttered by Crossbone: by no means: not a syllable of them. But the thought—the ethereal essence of words—had touched the brain of the apothecary, and his whole frame tingled with the awakened music. He had found a scoundrel, he was sure of it, and he was happy.

"Very good, my man; very good, I understand you. As you say, you are his lordship's servant, and have his lordship's orders to take my directions. Very well. You will please to take your father and mother from my hands: understand for once that they were honest, respectable people; and be grateful for the parents I've given you. Your father, good man! was killed by a windmill; and your mother still lives in the country, and regularly takes three fourths of your wages. And you are not to forget that you have a great love for that mother. And now, take this prescription to the apothecary's; tell him to make it up, and send to Mr. Snipeton's. After which, you 'll come to me at the Flask. Go." St. Giles, with perplexed looks, obeyed Crossbone, and went upon his errand. "I've given the vagabond a father and mother to be proud of—it 's quite clear, much better than were really bestowed upon him; and he has n't a word of thanks to say upon the matter. Let a gentleman lie as he will for the lower orders, they 're seldom grateful. Nevertheless, let us have the virtue that he wants. Were he a piece of pig-headed honesty, he would n't suit our work. No: Providence has been very good in sending us a rascal." With these mute thoughts, this final thanksgiving, did Crossbone step onward to the Flask. He would there further ponder on the plan that, throwing Snipeton's young wife into the arms of a young nobleman—and, in common justice, so old and vulgar a man had no claim to such refinement and beauty; she must have been originally intended for high life, and therefore cruelly misapplied—would throw him, Crossbone, the prime conspirator, into the very highest practice. He would keep a carriage! As he looked at the glorious clouds, colored by the setting sun, he felt

puzzled whether his coach panels should be a bright blue, a flame-colored yellow, or a rich mulberry. Still the clouds changed and shifted, and still with the color of his carriage at his heart, he looked upon them as no other than a celestial pattern-book, rolled out to help him in his choice. The wide west was streaked and barred with gold; and staring at it, Crossbone was determined that lace—three-inch lace—should blaze upon his liveries. And rapt in this sweet dream, he walked on, his heart throbbing to the rumbling of his coach-wheels. That music was so sweet, so deep, absorbing, that accompanying his footsteps, he was within a few paces of the Flask ere he saw a crowd gathered about the door, and heard the words "he 's killed." His professional zeal was immediately quickened, and hurrying into the middle of the crowd, he saw the body of a man, apparently lifeless, carried towards the inn. The people crowded around, and by their very anxiety impeded the progress of the bearers towards the door. "Stand aside, folks—stand aside," cried Crossbone, "I 'm a physician; that is, a medical man. Keep his head up, fellow."

"Get out o' the way," exclaimed a stranger, "you don't know how to carry a fellow-creetur," and the benevolent new-comer thrust aside the rustic who was, awkwardly enough, supporting the shoulders of the wounded man, and with admirable zeal, and great apparent tenderness, relieved him of the charge. "Poor soul—poor soul!" he cried, much affected, "I do wonder if he 's a wife and family?"

"A bed-room; immediately—a bed-room," exclaimed Crossbone; and his sudden patient was carried up-stairs, Crossbone following. As he ascended, a horse bathed in foam, and every muscle quivering, was led to the door.

"It 's my belief that that Claypole sends out his boy to fly his kite a purpose to kill people, that he may bury 'em. That 's the third horse he 's frit this week; the little varmint! And this looks like death any how." Thus delivered himself, a plain-spoken native of Hampstead.

"You may say death. Cracked like a egg-shell," and saying this, the speaker significantly pointed to his own skull. "The doctor 's a trying to get blood: it 's my opinion he might as well try a tomb-stone. Well, this is a world, is n't it? I often thanks my luck I can't afford a horse; for who 's safe a-horseback? A man kisses his wife and his babbies, if he has 'em, when he mounts his saddle of a mornin'—and his wife gets him lamb and sparrow-grass, or something nice for supper—'xpecting him home. She listens for his horse's feet, and he 's brought to his door in a shell."

"Well, mate, you do speak a truth; nobody can deny that," said one of the mob; who, it is probable, scarcely dreamt that the sometime moralist and truth were so very rarely on speaking terms. And this the reader will, doubtless, admit, when we inform him that the man who so humanely, so affectionately lent his aid to the thrown horseman, helping to bear him with all tenderness up-stairs, was Mr. Thomas Blast. It was his business, or rather, as he afterwards revealed, his pleasure to be at Hampstead—his solemn pleasure. At this moment, St. Giles, on his return from the apothecary's, came to the inn-door. Ere he was well aware of the greeting, his hand was grasped by Blast—"Well, how do you do? Who'd have thought to see you here?" Who, in sooth, but

Blast himself—seeing that he had dogged his prey from St. James'-square? "Ha! my good friend," cried Blast, very much moved, "you don't know the trouble I've had since we met. But you must see it in my looks. Tell me, aint I twenty years older?"

"I don't see it," muttered St. Giles; though, assuredly, such a sight would have carried its pleasure to the runaway transport.

"Ha! you won't see it; that's so like a friend. But don't let us stand in the street; come in and have a pot; for I've somethin' to say that'll set your art a bleeding." Hoping, praying, that Crossbone might not observe him—and feeling dwarfed, powerless, under the will of Blast—St. Giles turned into a side-room with his early teacher and destroyer.

"I don't feel as if I could do anything much in the way of drink," said Blast, to the waiter following, "and so, a little brandy-and-water. Well, you wonder to see me at Hampstead, I dare say! You can't guess what brings me here?"

"No," said St. Giles. "How should I?"

"I'm a altered man. I came here all this way for nothin' else but to see the sun a settin'. Your health;" and Blast, as he said, did nothing in the way of drink: for he gulped his brandy-and-water.

"To see the sun a settin'!" cried St. Giles; we fear, too, a little incredulously.

"Ha! you're young, and likes to see him a gettin' up; it's nat'ral; but when you're my time o' life, and have stood the wear and tear o' the world as I have, you'll rather look at the sun when he sets, then. And, do you know why? You don't! I'll tell you. Acause, when he sets, he reminds you of where you're agoing. I never thought I should ha' been pulled up in the way I have been. But trouble's done it. My only comfort's now to look at the settin' sun—and he sets nowhere so stylishly as here at Hampstead."

"Humph! And so you've had trouble!" said St. Giles, coldly.

"Don't talk in that chilly way, as if your words was hailstones. I feel as if I could fall on your neck, and cry like a 'oman. Don't freeze me in that manner. I said trouble. Loss o' property, and death."

"Death!" cried St. Giles.

"Little Jingo. That apple o' both my eyes; that tulup of a child. Well, he was too clever to live long. I always thought it. Much too for'ard for his age. He's gone. And now he's gone, I do feel that I was his father." St. Giles stifled a rising groan. "But—it's my only comfort—he's better looked arter now than with me."

"No doubt," said St. Giles with a quickness that made Blast stare. "I mean, if he is where you hope he is."

"I should like to pay him some respect. I don't want to do much: but—I know it's a weakness; still a man without a weakness has no right to live among men; he's too good for this sinful world. As I was saying, I know it's a weakness: still, I should like to wear a little bit o' black—if it was only a rag, so it was black. You could n't lend me nothing, could you? Only a coat would be something to begin with."

St. Giles pleaded in excuse his very limited wardrobe; and Blast was suddenly satisfied.

"Well, he's gone; and if I was to go as black as a nigger, he would n't rest the better for't. Besides, the settin' sun tells me we shan't be long apart. Nothing like sunsets to pull a man up;

and so you'll know when you've had my trouble. Your health agin."

"And you have had a loss of property besides?" asked St. Giles.

"Look here," cried Blast, taking off his hat and rumpling up his hair: "there's a change! Once as black as a crow; and now—oh, my dear friend"—St. Giles shrunk at the appeal as at a presented pistol—"if you want to put silver on a man's head, you've only to take all the gold out of his pocket. Had a loss! You may say a loss. I tell you what it is: it's no use for a man to think of being honest in this world: it is n't. I've tried, and I give it up."

"That's a pity," said St. Giles: knowing not what to say—knowing not how to shake off his tormentor.

"Why, it is; for a man doesn't often make his mind up to it. Well, I've had my faults, I know; who has n't! Still, I did think to reform when I got that lump of money; and more, I did think to make a man of you. I'd chalked out the prettiest, innocentest life for both on us. I'll make a sojer of Jingo, I thought; yes, I'll buy him some colors for the army, and make him a gen'lman at once. And then I thought we would so enjoy ourselves! We'd ha' gone and been one all among the lower orders. In summer time we'd ha' played at knock 'em down with 'em, jest to show we was all made o' the same stuff; and in winter we would n't ha' turned up our noses at hot-cockles, or blind-man's buff, or nothin' of the sort; but ha' been as free and comfortable with the swinish multitude (for I did begin to think 'em that when I got the money) as if they'd got gold rings in their noses, and like the pig-faced lady, eat out of a silver trough. I thought you'd be a stick to my old age. But what's the use o' thinking on it! As my schoolmaster used to say—'Him as sets his heart on the things of this life'—I've forgot the rest: but it's all of a piece."

"And how did you get this money?" asked St. Giles, with very well-acted innocence.

"How did I get the money! How should I get it! By the sweat of my brow." And so far, the reader who remembers the labor of Blast in his theft of the gold-box, may acquit him of an untruth.

"And having got such a heap of gold," rejoined St. Giles, "pray tell me—how did you lose it?"

Now Blast had, and never suspected it, a sense of humor: he could really enjoy a joke when least palatable to most men; namely, when made against themselves. Nevertheless, with people who have only a proper pride of such philosophy, he had his share of sensitiveness, to be called up at a reasonable crisis. Hence, when St. Giles pressed him to explain his loss, the jest became a hurt. Good nature may endure a tickling with a feather, but resents a scratch from a tenpenny nail. "My dear young friend," said Blast, "don't do that; pray don't. When you're as old as me, and find the world a stippin' from under you like a hill o' sand, you'll not laugh at the losses o' gray hairs," and again Blast drew his fingers through his locks meekly, mournfully. "How did I lose it! No: you warn't at Liguorish, you warn't! No; you don't know! Well, I hope I'm not much worse than my neighbors; and I don't like wishing bad wishes, it is sich old woman's work; it's only barking the londer for wanting teeth. But this I will wish; if a clergyman o' the 'Stab-

lished Church is ever to choke himself with a fish-bone, I do hope that that clergyman does n't live far from Lazarus, and that his name begins with a G. I'm not a spiteful man; and so I won't wish anything more plain than that. But it is hard"—and again Blast, he could not help it, recurred to his loss—"it is hard, when I'd resolved to live in peace with all the world, to give a little money to the poor, and—as we all must die—when I did die, to have such a clean, respectable monument put up to me inside the church, with a naked boy in white stone holding one hand to his eyes, and the other putting out his link—you've seen the sort o' thing I dare say!—it is hard to be done out of it after all. It's enough to make a man, as I say, think o' nothin' but the setting sun. Howsomever, it serves me right. I ought to ha' know'd that such a fine place must ha' belonged to the clergyman. If I'd hid the box in a ditch, and not in a parson's fish-pond, at this blessed moment you and I might ha' been happy men; lords for life; and, what I've heard, called useful members of society. And now, mate," asked Blast with sudden warmth—"how do you like your place? Is it the thing—is it clover?"

"What place?" asked St. Giles. "I'm in no place, certain, as yet."

"There, then, we won't say nothin' about it. Only this. When you're butler—if I'm spared in this wicked world so long—you won't refuse an old friend, Jingo's friend, Jingo's mother's friend"—St. Giles turned sick at his mother's name, so spoken—"you won't refuse him a bottle o' the best in the pantry? You won't, will you? eh?"

"No," stammered St. Giles. "Why should I? Certainly not, when I'm butler."

"And till then, old fellow,"—and Blast bent forward in his chair, and touched St. Giles' knee with his finger—"lend us a guinea."

St. Giles recoiled from the request; the more so, as it was seconded by contact with the petitioner. He made no answer; but his face looked blank as blank paper: not a mark was in it to serve as hieroglyph for a farthing. Blast could read faces better than books. "You won't then? Not so much as a guinea to the friend of Jingo's mother?" St. Giles writhed again at the words. "Well, as it's like the world, why should I quarrel? Now jest see the difference. See the money I'd ha' given you, if misfortin had n't stept in. 'He's a fine fellow,' I kept continually saying to myself; 'I don't know how it is, I like him, and he shall have half. Not a mite less than half.' And now, you won't lend me—for mind I don't ax it as a gift—you won't lend me a guinea."

"I can't," said St. Giles. "I am poor myself: very poor."

"Well, as I said afore, we won't quarrel. And so, you shall have a guinea of me." Saying this, Blast with a cautious look towards the door, drew a long leathern purse from his pocket. St. Giles suddenly felt as though a party to the robbery that—he knew it—Blast must somewhere have perpetrated.

"Not a farthing," said St. Giles, as Blast dipped his finger and thumb in the purse. "Not a farthing."

"Don't say that; don't be proud, for you don't

know in this world what you may want. I dare say the poor cretur up stairs was proud enough this mornin'; and what is he now?"

"Not dead!" cried St. Giles. "I hope not dead."

"Why, hope's very well; and then it's so very cheap. But there's no doubt he's gone; and as he's gone, what, I should like to know"—and Blast threw the purse airily up and down—"what was the use of this to him?"

"Good God! You have n't stole it?" exclaimed St. Giles, leaping to his feet.

"Hush!" cried Blast, "don't make such a noise as that with a dead body in the house. The worst o' folks treat the dead with respect. Else people who're never thought of at all when in the world, would n't be gone into black for when they go out of it. I'd no thought of the matter, when I run to help the poor cretur: but somehow, going up stairs, one of his coat pockets did knock at my knuckles so, that I don't know how it was, when I'd laid him comfortable on the bed, and was coming down agin, I found this sort o' thing in my pocket. Poor fellow! he'll never miss it. Well, you won't have a guinea then?"

"I'd starve first," exclaimed St. Giles.

"My good lad, it is n't for me to try to put myself over your head—but this I must say; when you've seen the world as I have, you'll know better." At this moment, the waiter entered the room.

"How is the poor gentleman up stairs?" asked St. Giles. "Is there no hope?"

"Lor bless you, yes! They've bled him and made him quite comfortable. He's ordered some rump-steaks and onions, and says he'll make a night of it." Thus spoke the waiter.

"Do you hear that?" asked St. Giles of Blast.

"Sorry to hear it: sorry to think that any man arter sich an escape, should think o' nothing better than supper. My man, what's to pay?" St. Giles unbuttoned his pocket. "No; not a farthing; tell you, I won't hear of it. Not a farthing; bring the change out o' that," and Blast laid down a dollar; and the waiter departed on his errand.

"I tell you, I don't want you to treat me; and I won't have it," said St. Giles.

"My good young man, a proper pride's a proper thing; and I don't like to see nobody without it. But pride atween friends I hate. So good bye, for the present. I'll take my change at the bar." And Mr. Blast was about to hurry himself from the room.

"Stay," said St. Giles; "should I wish to see you, where are you to be found?"

"Well, I don't know," said Blast. "Sometimes in one place—sometimes in another. But one thing, my dear lad, is quite sure." Here Blast put both his hands on St. Giles' shoulders and looked in his face with smiling malignity—"one thing is quite sure: if you don't know how to find me, I shall always know where to come upon you. Don't be afraid of that, young man."

And with this, Blast left the room, whilst St. Giles sank in his chair, weary and sick at heart. He was in the villain's power, and seemed to exist only by his sufferance.

DROMIO PUBLICATIONS.

THE withering ridicule bestowed by Horace upon literary imitators in his one emphatic appellative, "servile herd," has been repeated times without number, and the veriest tyro is now aware that theirs is, of all the sins of composition, the greatest. But since Horace's time, an entirely new kind of literary imitation has come upon the field, one in which publishers are primarily, and in general authors only secondarily, concerned. It consists in the presentment of works in direct imitation of others which, whether from their originality and merit, or from their aptly subserving some public need, have met with success. The writings of Swift and Pope tell us of a branch of "the trade" devoted to this business early in the last century, with Edward Curl for its most eminent professor. But it has, in our time, reached a magnitude, compared with which its early history is as mewling infancy to a Hercules' manhood. It is now absolutely impossible for the slightest originality to be shown in any of the forms of paper and print, but it is immediately run upon by scores of the bibliopolic pecus, and tossed and gored into a thousand deformations.

There is a vast number of grades in this imitative power—altogether apart, it must be understood, from respectable efforts in the line of fair competition—from him who can get up a simulative novel or periodical, down to the poor serf who limits his efforts to the counterfeiting of a clever book-cover. It is, however, all one thing in its ultimate character—an effort to come in for a share of the benefits which some wits of a happier kind are supposed to derive from their originality. One cannot but be somewhat amused in contemplating the proceedings of these dullards. Their private ratiocinations are of course simple enough: "There are Smart and Spritely—understood to make a capital thing by that magazine of theirs; can't we get up something of the same kind, and take a share of their profits?" Here is the real principle of action; but of course the public must be told something else. A prospectus accordingly deplores the absence of a certain desirable character in all existing periodicals. They are too utilitarian, and do not address themselves sufficiently to the feelings; or perhaps they are too sentimental, and do not condescend sufficiently to the affairs of common life. Anything will do that may serve to mask the real object—that of draining away a portion of the patronage bestowed upon Smart and Spritely. Sometimes even a tone of censure is assumed towards the parent works. They are misleading guides: much need has the poor public to be rescued from them. Here is the pure and clean tuber at last! An instance could actually be shown of this kind of swagger being assumed, where the extreme meanness had been descended to of stealing part of the name, as well as imitating the form, of the work rivalled. What an odd idea—pretending to a superior virtue over the publication for which it was willing to be mistaken! But such is the nature of the herd in general. Capable of the sneakery of a direct imitation, they seem to be capable of any inconsistency in working it out. Hence all the progeny of successful works are more or less parricidal in their tone. The parent is astonished to find twenty images of himself putting on a hostile frown against him, and that faults and failings in his character, which the world never could see, are at length detected and exposed by his own children.

To achieve an end with that unfortunate poly-poid animal, the public, is of course the real intention of these breaches of the fifth commandment. The public, to do it justice, means well and dreams not of evil. But this just the more lays it open to be practised upon by the fraternity of imitators. The public wishes to be shaved; it has heard of a clever artist in that line near the Blue Poets; it seeks the shop according to a description it has got, and blunders into one of four exactly imitative barbers' tabernacles which have been got up by the side of the meritorious original. The public has heard of an amazingly clever cork-screw, which whips corks out of bottles as it were by magic, and it goes to provide itself with the admirable instrument: it does not get the genuine screw, but one made by a man with a similar name, and who, being a numskull, gives his wares only an appearance, but not the reality, of their pretended virtues. Again, the public is anxious to get a certain pill, in which it has been taught, from its youth up, to place reliance: it sends for a three-shillings-and-sixpence box, and is supplied with a base imitation, loudly proclaiming on its cover, "Be sure to ask for the true-blue antibilious pill, prepared by ———." Thus is the public imposed upon in literature also. To every favorite work which it may desire, it has to make its way through an entangling brushwood of simulative works, all pretending to be the true work in the first place; and in the second, if the first trick fail, to be better. Every now and then its attention is attracted by a prospectus which will not be overlooked; for go where the public will, there is the portentous announcement. Well, the public reads the advertisement, and (we shall suppose the thing referred to is a newspaper) not being behind the scenes in such matters, it yields a kind of credence to the tale which it is told—as to interests of its own to be advanced, and so forth. It purchases; it reads; half-recollecting all the time that there were very tolerable publications of that kind before, even to the minutest specialty of character; rather hazy, however, about the fact; always looking for the outcome of the great promise—when is the fun to begin? Why, after all, the old work was just as good, or rather better. What is the meaning of all this? Only, dear public, that a certain worthy person, who could not start an idea of his own, got up behind another man's idea, and tried all he could to oust him from the possession of his own vehicle. There is nothing else in the whole matter. But only thou, silly public that thou art, couldst never see it.

It is melancholy, too, this desperate struggle to get bread reft from each other's mouths. It is not all slavish meanness of soul. Often there is ingenuity of no inconsiderable amount expended in getting up a passable imitative work. Often wonderful sacrifices of capital and labor are made to thrust the secondary work into the saddle of its primary. It was lately stated that an imitative weekly newspaper had caused an outlay of twenty thousand pounds, the return of which was one of the remotest of contingencies. What heroisms these are in their way!—perverted, misapplied, yet still heroisms—elements in what might, associated with purer elements than acquisitiveness for self and partners, constitute great characters. One could almost weep over human nature thrown into positions so wretchedly false, and the redemption from which seems, for the present at least, so hopeless.

—Chambers.

From *Fraser's Magazine*.

THE CAGED LARK.

Hour by hour the dreary day
 Slowly, sadly wore away;
 Heavy drops of ceaseless rain
 Beating 'gainst the window-pane;
 Bitter winds with gusty sound
 Mournfully were wailing round,
 Till at last the outward gloom
 Seemed to fill my quiet room,
 And I looked with tearful eyes
 Upward to the weeping skies.
 Now and then a few quick feet
 Passed along the village street,
 Now and then a child's shrill cry
 Mingled with the wind's deep sigh.
 Many a thought of other days—
 Fairer scenes and brighter Mays—
 Filled my discontented heart:
 I, who oft had taken part
 In the gladness of the spring;
 I, whose joy it was to sing
 Of the earth's awakening
 From her ice-bound wintry sleep,
 Now could only pine and weep,
 For my soul grew faint and dull,
 Longing for the beautiful.

"Spring was wont of old," I said,
 "Blessings on my path to shed.
 Once her skies were all serene,
 All her fields of richest green,
 All her flowers of loveliest sheen.
 Then the hidden cuckoo sang,
 Till the leafy greenwood rang
 With his lay, and thousands more
 Sounding till the day was o'er;
 Nor were even hushed at night
 Songs and echoes of delight.
 Then, where'er my feet might tread,
 Starlike flowers were gaily spread:
 Studded were the banks and fields
 With the primrose' yellow shields,
 Cowslip-bells and violets small
 Blossomed ere the grass was tall,
 And the murmur of the bee
 Ever rose unceasingly,
 Where the scented furze unrolled
 Banners fair of green and gold.
 Then the bright-winged butterfly,
 Like a dream of joy, flew by,
 Or awhile in quiet hung
 Where the tufted harebells swung.
 All of old was bright and glad,—
 Now, alas! how changed and sad!
 Now the skies are cold and grey,
 And throughout the live-long day,
 Prisoned in my room, I hear
 Not a sound of joyous cheer—
 Nothing but the ceaseless rain
 Beating 'gainst the window-pane,
 And the wind, with hollow tone,
 Round my dwelling making moan.
 Few and pale the leaves I see
 Budding on yon chestnut-tree.
 Here and there, within the bound
 Of my plot of garden-ground,
 Some stray flower of fairest dye
 Half unveils its timid eye,
 Till the storm-blast, rushing by,
 Blights its charms, but half-revealed,
 And its early doom is sealed.

Spring-time—season sad and drear,
 Once the gayest of the year,
 I am altered e'en as thou!
 Pain hath left upon my brow
 Shadows that may ne'er depart;
 Care hath brooded at my heart,
 Till I feel I cannot be
 E'er again in spirit free.
 Now I have no spells to raise
 Thoughts that cheer'd my brighter days;
 Other visions life hath brought,
 Sadder lore than once I sought."

Thus, in lonely hour, I said,
 Half believing joy had fled,
 And my own bright hopes were dead.
 Suddenly, while still I spoke,
 Blithest music near me woke,
 Piercing through the gloomy air,
 Like a voice of praise and prayer.
 Though the wind blew loud and shrill,
 Yet it had not power to chill
 Gladness such as filled that strain;
 And the shower beat in vain
 Round the prison, where had birth
 Those rich sounds of dauntless mirth.
 Well I knew the strains I heard
 Came from an imprisoned bird,
 One whose nature was to cleave
 Freest air from morn till eve,
 Fane to greet with fearless wing
 Sunshine and the breath of spring.
 Yet, though men had done him wrong,
 Still arose his cheerful song;
 Still, although the clouds were dark,
 Wildly sang that captive lark.
 Quickly faded the distress
 Of mine hours of loneliness.
 Near me seemed to pass once more
 Lovely things I'd seen of yore;
 Sense of all the love and joy
 Time and change could ne'er destroy.
 Thoughts of eyes whose loving light
 Still could make my dwelling bright,
 O'er my spirit rushed again,
 At the bidding of that strain:
 And my humbled head I bent,
 Heedful of the lesson sent
 To rebuke my discontent.

Brightly falls the sunshine now
 On each blossom-laden bough.
 Every moss-grown apple-tree
 Is a lovely sight to see,
 With its bloom in clusters fair
 Opening to the sunny air.
 Breezes, stealing round about,
 Shake the hidden fragrance out,
 Flinging on the ground below
 Frequent showers of mimic snow.
 Gleams of purest white are seen
 'Mid the chestnut's tufts of green;
 Pyramids of pearly flowers
 Peeping from their thick-leaved bowers.
 'Mong the boughs light breezes pass,
 And the shadows on the grass
 Move the while like living things;
 Many a pendent blossom swings
 From a lofty sycamore,
 And along the turf floor
 Thick the lowly daisies beam;
 King-cups shed a golden gleam
 O'er the meadows near the stream.
 Proud, and beautiful, and strong

Still the river sweeps along.
 Here and there a pleasant shade
 Elm or hawthorn-bough hath made,
 Or the willow's streamers gay
 Throw their shadow on its way:
 Beauty more than gloom they shed
 O'er the river's sunlit bed.
 Swallows in their merry flight
 Haunt the stream from morn till night.
 Gracefully as fairy boat
 On a magic lake might float,
 Now and then a milk-white swan
 In his stately joy moves on.
 Yet though spring's rich beauty glow
 As it did long years ago,
 I am but a captive still
 With an oft-impatient will;
 But whene'er my heart is fain,
 In its weakness to complain,
 Hark! for once again I hear
 Blithest music, rising clear
 From that other captive near.
 Little of the sky he sees,
 Little of the flowers and trees;
 Little he was used to rove,
 Houses round him and above!
 Yet upon the sod he stands
 (Laid, perchance, by kindly hands
 On his prison-floor) and sings,
 E'en as if his folded wings
 Still were free to range at will
 Higher than the highest hill.
 And again my heart will heed
 This sweet lesson in its need;
 And in other's bliss rejoice,
 Bidden by that captive's voice.

May, 1845.

From the Spectator, 30 May.

THE DEBATE IN THE LORDS, ON THE CORN BILL.

THE debate lasted three long nights. With fewer speeches, more elaborate preparation, a greater stateliness of manner, and less unmeasured rudeness in decorum than in the commons, the progress of the discussion has not fulfilled the Duke of Richmond's promise, that after the first stage personalities should be altogether avoided. The Earl of Ripon, who led the debate, began it, in no unworthy spirit however, with personal matters: he made a great point of exonerating himself from the imputation of inconsistency. He, it seems, the introducer of the corn-law of 1815, was even at that time in the main opposed to any corn-law at all; and he assented, not on the score of "protection to native industry," but "independence of foreign countries." So likewise the Earl of Haddington, it now turns out, has long avowedly changed his mind on the subject of protection. It is easy to sneer at these avowals and treat them as insincere: there is every reason to believe them quite sincere. Had these peers possessed a mere ambition for place, they might have whistled off Sir Robert Peel, and, by strengthening Lord Stanley, have prepared a new way to office; for, thus supported, his prospect would have been very different from what it now is. But, whatever the motive that actuates them, the effect is plain: Sir Robert Peel's advance in the direction of free trade has induced an extraordinary move among the quondam Tories: free-traders, it appears,

lurked there; and now we have them out, converting old obstructors into most efficient auxiliaries in the progress of opinion.

To the worst class of personalities the protectionists stuck with a pertinacity that would have been amusing if it had not been repulsive. Sir Robert Peel and his misdeeds were the main object of their diatribes; but the League came in for a share, with the imputation of all sorts of bad motives and evil designs. The Duke of Richmond abandoned himself as thoroughly as any speaker to vituperation; and, with more or less coarseness or delicacy, all who followed on his side made the question hinge on the personal part of the affair. Even the venerable and diplomatic Lord Ashburton, though statistical, was also personal. Lord Stanley's speech, pronounced by eulogists to be his masterpiece, was no exception. Composed with all the skill that his natural cleverness and parliamentary practice could command, and comprising all the points and commonplaces of the subject, it did not contain one new idea—it placed nothing in a new light. But it reanimated the dead, recalled the forgotten, reproduced the abandoned; tricked them out in rhetoric that pleased the ear; and with the nice tact of a true speaking artist, touched very tenderly the frail topics that shunned the grasp of masculine reasoning and the light of exposure. The "great speech" was constructed as much as possible to inflict pain. In some of the most studied passages, personal malignity towards Sir Robert Peel seemed to inspire every word. The assault, indeed, was clothed in decorous language, but not disguised; and when he, most untruly, described "his right, honorable friend" as mistaking clamor for the deep still flow of public opinion, he but echoed in more courteous phrase the Duke of Richmond's imputation of incompetency and cowardice. The reason for this position of Lord Stanley is explained by the sequence of facts. Lord Stanley was not felicitous in the administration of colonial affairs; he was virtually set aside in the New Zealand business, silenced when he would have given tongue, and "pitchforked" into the house of lords, not as promotion, but as a way of shelving him; and the series of significant facts is crowned by the outburst of this speech. His object in it seems to have been to emulate, to outdo Mr. Disraeli. His statistics were similar, but not quite so wild: foreign corn, for instance, is to come in under the new bill at 40s., instead of 35s.; and the quantity, three years hence, is to be not indefinite, but 5,000,000 of quarters. His language also was more subdued—more "genteel"—in manner: but not in spirit. Mr. Disraeli never attained office, and assails Sir Robert Peel: Lord Stanley has lost office, and assails Sir Robert Peel. The Disraeli of the lords is as clearly a disappointed man as his prototype in the commons. The single new fact in Lord Stanley's speech, if it is new, was the confession that in Sir Robert Peel's cabinet he was quite alone in resisting the proposal to abolish the corn laws. Lord Haddington appears to have been at first a supposed companion in dissent; but he was really as hearty in assent as any. Of all the leading men in the conservative party, therefore, Lord Stanley is the only one who deserts the onward policy of Sir Robert Peel.

Personalities also formed a prominent feature in some whig speeches. The party held a meeting at Landsdowne House on Saturday, and agreed to act in a body as supporters of the bill. It is evi-

dent that without some such restraint Lord Normanby would have been one to mutilate the measure. He talked of the fixed duty; strayed somehow to the subject of sanatory improvements; puzzled about house-rents in town and country; seemed to regret that Sir Robert Peel should be the man to introduce so good a measure; and finished by saying that he should support it. Lord Normanby vacillates between his patriotism and his party ties: he is evidently a man of the past. Lord Clarendon's masterly speech shows him to be a man of the present—one who can command events. He forgot faction and old feuds, and appeared as a leading man in the party of those who have for their sole object the service of the country. Less showy than Lord Stanley's speech, Lord Clarendon's outlives it: there is between the two all the difference between the real and the unreal; and Lord Clarendon will probably be working officially as a statesman when Lord Stanley is forgotten as an orator. Another whig, if so he can be called, that deserved well, is Earl Grey; who spoke at the opening of the third night. He did not enter at all into the party questions, but did good and laborious service in exposing Lord Stanley's tissue of glittering hollowness; picking to pieces his arguments, confuting his facts, rubbing off his glosses. Lord Stanley had a Liverpool correspondent, whose letter he read obviously because it contained abuse of Sir Robert Peel: Lord Grey also had a Liverpool correspondent, who utterly refuted Lord Stanley's statistics, with his terrible prophecies of exhaustless supplies to swamp the British corn-market.

The third night, and the debates were wound up by the Duke of Wellington, in a speech of characteristic brevity, plainness, and directness—worth, at that stage, volumes of argumentation. He forcibly set forth the political necessity under which he and his colleagues acted: he warned the house against the suicidal impolicy of endeavoring to brave the crown and the popular branch of the legislature. Recurring to personalities, he shadowed forth a fine sentiment; his position is peculiar; if he has rendered public services, have they not been strikingly acknowledged! the favors conferred upon him by crown and country have removed him from party—he owes higher obligations. Most nobly spoken: and well has he fulfilled those obligations now, not perhaps without some sacrifice of associations and predilections. He hinted, too, that this perhaps was the last occasion on which he might tender his advice. On the whole, the great captain's admirable address was calculated to bring back the peers to the common sense of the question, and to the higher views which had at times been forgotten. It fitly ushered in the triumph of the popular measure; whose march has been signalized, not by clamor and outrage, but by the deliberate concurrence of all parties save one in a national act.

Incidentally connected with these movements of party, is the conduct of Lord John Russell; which has been more creditable in the way of leadership than it had hitherto seemed. To him is the merit imputed of convening the whig peers at Landsdowne House, to keep them in order for the task of passing the bill. There might be a sharp eye to self-interest in his doing so. As Ireland was Sir Robert Peel's "difficulty," the corn bill was Lord John's: he was bound to pass it, but wanted strength for the Herculean labor: it was of vital importance that Sir Robert Peel should get it out

of the way before the whig reëcession. Hence the magnanimity. We are glad to see the whigs take so intelligent a view of their own interests.

Another astute move by the premier-proximate is on the sugar-duties. Lord John Russell has recorded his intention to abolish the differential duties. Luckily for that whig advance, Mr. Hume, at the instance of the minister, has waived his resolutions on the West Indies. The less done in that behalf before Lord John enters the field, the better for him. This notice of Lord John's is his "London letter" of the sugar-duties. Under different circumstances, it might, indeed, have the awkward effect of making Sir Robert Peel attend to the subject himself; in which case, Lord John's embryo scheme would probably be superseded by one more comprehensive and thoroughgoing. But the chances are in his favor, as Sir Robert's hands are full. He will probably not have time to overcome the "split in the cabinet" on the sugar question, before the opportunity is gone. Whig prospects, therefore, are looking up.

THE PORTUGUESE JEWS.

"THE Portuguese nation," says the Duchess of Abrantes, "is three parts Jewish." Obligated to conform outwardly to the Church of Rome, so strong was their attachment to the religion of their ancestors, that the government, through motives of policy, was obliged from time to time to acknowledge the existence of the feeling; and at length by an edict, in the year 1773, allowed the children of Moses to hold their festival—relieved them from taxes levied on them as Jews—and made honorable mention by name of certain officers of state who were Jews, yet had been prime ministers and treasurers, and finally declared that "the blood of the Hebrews is the blood of our apostles, our deacons, our presbyters, and our bishops."

Prior, however, to this act of toleration, the flames of the *Autos de Fe*, and the dungeons of the Inquisition, had, by the terror they inspired, driven from their homes great numbers of the Portuguese Jews. These, generally speaking, fled to England and Holland. They were composed of all ranks—noblemen, officers, learned physicians and opulent merchants;—many carried with them great wealth, and there were individuals who maintained in England a ducal establishment. The first names of the Portuguese nation may still be traced among their present descendants, who occupy very different situations. The Villa Reals, the Alvaréz, the Mendez, the Francos, the Rebellos, the De Salvas, the Garcias, the D'Aguilans, the Souzas, the De Castros, the Salvadors, and a long list, betray their Lusitanian lineage.

These distinguished persons constituted for many years what is called the community of Spanish and Portuguese Jews of London. The nobler families who brought wealth, assumed their rank in society. The mercantile class opened new sources of commerce—many of their physicians have obtained great practice in England; and Jews have excelled in that science from remote ages.

The Portuguese Jews of London could never drop their national characteristic; they were remarkable for their haughtiness, their high sense of honor, and their stately manners. Subsequently, Jewish emigrants flocked from Germany, Poland and Barbary, a race in every respect of infe-

rior rank. The Portuguese shrank from all contact with them; different synagogues separated them; and the Lusitanian Jew would rather have returned to the fires of Lisbon than have intermarried with the Jew of Alsace or Warsaw. The latter was humiliated by indigence, and pursued the meanest and not unfrequently the most disreputable crafts. The former, opulent and high-minded, indolent, polished and luxurious, splendid in dress and equipage, felt himself disgraced by the beard and gabardine of the Polander.

As the property of the Jews was formerly entirely personal, and they were prohibited from holding real estate, the wealth of Jewish families, it has been observed, never outlasted two generations. This has been the fate of the Portuguese Jews. By the chances and changes of fortune, some of the German Jews emerged from their lowly state—skilled in the arts and the artifices of finance, and the wealth of the Jewish nation is depicted in their coffers; and these northern Jews are even courted by the humble descendants of their haughty Portuguese brethren.

Before leaving the subject, it may be stated for the information of the curious, that at the time of the first great expulsion of the Jews from Spain, fifty thousand families were driven into Portugal. Of these, those whose fathers had received baptism, were known as *Christianos novos*; they were numerous, and secretly Judaized. Under the administration of the great Pombal, the priests persuaded King Joseph to renew that badge of Judaism, the yellow hat, to mark the *Christianos novos* among his subjects. The edict was prepared; Pombal the next morning appeared before his majesty with three yellow hats; one he offered to the king, one to the *grand inquisitor*, and put the third on his own head; saying, "I obey your majesty's order, in providing these badges, to be worn by those whose blood has been tainted by Judaism."—*Genius of Judaism*.

POLITICAL HISTORY.

"MEMOIRS of the Administrations of Washington and John Adams, edited from the papers of Oliver Wolcott, Secretary of the Treasury, by George Gibbs," is the title of a work in two large octavos, just published. We announce the publication, without having read a page of the work beyond the preface, anticipating instruction, and a revival of historical recollections from its future perusal. The character of the work may be inferred from the preface, which is annexed entire, and which will be admired for its honest and sturdy straight-forwardness:—

"No writer probably ever escaped criticism by deprecating it. Least of all can one claim an exemption who has awakened anew, quarrels which, if not forgotten, have been suffered to slumber, and renewed a warfare which had slackened in its animosity. The editor of these volumes certainly can claim no favor as a right, and solicits none in mercy. He has ventured to put his case on the merits, and must stand or fall by them.

"One thing only he would say, and that somewhat perhaps in the style of the painter who labelled his animals lest they should be mistaken. It is, to explain the design on which he has proceeded. His first intention was merely to produce a biographical sketch of an honored parent, whose services he believed entitled him to such commemoration, and whose actions he conceived had been mis-

understood and misrepresented. An examination of the field and the materials at his disposal afterwards changed this design; and he resolved to exhibit as much of the history and politics of certain periods connected with Mr. Wolcott's life as the nature and extent of these papers seemed to warrant; in the hope that some light (if only a few rays, so that they were distinct ones) might be shed upon the path through which, as a nation, we have travelled. The life of the individual has therefore been made subservient to a wider design—the contribution of materials for a biography of party. Whether the alteration has been a wise one, so far as success is concerned, the judgment of others must decide. Written with discrimination, a memoir of Mr. Wolcott would have possessed interest as that of a man having strong personal characteristics, and at the same time presenting the type of a class. The attempt, if unsuccessful, would at any rate have involved less disgrace in its quiet descent to that respectable oblivion whither so many have preceded it. He has, however, ventured upon a different task, with little expectation, it is true, of producing a work of historical merit, but (nor is the distinction a paradox) with that of offering one of historical value. It pretends to no perspective of narration—there has been no attempt to treat of its subjects in their relative proportions. Importance has sometimes produced enlargement—abundance of material or novelty much oftener. He has considered at all times the matter introduced as possessing the chief importance, and his own comments or details merely secondary; he has therefore preserved and presented that matter with scrupulous fidelity, nothing having been kept back which affected the subject in hand, or which candor, fairness, or its necessity to the whole truth required to be exhibited. He has not, indeed, considered it necessary to cumber a work, perhaps injudiciously expanded, by all the domestic and business details of private correspondence or with multiplied repetitions of the same ideas; he has, therefore, in some instances, as will be seen in the work itself, furnished only extracts from correspondence; but no suppressions have been made of political matter—no opinions or remarks have been withheld as injudicious or censurable. In one word, he has neither garbled anything which he has pretended to insert, nor kept back anything which he thought worth inserting. In the openness of friendly intercourse, men say and write much that they would not justify to their own minds; no sensible reader, however, but can make these allowances. Men are to be judged not by a single and perhaps a floating thought, but by the tenor of their ordinary language and the sum of their whole lives. The squeamishness which would present a statesman, a thinker, or a writer, ever with his best foot foremost, is contemptible in itself, and manifests a distrust of the subject. With these views he has, preferring that to the opposite error, perhaps admitted matter which good taste would have wished to exclude.

"Of the great mass of correspondence preserved by Mr. Wolcott, difficulty has been experienced in deciding what to reject. There were many letters interesting to readers in a particular section of the country, which would not prove so to all; there were others valuable only as showing the unanimity, or difference of opinion on public measures in distant states; there were some merely curious as illustrating the character of individuals. To throw aside all these would give to the work an incom-

pleteness in the estimation of those whose judgment was to be regarded; and the work of rejection has therefore, in this respect also, been exercised with a more sparing hand, than the writer's own choice would have dictated. The selections have been made from some twenty volumes of letters; the whole MS. collection, including revolutionary correspondence, drafts of official papers, and miscellaneous documents extending to nearly fifty. These papers were all carefully arranged by Mr. Wolcott himself. It is believed that the general value of what is published, will be regarded as an apology for any defect in judgment in the selection. The letters of Hamilton, Cabot, Ames, Griswold, King, and others, will be in the eyes of every student a mine of political history. They will give a more just view of the actual opinions and objects of those men, than the hostility of their opponents has hitherto permitted. They will be found honorable alike to the patriotism and the sagacity of the federal leaders.

"The bulk of the work has arrested it at the downfall of the federal ascendancy. Should, however, public favor justify its resumption; materials, and those of equal value, remain for an exposition of the subsequent history of that party, and of the principles and acts of their successors in power.

"By some, the editor may be censured for the harshness with which he has treated political opponents—whose enmities have long since died with them, or at least long since become inactive. To those he would say, that a willingness to shun controversy, to avoid embittering the feelings, or wounding the affections of the living, would have induced him to spare attacks upon individuals—had not higher than mere personal considerations dictated his course. He has felt himself not only the vindicator, but in some sort the avenger, of a by-gone party and a buried race. The men whose characters and conduct he has held up to scorn or to reproach, spared none. No integrity in public service, or purity in private life, no sanctity of official reputation, or of domestic ties, were by them regarded. Deliberately and wickedly they lied down men whom they could not cope with in a fairer field. Their hatred followed the federalists to the place of daily toil and to the evening hearth; it stopped not with their overthrow, nor relented at their graves. It mingled with the funeral wail of a nation at the death of Washington: it exulted over the assassination of Hamilton; and trampled the turf which covered the dust of Ames. That they wrested from the federal party the government of the nation was nothing; it is the means by which they compassed its destruction, the use they made of their victory, and the lasting consequences of their misgovernment which are condemned. To whom is it owing that the names of the great founders of the republic are by-words for political hacks to carp at! To whom is it attributable, that however just a measure, however called for by national policy, it is enough to term it 'federal' to defeat it! To whom that the hiring of party finds reason enough for the denial of individual justice in the opinions of the applicant! To whom that demagoguism rides triumphant to high places, corruption prevails in the morals of the nation, and sedition is fostered to the overthrow of law!

"To the historian there is no statute of limitations against political crimes.

"'The evil that men do LIVES AFTER THEM.'"

THE DEW-DROP AND THE STREAM.

THE following beautiful lines, which we find in a newspaper, are said to be the production of a servant girl from Devonshire.

The brakes with golden flowers were crowned,
And melody was heard around—
When, near the scene, a dew-drop shed
Its lustre on a violet's head,
And trembling to the breeze it hung!
The streamlet, as it rolled along,
The beauty of the morn confessed,
And thus the sparkling pearl addressed:

"Sure, little drop, rejoice we may,
For all is beautiful and gay;
Creation wears her emerald dress,
And smiles in all her loveliness.
And with delight and pride I see
That little flower bedewed by thee—
Thy lustre with a gem might vie,
While trembling in its purple eye."

"Ay, you may well rejoice, 'tis true,"
Replied the radiant drop of dew—

"You will, no doubt, as on you move,
To flocks and herds a blessing prove.
But when the sun ascends on high,
Its beam will draw me towards the sky;
And I must own my little power—
I've but refreshed a humble flower."

"Hold!" cried the stream, "nor thus repine—
For well 'tis known a Power divine,
Subservient to His will supreme,
Has made the dew-drop and the stream,
Though small thou art, (I that allow,)
No mark of Heaven's contempt art thou—
Thou hast refreshed a humble flower,
And done according to thy power."

All things that are, both great and small,
One glorious Author formed them all;
This thought may all repinings quell;
What serves his purpose, serves him well.

RISE OF THE MULGRAVE FAMILY.—The first diving-bell we read of was nothing but a very large kettle, suspended by ropes, with the mouth downwards, and planks to sit on, fixed in the middle of its concavity. Two Greeks at Toledo, in 1588, made an experiment with it before the Emperor Charles V. They descended in it, with a lighted candle, to a considerable depth. In 1683, William Phipps, the son of a blacksmith, formed a project for unloading a rich Spanish ship sunk on the coast of Hispaniola. Charles II. gave him a vessel with everything necessary for his undertaking; but being unsuccessful, he returned in great poverty. He then endeavored to procure another vessel; but failing, he got a subscription, to which the Duke of Albemarle contributed. In 1687, Phipps set sail in a ship of 200 tons, having previously engaged to divide the profits according to the twenty shares of which the subscription consisted. At first, all his labors proved fruitless; but at last, when he seemed almost to despair, he was fortunate enough to bring up so much treasure, that he returned to England with the value of £200,000. Of this sum he got about £20,000, and the Duke of Albemarle £90,000. Phipps was knighted by the king, and laid the foundation of the fortunes of the present noble house of Mulgrave. Since that time, diving-bells have been very often employed.—*Mechanics' Magazine*, No. 1119.

From Chambers' Journal.

THE NEUVAIN OF THE CHANDELEUR.

A TALE—FROM THE FRENCH.

THERE is in country life a charm unknown to the inhabitants of large cities, particularly in early youth. A city life may be preferred in the age of activity of the passions, when the spirit of enterprise and the thirst for success animate the soul; but the country is the element of childhood and youth, where the tenderest and most exalted sentiments of the soul may unfold and expand. In the country, the familiar abandonment of the early relations of life is prolonged, without danger, till beyond the age when the least familiarity becomes dangerous and suspected among young people in large cities. In the country, habit prolongs those innocent pleasures, under the attentive eye of mothers, even in the ardent season of youth. One is already a man in mind, but a child still in tastes. At the age of eighteen I loved the fair young girls, amongst whom I passed the happiest hours of the day, with all the affection of a heart accustomed to love them, but without fever, without inquietude, and almost without preference.

On the 24th of January, 1802, we were all assembled, as usual, before the hour of supper—for suppers were still in fashion—and were talking confusedly around our mothers, who were gravely conversing on matters not less frivolous. The question debated amongst us was the choice of a game.

"We should not be at a loss," said the dark-haired Theresa, "if Clara were come. She knows every game that has ever been invented; and when, by chance, she happens to forget, she invents one immediately."

"Clara will not come," said Marianne. "I am sure of it; for this evening she commences the Neuvaine* of the Chandeleur."†

"The Neuvaine of the Chandeleur!" cried I in my turn. "I did not know she was so devout."

"It is not for the sake of devotion," said Emily with ill-natured gravity; "it is through superstition or ostentation."

"Through superstition!" replied Marianne; "superstition indeed! The most whimsical, the most fantastical, the most extraordinary, the most extravagant—"

"But what is it?" I interrupted, laughing. "You excite my curiosity without satisfying it."

"Pshaw!" said she, looking at me with an ironical expression; "it is too stupid for such a wiseacre as you. As for the rest, they are not ignorant, I imagine, that the Neuvaine of the Chandeleur is a particular devotion among young people of the lower class, the object of which is—How shall I tell it!"

"The object of which is?" murmured a dozen voices, whilst a dozen pretty necks were stretched towards Marianne.

"The object of which is," resumed Marianne, "to know beforehand what husband they shall have."

"The husband they shall have!" repeated the dozen voices, with as many different inflections; "and what connection can the future husband have with an act of devotion like the Neuvaine of the Chandeleur!"

"You all know very well that I don't believe

it," she continued; "and even if I did, I should not be the more anxious about it. What is it to me what husband I shall have, provided he be a man of honor, birth, and fortune! My parents will give me to no other; so I don't trouble myself about the matter so long beforehand."

"Nor I either," said Theresa, drawing her chair close to that of Marianne. "But the spell?"

Impatience was now at its height, and that of Marianne was not less than ours; for she always took more pleasure in talking than any one else did in listening to her. Throwing a glance of satisfaction over her audience—"You must know," she resumed, "that there is no devotion more acceptable to the blessed Virgin than the Neuvaine of the Chandeleur; and on that account it is thought that she recompenses with peculiar favor persons who pay her that homage. But there are so many ceremonies in the experiment in question, that I am afraid I shall go wrong, if Emily do not give me a little help. She was with us the day that Clara told me all about it."

"I!" returned Emily disdainfully—"I never take any part in your conversations."

"I do not say you take any part in them," replied Marianne, "but you listen to them." Then, after biting her pretty fingers for a little, she added—"The Neuvaine must be commenced this evening, by praying for eight hours in the chapel of the blessed Virgin. Afterwards, you must hear first mass every day, and return to prayer every evening with unabated piety and unshaken faith until the first of February. It is terribly difficult. Then, on the first of February, you must hear all the masses, from the first to the last, in the chapel. In the evening you must hear all the prayers, and all the instructions, without missing a single one. Stop, stop. I was near forgetting that you must also have confessed on that day; and if, unfortunately, you have not received absolution, all you have done will be labor lost; for the essential condition of success is, that you enter your chamber in a state of grace. Then—"

"Then you find the husband there before you?" cried Theresa.

"You are in a great hurry," replied Marianne coldly; "I am not yet through the half of my instructions. Then you again begin to pray; you shut yourself up, in order to fulfil the conditions of a severe retreat; you must be fasting, and yet have everything disposed for a banquet. The table must be laid for two persons, and furnished with two complete services, with the exception of knives, which must be avoided with the greatest possible care. I need not tell you that the table linen must be perfectly white, and as clean, as fine, and as new as can be got, that good order and good taste may reign in the little apartment; for these things are always attended to when a person of consideration is expected. The repast consists of two bits of consecrated bread, brought away from the last mass, and two glasses of pure wine, placed of course at opposite sides of the table. Only the middle of the service is garnished, if possible, with a porcelain or silver dish, which contains two sprigs (carefully blessed) of myrtle, rosemary, or any other green plant—boxwood excepted—placed side by side, not crosswise. This also is a point which it is essential to observe."

"Then?" asked Theresa, and the whole circle repeated the question like an echo.

"Then," replied Marianne, "having opened the

* Neuvaine, a nine-days' devotion.

† Chandeleur, Candlemas.

door, that the expected guest may enter, you take your place at the table, devoutly commend yourself to the protection of the Virgin, and go to sleep, in expectation of the effects of her favor, which never fail to be manifested according to the person who implores them. They begin strange and wonderful visions. Those for whom Heaven has prepared on earth some mysterious sympathy, see the man appear who is to love them if he meet them—who would have loved them, at least, if he had met them: the husband they should have, if favorable circumstances brought them together. It is also pretended, for a positive fact, that the Neuvaine has the peculiar privilege of causing the young man of whom one dreams to dream the same thing, and inspiring him with the same desire to find that half of himself which has been revealed to him: That is the bright side of the experience. But woe to the young girls whom Heaven has neglected in the distribution of husbands, for they are tormented with frightful prognostics! Those who are destined for a convent, see, it is said, a long procession of nuns, chanting the hymns of the church, slowly defile before them. Others, who are to die before the time, are present at their own funeral, the sight of which freezes the blood in their veins. They are awakened with a start by the light of funeral torches, and the sobs of their mother and friends, who weep over a coffin hung with white."

"I solemnly declare," exclaimed Theresa, "that I will never expose myself to such terrors. It makes one shudder even to think of them."

"You might, notwithstanding, expose yourself to them without fear," replied Emily. "I warrant you would sleep soundly till morning, and should be awakened as usual to take your Italian lesson."

"That is my opinion too," said Marianne; "and I should be very much astonished if it were not also that of Louis, who seems buried in his reflections, as if he were trying to explain a difficult passage in some Greek or Latin author."

"I don't know," I replied; "and you will excuse me if I do not pronounce judgment so hastily on a belief supported by the testimony of the people, whose opinions are generally founded upon experience. But pardon, dear Marianne, if the details you have just given, with your usual grace, have left me still something to desire. In your recital you have mentioned young girls only as being benefited by the effects of the Neuvaine of the Chandeleur. Do you think that the Virgin does not grant the same favors to the prayers of young men?"

"By no means!" she exclaimed; "and I beg pardon for being so remiss. The Neuvaine of the Chandeleur, performed with this design, has the same virtue with respect to all unmarried persons, without distinction of sex. Would you have any strong desire to try it?"

"Truly," said Emily, "it would be a fine thing to see a rational young man, accustomed to the society of men of learning, and whose father was the friend of M. de Voltaire, giving credit, like an ignorant child such as Clara, to such shameful folly."

I made no reply, but rose quietly, under pretence of suddenly recollecting some engagement; and gliding gently from chair to chair behind the elder ladies, I seized my hat, and ran to the chapel of the Virgin to commence the Neuvaine of the Chandeleur; for, in truth, I saw no plausible

reason against it. "Why," said I to myself when I had proceeded some steps towards the church—"why may it not be so? Nature has twenty mysteries more marvellous than this, and no one doubts them. Gross and apparently insensible bodies have affinities between them, which attract them to each other through incalculable space. The magnet, if consulted under the equator, recognizes the pole; the newly-hatched butterfly flies unerringly towards his unknown mate; the pollen of the palm-tree goes upon the winds of the desert to impregnate the solitary flower that awaits it. And is it prohibited to man alone, otherwise so privileged, to foreknow his destiny, and to join himself to that essential part of himself which God has prepared for him in the treasures of his providence? To believe in such neglect, would be a calumny against the power and goodness of the common Father."

I had fulfilled all the obligations of the Neuvaine; and after having finished my preparations, I opened my door to the approaching apparition, and had hardly regained my arm-chair, when I was surprised by a most profound sleep. I know not how long it lasted; but it suddenly seemed to me that I had ceased to sleep. My chamber resumed its usual appearance by the vacillating light of the candles. I distinguished every object—the slightest noise. Hearing a slight murmur, like that caused by the motion of a plume of feathers, I looked towards the door, and saw a female enter. I wished to rise and receive her; but an invincible power retained me in my place. I tried to speak, but the words remained glued to my tongue. My reason was not lost in this mystery. I felt that it was a mystery, and that the prayers of the Neuvaine had been heard.

The unknown approached, without seeming to perceive me, as if she had obeyed a kind of instinct, an irresistible impulse. She seated herself in the arm chair which I had prepared for her, and, with downcast eyes, remained thus exposed to my view. I certainly had never seen her before, and I felt, in the vague consciousness of a dream, a conviction that this existence, strange as it was to all my recollections, was not the less living and real. I will not speak of the beauty of this female; portraits cannot be drawn with words; I have often doubted whether they can be with colors. I did not ask myself why I loved her; I knew that I loved her; for it must be recollected that the apparition of the Chandeleur is conjured up only through a complete and absolute sympathy between the persons whom it brings into rapport.

The stranger seemed to be dressed, like myself, for a bridal feast; but her garments were not familiar to the brides of my province. They recalled to my mind those I had often remarked, in similar circumstances, in a town at some distance. It was the graceful costume of Monthéliard, which the highest society in the country still preserved by tradition, in certain solemn ceremonies, and which is probably now abandoned by the people themselves. She had placed beside her, on the table, one of those little bags in which young ladies keep those trifles which they are pleased to call their work, and on the steel-clasp of which I perceived two letters engraven, which must have been the initials of my future bride. At length her eyes met mine. I could scarcely support the fascination of that heavenly look. Never did the fire of innocent affection animate eyes more lovely, nor better reveal those secrets of pure love for

which no human voice can find words. A strange cloud, however, suddenly darkened her brow; her bosom palpitated; her eyelids became moistened with tears, which she tried to restrain. She gently pushed away the bread and wine which I had placed before her, took one of the sprigs of consecrated myrtle, and slipped it under one of the knots of her bouquet. She then rose, and departed by the way she had come. I was then relieved from the horrible constraint which chained me to my seat, and I darted after her, to obtain one word of consolation and hope. "Oh! whoever you are," I exclaimed, "abandon me not to the terrible regret of having seen you, and never being able to find you out again! Think that my future happiness depends on you, and make not the sweetest moment of my life an eternal misfortune! Tell me, at least, I implore you, whether I shall again press this hand which I bedew with my tears—whether I shall see you again?"

"Once more!" she replied; "or never! never!" she repeated with a mournful cry, and vanished.

I felt my strength fail, and my limbs sinking under me, and was obliged to lean on a chair for support. At this point I was awakened to broad daylight by the bursts of laughter of a servant who was removing the preparations of my nocturnal collation, and which he attributed to the fantasies of somnambulism—to which, indeed, I was subject.

I was not of a character easily to lay aside ideas with which I had once been strongly impressed. This unknown female, whom I loved with all the strength of my heart, even to distraction, and who perhaps was not in existence, became my fixed idea—the only thought of my life. I shunned society, and sought for solitude; because it was only when alone that I could freely indulge in the contemplation of my wishes and hopes. To what friendship, or to what complaisant credulity, could I have dared to confide them? I imagined that some unforeseen circumstance would shortly bring me in contact with my visionary betrothed. I expected her. I fancied I should find her in every strange female whom I saw at a distance; but she always escaped me, like the dream in which I had seen her. My reason and health sunk under this perpetual succession of powerful emotions. The physician, vainly called to my bed of grief, in a few days gave up all hope of me. In the meanwhile, I had neglected no means to discover my mysterious friend. Under the seal of profound secrecy, I communicated to a schoolfellow of mine, who lived at Montbéliard, the initials of the bag, with a most circumstantial portrait of the young girl whose name they were meant to express.

The reply came at length to cheer my heart, in one of those moments of extreme anguish when my exhausted strength seemed no longer able to struggle against death. The ideal being of whom I dreamt on the night of the Chandeleur really existed! The resemblance was perfect, even to a small mark on the back of her neck, which I had noticed in her retreat. Her name was Cecilia Savernier; and these names corresponded with the letters I so well remembered to have seen on the steel-clasp of the bag. She usually resided with her father, in a mansion situated at some distance from the town of Montbéliard, where her beauty and virtues were the theme of every conversation. Thus my illusion assumed a body; my chimera became a reality; my languor disappeared with my anxiety; my health improved;

and my father rejoiced in the certain hope of my recovery.

One day my father entered my room, which I had not yet left. "Heaven be praised!" said he, affectionately pressing my hand; "my son is restored to me." After a few minutes' silence, he added, "Louis, I am come to speak to you on a subject which I have much at heart—your marriage."

I looked at him in surprise. "Don't you think, father," I replied, "that there is still time enough to trouble ourselves about that? I am not yet twenty."

"It is a matter which concerns you deeply," he returned; "and why not? I married too late, or else the years have passed away too quickly; and I should lose one of the sweetest enjoyments of life if I died before having been loved by a daughter whom you should have given me, without having played with your children, without leaving behind me the remembrance of my features and affection to a new generation. This, my son, is the *material* immortality of man, which alone the weakness of our organs and intelligence permits us to foresee clearly. The other is a great mystery, which religion and philosophy prudently abstain from attempting to explain. Your marriage, then, has become, for your own sake, the principal object of my thoughts and hopes; however, I do not wish to put any force on your inclinations, but leave you perfectly free in your choice and establishment: and I shall never depart from this promise."

"You overwhelm me with gratitude and joy!" I exclaimed, embracing him. "On my side, I swear to you that I will never bring a daughter into your house whom you will not have adopted beforehand."

"As you will," said my father; "however, this idea which I must now sacrifice to you was the sweetest dream of my old age. Suffer me to speak of it to you for the last time. I have perhaps never mentioned before you the name of one of the friends of my youth, the remembrance of whom recalls the only real friendships we generally enjoy in this life—the sincere and disinterested friendships of the college. Though a great difference of vocation, habits, and abode, seemed to have separated us forever, yet I have never forgotten him. He became a colonel of artillery. He emigrated, and this circumstance rendered our separation irrevocable; for I, like many others, had followed the movements of the Revolution, when I was far from perceiving its aim and results. This transitory direction of a mind deceived by appearances, gave me a political credit which I have had the happiness of seeing sometimes useful. My friend, undecieved in his turn from another kind of error, sighed for his country, always so dear to every well-constituted heart. I succeeded in obtaining his eradication,* in restoring him to his hearth, his paternal fields, and native air. We have not seen each other since, but his letters cease not to testify an affectionate gratitude, which sweetly repays me for my efforts in his behalf. Mutual confidence has made us acquainted with the most trifling particulars of our inmost thoughts and fortune. My old friend Gilbert knows I have a son in whom I repose all my hopes of the future. He has a daughter whose praise is in every mouth, and who will certainly make her husband as happy as she has made her

* Getting his name struck off the list of the proscribed.

father. I do not conceal from you that we had seen in this projected union an agreeable means of reuniting ourselves for the remainder of our days. It was a life we had fondly planned in our foolish confidence; so true is it that we deceive ourselves at every age, and that old age, matured by experience, is as apt to give way to illusions as youth itself. This prospect was delightful! It must be renounced!"

"Pardon, my father; a thousand pardons! Why has Heaven condemned me to acknowledge your affection so badly?"

"Never mind," said he; "I shall easily forget the joy I promised myself in seeing my hopes realized by thinking of yours. After all, it is a pity, for Cecilia Savernier is considered a handsome girl in a country where it is difficult to choose——"

"Cecilia Savernier!" I cried, jumping to my feet; "Cecilia Savernier! Oh, father! have I heard you rightly?"

"Perfectly," said he. "Cecilia Savernier, daughter of Gilbert Savernier, late colonel of artillery, residing at Montbéliard, department of Mont-Terrible. It is of her I spoke."

I fell at my father's feet in a state of agitation impossible to describe. Unable to utter a word, I covered his hand with kisses and tears. My father raised me anxiously, pressed me to his bosom, and asked me what was the matter more than ten times before I had power to answer. "Cecilia Savernier! 'T is she; 't is she, father!" I cried with a choking voice. "'T is for her I ask you on my knees!"

"Indeed," he replied; "then your prayer is soon heard, since the affair is nearly all settled. But where can you have seen Cecilia? Or where can she have known you? Montbéliard is the only town in France she has appeared in since her return from abroad. And when you were in that part of the country two years ago, I am positively certain she was not yet there."

I blushed. This question touched too nearly on a secret which I had not strength of mind to reveal, and which my father might regard either as an illusion or a falsehood. "Believe," I replied, "that I have seen Cecilia, and have reason to think that she will not be unfavorable to my love. With respect to the circumstances or accident that brought us together for an instant, be so good, I beseech you, as not to question me further."

"Heaven forbid!" said he, embracing me. "I have too much respect for this kind of mystery to take from you the merit of discretion. There are secret links, sympathies, known only to lovers, which one at my age can but ill discern. This state of things accords so well with my wishes, that I have no desire to find out how it originated. Let us now think only of your marriage, which will be celebrated without fail after you shall have taken your degree. This delay seems to frighten you; but it is not so long as you imagine. You will soon regain the time you have lost during your illness. You must feel that it would ill become you to present yourself at the most solemn act of life, without bringing as a dowry an honorable and serious title. Besides, it is but proper that you should first see your intended wife and father-in-law, and obtain a more positive consent than that on which we have been flattering ourselves, before pushing things any further. As your health is so much improved, I trust that a month's residence at Montbéliard will quite re-

establish it. You will be present at your cousin Clara's wedding as you pass, for she lives half-way, at the Bois d'Arcey."

"Clara's wedding!" I exclaimed in surprise. "Is Clara going to be married?"

"Yes," replied my father. "I wish she may be happy; though there is something extraordinary about the whole affair. This year she refused three highly-advantageous offers, and her mother thought she was disposed to embrace a religious life, when a strange young man, who had arrived in town only a day or two before, obtained her consent in their first conversation. The references he gave as to character and fortune were satisfactory, and their two families promptly agreed to the match. Clara is happy in this union, which the Virgin, she says, had in reserve for her since the night of the Chandeleur. But what say you? Does the arrangement I have proposed suit your inclination?"

I threw myself into his arms; he kissed my forehead, went into his study, and soon came out with a letter in his hand, addressed to Colonel Savernier. Next morning I set out for Montbéliard, happier than I can express.

Alas! what are human joys!

I have said that the strange illusion that filled up my whole life, and absorbed my every thought since the night of the Chandeleur, had to me become equivalent to the most positive truth. The result of my inquiries had given to it an extreme likelihood. The unforeseen concurrence of my father's projects with the time and circumstances of my dream, distinguished it from the class of ordinary dreams. It was no longer a dream—it was a revelation. Constitutionally disposed to be easily impressed by the marvellous, I abandoned myself to this without resistance. Hearts that resemble mine will have no difficulty in understanding me. I embraced, for the first time, the thought of a happiness which I imagined nothing was to disturb. I flew towards Cecilia in all the confidence, all the abandonment of my heart. It was at the end of January; and I was struck with a strange sensation when I remarked that Clara's marriage was exactly on the day of the Chandeleur. I arrived in time to be present at the ceremony. The countenances of the bride and bridegroom expressed the most perfect happiness. The young man was handsome, affectionate, and engaging, but serious in his demeanor. When the ceremony was ended, I approached my cousin, and pressing her hand to my lips, whispered, "I hope, my dear friend, that this gentleman is the husband who was revealed to you on the night of the Chandeleur!" Clara blushed, and gave me a look which seemed to say, "How do you know that?" Then pressing my hand, she replied, "I would not have married another." I felt myself agitated by a delightful emotion, impossible to describe, in thinking that a similar happiness awaited myself.

Whilst the fêtes of Clara's marriage detained me at the Bois d'Arcey longer than I could have wished, my excellent father had advised Colonel Savernier of my intended visit; of which the latter, curious to know me first, did not think proper to inform his daughter. When I had presented my letter to the colonel, he merely glanced at it with a smile, and coming to me with open arms, "I need not ask your name," said he with affectionate cordiality; "you bear so strong a resemblance to the friend of my youth, that I think

I see him still, as when every morning brought us together—only you are a little taller. You are welcome, my dear boy, as a friend—as a son—if, as I hope, your heart and that of my Cecilia's come to a mutual understanding. And now, sit down and rest yourself, while I read your father's letter, and consider you more at my ease."

The kindness of this reception brought tears to my eyes, which I sought to restrain by taking a survey of the room. A straw-hat, trimmed with blue ribbons, hung upon a nail: it was Cecilia's. There was a harp in one corner of the room: it was Cecilia's harp. A bag had been carelessly left upon a chair close to mine, on the steel-clasp of which my eye quickly detected the initials that had struck me on the night of my vision. Yet the idea suddenly occurred to me, what if Cecilia was not the right person after all? The thought froze me with terror. I found myself engaged in the most sacred, the most irrevocable manner, by the wishes I had expressed to my father, by my present proceedings with respect to M. Savernier, and my blind precipitation was perhaps about to separate me forever from the bride who had been promised me. A mortal shudder ran through me when I perceived, at a distance, the portrait of a young female wearing a straw-hat. I collected all my strength, and hastened across the room to examine it more closely. I was struck with despair. It was the portrait of a charming woman, but whose face bore no resemblance to that of my imaginary Cecilia. It was not she! My limbs were sinking under me, when the arm of M. Savernier, passed round my body, held me up. "Alas!" said he, wiping away a tear, "you will never see her! That is Lidy! my fair and gentle Lidy! the mother of our Cecilia. May you never experience the grief of surviving what you love!"

My terror vanished, leaving only a profound sympathy for my friend, who seemed to appreciate my feelings, for he said, "Yes, you shall be my son! for you have a soul! You shall be the husband of Cecilia, if she consent. And why should she not?" After a pause, he added, "My dear young friend, a regard to propriety will not permit that you should stay at my house; but we shall see you every day while you remain at Montbéliard, before going to resume your studies. The sweet intimacy that ought to precede a serious and inviolable engagement will grow up of itself. One ought not to proceed lightly with affairs of life and eternity. But I learn with much surprise, from your father's letter, that you already love my Cecilia; and, what is still stranger, if it be possible, her artless heart, which has never concealed anything from me, feels drawn towards you by the same inclination, though you have never seen each other; unless, indeed, my vigilance has been deceived by some of those artifices which youth practices by instinct, and old age forgets. That, I own, is a point on which I am anxious for an explanation; and my friendship for you gives me some right to expect it."

The colonel cast a searching look on me; and the trouble into which his question plunged me could not have escaped his notice. I cast down my eyes, hesitated, and vainly sought for an answer.

"I swear to you, upon my honor, sir," I at length replied, "that I have never seen Cecilia; that I have never seen her portrait; that I have never presumed to write to her; and that her

name was known to me scarcely two days before my father mentioned it to me. Notwithstanding, it is a year since I first loved her; and I will love her all my life. There is the truth, sir. The rest is to me an incomprehensible mystery."

"Incomprehensible, indeed!" replied M. Savernier with an anxious air—"quite incomprehensible; for I do not suppose you could be guilty of a falsehood. And yet—"

"And yet I have disguised nothing from you. Is it not an instance of those mysterious sympathies which sometimes unconsciously take possession of us, and carry us away with all the vehemence of a passion? It is what I am profoundly ignorant of; however, I must believe it, for I have no other explanation to give you."

"Pshaw!" replied the colonel; "you will next have me believe that you have seen and loved each other in a dream. If the secret of that kind of rendezvous get abroad, it will be all over with paternal surveillance. But what matters it, provided you love each other!—just as I wish things to be. This is what we shall all know before long in a more positive manner; for you shall dine to-morrow with Cecilia."

"To-morrow!" I exclaimed in a tone of disappointment.

"To-morrow," said he, smiling. "It is not so soon as you would wish; but the delay is not long enough to cause you any real affliction. I have not told Cecilia of your expected arrival. I reserved to myself the pleasure of discovering at your first interview, when I had known you a little, whether there is any reality in the sympathy between you; and I was not sorry that an opportunity offered to get my daughter out of the way at the moment I expected you. A country family, in which Cecilia counts no less than six friends—all sisters—solemnize to-day the anniversary of the birth of their excellent grandmother, who is an old friend of mine. As the long retirements of the Chan-deleur are over, and the rest of the time between this and Lent is, by immemorial custom, consecrated to amusements more or less innocent, but which religion itself does not forbid, they dance, they disguise themselves, and I even believe they will be masked. Don't be alarmed, my friend; the programme of the fête admits females only, nor will any man be received there, whether father, husband, or brother, till the hour appointed for the sweet lambs to return to the fold. Meanwhile we shall dine *tête-à-tête*, for there is Dorothy calling us."

"Do you know," said he suddenly, when we were about to leave the table, "an idea occurs to me. Since to-morrow seems so long to your impatience, we shall at least try to deceive her till then. I shall tell you how. At the hour of breaking up this evening, you shall accompany me when I go for Cecilia. I shall enter alone, and in a few words smooth all difficulties. A servant, at my appointed signal, will introduce you as a friend of the family. We must seem to be entire strangers to each other. In this way I shall be enabled to appreciate the reality of those marvellous sympathies you speak so much of; for there will be nothing to prevent you, if not from seeing Cecilia, at least from conversing with her without restraint. I hope you will have no difficulty in distinguishing her in her disguise as a bride of Montbéliard."

"She is disguised as a bride of Montbéliard, say you! Can it be possible!"

"Why, yes; as a bride of Montbéliard," he replied. "It is a good omen, is it not? But this costume is so graceful, that more than one of her companions may have also chosen it. In that case you will know her from the others by a little sprig of myrtle, separated from her bouquet, which she took a fancy to attach to her bosom, and by which I am myself to recognize her."

This second circumstance, which recalled so vividly the particulars of my dream, renewed my emotion; but I soon mastered it, and answered to the proposal of M. Savernier by testifying the most tender gratitude. An hour afterwards, he had executed his project on all points, and I was in the presence of Cecilia, whom I easily recognized by the tokens her father had given me. On her side she had shown some emotion at my approach, and when I had taken my place beside her, I thought I perceived her tremble. "Excuse," said I, "a liberty which the mask and disguise will in some degree explain. The vicinity of a stranger may perhaps be unpleasant to you; yet I doubt much whether my features are wholly strange to your recollection?"

"Indeed," she replied, "I do not think I have had the honor of ever seeing you before."

"Never!" said I.

"Never," she returned with a forced laugh, "unless it was perhaps in a dream; and you may believe my word, for I am incapable of feigning. I have not even tried to disguise my voice."

It was indeed the voice I had heard a year before, and which still echoed in my heart. "Permit me, then," said I with warmth, "to seek some motive which may supply the pleasing customs of established acquaintanceship. My name, or rather that of my father, must have often been mentioned to you by yours, and I am not ignorant that I speak to the daughter of M. Savernier. Would this name be happy enough to awaken any kind of sympathy in your soul?"

I had hardly pronounced my name, when Cecilia started, and turned on me a look expressive of tenderness, mingled with terror. "Yes, yes!" she replied; "your name is well known to me. It is dear to my father and to me also; it recalls to us recollections which are never effaced from an honest heart—those of gratitude! It is true, then?" she continued, speaking to herself, as if she had suddenly forgot my presence; "it was not an illusion. All has been thus far fulfilled—all will be fulfilled without doubt! The will of God be done!" And she fell into a state of gloomy dejection, in which all her ideas seemed to be absorbed. One of her hands nearly touched mine. I took it without her making the slightest effort to withdraw it. She only looked at me more attentively. "It is he!" she said.

"Oh, let not the sight of me give you any alarm!" said I, pressing her hand. "The sentiment which has led me to you is as pure as your own heart, and it has the sanction of a father whose only thought is your happiness. You are free, Cecilia; and our future destiny depends only on you."

"Our future destiny depends only on God," she replied, letting her head droop with a deep sigh. "But you have spoken of my father. You have surely seen him? He knows that at this hour of the night, for some time past, I suffer from an inexpressible affection which stifles and kills me. I wished so much to prevent its approach! How is it that my father is not come?"

Although the colonel had told me something of this circumstance, which inspired no fear, the expression of suffering that accompanied those words froze my blood. Besides, her father was standing before us at the moment that she seemed to be seeking him through the room with an uneasy look. I was surprised that she had not seen him. "I am near you," said he, encircling her with his arm, for she was going to faint. She leant upon him, and passed one of those moments so long to pain.

The friends of Cecilia had gathered around her, and, in the cares they lavished on her, displaced her mask. Alas! all my doubts were dissipated; but a frightful pallor covered those features so dear to my memory. I felt as if life was about to leave me, when Cecilia breathed, raised her head, and looked at the persons who surrounded her. "Ah! all is well now," said she. "I am better. I no longer suffer. I ask pardon, and thank you all. This crisis is never long, but I would have wished to have spared you the pain of witnessing it. In that case I should not have come, or have gone away sooner. I will no longer interrupt your pleasures; the air and a walk will complete my recovery."

Shortly after we set out, and M. Savernier entrusted his daughter's arm to me. She was near me—close to my heart. I conversed freely with her. I spent ten minutes of the fullest, the purest happiness that ever mortal was permitted to enjoy on earth. Cecilia walked with a light and firm step. She seemed happy. Her father, with one arm passed round her, congratulated himself on seeing her so well, and attributed her late illness to the fatigue of dancing, or to some sudden emotion, the secret of which he gaily refused to penetrate. The space we had to walk was very short. We arrived. "Adieu till to-morrow," said the colonel—"till to-morrow! To-morrow, the fairest day of all our lives, if my hopes be not deceived. But the night is past, and this fair to-morrow must be near its second hour. At four o'clock in the evening," said he, embracing me; "and at this time we shall all three sit down to table. Sleep, the toilet, and hope, will help to shorten the time till then." They retired. I still hear Cecilia's adieu.

Next day was Sunday. The hour so impatiently expected at length arrived—the hour at which I was to see Cecilia! Cecilia, by whom I believed myself loved! Cecilia, whom I adored! The street through which I had to pass, and which I had seen nearly deserted the evening before, was now filled with people. I attributed this difference to the solemnity of the day; but I could not explain why the crowd formed itself here and there into motionless and silent groups. I rapidly threaded my way through those little assemblies, and only by chance caught a few confused words to the following effect:—"An aneurism!" said one; "persons do not die of aneurism at that age." "One dies when the hour of death is come," replied his neighbor. A little farther on was a young girl, adorned and veiled, to whom one of her companions was listening in tears. "At half past two, when leaving the ball, she said truly that she would never be married!" A horrible light glanced in upon my mind. I was not more than twenty steps from the house. I ran. The many years which have elapsed since then cannot weaken the impression of that fearful moment. The door was hung with white; in

the passage was a coffin, surrounded with torches.

"Who is dead? Who is dead in this house?" I exclaimed, violently laying hold of the arm of a man who seemed to have charge of the preparations.

"Mademoiselle Cecilia Savernier!"

From Chambers' Journal.

THE WORK-GIRL.

WORK!—what extremes in human life are suggested by this little monosyllable! What varied interpretations may be placed on this one short word! And how differently is it considered in each circle through which we might trace its universal application, from the light and elegant occupation of affluence, downwards to the toilsome drudgery of necessity! One picture gives us the fair and accomplished daughters of our land seated before their embroidery-frames, surrounded by colors as bright as the rainbow's hues—worsted, and silk, and golden threads, scattered in rich profusion, with every accessory to interest and amuse; but before the leaf, or the flower, or the cunning device is half copied on the canvass, some anxious parent or careful friend will approach, and in tones of fond entreaty request they will lay it aside, lest the graceful figure should be injured, or the radiant eyes made dim, by work! And this, again, is the term to designate the employment that has hollowed the cheek and chilled the life-blood of the weary occupants of many a solitary garret, who, sighing, listen to the midnight chime, and think that even then they cannot lay it by to rest. Such are the extremes. Would that neither boundary was so strongly marked, and that a little habitual self-denial in the one instance, might afford means to lessen the privations of the other! When Lord Collingwood wrote home, enjoining his wife to inspire his daughters with "a contempt for vanity and embroidery," it might almost be imagined that the gallant admiral had a prophetic glimpse of the expenditure of time and money lavished by the present generation on this fascinating pursuit. But it is the abuse, not the use of anything which renders it reprehensible; and we may remember it was a saying of the sagacious Dr. Johnson, that many a man might have escaped hanging, had he known how to hem a pocket-handkerchief. Let our fair countrywomen, then, enjoy this recreation as a recreation, not as an all-engrossing pursuit; and let us all, both men and women, feel thankful that the needle has provided an antidote against listlessness in one class, and a means of livelihood for another.

A lady was lately making some purchases in the principal shop of a little sea-side village in the south of Ireland. As usual, it was a place where the most incongruous articles were collected, and, accordingly, frequented by purchasers as different as there were varieties in the inhabitants of the village; besides which, on the weekly market-day, it was so crowded from morning till night by an influx of country customers, as to render it a matter of some difficulty to reach the counter. The lady, however, was a person of some importance, and way was made for her as soon as she appeared, while the obsequious shopman threw everything else aside to attend to her commands. They were not very important; and having soon despatched them, she was waiting for the change of a note, when she became aware of a gentle

pulling at the back of her dress, two or three times repeated, and so far different from the occasionally rude pressure of the crowd, as at last to attract her attention. She turned, and saw two young girls immediately behind her, both of whom colored deeply as she looked round: one, very small and delicate-looking, drew back timidly; but the other, a tall, handsome girl, raised her eyes ingenuously, though respectfully, to those of the lady, and in gentle accents apologized for the liberty they had taken. "But my sister, ma'am," added she, "is very sickly, and her only pleasure is in work; and when she saw the trimming on your dress, she thought it so pretty, that I could not help drawing it a little nearer for her to see."

Before she had concluded the sentence, her companion had again glided forward, her dark eyes glistening, and slipping her hand into that of her courageous defender, added earnestly, "Forgive us both, ma'am." The lady, whom we shall call Mrs. Villars, much struck by the little scene, reassured them speedily with one of her own sweet smiles, and stooping down, unclasped her mantle, and showed them, to their hearts' content, the dress they had admired so much; then gathering up her little purchases, she returned their energetic gratitude and admiration with another smile, and left the shop.

Days passed away, and she saw the sisters no more; but they often returned to her thoughts, and, unblest by any similar tie, she would remember with a sigh the strong affection revealed by that little incident. In one moment it had told its own story—of fond protection on the one side, and grateful reliance on the other—as intelligibly as if the parties had been known for years; and she marvelled that, in a class where, from want of mental cultivation, externals must seem so important, such superior personal attractions as one sister enjoyed, should create no taint of vanity or of jealousy to sully their mutual love. But Mrs. Villars reasoned wrong. She had yet to learn that the heart teaches its own lesson—the most unsophisticated often the warmest; and that true affection is a sunbeam that blinds our eyes to the deficiencies of the beloved ones, while it casts a ray of tenfold brightness on every excellence they possess.

At last one morning, in an early walk more extended than usual, she came to a cluster of cottages near the shore, at some distance from the village. It was a pleasant, animated scene, and Mrs. Villars stopped to admire the eager groups collected round some boats returned from the night's fishing, and either making bargains for themselves, or congratulating their sons or husbands on their success. As she lingered, a young girl tripped lightly by with a basket on her arm; and even in that passing glance she could not mistake the bright eyes and glowing complexion of her late acquaintance. A look of recognition also beamed from those same eyes. Half hesitatingly she paused for an instant, then with a modest curtesy was passing on, when Mrs. Villars accosted her, and, with an inquiry for her sister, joined her on her way.

During their walk, she learned that Ellen and Mary Roche were sisters, their mother long since dead, and their father—"Wisha, he was just nothing at all." Mrs. Villars had lived long enough in Ireland to know that the smothered sigh which followed that little hesitating sentence indicated a good-natured kind of idler, who smoked tobacco

when he could get it, drank whisky on the same terms, and was a burthen to the family it was his duty to support. But how eagerly the speaker turned from that unwelcome theme, to dwell on the perfections of her sister Ellen! And as she did so, the varying cheek, the eyes sometimes smiling, sometimes tearful, and the occasionally tremulous tones, spoke in her own favor as eloquently as if Ellen had been there in turn to tell the tale, and more than that we need not say. Ellen was the eldest, though she looked so small; but an early accident had made her lame, and checked her growth; and in those days of suffering she had learned to use her needle with such skill, as to enable her to contribute materially to their livelihood now. "She could never come with me, ma'am, when I went out to play with other girls, or follow me when I was clambering on the rocks, or picking shells on the shore; but she was always on the watch for me, as a mother looks for her child. I never found her missing from the door when I was coming home; and if, as sometimes happened, I forgot to be back in time, I saw the trouble in her pale cheeks and sad eyes, though she never said a word, so that made me careful not to wander any more. And she taught me to be tidy, ma'am; for I was very wild and careless, and would never have cared about tearing my clothes, only she always took and mended them, without ever noticing it; and she taught me to be gentle, and to curb my hasty spirit, for I saw her suffer pain and sorrow without murmur or complaint; and above all, ma'am," and here the tearful eyes filled entirely, "she taught me hope when my heart was sinking, and the power to bear when sorrow in earnest came—"

She stopped short, and drew her hand across her eyes; then looking archly into Mrs. Villars' face, who, deeply interested, was quite unprepared for the sudden transition, she added gaily—"Here I am all the time praising myself—tidy, gentle, and strong-hearted! Oh, lady, they are all but feathers from that sweet dove's wing!"

As she spoke they approached a whitewashed cottage, poor, but neater than is usually seen. In place of the dunghill there was a narrow little strip of garden, paled off from the road, filled with gay flowers glowing brightly in the morning sun; and at the door, as Mary had just been telling, was Ellen, looking out for her with the watchful habit of their early days. A few quick steps forward, a whispered word from Mary, and Ellen turned to the lady with a pleased smile of recognition, and invited her in to rest. She gladly accepted the invitation; and soon found herself seated in the clean, and tidy, though poorly-furnished dwelling. The only articles of superior comfort were a small work-table, placed near the window, and beside it a sort of easy-chair, made of straw, both evidently adapted to the occupation and infirmity of poor Ellen. Oh yes, we had nearly forgotten, the room was not quite unornamented either; for over the fireplace was arranged a large piece of coral, and some foreign shells, and near the window hung a cage in which was a bird with brilliant plumage, all telling plainly of some friend from over the sea.

Mrs. Villars had at this time the good fortune to escape an interview with the good-for-nothing father, and had the pleasure of talking, without interruption, to the two young girls, so different, and yet so united. This interview was succeeded by many others. Ellen was supplied with as

much work as she could accomplish; and Mary, who, under her instructions, had also become very expert at the needle, would hasten with double diligence through her more active employments, that she might gain some time to share in the occupation of her sister. And sweet it was to see those two young creatures seated, with busy fingers, at their work on the quiet summer's eve; Ellen earnestly dwelling on some instructive lesson, while, with deferential gentleness, Mary would raise her loving eyes now and then, in silent assurance that the words were going home to her heart; or, in turn, those eyes would sparkle gaily, and a happy smile would brighten Ellen's graver face as she listened to some passing jest or merry narrative from her light-hearted Mary. But were they thus alone? We reckon the father as nothing; for, with his hands in his pockets, he lounged in the sunshine while sunshine lasted, and then took his supper, and went off early to bed. He had his cottage and a little plot of ground rent free for his own life, and, caring only for himself, considered any exertion for a future provision quite superfluous. Even so: the girls had another companion who would often, as Ellen would say, come in "to idle them" in the evening; sometimes to make them laugh and talk—sometimes to read while they worked—and, oftener still, when the sun was sinking low, and the evening waves curling gently towards the shore, to coax them to "lay aside their stitchery," and saunter with him for half an hour along the cliffs. Notwithstanding the difference in their station, Mrs. Villars was soon regarded as a friend by those two motherless girls, and each meeting increased the interest she felt in them. She had given them employment and encouragement, and, more welcome still, had on more than one occasion given them affectionate sympathy and advice; but still she observed that at times some cloud was hanging over them, heavier even than poverty, and she determined not to conclude her visit to the sea-side without, if possible, winning their entire confidence, and making some effort for their happiness.

One morning Ellen was alone in the cottage, when Mrs. Villars entered with a small parcel in her hand, and asked her gaily, "Well, Ellen, would you like to make your fortune at once?" Ellen returned her smile with one as gay; but in an instant the bright expression vanished, and clasping her hands tightly, while her delicate figure actually trembled with emotion, she answered earnestly, "Would I wish to make my fortune? Oh, lady, I would give all the work these poor hands can ever do while life is spared me, to make a fortune of ten guineas before another month passes by!" Then burying her quivering features in her hands, she sank back into the little chair from which she had just risen, and burst into tears. Mrs. Villars, amazed at an agitation so unlike the usual placid and collected demeanor of Ellen, sat down beside her, and sought to comfort and calm her with tones even kinder than her words. For a while all would not do; but at last Ellen raised her head, hurriedly wiped away her tears, and putting back her hair with her still trembling hands, in faltering accents asked pardon for her foolishness; then, gaining confidence with the effort, she related, even as friend would tell to friend, the sorrow that was weighing on her heart.

She told what a young and helpless creature Mary was when they were left even worse than

orphans; how she, older by a few years, was still older from suffering and much inward thought; and how, from that hour, she had taken the little darling to her heart, and resolved to fill a mother's place to her through life. Then she told how the task was more difficult, because her beauty won indulgence from every one, and how she feared to lose her love in the checks she found it needful to impose. "But there was a deep mine of truth and sense in that seemingly thoughtless nature; and even in childish anger, she never forgot that I was her best and truest friend—even then her chief care was not to grieve me; and you know, ma'am, how she loves me now," said Ellen, looking up with a glow of intense feeling; and reading her answer in the lady's eyes she dropped her own as she softly murmured, "Yes, even as I love her!"

There was a moment's pause; and then in lighter tones Ellen went on to say that even such love, perfect as it was, could not entirely satisfy a heart like Mary's; that she always knew the time must come when she should be contented with a sister's place; and instead of regret, felt proud and happy when she found that Mary's heart was gained by one who had loved her almost from childhood—the most dutiful son, the best conducted and most industrious boy in the place. "I rejoiced in their happiness, and I encouraged it," continued she; "little dreaming that I was building on the very sand. Garret Mahony was a sailor, and had been more than once abroad; but his father was grown old and infirm, and as he was the last of many children, he made him promise never to leave him again. So he had a good deal of idle time, except when out fishing, and those leisure hours were mostly spent in the company he loved best; while I, proud of my own sweet Mary, and seeing no one in the world to compare with her, never for one moment dreamt that any could look on her with other eyes. One evening Garret came in, and at the first glance I saw something was the matter. Happily, Mary was out; gone to carry home some work; and I was able to bear the first wild burst of sorrow alone. But there was anger too, as well as sorrow; and though I had to bid my heart be still, that I might quiet his, yet it was the bitterest hour of my life.

"He told me that his father that morning had questioned him as to all the time he latterly spent here, and that, glad of the opening, he had at once avowed his love for Mary, and tried to speak of her as she well deserved; that his father had listened quietly until he was done, and after he was done, and then at last asked coldly what she had, along with what she was? This was a question that never had occurred to Garret; but he well knew there could be but one answer, and so he told his father, adding, that Mary was more precious than money or land. But the old man smiled, as some will do when they think young hearts have spoken in their folly, and he told his son the time would come when he would see with different eyes. Garret grew impatient, and was answering warmly, when his father silenced him, and, in a voice of command, desired him to attend. He is a proud and stern man, dear lady, old Maurice Mahony, and with a name for sense that has given him power over all that come within his shadow; so no wonder that his son listened with respect, though his heart was rebelling at every word. The father went on to say that he never knew any good come of marrying a girl that could bring no

thing but herself, unless she met with one as badly off, and then they might pull on together; but as long as the husband had any income, the wife that never knew the value of money of her own would think there was no end to his, and would soon grow discontented when her wishes were refused. Then would come extravagance, then anger, then bitterness, then want; and no knowing how many more evils he would have added, only Garret's fiery countenance showed he could bear no further. He changed then so far as to say that this was not out of covetousness, for the day Garret married to please him, he would give him up his share in the hooker, and that was well worth twenty guineas; but that he expected his wife would bring at least as much again; and unless she did, they never should have his consent or blessing.

"Garret was cut to the heart. There was a show of reason in his father's words; but it was calculating, heartless reason; so, without pretending to answer it, he tried to touch his feelings; but all in vain. The old man was not to be shaken; and at last poor Garret, as he himself confessed, lost patience, temper, respect itself; and, in words which no child should have spoken, no parent could forgive, reproached his father with cruelty and covetousness, withdrew his promise of never leaving him, vowed to go to sea again, and, sink or swim, never to return till he could bring home an independence for himself and Mary. Oh, lady, those words are few and cold to convey the feelings that were poured like a torrent from his heart! All were mixed and struggling together—anger, disappointment, self-reproach, love for Mary, duty to his father; each feeling so true, and yet so opposing, my very heart bled for him, for her—for all. But before I could well picture the consequences, in came Mary herself, her sweet face glowing from her walk, and from pleasure at being home with me again. One glance, and Garret buried his face in his folded arms on the table; the smile and the color fled from Mary's cheek, and without even a look at me, she sprang forward, and grasping his shoulder, asked wildly what was the matter. I had thought to break this reverse to her myself, to spare him the telling, and her the hearing it from him: but, as I said, she came back before a plan was formed, and now there could be no disguise; his look had prepared her for the worst, and I saw by her terrified countenance that even the truth would be a relief.

"And so he told it all again; but this time, oh, how different! The presence of her he loved came like sweet dew upon his heart, and melted away all the fierce and stormy feelings which had made me doubly grieved. With touching, yet manly sorrow and repentance, he related his disappointment and his fault, and he told it to one whose generous nature fully felt his confidence, and lost the first sharp sting of grief in sympathy for the estrangement between the father and the son. She wept, without doubt, long and sadly; but her face was turned away, and she listened, without interrupting, from beginning to end. Then, when all was over, she raised her head; her face was very pale, and her lip trembled; but there was a light in her eyes, and a steadfast look, that made me remember the high, proud spirit of her childish days, and tremble for the words she was about to speak. I wronged her in that passing fear, even I that should have known her well. It was no pride, but a holy resolution that was shining in that earnest look. She laid her hand affec-

tionately on Garret's arm, and in a very calm, low tone, asked him, 'Did the old man say anything against me, Garret—against myself?' He gave her a look of surprise, almost of reproach, as he exclaimed, 'Oh, Mary!' It was enough. A faint smile rested on her lip as her heart told her Garret felt such a thought impossible; and, after a moment's pause, she continued, 'Then, Garret, our first thought must be of him. Go to him at once, and gain his pardon for that disrespect, and comfort his heart, even as you did mine, by the goodness of your sorrow. You will feel nothing but misery till you have his forgiveness; and think how he must be grieving now! Then, for the future, we are both very young, and may well wait, with trust in God and in each other, for the changes time may bring. Your father made no objection to me except for poverty, and as that is no real fault, who knows but he may change his mind.'

"Garret shook his head despondingly as he answered, 'Ah, Mary, you little know him; but I'll go at once and ask his forgiveness, for, as you truly say, I cannot have rest or peace until I do so. But as to remaining idle any longer at home, when gold is to be made, and happiness depends on it, it is out of the question, Mary! You must not ask me to do that.'

"But indeed I do, Garret; that is what I ask you. You gave a promise to your old father, and you must not leave him. God always grants his blessing to the dutiful son; and would I be the one to tempt you to disobedience, and so provoke his curse! No, Garret; it surely is not *we* that wish for money: all we want is your father's consent; and that would be farther off than ever if you were to desert him, and make him look on me as the cause.'

"Garret still remonstrated; but Mary's simple faith and sense of duty finally conquered so far as to gain his promise to wait one year; and then he declared impetuously that if his father by that time had not changed his mind, he would no longer yield to his unreasonable whims.

"Satisfied with averting the present evil, Mary urged him no farther then; but hurried him away, not to lose a moment in becoming reconciled to his father. Then, worn out with her long effort at composure, my poor girl threw herself into my arms, and wept without restraint her long-repressed and bitter tears. But Mary's heart is like an April day—sunshine ever following the showers; and after a while she raised her head, and with a cheerfulness that took me by surprise, exclaimed, 'Well, Ellen, at any rate we shall not be parted; life will glide along the same as ever; and with hope to gladden, and the sense of doing right to bear us up, I think we ought to be even happier than before we were tried. And now from this time out,' added she, with increasing liveliness, 'I must be very careful, steady, and diligent, and so win a good character for old Maurice, as I have no money to buy one:' then sitting down to work with an air of diligence, she cried, 'Now, Ellen, you'll have to bear witness in my favor; so here's to begin!'

Ellen then told how, in the evening, Garret returned; but though his heart was evidently lightened by his father's forgiveness, still it was also plain that he had not recovered his own disappointment. His impetuous, active nature found waiting and submission a hard trial; and it required a double exertion of fortitude on Mary's part to make

him hope against hope. It was also evident that no change had been wrought in old Maurice's determination; so, convinced that matters could not long continue in this state, Ellen inwardly determined to make an effort to bring about some understanding. And an effort indeed it was for her. Naturally timid, and rendered still more diffident by her infirmity and secluded life, nothing but the power of an affection which was the first object of her existence, a love stronger than death, could have induced her to take the step she now meditated. This was to obtain an interview herself with old Maurice, and with her own lips plead the cause so dear to her heart. She knew him, as she had said, by report to be a hard and stern man; but she had also always heard he was a sensible and just one. She had heard, too, of his having, in early life, loved his wife to idolatry, and cherishing her memory with a constancy that would never allow him to replace her; this, combined with his genuine love for Garret, inspired her with the hope that his feelings might be touched by her appeal; and she resolved on making an attempt to convince him that arithmetic was not the only rule for measuring human hearts.

We need not enlarge upon this interview. Enough to say, that, though at first causing some surprise she was received with civility and kindness, which gave her courage and even hope; and though she found it impossible to remove an opinion which had become a fixed idea in old Maurice's mind, still, conquered by her earnestness, he modified it so far as to promise that if, at the end of the year, Mary could bring him half the sum originally demanded—namely, ten guineas, and this fairly earned by their united industry—he would be proud and happy to welcome her as his daughter. In the mean time, he also required a promise from Ellen to keep both this meeting and agreement a secret from every creature except Mary herself.

"From Garret!" asked Ellen pleadingly.

"Yes, from Garret especially," said the old man. "Can Mary be depended on to oblige me in this?"

"You shall see," answered Ellen proudly. Old Maurice smiled; and ratifying the treaty with a warm benediction and shake of the hand, they parted, mutually pleased. Since then, long months had passed away, and yet not so very long, for hope and constant industry had made the time seem short; and if Garret would sometimes, without those aids, wax impatient, a gentle word from Ellen, reminding him of his promise, would induce him to keep it with a good grace. He would good-humoredly say, "You are our pilot, Ellen, and in such hands it would be hard indeed if we refused to answer the helm." While Mary, assenting with beaming eyes, would think to herself, "Ah! if he knew but all."

But now the time was drawing very near. The "Sarah Jane," the vessel in which Garret was to have taken a berth last year, was to sail again in another month; and more than once of late he had mentioned this in a way that plainly showed his mind was dwelling on the voyage. The two girls worked harder, more perseveringly than ever; but they lived in a remote place, and, until Mrs. Villars' kindness had provided them with employment, their tasks had been precarious, and remuneration small; so that when, on that very morning, after a painful interview with Garret, the sisters reckoned over their little hoard, they found it scarcely amounting to two thirds of the requisite

sum, and Ellen sadly acknowledged that, from former experience, she was convinced it was useless to expect any further concession from old Maurice.

In this desponding mood she was found, as we have related, by Mrs. Villars, who listened to her artless narrative with deep and unaffected sympathy. When all was told, she spoke a few words of comfort and encouragement, expressive of the great use of trial to fortify and exalt the mind; and dwelt upon those lovely traits in Mary's character, which had been just described, and which might have withered away under too bright a sun. Then opening the little parcel she still held, she unfolded a large square of lace, and laying a pattern before Ellen, said, "Do you think, Ellen, you both could work this into a veil, and have it ready by this day month? It is for a young friend to wear at her wedding, and you shall have five guineas if you do it well." Ellen's heart gave one wild throb; for a moment she tried in vain to speak; then finding utterance, poured forth her thanks and hopes with a rapidity almost unintelligible. "Five guineas!—oh, dearest lady, what would we not attempt for that! Five guineas!—why, it has taken nearly a long year to put so much more together, and now it will seem but a day to earn the rest; and then you will at last be happy, my own Mary—happier and better for all your trouble. Oh, ma'am, fear not but we will accomplish it; and night and day we will work, until it is done." And night and day they worked, Mary at the plainer part, Ellen at the delicate stitches; while with admiration and renewed hope they contemplated each morning the progress they had made. At first Ellen thought to have given Mary the pleasure of a surprise, and, until it was done, to keep the amount of their reward a secret; but they had been too long accustomed to sharing every thought, to practise any concealment now; and one day remarking an unusually rapid progress, the whole truth burst in gladness from her lips.

To describe Mary's delight and astonishment is impossible. More busily she could not work, and for a while her trembling fingers refused to work at all; but day after day the sweet hope strengthened, and at last the appointed morning came, and found their task all but completed. It was, however, a day of unusual interruptions; and Ellen had each hour fresh cause to admire the improvement in Mary's temper, as, without an impatient word, she would lay aside her work and attend to every demand. But evening still found them at their unfinished task, and Mrs. Villars required it that night at the very latest. Just as they were busily employed, in came Garret with his usual request for an evening walk, and, half-affronted when refused, he said reproachfully, "I believe there is some charm in that cobweb, for you never will put it by. Here I have tried in vain to get you out for an entire month. I will begin to think at last, Mary, that you take no pleasure in my company."

Mary's quick feelings rose at this undeserved reproach, and, with somewhat of her old spirit, she was about to retort; but remembering all their past sorrow, all her present hope, she paused and answered gently, "To prove the contrary, Garret, I condemn you never to leave me till this cobweb, as you call it, is fairly spun; and then—" She stopped short with a gasp, at having so nearly betrayed her secret; but her look was so eloquent

of love and hope, that Garret started from his chair, and bending over her, inquired in hurried tones, "What then!—dearest Mary, what then!"

She threw back her head merrily as she looked up into his face; and though she tried to compose her features, a thousand smiles and dimples contradicted the demure accent with which she continued, "And then you may come with us when we take it home." Both Ellen and Garret laughed at this anti-climax; Ellen especially, well knowing what was in the glad girl's heart, and amused, besides, at Garret's somewhat puzzled countenance. But that soon brightened again under the happy influence; and, without seeking the reason why, he found himself chattering away with a lighter heart than he had felt for months.

The moon arose; but as that fair light has business of its own, our workwomen reserved it for a future hour, and sent Garret for the more terrestrial assistance of a pair of candles, to put the few concluding stitches to their work. At length behold it finished! Ellen resigned the last two or three stitches to her sister, that by her hands it should be completed; and, holding it up with an exclamation of triumph, poor Mary gazed joyfully at it for an instant, then flinging her arms round Ellen's neck, burst into tears. Garret looked on wonderingly, and made some efforts at consolation so wide of the mark, that Mary's weeping was at once changed into laughter, until her bright eyes overflowed again. Ellen at last, remembering that the best of men may sometimes grow impatient, and unwilling to try Garret too far, laid her hand on his arm, and said, "This is a bridal veil, Garret, and Mary and I have worked hard day and night to have it ready; it is to be worn by a fair and happy bride, while we—"

Garret required no further explanation of Mary's tears and excitement; and shaking off Ellen's hand with an upbraiding glance, as if he thought her for once in her life unfeeling, he answered warmly, "And if she is ever so fair and happy, she cannot be fairer than my own sweet Mary, or more deserving of the happiest lot." Then, before she had time to answer, he seized the veil, and playfully throwing it over Mary's glossy hair, he added, "Now tell me, Ellen, will there ever be a fairer bride than that!"

But he was answered by a loud cry from Ellen. In passing, the veil had touched the flame of the candle, and in an instant the delicate covering was in a blaze. Quick as thought, she tore it from that beloved head; the next moment it lay in scorched and worthless fragments on the floor. To describe their consternation, their revulsion of feeling, is impossible. The present calamity was so overpowering, that for the minute it swallowed up all thought of remoter consequences, and—pale, speechless, and aghast—they gazed in silence first at one another, then at the fragile object on which their hopes had so lately rested. At last Mary, pale as death, and almost as calm, laid her arm on her sister's neck, and in a low sad tone murmured, "You see, Ellen, 't is not to be!" Those words, uttered so despondingly, and Ellen's piteous tears, revealed to Garret somewhat of the truth; and though he could not guess the full extent of the misfortune, still he became at once aware that, in a moment's heedlessness, he had destroyed some plan essential to the happiness of all, and his self-accusation almost amounted to despair.

It was morning once more; the sun shone out as brightly as if it had only to awaken light and happy hearts, and the sisters had arisen betimes, and again were busy with their daily work. With the poor, there can be no useless indulgence of regret, and the labor of one hour often conquers the sorrow of the preceding; but we cannot wonder at the languor that now hung over Mary's usually active movements, or blame the large tear that would escape from her long, dark eye-lashes, as a gentle sigh from Ellen now and then caught her ear. Otherwise, they were quite silent; they had exhausted the language of sorrow; and it was not at once the foundations of hope could be laid again. Still, they both were occupied with their different employments when a footstep approached, and looking round, Mary saw old Maurice Mahony standing in the door-way. Starting at sight of such an unusual visitor, her first thought was of Garret—that some harm had befallen him, and trembling violently, she found herself unable to ask; but Ellen, with more self-possession, wished him good morning: and as he answered, "Good-morrow," kindly—"Always busy, I see," the tones of his voice at once reassured poor Mary, and awakened, she scarcely knew why, some indefinite feeling of hope.

He had not addressed her, but he now held out his hand, and drew her to a chair, beside which he seated himself. Ellen laid by her work, and there was a momentary pause of stillness and expectation. Maurice was a remarkable looking man. His hair, almost snow-white, combed back into smooth, old-fashioned curls, and his clothes, cut according to the fashion of a former generation, would have given him the appearance of great age, had it not been contradicted by his fresh complexion and still elastic step. His tall figure, scarcely stooped until his recent illness, and his firm, well-shaped mouth, and sagacious eyes and forehead, betokened an intellect still retaining all the vigor of its prime. He sat, as we have said, for a moment in silence, looking at the two anxious girls. At last he spoke; and, still retaining Mary's hand, related how Garret had returned home last night in a state little short of distraction; his heart so entirely full of one subject, that though it had never been renewed between them since the first painful day—under the influence of strong excitement, the interval seemed as nothing—the long smothered feeling burst forth, and he told him all that had occurred.

"It was very late," continued the old man, "but I could not go to rest till he came in, for I had felt all the evening more lonely than usual. The fire burnt low as I sat before it in thought; and fancy brought back again her I had laid long years ago in her narrow grave, and the children that had followed her; and I could see them all again smiling and chattering round the hearth, as they used to in those old hours. At last, from being very sorrowful these memories grew pleasant, and a dawning of the future seemed to gain upon the shadows of the past. I began to think; for the heart," added the old man solemnly, "is often prepared within itself for the way it ought to act; I began to ask myself why there were not smiling faces and sweet young voices round my hearth again, and why my best and only one was at that moment under the roof of a stranger—his thoughts full of bitterness against the old father that loved him all the time better than the veins of his heart —" "Oh no, no," interrupted Mary softly. Old Maurice sighed as he continued—"If it was so,

Mary, I had to blame myself. It was shown me then that I had been too positive and unbending; and Ellen's words, and all her loving arguments, came back fresher to my mind than the day I heard them. I was not so hardened as you thought me that day, Ellen," added he, turning to her; "but I thought a little trial would do the young people no harm; for I knew their hearts were in the right place, only they wanted ballast. But it is not good for short-sighted mortals to take the province of the Most High. When He afflicts, He sees and knows all things. We may often do mischief, though intending good, when inflicting needless trial on the hearts that love us; and so Mary, achree, even before Garret came in, I had resolved on my future course, and was waiting to tell him so before I slept that night; but when he did come, and all was told—all the mischief he had done, and the sweet, patient way you bore it—I thought the night too long till I could come and relieve my own heart and yours.

"And now Ellen," continued he, "how far were you able to fulfil your promise? for that you both did your best, I have no more doubt than that the sun is shining on us now. I have often noticed you hard at work when you little thought I was passing, let alone the good report from every one that ever names you. And there was a promise too, Ellen, that you made for another," added the old man with a smile; "and Mary, asthore, you kept it well, as I saw by Garret last night; and though he'll hardly thank me for teaching you to keep a secret from him, he'll feel it makes you the worthier of his trust in time to come. Is this the money?" asked he, as he took the little box containing their united earnings from Ellen's hand, and poured out the precious hoard upon the table—half-crowns, shillings, sixpences, even half-pence—all as they had been received and deposited there, and a tear glistened in the old man's eyes as he reckoned over those tokens of affection and persevering industry. The sum amounted in all to little more than seven pounds; and when the total was announced, Ellen shook her head as she remarked, "It would have been too little after all." "It is enough," answered Maurice quietly; and selecting from amongst the coins a crooked sixpence, which, pierced with a little hole, had once probably been a true-love token, he added, "I shall keep this for a luck-penny while I live; after that, Mary, it shall be yours in memory of this day. That is our share. The rest, dear Ellen—for your sake only I wish it had been more—but, such as it is, keep it till you meet with some old man as unreasonable as myself." Ellen remonstrated; but in vain. Old Maurice made it a condition; and as Mary took his side, two to one carried the day; then, in compassion to Garret's impatience, he left them, as he said, to have his place better filled.

With what different feelings did the little group again pursue their way to the residence of Mrs. Villars. Forgetful of her own disappointment, she had listened with kind and womanly sympathy to their sorrowful communication the night before, and now they hastened to tell her of their joy, and to ask her whether the time could possibly allow them to repair the accident by working another. "All for love, dear lady, this time; you must not think of offering us any money now!" But Mrs. Villars had already taken measures to supply the loss, and, as her best apology for the delay, had transmitted to her young friend the burnt fragments

of the veil as an evidence of the beauty of the work, and of the accident which destroyed it. In relating the circumstances, she added the hope that, as in Ireland a conflagration was considered an auspicious omen to a bride, good fortune might attend those relics in a tenfold proportion to the sorrow they had caused; and the young English girl, as she smiled at the augury, sent a thought across the waters from her own happy home, and determined not to enjoy the prosperous influence alone. She laid the open parcel on the table, and told its story in a way that went home to the hearts of her auditors. Had she been covetous, she might have made Mary Roche the richest of her name; but, guided by judgment as well as feeling, she contented herself with accepting a trifling gift from each, and so realized a sum which, though moderate in her eyes, far more than compensated for the labor they had lost. It was forwarded to Mrs. Villars, who divided it equally between the surprised and grateful girls; and it would have been more than human nature, had they not felt some little pleasure in the consciousness that Mary was not a portionless bride after all.

She and Garret never forgot their separate lessons of perseverance and patience acquired in that year of probation. They had truly learned them by heart, and such experience is seldom obliterated; and Ellen, happiest in the happiness of others—the dearest object of her heart attained—still felt that she had a sacred duty to perform. She devoted herself more entirely to her father, and, in studying his wishes, endeavored gradually to improve them; and she was rewarded. Drawn to each other by the absence of their mutual companion, he seemed each day more conscious of her excellence. Stimulated by the example of her cheerfulness and industry, he began to feel ashamed of his own listless indolence; and by degrees shaking off the influence of habit, he became an altered man. The "Work-girl's" cup of joy was full.

A TOBACCO SPECULATOR.—A French newspaper makes the following statement: "We learn that M. de Rothschild has arranged an affair which will insure him the monopoly of tobacco not only in France, but throughout the continent of Europe. He has for some time had agents in America to buy, by anticipation, the growth of all the plantations for a great many years to come. Thirty millions of francs have been appropriated to this vast speculation. The news has spread alarm among the capitalists who have entered into contracts with the royal tobacco manufactory, as it will soon be impossible for them to supply their tobacco at the stipulated prices." What an unheard-of proceeding! One man, by wealth, to acquire a power of money-squeezing or taxing over every one of his fellow-creatures who is addicted to a by no means rare habit! The Dutchman and German, who live in an atmosphere of tobacco smoke; the Parisian gentleman, who could not want his cigar; the operative, to whom the short pipe is equally indispensable; the old woman, who would perish without her *tabatière*; all to become liable to a suffering in purse for the benefit of M. de Rothschild, because M. de Rothschild happens already to possess overgrown wealth. Is there not something alarming in this announcement, as if we were now to find the results of industry converted into the most serious of tyrannies? Why, at this rate, it would only require the profits of the

tobacco monopoly to enable the monopolist to acquire a monopoly over sugar or tea; the profits of these united, to establish a monopoly of corn; and then we should have Mr. D'Israeli's ideas of "the Coming Man" realized with a vengeance—the ailment of the human race depending on the will and pleasure of an individual, and he a member of the house of Israel! Such may not practically result, but it is theoretically possible; and, on a simply philosophical consideration, nothing could be more curious. The profligate monopolies granted to courtiers, in the seventeenth century, for base and selfish reasons, here recur under totally different circumstances. Here reappears a power of unite over multitudes, such as existed in similar force only in the earliest state of society.—*Chambers*.

From Lamartine's "Harmonies Poétiques."

A HYMN.

THERE is an unknown language spoken
By the loud winds that sweep the sky;
By the dark storm-clouds, thunder-broken,
And waves on rocks that dash and die;
By the lone star, whose beams wax pale,
The moonlight sleeping on the vale,
The mariner's sweet distant hymn,
The horizon that before us flies,
The crystal firmament that lies
In the smooth sea reflected dim.

'T is breathed by the cool streams at morning,
The sunset on the mountain's shades,
The snow that daybreak is adorning,
And eve that on the turret fades;
The city's sounds that rise and sink,
The fair swan on the river's brink,
The quivering cypress' murmured sighs,
The ancient temple on the hill,
The solemn silence, deep and still,
Within the forest's mysteries.

Of Thee, oh God! this voice is telling,
Thou who art truth, life, hope, and love;
On whom night calls from her dark dwelling,
To whom bright morning looks above;
Of Thee—proclaimed by every sound,
Whom nature's all-mysterious round
Declares, yet not defines Thy light;
Of Thee—the abyss and source, whence all
Our souls proceed, in which they fall,
Who hast but one name—INFINITE.

All men on earth may hear and treasure
This voice, resounding from all time;
Each one, according to his measure,
Interpreting its scenes sublime.
But ah! the more our spirits weak
Within its holy depths would seek,
The more this vain world's pleasures cloy;
A weight too great for earthly mind,
O'erwhelms its powers, until we find
In solitude our only joy.

So when the feeble eye-ball fixes
Its sight upon the glorious sun,
Whose gold-embazoned chariot mixes
With rosy clouds that towards it run;
The dazzled gaze all powerless sinks,
Blind with the radiance which it drinks,
And sees but gloomy specks float by;
And darkness indistinct o'er shade
Wood, meadow, hill, and pleasant glade,
And the clear bosom of the sky.

D. M. M.

From Chambers' Journal.

ANIMAL LANGUAGE.

LANGUAGE—as far as the communication of ideas by certain modes of contact, by gesture, or by sounds, can be called by that name—seems to be possessed in common by all living creatures. The first or simplest form in which this faculty is manifested among animals, is that of contact—a species of intercommunication beautifully illustrated by the habits of such insects as the ant. “If you scatter,” say the authors of the *Introduction to Entomology*, “the ruins of an ant’s nest in your apartment, you will be furnished with a proof of their language. The ants will take a thousand different paths, each going by itself, to increase the chance of discovery; they will meet and cross each other in all directions, and perhaps will wander long before they can find a spot convenient for their reunion. No sooner does any one discover a little chink in the floor, through which it can pass below, than it returns to its companions, and, by means of certain motions of its antennæ, makes some of them comprehend what route they are to pursue to find it, sometimes even accompanying them to the spot; these, in their turn, become the guides of others, till all know which way to direct their steps.” The mode of communication employed by bees, beetles, and other insects, is much of the same nature, being almost entirely confined to contact, and rarely or ever partaking of gesticulation, which may be considered as the next form of language in the ascending scale.

In expressing their wants, feelings, and passions, almost all the higher animals make use of gesticulation. The dog speaks with his eye and ear as significantly as he does by his voice; the wagging of his tail is quite as expressive as the shake of a human hand; and no pantomime could better illustrate conscious error, shame, or disgrace, than his hanging ears, downcast look, and tail depressed, as he slinks away under rebuke. The dog, indeed, is an admirable physiognomist, whether actively or passively considered. If you can read craving, fear, or anger in his countenance, so he will kindness or surliness in yours, just as readily as he can interpret the physiognomy of one of his own species. Observe that huge mastiff gnawing a bone on the other side of the street, and see how the Newfoundland that is coming up on this side reports himself. First, he stands stock-still; not a muscle of his frame is moved; the mastiff takes no notice of him. Next, he advances a few steps, looks intently, wags his tail once or twice; still not a glance from the mastiff, which is evidently striving not to observe him. On the Newfoundland goes, with an indifferent amble, keeping as closely to this side as he can, and thinks no more of the mastiff. Had the latter, however, lifted his head from the bone, had he exchanged one glance of recognition, had he brushed his tail even once along the pavement, the Newfoundland would have gone gambolling up to him, even though the two might have had a tussle about the bone in the long-run. Here, then, is an example of strict physiognomy or pantomime, quite as well understood between animals as the most ardently-expressed sounds. Again, mark that couple of terriers, bound on a secret rabbiting excursion to yonder hill-side. Two minutes ago, that shaggy native of Skye was dozing on his haunches, as little dreaming of a rabbit-hunt as of a journey to the antipodes. But his little pepper-and-mustard

friend awoke him from his reverie, and pricking up his ears, gambolled significantly around him. Next he scampered onwards for a dozen of yards or so, looked anxiously back, again scampered forward, looked back, whined, and returned. Then he set out, scenting the ground as if he had made some important discovery, stopped suddenly, made a short detour, tracking some imaginary scent as eagerly as if a treasure of venison lay beneath his nose. This at length rouses his friend of Skye, and away they trot as slyly to the hill as any couple of poachers. Now our pepper-and-mustard hero is beating the whin-bushes, while his comrade stands outside the cover, ready to pounce upon the first rabbit that makes its appearance. Not a whine, not a yelp is heard—the whole is conducted by signs as significant and as well understood as the most ingenious system of marine signaling.

Independent of the humble kind of expression which gesticulation implies, many of the higher animals are possessed of vocal language, by which they can give the most intelligible utterance to their feelings of delight, pain, fear, alarm, recognition, affection, and the like. Nor does this language differ in aught but degree from that which we ourselves enjoy. Our organs may be capable of a greater variety of tones and modulations; and yet in some cases this is more than questionable: all that can be said is, that the human organization is capable of more perfect articulation, and this articulation is a thing of art, imitation, and experience, depending upon the higher degree of intelligence with which the Creator has endowed us. The brute creation express their feelings and passions by certain sounds, which are intelligible not only to those of their own species, but in a great degree to all other animals. Man, in his natural state, does little or nothing more. It is civilization—the memory of many experiences, aided by his higher mental qualities—which gives him his spoken language; each new object receiving a name founded on association with previously-known objects, and each conception receiving expression by association with ideas formerly entertained. Nothing of this kind takes place among animals; their limited endowments do not permit of it, as the range of their existence does not require it. Their language may be considered as stationary in a natural state, though capable of some curious modifications under human training, or even under certain peculiar changes of natural condition. It is to this range of animal expression that we would now direct attention.

Take that barn-yard cock, for example, which five minutes ago was crowing defiance from the top of the paling to his rival over the way, and hear him now crowing a very different note of delight and affection to his assembled dames. In a few minutes you may hear his peculiar “cluck cluck,” over some tid-bit he has discovered, and to which he wishes to direct their attention; his long-suppressed guttural cry of alarm, if the mastiff happens to be prowling in the neighborhood; or his soft blurr of courtship, when wooing the affections of some particular female. All of these notes, even to the minutest modulation, are known to the tenants of the barn-yard, which invariably interpret them in the sense they were intended. Or take the barn-yard hen, and observe the language by which she communicates with her young. By one note she collects and entices them under her wings, by another calls them to partake of some insect or grain she has discovered, by a third warns

them of danger, should any bird of prey be sailing above, by a fourth calls them away to another place, or leads them home, should they have strayed to a distance. Nor are these various calls known instinctively, as is generally believed, by the young brood. We have watched the habits of the barn-fowl with the closest scrutiny, and are convinced that a knowledge of the mother's notes is, to the young, a process of acquirement; in the same manner as a human child quickly, but nevertheless by degrees, learns to comprehend tones of affection, doting, chiding, and the like. The knowledge of the lower animals is in almost every instance acquired; a process necessarily more rapid in them than in man, as they much sooner reach the limit of their growth and perfection. Animal language is most perfect and varied among such animals as are gregarious in their habits. Let the most ignorant of natural history attend for a few days to the habits of a flock of birds, herd of oxen, horses, deer, elephants, or the like, and he will find that they make use of a variety of sounds often totally different from each other. Friendly recognition, hatred, fear, mirth, satisfaction, the discovery of food, hunger, and so on, are expressed each by a peculiar note, which is distinctly and instantly comprehended by the whole flock. And as among men, when simple sounds are insufficient, so among animals gesticulation is made use of to assist the comprehension and deepen the impression.

If, then, animals are really in possession of a vocal language, it may be asked, is that language capable of any modification, improvement, or deterioration; and have we any evidence to that effect? That animal language admits of extensive modification, we have ample proof in the history of cage and singing-birds. The natural note of the canary is clear, loud, and rather harsh; by careful training, and breeding from approved specimens, that note can be rendered clear, full, and mellow as that of the finest instrument. We have farther proof of such modification, in the fact of a young canary being made to imitate the notes of the linnet or goldfinch, just as either of these may be taught the song of the canary. The starling and blackbird may be trained to forsake their wood-notes wild, and to imitate the human whistle to perfection in many of our national melodies. Nay, the parrot, starling, raven, and even the canary, may be taught to articulate certain words and phrases with more precision and emphasis than the tyros of the elocutionist. Nor is artificial training always necessary to accomplish such modification; for we have the gay and lively mocking-bird of America producing, of his own free-will, almost every modulation, from the clear mellow tones of the wood-thrush, to the savage scream of the bald eagle. "While thus exerting himself," says Wilson, "a person destitute of sight would suppose that the whole feathered tribes had assembled together on a trial of skill, each striving to produce his utmost effect, so perfect are his imitations. He many times deceives the sportsman, and sends him in search of birds that perhaps are not within miles of him, but whose notes he exactly imitates: even birds themselves are frequently imposed on by this admirable mimic, and are decoyed by the fancied call of their mates, or dive with precipitation into the depth of thickets at the scream of what they suppose to be the sparrow-hawk. The mocking-bird loses little of the power and energy of his song by confinement. In his domesticated state, when he commences his ca-

reer of song, it is impossible to stand by uninterested. He whistles for the dog—Cæsar starts up, wags his tail, and runs to meet his master; he squeaks out like a hurt chicken—and the hen hurries about with hanging wings and bristling feathers, clucking to protect her injured brood. The barking of the dog, the mewling of the cat, the creaking of a passing wheelbarrow, follow with great truth and rapidity. He repeats the tune taught him by his master, though of considerable length, fully and faithfully. He runs over the quiverings of the canary, and the clear whistlings of the Virginian nightingale or redbird, with such superior execution and effect, that the mortified songsters feel their own inferiority, and become altogether silent, while he seems to triumph in their defeat by redoubling his exertions."

As there is thus an evident capability of modification, so there must, to a certain degree, be improvement or deterioration, as surrounding circumstances are favorable or unfavorable to the development of the vocal powers. A young canary brought up in the same room with a goldfinch and linnet, if he does not slavishly adopt the notes of either, will often be found to add them to his own natural music. The natural voice of the dog, so far as that can be ascertained from wild species of the family, is more a yelp and snarl than a bark; and yet what is more full and sonorous than the voice of the Newfoundland or mastiff? The wild horse—depending so much as it does upon the society of its kind—acquires the nicest modulations of neighing, so as to express pleasure, fear, recognition, the discovery of pasture, and so forth; while the labored hack has scarcely, if at all, the command of its vocal organs. The voice of animals is just as evidently strengthened and increased in variety of tone by practice, as is that of the human singer or orator, and thus becomes capable of expressing a wider range of ideas. Indeed, it is certain that, if animals are placed in situations where the use of their language is not required, they will in a short time lose the faculty of speech altogether. Thus, on the coral island of Juan de Nova, where dogs have been left from time to time, and where, finding abundance of food, they have multiplied prodigiously, it is asserted that the breed have entirely lost the faculty of barking. We knew an instance of a young canary, just bursting into song, which was rendered permanently dumb by being shut up in a darkened chamber, and by occasionally having a cloth thrown over its cage, that its notes might not disturb an invalid. This treatment was continued for several months: and so effectually did it destroy the clear, brilliant notes of the youngster, that he was never afterwards known to utter a note beyond a simple "tweet, tweet" of alarm. As the human speech is affected by disease and old age, so likewise is that of the lower animals. The husky, paralytic voice of the old shepherd-dog, is a very different thing from the full-toned bark of his athletic years; formerly, its modulations could give expression to joy, fear, anger, reproach, and the like; now, its monotony is destitute of all meaning. We were once in possession of a starling, which we had taught to utter a number of phrases, and to whistle in perfection a couple of Scottish melodies. After a severe moulting attack, not only was his power of voice destroyed, but his memory apparently so much affected, that phrases and melodies were ever after jumbled incoherently together; much like the chattering of

an old man in his dotage, or like those individuals who, after severe fevers, forget some of the languages they have acquired, or make themselves intelligible through a new jargon of English, French, and Latin phrases.

But it may be asked—if the lower animals thus make use of a vocal language, are those to whom it is addressed at all times capable of interpreting its meaning? The well-known habits of gregarious animals, in our opinion, ought to answer this question. Every individual in a herd of wild horses or deer, most perfectly understands every gesture and sound of the watch or leader, which is stationed for the general safety. Nor is such understanding altogether instinctive, but a process of training and tuition quite analogous to what takes place in our own case. Farther, the speech, if we may so call it, of one animal is not only understood by the animals of its own class, but in a great measure by the other animals that are in the habit of frequenting the same localities. Thus the chaffinch, which discovers the sparrow-hawk sailing above, instantly utters a note of alarm—a note known not only to other chaffinches, but understood and acted upon by all others of the feathered race within hearing. The suspension of every song, the rustling into the thicket beneath, the sly cowering into the first recess, or the clamor of impotent rage, abundantly attests how well they have interpreted the original note of alarm. But if all other evidence were wanting of the capacity of the lower animals to interpret other voices than their own, the fact that many of them learn to interpret human words, and to distinguish human voices, would be sufficient attestation. Thus the young horse taken from the hills, learns in a few months to discriminate the words spoken to him by his driver; and so do the ox, the dog, and other domesticated animals. This comprehension of vocal sounds evidently implies a sense of language—a sense that, on their part also, the expression of certain sounds will meet with a certain interpretation.

Such is the language of the lower animals; limited, no doubt, when compared with that of the human race; yet all-sufficient for their wants, and only inferior because not combined with that higher intelligence which, after all, forms the true distinction between man and his fellows of the animal creation.

AREYTOS, OR SONGS OF THE SOUTH, by W. GILMORE SIMMS, is the title of a little volume recently published at Charleston, South Carolina. It may be had of Paine & Burgess, in this city. Mr. Simms has given us in this collection many beautiful little pieces, the offspring of literary leisure. Many of them seem like improvisations. The following has much depth of feeling as well as beauty of expression.

"COME WHEN THE EVENING INTO SILENCE CLOSES."

I.

Come when the evening into silence closes,
When the pale stars steal out upon the blue;
And watchful zephyrs, to the virgin roses,
Descend, in sweetest murmurs, bringing dew;
Come to the heart that sadly then declining,
Would need a soothing day has never known;
Come like those stars upon the night-cloud shining,
And bless me with a beauty all thine own.
Beauty of songs and tears,
And blessed tremulous fears—

Beauty that shrinks from every gaze but one:
Ah! for the dear delight,
The music of thy sight,
I yield the day, the lonely day, and live for night alone.

II.

It is no grief that, in the night hour only,
The love that is our solace may be sought;
Day mocks the soul that is in rapture lonely,
And voices break the spell with sorrow fraught;
Better that single, silent star above us,
And still around us that subduing hush,
As of some brooding wing, ordained to love us,
That spells the troubled soul and soothes its gush;
Shadows that still beguile,
Sorrows that wear a smile,
Griefs that in dear delusions lead away—
And O! that whispering tone,
Breathed, heard, by one alone,
That, as it dies—a wordless sound—speaks more than words can say.

Here is a martial melody, in which the poet has spoken truly of the inflammable temperament of our population.

"WELL, LET THEM SING THEIR HEROES."

I.

Well, let them sing their heroes' deeds of fame,
Their belted warriors great in souls of might,
We too have gallant chiefs we joy to name,
Mighty in spirit, fearless in the fight;
There's not a spot in all this land of ours,
From Ashley's wave to Apalachia's steep,
Though smiling now with green, and gay with flowers,
That has not seen the charging squadrons sweep;
That has not heard the cry,
Peal in the blood-red sky,
A cry of death and terror to the foe;
That has not seen the strife
For liberty and life,
The dread alarm, the gallant charge, sharp shot
and sudden blow.

II.

And if the peace that blossoms through our land,
The boon of valor won from matchless hate,
Be once again by foreign legions bann'd,
And all the terror that was triumph late;
Then shall the spirit of old days awaken,
And through our plains the glorious cry shall spread:
The share thrown by, the sword again be taken
And plumed war bestride his battle steed:
The soul of Sumter then,
Shall stir each hill and glen,
And Marion rouse the spirit of the plain;
Brave Moultrie by the deep,
Fling off the ancient sleep,
And from his mountain heights old Pickens dart
again. *Eve. Post.*

WHOM TO LOOK TO.—There are six sorts of people at whose hands you need not expect much kindness. The sordid and narrow-minded think of nobody but themselves; the lazy will not take the trouble to serve you; the busy have not time to think of you; the overgrown rich man is above minding any one who needs his assistance; the poor and unhappy have neither spirit nor ability; the good-natured fool, however willing, is not capable of serving you.—*Burgh.*

THE THREE FRIENDS.

THERE were three friends—that is to say
They were men meeting every day;
Grasping each other's hands with earnest pressure
Upon the mart, or in the hours of leisure

The eldest had a large and finely-tempered heart,
Thought a few thoughts in which the world had
not a part.

And as the mountains are the first to win
A dawning glory ere the day begin,
He saw to trace his life-chart on a plan
Of simple grandeur meet for such a man.

His acts oft puzzled worldlings, who, you know,
Bat-like, are blinded by the noonday glow
Of deeds to which they cannot find the clue
Of double motive or a selfish view.
And yet as mountain sun-crowns downwards creep,
Till o'er the plain the generous day-beams sweep,
So from the height of his great soul were caught
Some peerless lessons by example taught.

"But," says the reader, "to these three great friends,

I cannot see which way your story tends."
Patience; and yet, perchance, when all is told
Meaning or moral you may not behold!
Of station, fortune, equal all had been,
But to the younger two came losses unforeseen.
Generous and prompt, the first with open hand
Made free his fortune to their joint command:
Saying, "It is a gift or loan, it matters not,
According to the chances of your future lot."
A test of friendship bravely, nobly borne;
But though the theme be much less trite and worn,
It is almost as hard—I own not quite—
To take with grace, as to bestow aright,
Favors like this; which try mind metal more
Than shielding life with life amid the battle's roar.

One was profuse of thanks; yet you might see
He bit his lip half-peevisly,
And to his cheeks the chafed and feverish blood
Sent fitfully its tell-tale flood.

The other said, "God bless thee!" fervently;
"God knows, I would have done the same for thee."

And several signs stood out in strong relief
To mark the twain; but, to be brief,
The one a slave, in struggling to escape,
Broke up his household gods of every shape,
To melt them—in his heart—into one figure rude
Of monstrous mien, which he called Gratitude;
Until, self-tortured by his hideous guest,
Day brought no peace, and night no rest!
The other one walked upright as when he
First knew his friend in all equality.
There was no servile crouching; no revoke
Of differing thoughts he once had freely spoke
(For e'en as discords harmony may make,
So kindred minds some different views may take.)
The only chain the gold 'twixt them had wrought,
Drew them more near, and dearer friendship
brought.

"God knows, I would have done the same for thee!"

"I know he would have done as much for me!"
Was felt—not said—by each respectively.
An unsung music to themselves most dear,
As one may silent read a page, not hear.

The writhing slave knew nought of such sweet
peace;
His visits shorten, and at last they cease.

As for the lender, if his thoughts be told,
He mourns to lose a friend, and not his gold.
Unto the other once he said, "Your words are true.
You've tested me; but I have tested you!
It pains my heart to know he could not comprehend
The rights and pleasures of a faithful friend."

"It chances," said the third, "that you and I
Do understand each other perfectly.
But frankly tell me, do not you opine
That, out of every hundred, ninety-nine
Of poor mankind do not know how
Either to accept a favor, or a boon bestow?
No matter what on Friendship's shrine the oblation,
They shrink in horror from an obligation!
So little are the ties of brotherhood
Between earth's children understood;
So few who seem such thoughts to understand,
That I could count, upon the fingers of one hand,
With whom I know such bonds might be,
And give or take all equally.
Without disturbance of our self-respect,
Or some regret the curious might detect."

"'T is very sad!" the first one sighing cried;
"God's gifts we most unequally divide,
How shall we teach one human brotherhood?"

"Trust God! and trust the might of doing good!"
The other answered. "There's a dawn draws
near;

(May eyes grow stronger ere the noon appear,
For some I know that not e'en now can bear
Truth's struggling beams that pierce this murky
air!)

Why, 't is a wholesome sign, you will aver.
That even you and I can thus confer!"

Camilla Toulmin.

A BACCHANALIAN SONG.

(DEDICATED TO FATHER MATHEW.)

To be adapted and sung to the tune of "*Hunting the Hare*," with accompaniments by the drum and Pandean pipes.

Toss your tippie off, roystering jolly boys,
Fill the tumbler, and empty the go;
Ne'er the consequence heed of your folly, boys—
Beggary, ruin, disease and woe,
Delirium tremens, and gout, and Dyspepsia,
Febris and icterus, phthisis, decline,
Marasmas and Megrims, confirmed Epilepsia,—
But pass round the bottle and drink up your
wine.

Erysipelas, elephantiasis,
Don't regard, my good fellows, a fig;
Impetigo, lichen, psoriasis,
Though they may lurk in each draught that you
swig.

Eczema, lepra, and all the variety
Of acne that Willan's *nosology* shows,
Shall never make us, lads, avoid inebriety—
Why, what if I do spoil the look of my nose!

Hæmatemesis, hydrops, and tetanus,
Though we shall probably have them some day,
Ne'er let us mind, whilst as yet they but threaten
us—

Let us be merry, and drink whilst we may.
Come apoplexia, mania, paralysis!
Of these and all other complaints we'll make
light;
And, happy and jovial as kings in their palaces,
Though we suffer to-morrow, get tipsy to-night.

From Chambers' Journal.

WAGERS.

THERE are three leading kinds of wagers—those designed to settle a difference of opinion on a question of fact, those speculating merely upon a doubtful future event, and those in which some feat is undertaken under a forfeiture. All are alike contrary to rationality. It may even be said of some wagers that they are immoral. For instance, the second of the above classes is merely a variety of gambling, and therefore not one word can be said in its favor. Those, again, which involve danger to the person of one or other of the parties are utterly indefensible.

There are some things in the history of this absurd practice worthy of being noted. Casuists and legislators have differed very much as to the way in which betting should be regarded in public policy. The general inference to be drawn from the various arguments adduced on both sides of the question is, that it is lawful, unless the object of it bear upon private wishes or criminal actions. As, for example, when, having wagered that such a person will die at such a time, the desire of winning, and the fear of losing, makes the bettor desire, or perhaps hasten, the death of that person; or when the wager is to be won by either the commission of crimes, or the causing others to commit them.

There are other examples of unlawful wagers in which injustice and fraud are included. Injustice, when, of two bettors, the one is certain, the other uncertain of winning; fraud, when a party engages, by evil means, or by equivokes in terms or intention, to perform any action—as in the celebrated wager of Cleopatra with Mark Anthony. Cleopatra invites Anthony to supper, and wagers that she alone will eat, at one meal, a sum equal to 80,729*l.* 3*s.* 4*d.* Anthony, seeing nothing extraordinary, begins to rally the queen on the frugality of her table. She makes no reply, but detaches from her ears two pearls of great price, one of which she throws into a liquor prepared for the purpose, by which it is speedily dissolved, and swallows it in the presence of Munatius Plaucus, the chosen arbiter of the wager; and as she is about to do the same with the other pearl, Plaucus snatches it away, exclaiming that she had already won.

The wager of Asclepiades the physician was not less extravagant. He wagered against fortune that he would never be ill during his life, under penalty of losing the reputation he had acquired of being the most famous physician of his time. It is true that he won his wager; for in fact he never was ill while he lived, having died from a fall in extreme old age.

In several states we find that various kinds of wagers are prohibited, some of which are of very little consequence. At Rome it is unlawful to make wagers on the death or exaltation of the popes, and on the promotion of the cardinals. In several republics it is also forbidden, under heavy penalties, to make wagers without the permission of the magistrate; at Venice, on the election of persons to fill the public offices; at Genoa, on the revolutions of states and kingdoms, the success of military expeditions, purposed marriages, and the departure or arrival of vessels. Bugnion mentions an act of parliament of Paris of 1565, which made it unlawful to make a pregnant female the subject of a wager.

In ancient Rome it was forbidden, by the law

Titia and the law Cornelia, to bet upon the success of unlawful games, or of any game whatever, with the exception of those in which courage, address, and bodily strength were to be tested; in which case the bettors were accustomed to place in the hands of a third party the signet rings which they wore on their fingers, as a gage or pledge. This deposit, which held the place of a stipulation, rendered the wager obligatory, and produced an action at law; which proves that consignment is absolutely necessary to make the engagement valid. The terms consignment and wager are used indifferently by lawyers. The etymology of the word wager, or gager, which comes from gage, shows that wagers are not considered serious conventions, unless the gage has been deposited.

However, where address and bodily strength are concerned, the wager is obligatory, even though the gage has not been deposited: and this is the exception to the rule; for the gage or stake is properly the reward of the address and danger incurred by the subject of the wager. Thus the Count de —, in his wager against the Duke de —, (which he won,) even though he had not consigned, would, if he had lived, have had an action against his adversary. In ancient Greece, the count would have borne away the prize in the horse-race at the Olympic games. The following is the history of this wager:—

The count betted 10,000 crowns against the duke, that in six hours he would go twice, and back again, from the Porte St. Denis to Chantilly. He had his whole body tightly bandaged round, and a leaden bullet in his mouth to refresh him, by keeping up a supply of moisture. Relays of horses were disposed from space to space, and every embarrassment prevented that might in the least retard his progress. The swiftest horses were chosen. A clock was attached to the Porte St. Denis, to mark the time. He set out with the speed of an arrow, and in a moment was out of sight. Never did man cleave the air with such rapidity. On arriving at each relay, without alighting, he sprang from one horse on to the other, and continued his flight. He arrived at the Porte St. Denis, having performed his four courses eighteen minutes before the appointed time! He said he was still able to go to Versailles, to bring the king tidings of his success. All bathed in perspiration, he was put into a warm bed, and, five months afterwards, died from the effects of this effort. This nobleman, remarks the narrator of his exploit, deserves no praise for having run such a race. All that can be said of him is, that he would have made the best post-boy in the world.

Another wager may be mentioned, the wildness of which was the cause of great excitement at the time it was made.

The year 1726 was so rainy, that it seemed as if the flood-gates of heaven were opened. All the rivers overflowed their banks, to the great prejudice of commerce. There were some superstitious persons who announced a second deluge. A Parisian banker named Bulliot having remarked that it had rained excessively on St. Gervais' day, (19th June,) persuaded himself that it would continue to rain for forty days. The motive of this opinion was a proverb current among the people:

S'il pleut le jour de St. Gervais,
Il pleut quarante jours après.*

* If it rain on St. Gervais' day, it will rain for forty days afterwards.

Infatuated by this opinion, and being on that day in the Café de la Regence, near the Palais Royal, he entered into conversation with some persons on the subject of the incessant inundations which were destroying the hopes of a good harvest, and exciting apprehensions of a very great rise in the price of corn. Bulliot observed that there would be more cause for alarm if the rains continued for forty days longer, and that he was ready to wager that this misfortune was inevitable. This evil prognostic was but badly received by those present, who inquired upon what he founded it. "I am sure of it," he confidently replied. "Let any one bet against me; I am ready to put down my stake." He then threw some louis upon a table, to excite the curious, and defy the incredulous. As his speech was not very sensible, several persons refused to enter the lists against him: but others, more interested, flattered by the hope of winning, put down stakes to the same amount as he did. The money was deposited in the hands of the coffee-house keeper, and the wager registered in the following terms:—"If it rain little or much during forty days from St. Gervais' day, Bulliot has won; if it discontinue raining even for one single day during the forty days, Bulliot has lost."

This wager irritated the cupidity of the whole café, who were eager to appropriate the louis in which Bulliot so abounded; so that, after having staked against all who would bet against him, and after having emptied every purse, he demanded, with a sort of insult, if there were any others ready to oppose him. Believing himself sure of victory, he proposed to those who had no money to stake their gold-headed canes, gold snuff-boxes, and other valuable jewellery; which were duly appraised, and placed in the hands of the same depositary; for all which he put down full value in specie. He even consented that those who had neither money nor jewels should deposit their Holland shirts, against which he also consigned their value in money.

The contagion of this folly having spread abroad, the next day brought a fresh reinforcement of antagonists, who presented themselves at the same café to put down their stakes against Bulliot. But his money being at length exhausted, he offered those new-comers bills payable to the bearer, or letters of exchange. As he was in good repute, and had always honored his engagements, his proposal was accepted. He gave bills and letters of exchange to the amount of nearly 50,000 crowns; all which were likewise deposited. It might be said of Bulliot that he was alone against all, and that if he won, he would make the finest haul in the world; whilst the whole troop of his adversaries would be ruined by the inclemency of the weather.

Fame, as usual, added new embellishments to this story, as she sped it on from ear to ear, through city and court. Every one was anxious to see this extraordinary man. Those who knew him by sight, pointed him out to those who did not. His countenance was attentively observed, and eyes were opened wide upon him. When asked why he was so steadfast in his opinion, he alleged the proverb before mentioned, which the people have adopted more for rhyme than reason.

A nobleman of high rank jestingly said, that if Bulliot won, he should be tried for sorcery; and that if he lost, he should be put in bedlam. In fine, he was the subject of every conversation.

The comedians, ever alive to the whim of the hour, acted him in the several theatres.

At length, in spite of the proverb, the windows of heaven were closed before the expiration of the forty days. The coffee-house keeper and the other depositaries accordingly gave up the stakes to those who had won. The bearers of the bills and letters of exchange had not the same luck. Bulliot's relatives caused him to be interdicted as a prodigal.

Several of the bettors, unwilling to engage themselves in a lawsuit of such doubtful event, returned their bills and letters of exchange; others, more avaricious, embarked upon the stormy sea of the courts. The suit, which was first brought to the Chatelet, came at length before the parliament. The bettors, wishing to put the best face possible upon their claim, said nothing about the wager. They only represented that they were merchants, who had accepted the bills in question with confidence, on account of the established credit of Bulliot, who had hitherto satisfied all his creditors; that, to oppose to their claim the interdiction of their debtor, who was not bound by that interdiction at the time of his engagement with them, was to violate the public faith; that, if creditors could be eluded in this way, foreigners would lose all confidence in us; finally, that the good faith of commerce, which is the soul of it, required that the merchants who had given value for those bills, having no reason to distrust Bulliot, should be satisfied. Bulliot's brother, who had been appointed his guardian, made the truth so fully apparent by presumptive proofs and the date of the bills, that, at the end of 1726, a verdict was returned for the defendant, annulling all the wagers.

From Chambers' Journal.

DR. COMBE ON THE OBSERVATION OF NATURE IN THE TREATMENT OF DISEASE.

IN the *British and Foreign Medical Review* for January last, the editor, Dr. Forbes, presented an elaborate paper on Homœopathy, in which, while treating that novel system more liberally than is customary in the orthodox profession, he made such a number of admissions as to the state of ordinary medicine, as, coming from such a quarter, might well startle the public. We do not propose to say more on this paper at present, than that it meets but too aptly conclusions at which we have long arrived regarding medical practice. Our immediate aim is, to direct attention to a paper which the above has elicited from the pen of Dr. Combe, and which appears in the number of the *Review* for April. This eminent person, as is his custom, takes the subject at once before the bar of nature. He sees disease to be "a perverted state of a natural organic action, and not a something thrown into the system by accident, and obeying no fixed laws. In the cure of disease, therefore," says he, "the business of the physician is not to supersede nature, but carefully to observe what is wrong, and to aid the efforts made by her to reestablish regularity and order. Accordingly, experience shows that the physician and the remedy are useful only when they act in accordance with the laws of the constitution and the intentions of nature; hence in chronic, and even in acute diseases, the most effective part of the treatment is generally the hygienic, or that which consists in placing all the organs under the most favorable circumstances for the adequate

exercise of their respective functions. If this be done systematically, every effort of nature will be towards the restoration of health; and all that she demands from us in addition, is to remove impediments, and facilitate her acts."

The learned physician deplores that his medical brethren, in general, should look so much to what is called active treatment, and so little to hygiene, or the regulation of external conditions. He is not for leaving the patient to the efforts of nature, in the common sense of the phrase; he would take care neither to counteract her own efforts, nor to substitute another method of cure for hers. "So far from sanctioning inactivity on our part, an intelligent reliance on nature implies that we shall exercise, throughout the whole course of disease, the most watchful observation over its phenomena and progress, and not only timously remove obstacles which may interfere with its proper course, but rigidly fulfil all the conditions which a sound physiology shows to be most conducive to the well-being of the various bodily organs, and to their restoration when disordered. *In this way the physician may often exercise the most salutary influence, nay, even be the means of saving the patient's life, and yet not give one particle of medicine.*" It is first necessary that the physician should thoroughly know the laws of the healthy system; then, that he should observe the manner in which the various disturbing causes act upon the different functions, and the *kind, course, duration, and termination* of the morbid action which they produce; implicitly believing, and having ever present to his mind, that "all the operations and actions of the living body, whether healthy or morbid, take place according to *fixed and discoverable laws*, and that God has left nothing to chance." "That there are," he pursues, "forms of disease in which a determinate nature and course cannot be easily traced, is quite true; but there are many more in which the natural course is as obvious as that of the sun. Take the familiar example of cow-pox, small-pox, fever, or ague. The disease is regulated by fixed laws in such a palpable manner, that every medical book describes, with perfect accuracy, the appearances which each will present on given days of its progress in an average constitution. The same holds with measles, scarlatina, and many other acute affections; and less clearly but still perceptibly enough, with gout, rheumatism, and inflammation. All of these go through a regular course in a shorter or longer time; and when everything goes according to rule, we feel assured that the constitution is safer than where some unusual accident has interrupted the natural progress of events. This, be it observed, is the course towards health which the Creator, in constituting man, considered best for him; and the wisest thing we can do is to act in accordance with it, and seek only to remove impediments. It is not we to whom the cure is entrusted, or by whom it is effected. The Creator has perfected all the arrangements for that purpose, and our sole business ought to be to give these arrangements full play." As an additional illustration, "take even a severe cold, with which all are acquainted more or less. Everybody knows that when once set in, treat it how you like, it will run through a determinate course of increase, maturity, and decline; and that all we can do is to shorten a little the duration of its stages by diminishing its intensity, or lengthen it by increasing its severity. Occasionally, it is true,

an incipient cold may be stopped by a 'heroic' remedy, such as a tumbler of warm punch at bedtime; but much more frequently the heroics leave the patient worse than they found him, and the common experience of mankind shrinks from their use. Even a common boil on the fingers runs through its regular stages of inflammation and decline, or of suppuration and ulceration, each stage being hastened or retarded by external or constitutional causes, but never inverted. But if we apply to the one stage the means which are adapted only to the succeeding one, the result will be injurious; or if we lower the system so much that it becomes inadequate to carry on the regular succession of actions required for recovery, mischief must once more be produced."

Dr. Combe exemplifies this principle in small-pox and measles. In these cases "the excitement often runs very high in the first or eruptive stage, and means are required to moderate it. But if we bleed too freely, it is well known that the eruption (which we shall suppose to have come out) will generally disappear, and increased danger to life ensue; because the order of nature being forcibly interrupted, some internal disease is brought on, or the system sinks exhausted. Whereas if, instead of bleeding excessively, we keep the patient very quiet, in a cool, well-aired room, and administer cooling drinks, mild laxatives or antimonials, and reserve bleeding for cases of necessity, the probability will be much in favor of recovery. To apply this to the pleurisy. Instead of being intent on cutting it short, the moment we ascertain its existence, we would have respect to its natural course and duration, and reserve our means to carry it safely through its regular stages. So far as my observation goes, cures would be more numerous and complete were this principle followed. If a severe bleeding disturbs fatally the progress of small-pox eruption, may it not also, when unseasonably used, injuriously influence the course of internal inflammation, and lead, for instance, to fatal oppression or effusion?"

Dr. Combe counsels no inactive practice; for his views, to be fully carried out, would call for much greater vigilance and care than are usually bestowed. "Disease," says he, "arises either from the habits of the individual, from accidental causes, or from peculiarities of constitution acted upon by these. Hence, on being called to a patient, the first step in the natural investigation is to examine the constitutional qualities, to make ourselves acquainted with the mode of life, feelings, &c., and to trace the manner in which the cause has acted or continues to act. All these influence very greatly both the nature of the disease, and its probable course. They also bear directly upon the kind of treatment, and its probable success. If, however, we are content to regard disease as an entity, arising by chance, and observing no laws, we shall have no inducement to trouble ourselves or the patient with any of these inquiries. Such is, in fact, the practical faith of the great majority of professional men. They discover the existence of an entity, which in medical works has a certain name, and, knowing that in the same books certain remedies are said to be good for that entity, they prescribe them accordingly, without giving themselves much concern about their mode of action or fitness for the individual constitution, age, or stage of the disease, and without inquiring whether there is anything in the mode of life tend-

ing to reproduce the malady or not. In many chronic ailments, removable causes are thus often left in full operation, while the effect is partially mitigated, but not cured, by the use of active medicines, and in a short time the whole evil returns in its full force. Whereas, if proceeding according to the order of nature, we can trace the disease to any error in the mode of life, to any external source of danger, or internal peculiarity of constitution, aggravated by either of these two conditions, we can convince the patient of the fact, and give him a rational and confiding interest in the changes which we may recommend, and thus not only promote his recovery, but render him proof against all the seductions of quackery. According to the prevailing kind of intercourse between patient and physician, namely, unhesitating dictation on the one hand, and ignorant obedience on the other, blind faith is the pivot on which their mutual connexion turns—a faith which is thus necessarily at the mercy of the chapter of accidents, and is often supplanted by reliance on the first bold and confident quack who comes in the way. People wonder that quackery abounds, and medical men ask for power from the legislature to put it down. They themselves, however, are in no small degree its abettors, and they have the remedy already to a great extent, although not wholly, in their own hands. If they who are educated, and should know better, accustom their patients to the principles of quackery, by themselves treating them empirically, can they wonder that patients who are not professionally educated, and are trained and treated on purely empirical principals, should be as ready to listen to the assurances of the quack as to those of the regular practitioner, whose manner of proceeding is often so nearly allied in kind, as to present no very obvious marks of distinction from that of the quack? In fact medicine, as often practised by men of undoubted respectability, is made so much of a mystery and is so nearly allied to, if not identified with, quackery, that it would puzzle many a rational onlooker to tell which is the one, and which the other. And this being the case, it requires no ghost from another world to explain why the profession has decidedly sunk in public estimation, and does not exercise that wholesome influence on public opinion which it ought to do."

We would only add, that if a reform of medicine to the effect contemplated by Dr. Combe is ever to be brought about, the public must take a share in it. They must cease to tempt their medical attendants into "vigorous practice" by their irrational eagerness to see *something done*. They must be prepared to wait with patience to see nature, with the proper negative as well as positive assistance from man's hand and skill, regain her healthy action. And, as a first step to this improved treatment of their sick friends, they must altogether abandon that vulgar faith in doses and bleedings which has so long been—we speak in all soberness—a scourge to our race.

SHOULD STUDY BE CONFINED TO ONE SUBJECT?—In a series of lectures on the study of German Literature, delivered at Manchester by Mr. George Dawson of Birmingham, the following remarks (quoted from the *Manchester Examiner's* report) are made:—"Sometimes you heard men warning people against a dissipation of study, against study-

ing too many things, and exhorting them to confine their attention to one thing. Now, up to a certain time, he considered that this was bad advice. He did not think that this should be the foundation of culture to those to whom literature was a secondary thing. They should in early life gather in a variety of knowledge—form, as it were, a good web—and then inweave the particular study which after-life required should be the pattern on the cloth. For a literary man, he need not say how necessary total culture was. He had before protested against fractional studies, as contradistinguished from a subdivision of labor in teaching. To exhort people to cultivate one branch of knowledge to the exclusion of everything else, was like urging one man to direct his efforts solely to the strengthening of his right arm, another of his left, a third of his feet, and so on. One man recommended you to cultivate the exact sciences only, and hence society had been supplied with men who were mathematicians only—men whose gospel was a right angle, and whose religion was a circle. In other cases, men had become so engrossed with a particular study, that they would spend an enormous amount of time in settling the quantity of a Greek syllable, and write most elaborate treatises on the Greek digamma. A fully-cultured man could turn his attention to anything; and, when fully cultured, he should turn to the division of labor which stern necessity imposed upon him. Sometimes, however, natural propensity would come in to check this. Nevertheless, we should all aim at what the Germans called 'many-sidedness;' so that, whichever way we turned, there might be a polished side presented."

MR. WEBSTER.

UNFORTUNATELY, the results of this mischievous accusation will not be terminated with the report of the committee, or the declaration of Mr. Webster's innocence. The loss, however, will fall not on Mr. Webster, but on his country. He will be the smallest sufferer by this unprincipled proceeding. A charge which hardly obtained an hour's currency even amongst the most vicious Americans, and which was at once contemptuously scouted by Europe, will not leave the shadow of a stain on the character of this great statesman. As far as it reflects upon him, it will be forgotten before it is refuted. But there is another character on which it will leave a terrible stigma—that of the nation. Whatever be its truth or falsehood—whatever the motives which dictated its production—the mere simple fact that in 1846 an American Senator, in the heat of party altercation, accused a Secretary of State with peculation and embezzlement five years before, will read so strangely in the page of history, and will admit of such a sweeping inference as to the morals and civilization of the people, that a volume of patriotic eulogies will never counterbalance it. If ever there was a nation on whom the strictest watchfulness in matters of this sort was incumbent, it is that of the United States. * * * * *

The object of the attack in this instance happens to be secure enough; but the mischief to the national character, from the avowal and circulation of such a charge as this against a gentleman who has done as much as any man living to raise his countrymen in the respect of others, is almost irreparable.—*Times*, June 2.

From the Union.

THE LA PLATA WAR.

UNITED STATES SHIP PLYMOUTH,
Montevideo, April 28, 1846.

WE left Gibraltar on the 28th October, arrived at Rio de Janeiro on the 3d December, left there on the 20th January, and arrived here on the 27th, since which time we have been lying quietly at anchor here, near the very spot where we lay fourteen years ago. The town looks pretty much the same as then; the same landing, (wharf painted red;) part of it covered, where we have often stood out of the rain; the same wheel (hoisting machine) which we have often turned, while waiting for the market boat to go off. * * * *

* Titus' Hotel is still kept as an hotel, but much enlarged. There are also several other hotels kept principally by Frenchmen. No improvements have been made in the streets or in the heart of the city, but outside the wall, a large number of buildings are erected—almost a second town. A Protestant church has also been erected, but what was called the English burying ground is a complete ruin—a mere common. Several slight wharfs have been lately commenced, just outside of the old one, and a few large storehouses erected near the water. These are all the improvements; therefore, if you still retain any recollection of the place, you will at once be able to fancy yourself in every part of it, and be astonished at the little change fourteen years have brought to it. What a difference would that period make in almost any corner of our blessed country. But how can anything prosper under such a state of affairs as exists in most of the so-called republics of South America! Since our arrival here we have had uncommonly fine weather—not even a pampero as yet; but the season for them is fast coming on. We expect to remain here two months longer. The brig Bainbridge left here for Rio on the 23d of last month. The frigate Columbia and sloop Saratoga on the 9th inst., also for Janeiro. We expect the return of the Bainbridge in a few days, and we do hope she may bring orders for us to return home. This ship has already been in commission two and a half years, and her crew's term of service is fast expiring; besides the state of our affairs with England may make it necessary for our squadron to be nearer home, not only to protect our coast, but to put the ships in the best state to do service; to do so, our ship must have a new suit of sails and a few other necessary articles; with that exception, she is in splendid order, both in appearance and utility. She is admired wherever we go, and we take deep pride in keeping her in that order; and she is at all times ready for service or show. The crew are in an excellent state of discipline, and although young and light-bodied men, they out-work everything we meet, and will no doubt do their duty, should our services be needed. When she returns home it would give me real pleasure to show her to you, and to see her is well worth a jaunt to either Norfolk or New York. I will now give you a feeble sketch of the political affairs of this river; to give an exact one, would be almost impossible, for there are so many contrary statements, beliefs, actions, &c., that it would be a task indeed to unravel the exact motive that has governed the different actors for the last six or eight years. I shall, however, attempt an outline, and then send you a printed copy of official

documents that passed between the English, French, and Argentine ministers during the last year, which will guide you into the affairs as they now exist. I will begin by stating that about six or eight years ago the French, as you are well aware, blockaded Buenos Ayres, as a measure to force that government to indemnify some Frenchmen for some spoliation, said to have been committed upon them by Rosas. At that period all was tranquillity in the river. Oribe was President, and Rivera commander in chief of the troops of the independent province of Banda Oriental, (Montevideo its capital.) Rosas was then, as now, governor, or as you may say, dictator of the province of Buenos Ayres; and, they say, ruled as a scourge; but that was their own look-out. Other nations had nothing to do with it. The French continued the blockade, and made many prizes, which were taken into Montevideo for condemnation. Oribe refused permission to have them condemned in his port, and this, they say, was the first cause of French interference in this place. That is the ostensible one. Montevideo contained at that time, as now, several thousands of French Basques and Italians; a strong faction was created against Oribe; and these foreigners were induced to take up arms and throw themselves in the arms of Rivera, who, already at the head of the native troops, (mostly blacks,) thus found himself in sufficient power to usurp the government. Oribe was soon obliged to fly. Some kind of an election took place, and Rivera proclaimed President. Oribe fled to Buenos Ayres and was taken under the protection of Rosas, and, I believe, became one of his generals. About this time, the French withdrew their blockade of Buenos Ayres, having in some manner settled their affairs with Rosas; who now, they say, turned all his attention towards subjugating this province, either to annex it to his own, or to gain a lasting influence in its administration. Others say his ill feeling towards the province arose from its affording shelter to a number of his countrymen who had become obnoxious to him, and who had joined Rivera (who had always been his enemy) in working the Buenos Ayrean government all the ill they could. Finding all his complaints unheeded, he determined upon the overthrow of Rivera, who, he judged, was the sole cause of all the encroachments on his province, and the dissensions at home against his administration. He raised an army, and placed it under the command of Oribe, who immediately landed in the upper part of this province and carried the country wherever he appeared, thousands joining his standard. He reëntered as the lawful President, and his reinstatement was the sole cause of Rosas' acknowledged interference. The army moved along; and having acquired the full possession of the whole province, appeared under the walls of Montevideo. Had Oribe then marched on, all would have been in his possession; but from some cause or other, he delayed. A strict defence was instituted, Rivera arming all the French, Italians, and refugees from Buenos Ayres. Oribe then encamped within three miles of the wall, and laid down for a regular siege. Some time after, Rivera attempted to prevent Oribe from taking possession of Maldonado, (a small port about forty miles below.) He was defeated, and obliged to fly the country, his own troops at Montevideo refusing to receive him within the city after his defeat. The government was continued by the vice-president, and the siege and

defence continued on. Rosas now brought his squadron to blockade the port, thus completely cutting off all further supplies. What they had on hand was, in time, almost consumed; the inhabitants were even obliged to feed on dogs, cats, &c. Thus reduced, in a very short time the town would have capitulated, and Oribe would have again been fully reinstated; and then he proposed to allow them a fair election. At this state of affairs, all at once, the English and French appeared as pacificators, so they called themselves. All at once, they saw Rosas' ambition, and determination to destroy the independence of this province of Uruguay, which they (the English) had guaranteed in some treaty with Brazil. They protested against Rosas' right of blockade; and, after a heavy correspondence of advice, threats, &c., which Rosas unheeded, they seized and dismantled the blockading squadron; turned their crews adrift; received several of the vessels into their service; and, finally, the united forces of England and France blockaded Buenos Ayres. The documents that I have sent will put you in possession of all the particulars of this last movement, which took place last fall. The English have also landed the 73d and 45th regiments, and a party of royal marines, amounting to near two thousand men; the French have also landed a few hundred of their sailors, (who are half-soldier, half-sailor,) and their ministers and admirals sway all the counsels of the city. Besides these troops, there are about one thousand blacks and two to three thousand French Basques, and Italians, all under arms, and supported, no doubt, by English gold, with a promise of rich lands in the interior when once Oribe's power is destroyed. If they wait for that, it will be a long day; for one hundred thousand men would scarce overrun this province, or that of Buenos Ayres. Within the last ten days Rivera arrived from Rio. The *pacificators* denied him permission to land; but so severe was the outcry among the troops—especially the blacks, who commenced every kind of excess—that they were at last obliged to allow him to land. He is now on shore, and at the head of the blacks, Basques, and Italians, and, it is thought, will not be swayed longer by foreign influence, and rather than submit to it he may capitulate with Oribe. They used him as a tool as long as he might serve their views, and then wished to see him cast aside. They are certainly on the look-out; and I fancy I can see signs of an embarkation of their troops, which must take place before long, if their governments do not materially reinforce them. They have clearly made fools of themselves; and if their object was and is a foothold in this part of the world, I believe they have so far fully missed it; sooner or later they must retire, and then Oribe will take instant possession, and should he rid the state of that foreign tribe, he will be doing it some service. So far I have, by a feeble sketch of affairs, brought you up to the existing state at present. I will only add that Oribe has been encamped at his present site near three years; that he maintains a strict government of the whole country, except Colonea, a small village opposite Buenos Ayres and Maldanada, also a small town near the sea, off both of which places the English or French maintain a naval force. What have been their views in the whole transaction, I leave to sounder heads than mine to unravel; the greater knowledge you possess of political affairs than I have, will, no doubt, guide you to a motive; one

thing more I will mention, and then have done with this miserable attempt at description. You no doubt have heard of the combined force, with a large convoy of merchant vessels, of all nations, loaded with merchandise, forcing the passage of the Parana on their way to Paraguay, and of the desperate resistance they met with. Still they succeeded in destroying the forts and passing on to Corrientes, a part of which province English gold has caused to rebel against Rosas. In Paraguay they have also, by the same means, created a feeling against Rosas, which they trust will aid them in whatever views they have towards Buenos Ayres. Lately we have not heard anything further of this fleet, but that they have not reached Paraguay is certain; and whether Paraguay will be forced into a direct war with Buenos Ayres, or whether these noble rivers will be entirely opened to trade, time alone will decide, and nations alone will judge how far the English and French had the right to force the opening of the river; but one thing is certain, if it is ever freely opened, we shall derive the same advantage as we did from the China transaction. Our peaceful attitude, and the course we have pursued, will give it to us; wherever we go we are respected and loved as a just and honorable nation, strictly loving peace, but determined to bear no wrong, and one that I hope will never suffer European interference. I have seen enough of it in every part of the world never to view with indifference their least foothold in our blessed country.

JOURNEY ACROSS MEXICO SINCE THE WAR.

WE are indebted to Dr. Wood, who has recently returned to the United States, in company with Messrs. Dimond and Parrot, (consuls,) for the following sketches. Dr. W. has spent some time on the coasts of the Pacific; and travelled, on his return, from Mazatlan, on that coast, to Vera Cruz, on the Gulf of Mexico. These sketches will be found interesting, particularly at this time.—*Union*.

"Although the route and mode of procedure between Mexico and Vera Cruz has been frequently described by tourists, I believe there is not so much familiarity with the road from the Pacific to the capital of the Mexican States; and it may not be uninteresting at the present moment to take a rapid glance at this long route, passing through the heart, the chief provinces, and cities of the republic. While hostilities were threatening, but before their commencement, it became necessary to hold immediate communication with the United States across the continent. The most convenient point of departure is at the town of San Blas, a little south of the mouth of the Gulf of California, and one day's ordinary sail from Mazatlan. Starting from San Blas instead of Mazatlan saves five days' laborious land travel. The village on the beach consists of a collection of thatched huts, inhabited by a sallow, unhealthy looking population, and particularly rich in mosquitoes and sand flies. About a mile back of the beach stands the old town of San Blas, on a rocky eminence, rising like a castle from the swampy verdant plain surrounding it; it is now but the mouldering gravestone of past prosperity. Both San Blas and Tepic, the city of which it is the port, are losing themselves in the flourishing town of Mazatlan, which has risen rapidly out of that smuggling commerce which the benighted policy of Mexico has rendered

the systematic, if not the legitimate, commerce of the country. With the Spanish style of architecture, Mazatlan has the freshness, newness, and, disdaining the limitation of walls, the independent, straggling character of a new town in the United States.

At San Blas arrangements had been made with an arriero, or muleteer, to convey us to the city of Tepic; some of our party going no further than this place; and accordingly on the morning of May 4th, we found the requisite quantity of beasts on the beach, all caparisoned for the journey. It is next to impossible to describe the huge, confused mass of wood, leather, thongs, and straps which make up the equipment of a Mexican saddle, and appears a sufficient load for the little animal which sustains it without the addition of the rider. It is necessary that each traveller on this journey should have at least one baggage mule; for, besides his ordinary luggage, he must carry all his bedding, and, with a just discretion, a good store of provisions. Upon this occasion, we had handsome and convenient brass bedsteads, stowed compactly in trunks and boxes, and at night, when they were put up, their glittering posts and canopy frames formed a strong contrast with the rude unfurnished rooms in which we lodged. In loading the mules two things surprise the stranger: first, the weight and bulk which the animals carry; and next, the facility with which the arrieros secure articles of every weight and size, so that the animal climbing precipitous paths, and walking narrow shelves, seems a moving mass of trunks, boxes, and bales.

Our party consisted, including the muleteers, of seven persons, and ten horses and mules; each of us equipped with a formidable battery of carbines at the saddle bow, pistols round the waist, and the Mexicans wearing long rusty swords which had lost their scabbards. All this warlike equipment was, I presume, upon the principle of scarecrows in a cornfield, more than with any design of bloody conflict. All preparations being completed at seven o'clock, we took our departure from the shore of the Pacific ocean, and passed into a dense, luxuriant, bottom land thicket or jungle. This bottom is only passable in the dry season, and we noticed the elevation of the water during the wet season marked six feet high on the trees. From this bottom we ascended by a gentle rise to some good cultivable land, upon which was here and there a Mexican farm or rancho, and occasionally a new clearing, such as are seen in our west. At twelve we reached the half-way house, a plain farm-house, where we found clean and comfortable provision. Resting until half-past three, we again got under way, and now commenced the ascent of the mountains. Our way lay through a dark forest of gigantic trees, up and down precipitous declivities until, about sun down, we emerged upon a naked and desolate mountain summit, from which, looking back over a vast region of country below us, we had our parting view of the Pacific losing itself in the distant horizon. The road now passed over hills of white and red clay, a sterile and lonely country. The moon rose upon us long before our day's journey came to its close in the city of Tepic, just as the serenoes, or watchmen, were whistling on their sharp calls the hour of ten, and giving forth their devotional cry of "*Ave Maria purissima.*" We were received in the elegant mansion of Mr. Forbes, a Scotch gentleman, whose warm hospitality allows no stranger to pass Tepic without a home. He had been expecting us, and we

found ready an ample supper; after which we were assigned chambers provided with every luxury for the most fastidious, and particularly agreeable after an unaccustomed ride of fifty-five miles.

Tepic is a handsome and well built city of about eight thousand inhabitants, but in a state of decay—its population having fallen off in a few years four thousand. The only thing refreshing, prosperous, and un-Mexican about it, is the cotton factory of the Messrs. Forbes. The situation is pretty and picturesque, where they have the water-power of a mountain stream, and the buildings, both of the factory and residences of the persons connected with it, are in a showy and appropriate architectural taste. The superintendent, as well as all the leading workmen, are from the United States; and in the number of years in which they have been employed, Mr. Forbes assured me he never had had the least difficulty or cause of dissatisfaction with any of them. This factory makes eighty pieces a day, and it sells at twenty-five cents the yard—something less than a yard. Most of the raw material is brought from New Orleans, although a little is grown in the country. In the neighborhood of Tepic are some fine sugar estates, where refined sugar is made at a cost of three or four cents, and sells at ten cents a pound, though nothing like a supply for the country is produced, as I have known, in the neighborhood of Tepic, this sugar to retail at fifty cents a pound.

At Tepic we first met the hostile proclamation of Paredes, directing an advance upon General Taylor. This gave us some uneasiness, although it was the general impression that this proclamation had some other design in its threats than the purpose of executing them.

At Tepic we made a new contract with an arriero for himself, his mozos, or boys, horses, mules, carbines and swords, to carry us to Guadalajara, a five-day journey. The annual fair of Tepic was in progress as we passed through. It is nothing more than a scene of low dissipation; the public square, or plaza, which is common to every Mexican town, being filled with every possible contrivance—wheels, cards, dice, colored cloths, &c.—for gambling, and the tables ranging in wealth from a small capital of copper coin, where children and beggars tried their fortunes, to those where their elders and betters might stake gold.

The necessary arrangements being completed, on the afternoon of May 6th our cavalcade was on its way to Guadalajara, reaching that night the village of San Leonel. Don Ramon, our chief arriero, instead of taking us to the fonda, lodged us in the farm-house of a friend of his. The lady of the establishment was particularly cautious in locking the doors and securing the windows before retiring; and, as a reason for her care, she showed an enormous scar extending the whole length of her arm, which had been inflicted by the knife of a robber some years before, who, at the same time, laid two others of her household wounded on the floor.

The usual mode of travelling is to start at three or four o'clock in the morning, having first taken the *desayunero*, or cup of tea, coffee, or chocolate, with a small cake or rusk; then travelling until eleven or twelve o'clock, when breakfast, in our sense of the word, is taken, and a rest of three or four hours enjoyed, the day's journey being completed in the cool of the evening, at which time the traveller dines. This order and period of meals is that common to all Mexico.

The first part of our journey from Tepic was among a succession of smooth, rounded hills, rising from the surrounding dry, barren plains, like Indian mounds, the plains themselves intersected by long stone fences, but entirely destitute of cultivation. Soon after leaving San Leonel on the morning of the seventh, the country assumed a rather more cheering appearance. A few thinly-scattered pine trees covered the hills, and an occasional small stream of water ran at their base. In the valleys were fields of barley; here and there we passed an Indian village of thatched huts, and mules treading out barley on a ground threshing-floor. Our halt for the day was at the village of Santa Isabel. Leaving this place, our road conducted us, during the afternoon, over a singular volcanic formation. As we approached this region, there appeared to be a lofty dark wall extending across the country from the base of a mountain on the left. This wall formed the boundary, or outer edge of a widely-extended mass of craggy rocks rising some twenty feet above the country over which they were spread. They lay, far as the eye could see, tossed into all manner of confused shapes, like rocky waves with ragged summits, grown black with age, and had the appearance of a tempest-tost sea of molten iron, suddenly congealed in all its wild confusion. In contemplating the probable force producing the phenomenon, it presents the idea of the explosion of a mountain and the masses tumbling into their present disorder. By night we arrived at the pretty town of Aguacatlan, of some five thousand inhabitants, having a fine plaza surrounded by shade trees, and a conspicuous church and convent. The porada of Aguacatlan is one of more pretension than any on the route, having a large corridor in front, over which is announced in large letters, "Here may be found every convenience for persons of good taste." The offices surrounding the court yard were each labelled, and it was very gratifying to notice over one, "Here the bread is made with the greatest cleanliness." Generally the arrangement of all these poradas is the same. The traveller is shown into a room containing a heavy table, a bench with a high back, and some boards in a corner—upon which to place his bedding; but in addition to this at Aguacatlan, we had a lay sala or drawing-room, furnished with mahogany chairs. The proprietor is undoubtedly one of those spirits in advance of his age and country. On the following morning our route from Aguacatlan to Istlan lay for ten or twelve miles through the most fertile and best cultivated valley we had yet seen, and better covered with farm houses and villages; still the cultivation is careless, antique, and barbarous, the plough in use being no more than a sharpened log of wood. The afternoon of this day brought us to the Barranca, the wildest and most picturesque scene on the whole route from the Pacific to the Atlantic. The barranca is a gorge several thousand feet deep, separating two ranges of mountains, and the descent is by a zig-zag road along the face of the left hand range, with this tremendous gulf on the right; the bottom of this gorge being reached, a little advance shows that we are still on the summit of a mountain, for another opening of still greater depth appears on the left hand, the bottom of which has also to be reached; the road there continues in this deep and shady valley, along the banks of a rocky stream, and beneath overhanging precipices for some miles. In this wild and difficult pass, by some capricious impulse, is seen the only evidence of national energy, or internal im-

provement which came under my notice. A broad, handsome, well-made, paved carriage road is being cut from the face of the mountain, descending it in a succession of inclined planes, turning one upon another, and much of the road is already completed. Ascending from these shady depths by a precipitous road we reached, a little after night, the miserable village, but good porada of Mochotitli. Leaving this village early in the morning, we entered upon the lonely desolate table lands of Mexico; but although uncheered by shrubbery or cultivation, we had the advantage of a good level road, which towards evening brought us rather suddenly upon a different scene. From the brow of the elevated plain upon which we had been travelling, we looked down upon an extensive green valley, spread over with fields of the maguey plant, from which the brandy of the country is distilled. Immediately beneath us was the town of Tequila, with its houses and church domes shooting from amid groves of trees. Tequila, although constructed with handsome houses and regular streets, owed much of its effect to distance; for, in passing through it, the appearance of the whole place was one of poverty, dilapidation, and decay. Sleeping that night at the village of Amelatan, on the following morning, (Sunday, May 10th,) under a broiling sun, in clouds of dust, and amid troops of mules, at 11 o'clock we entered the truly beautiful city of Guadalajara, but not without seeing something of the benighted policy, constructed to facilitate robbery, and sustain a rapacious soldiery, the system which scarce permits an article to move from one part of the country to another, without taxation. Although we had now advanced so far in the interior at the garita, or interior custom-house, one of our mules was selected to be unloaded, while a slovenly epauletted fellow—some Mexican general or colonel, undoubtedly—overhauled the baggage to see that we were not smuggling. Had we really been loaded with contraband articles, it would have given us no annoyance, as he was only stationed there to make his living by taking bribes. However, we had no favors to ask, and did not choose to pay him to release us from the detention.

Guadalajara is a very showy city, of palace-like houses, and enormous churches and convents, covering many squares of the city; concealing in their recesses a vast population lost to life and usefulness. Flowers and gardens seemed to be a prevalent taste, and the verandahs or iron balconies projecting from the second stories were so filled with vases of flowers as to give along the length of elegant streets the appearance of hanging flower gardens. A broad and shaded paseo extends for a mile and a half along one side of the city, and terminates in a handsome rose-hedged park and garden. Fountains of stone and bronze, bubbling forth clear cold water, are seen in every direction. But these are all remnants and splendors of the past—the present is in strong contrast. Poverty, vice, and wretchedness are its characteristics; beggars forming the great population of the streets, and the prisons thronged with criminals of the vilest character, and existing in the most disgusting filth. The prison of Guadalajara is one of the most fertile recruiting stations of the army. The California garrison was always formed from these assassins; or rather they were sent there to depravate with impunity upon the unoffending inhabitants, until, patience being exhausted, all Mexican rule was expelled. Their offences and their ex-

pulsion came under my own observation; and but recently a garrison of these criminals was sent to Mazatlan, and it had scarcely reached there before it threatened a sack of the town. Seven assassinations occurred in one Mexican town during my short residence in it, and I never heard of anything worse happening to the criminals than being made soldiers of, although one of them had despatched his third victim. At Guadalajara, we were startled by receiving the Mexican account, in triumphant and boastful language, of the capture of Captain Thornton's dragoons. This intelligence placed us in a very precarious situation. All the representations we received being through the Mexican press, gave us great uneasiness as to the result of our interests on the frontier, notwithstanding the large allowance we made for Mexican braggadocio. Soon after the arrival of the intelligence, boys were crying extras about the streets, crying out, "Triumph over the North Americans." We determined to hurry on our way, though it was in anxiety and gloom that we did so.

From Guadalajara a line of diligences runs to Vera Cruz, and this line is worthy of all commendation. The conveyances are good Troy-built coaches; the horses and mules are in fine order, and the coachmen possess great skill and dexterity. Originally, the coachmen were all Yankees; but now they are Mexicans who have grown up on the road, and among the coaches and horses. It is somewhat amusing to notice the amalgamation they have made on the Mexican costume with that of our coachmen or drivers. The universal Mexican serape has given way to the box coat; but the split-leg pantaloons hold their own, and a brightly-colored handkerchief tied over the throat and chin, seems a type of the woollen cravat so generally worn by our drivers in cold weather. The fondas (hotels) are regulated by a system extending along the whole route, prescribing what shall be given, and the hours of meals, and also regulating the charges. These rules also direct that every passenger shall be furnished with clean sheets and pillow-case, which no one has used, at every lodging-place on the route. The hours of travel are from three to four in the morning to the same hour in the afternoon.

Leaving Guadalajara at half-past three in the morning, our first day's journey was over a desolate-looking rolling table land, in many places rocky; the soil was a stiff blue clay, here and there broken by the plough and ready for corn, but the general face of the country was covered by a short yellow dried grass. The road (thanks to Nature!) was generally good; but where she had left any impediments, art had disdained to remove them: and in some places, for short distances, our strongly-built coaches had terrible encounters. Over thirty leagues of such a country, by four o'clock in the afternoon, we reached the wretched little hamlet of San José, and the diligence coming in the opposite direction not having arrived, we were compelled to await its arrival for dinner. The delay became unusual, and the sun was going down, leaving San José and the desolate country about it to the additional gloom of night, when the expected stage rattled into the court-yard; one solitary passenger leaped from it, with his dress all loose and disordered; his trunk being taken from the boot, he gave it a kick of ineffable disgust, and which betrayed its lightness and emptiness. While we had been awaiting his arrival to dinner, he had been lying under the coach with his mouth to the ground, and a carbine at his head, and a band of

robbers had been appropriating his property; they stripped him even to his suspender buckles, and asked what he was, where he was from, &c., concluding by beating him with their swords. The robbers—three in number—were masked. The minuteness of their inquiries caused us to feel somewhat apprehensive, as, in case of their ascertaining our nationality, they might think they rendered the state some service by taking our lives; and consequently no choice was left us but to fight in case of an attack. The Mexican servant accompanying us being called in to the council, expressed his willingness and ability to handle a gun. In addition to the arms in our possession, two fowling-pieces were obtained from the manager of the fonda; and as it was more than probable the robbers were from the village itself, and had their agents about us at this time, we gave some little publicity to our preparations. I discharged a Colt's pistol, and re-loaded it, in presence of this respectable public. Having made these preparations, and arranged our plan of defence, we started at four in the morning, and were upon the look-out, finger on trigger, for two or three hours, after this our uneasiness somewhat subsided, and we made the day's journey safely, and to our own satisfaction, if not to that of the robbers. Through most of this day the country was very much the same as that of yesterday; destitute of population, water, or any growth but the nopal, or prickly pear, and a few scattering acacias. Late in the afternoon it was quite refreshing to come upon a fine valley prairie, watered by a small stream, and covered with wheat-fields ready for the harvest. Our stopping-place for the night was a town of about eight thousand inhabitants, called Lagos, rather a neat place, with the usual share of enormous churches. From Lagos our road on the following morning continued through the same beautiful prairie and waving wheat-fields, upon which we had entered the preceding evening, and this was the character of the country until our arrival in the afternoon at the mining town of Guanajato. This city has a very picturesque situation, climbing up the sides and over the summits of a range of hills; the streets are exceedingly intricate and precipitous. For miles before reaching the city there are a succession of immense establishments for reducing the metals from the ore. Viewed from one of the surrounding elevations, it appears as though there was a separate town on each hill as far as the eye can see, the church crowning each summit. Here we sat down to table with some more unfortunate fellows, who had been robbed the preceding evening in the stage approaching us. In this case there were eight robbers; and not feeling it to be necessary to go far, or take much trouble in the matter, they robbed this stage in sight of the gates of the city of Queretero—a city of 20,000 inhabitants; not even taking the precaution to mask themselves; and one of the robbers on the following day, near the door of our hotel, asked a gentleman whom he had relieved of his purse and watch for the light of his cigar. No one acquainted with the country would take the responsibility of denouncing a robber; to do so would take nothing from his impunity, and would insure the assassination of the informer. Soon after leaving Guanajato, we passed from the rugged mountain region in which it is situated to a continuation of the fertile valley upon which we had been the preceding day, and continued along this our whole day's journey of forty leagues, to the handsome city of Queretero, passing on the

way several pretty towns of five or six thousand inhabitants each. Just before reaching the town of Celayo, we fell in with a group of half-naked peasants, some on foot and some on donkeys, being driven in by a few Mexican soldiers to form part of the army destined for Matamoros. The stage stopped one day, being Sunday, in Queretero, and on the first night of our arrival the house of a curate nearly opposite to us was entered by a band of robbers and stripped of all its portable valuables, with five thousand dollars in specie. Here we, for the first time, learned through a Mexican paper the name of our unfortunate dragoons, and the unhappy fate of Col. Cross.

As an evidence of the facilities of Mexican civilization in this handsome and populous city of Queretero, having occasion to receive six cents in change, I was compelled to take it in four cakes of white soap, the common currency of the country. Before leaving this city on Monday morning, we called a council of war to determine whether we should defend ourselves or yield, in case of an attack. There were eight of us, but one was a priest, the other an old man of seventy, two were invalids, and none would entertain for a moment the question of war. They had no arms; we therefore laid ours aside and determined to submit quietly to any fate. We fortunately entered Mexico on the evening of the second day from Queretero without any interruption. On the night before our arrival in the city we put up at an antiquated and prison-like *fonda*, the court-yard of which was occupied by part of a company of soldiers, and a machine on wheels which greatly excited the curiosity and attention of our companions. A glance at it was only necessary to discover that it was a camp forge; for there were the bellows and the anvil. But a particularly luminous Mexican explained to the whole party that it was a "bomba"—a bomb carriage for the destruction of us North Americans.

I shall not, in a flying tour of this kind, undertake a description of the oft-described city of Mexico, or the emotions with which a stranger enters a place which has been alternately the capital of the Montezumas, the capital of Cortez, and the theatre where one military chief has contended with another, not for the honor of his country, but for the possession of the returns of the custom-house.

Mexico is indisputably a magnificent city; but as Madame Calderon justly remarks, its elegant houses, without having the dignity of ruins, induce the impression of fine buildings in a state of neglect. One accustomed to a different state of things, walks the elegant streets of Mexico with feelings of melancholy and disgust, at finding himself amid throngs of epauleted and laced soldiers, in a mingled attire of decoration and dirt; and crowds of the most revolting beggars of every age from infancy to decrepitude. This disgusting spectacle accompanies the traveller across the whole stage route of Mexico. The coach cannot stop for a moment without being surrounded by these wretched objects, displaying their disgusting infirmities and uttering piteous moans. At one point they start off with the stage; children, young girls, and men, old women with infants on their backs, and with their hands pressed together, uttering a continued moan. With marvellous speed they keep up with the coach for near a mile. Sensibility becomes blunted by the continued contemplation of disease and wretchedness, while

charity is paralyzed by the consciousness of inability to relieve the mass. The comfort of the stranger is by no means increased by the conviction that all his vigilance will not prevent his pocket being picked in the most public places, an event which happened twice to my companion in one day, and twice I detected the predator's hand in my pocket; the third time he was more successful. Soldiers seem an essential part of every institution of the country. If the host passes the streets and brings the whole population to its knees, it is accompanied by soldiers; if you visit a peaceful scientific institution, a filthy soldier examines your right to admission. He is, however, an appropriate sentinel; for scientific institutions with high-sounding names, upon being entered display nothing but disorder, neglect, and filth; they indicate a people degenerating into the darkness, without the energy of barbarism. The state of general ignorance may be imagined when those who ought to be the receptacles of knowledge are among the most ignorant. Standing near a Franciscan friar, in the museum, examining a model representing a section of the mines, the good father contemplated it with great earnestness, and graciously informed me that it was a kind of representation of the birth of our Saviour.

Upon our arrival in the city we were naturally anxious to learn something of the state of affairs on the frontier; but at first could learn nothing but the probability that an action had taken place; then that it had been fatal to us; finally, the truth began to leak out, and we learned that the Mexican arms had sustained a defeat. No public promulgation was made of this state of affairs, and long after the government was apprized of the truth, the news-boys were crying among the deluded people the triumph of the Mexican arms. The press, of course, dared publish nothing that Parades did not approve.

On the day of my departure from Mexico, (May 27,) the Mexican Congress was about to meet. It is, however, a burlesque to call it a Congress of the nation, being a body selected from the clergy and military chiefly, originally convened for the purpose of confirming the usurpation of Paredes. Some of the departments could not be coerced into sending deputies, and several of the deputies sent made strenuous efforts to avoid the responsibilities of their position, knowing that at this time they could not much longer bolster up Paredes.

It is difficult to conceive what is the proper remedy for the present disorders of Mexico. With a population of eight millions, seven are of the poor, oppressed, humble, and submissive Indian race, the victims of all changes, and the feeling of despair and melancholy has impressed itself upon the countenances of even the children. The other million is the Mexico-Spanish blood, from which are taken the clergy, the twenty thousand soldiers, and the twenty thousand officers, most of whom are left to pay themselves in any way they can. It is evident that this population wants the intellectual and moral basis upon which to form a government.

Sympathy with Mexico, in relation to her conquest is a sympathy undenied by Mexicans whose interests are those of peace and order; indeed, to desire the introduction of any influence opposed to principles of rapine and revolution, becomes the part of patriotism; for Mexico is now the subject of other powers by principles as strong as those of arms. All her resources are in the hands of

foreigners—her mines, manufactures, and commerce; because, among other reasons, the reputable and enterprising Mexican cannot protect himself against the exactions of his own government. The system of bribery by which the revenue is collected is known to the whole world; and another evidence of narrow policy is seen in the fact that, although Mexico can grow tobacco equal to that of Cuba, bands of armed men are sent annually to destroy the green tobacco crop, except in those two provinces where the government monopolize the growth of an inferior article.

The greatest curse of the country is found in its military establishment, and a view of the evils of this almost causes one to regard the glitter of an uniform as a crime against civilization.

Yours, truly,

WM. MAXWELL WOOD.

CORRESPONDENCE.

THE Antwerp correspondent of the United States Gazette, speaking of the Oregon question, in his letter of 1st June, says:

"On the whole, we may, as Americans, feel proud of the firmness which has been manifested on this occasion by the coördinate branches of our government; for though we may have come in for a share of censure occasionally, yet, on the whole, I believe, we will come off with flying colors, and no mistake. There is an old soldier's proverb, which says, 'fortune favors the brave!' and a man who insists on his rights cannot, under any circumstances, be refused respect. But I refrain from further observations, as, in all probability, the whole difficulty is already arranged to the satisfaction of the lovers of peace, and without sacrifice of the national honor.

"The most important feature on the continent, at this moment, is the emigration to America. It seems as if the populations of all Europe, after in vain attempting to establish liberal governments at home, had now resolved to elect the United States as their future theatre of action, and the field of their manly industry. At this port (Antwerp) the price of steerage passage to the United States was last year 50 francs a head, the passenger finding his own provisions. It has this year already risen to 100 francs, just double the amount, and the charterers besides offer to find the water casks, which was not customary in this place, and which makes the actual price of passage agree to 103 francs a head. All American vessels are chartered long before they enter the Scheldt, and Germans, Swedes and Norwegians equally profit by this unexpected increase of business. When all the vessels fit for an American voyage are engaged, agents are sent over to England to pick up vessels as they come in, and there are instances where charter parties have actually been concluded in the mouth of the Channel. Hamburg and Bremen do three times the emigration business of former years, and engaging besides every American vessel that touches there. The number of Germans emigrating this year to the United States will not be less than 60,000, and those from Ireland and England 140,000 or 150,000, in all about 200,000; enough at least to form the population of two new States!

"This rage for emigration, however political writers may account for it, is the best testimony

which the people give to their respective sovereigns of the estimation in which they hold their respective governments; but if any one doubt that political motives are the cause of the phenomenon, let him read the official acts of the German governments in which these emigrants are all stigmatized as 'malcontent and political fanatics.'

'It is said that the month of July is at last fixed upon by the King of Prussia for granting his people a constitutional government,' but his majesty, and his majesty's illustrious father have broken so many promises, that it is extremely doubtful whether he will keep his word this time. Perhaps the rumor was only got up to punish the Czar for his want of politeness in not visiting either Berlin or Vienna on his proposed tour through Germany. The Czar, namely, has an innate aversion to all liberal institutions, which extends even to the name of them, so that he even dislikes the constitutional states of Germany, and the constitution *in futuro* of Prussia. His dislike to that form of government is a perfect idiosyncrasy, and he has gone so far in it as to lecture his brother-in-law, William IV. of Prussia, very severely on the meditated changes of his administration, and on being told that he (the king of Prussia) had promised to effect reform, to advise him to abdicate the crown. This is no idle rumor, no *on dit*, but a fact, which, if the King of Prussia had a spark of manhood, (this being exactly the property which nature has denied him,) would, long ago, have made him seek the alliance of the German people, who but awaited the word of command, to prove to the autocrat that he was free to administer his own government without asking the consent of the cabinet of St. Petersburg. But the King of Prussia is more afraid of liberalism than of the growing influence of his Northeastern neighbor, or he would not have acted such a despicable and cowardly part as the late Polish revolution. Prussia has, by the extradition of the Poles to Russia, shown that she has no idea of national independence or honor. 'She is hesitating commercially and politically between England and Russia, without satisfying either, and alienating every day the only source of her strength—the affections and the respect of the Germans. Austria has not yet recovered from the shock she has received in Galicia, where she is threatened with fresh insurrections in Italy. In addition to that, she is quite isolated from Russia, and has thrown the gauntlet to her own feudal aristocracy in ameliorating the condition of the peasants. The Hungarians and Croats are quite dissatisfied, and the peasantry of Bohemia has risen. Austria, the old rival of the house of Bourbon, is near its spontaneous dissolution—the first blow from a foreign foe is sure to dismember the monarchy.'

A letter to the Union from Hanover, 23d May, says:

"The number of emigrants from Europe to the United States during the present year will amount, it is believed, to not less than two hundred thousand—a third more than ever embarked in any previous year. The 'Dublin Post,' estimates that thirty thousand will leave Ireland alone, most of whom are substantial farmers, and they will carry with them at least £600,000 or \$3,000,000. In England the number will be still larger, and confined principally to farmers, who are frightened by the probable abrogation of the corn laws. Many

families in affluent circumstances are also quitting Holland for our shores—a country which, for a long time, has been less of an emigrating turn than any in Europe. Twenty thousand persons, chiefly French and Swiss, will embark at Havre. Forty thousand Germans, at the lowest computation, will sail from Bremen, three or four thousand from Hamburgh, as many from Rotterdam, and four or five thousand from Antwerp. Besides the increase of our wealth from this addition to our population by its industry, it carries with it an actual capital exceeding \$20,000,000.

“What higher testimonials are required of the estimation placed upon our government, our institutions, and our people, than to behold ‘the bone and sinew,’ the honest yeomanry of Europe, seeking an abode where they can safely repose ‘under their own vine and fig-tree,’ under and among them, ‘and none to make them afraid!’ At no period of our history has confidence been more unbounded with regard to the durability of the Union, and its future magnificent destiny, than at this moment, in the various powers and states of ‘the Old World.’ The political doctrines which constituted the creed of the late sage of Monticello, must and will prevail ultimately throughout the universe. They are extending as speedily as monarchical principles are diminishing. In the English parliament, Cobden speaks universally of the rights of the people, and his sentiments are cheered by the most distinguished functionaries.

“Great preparations are making in Germany for the New York steamers. The King of Hanover is hastening his railroads to completion. In twelve months the line from Bremen to Trieste will be finished; and branches from it will connect with towns and cities in every direction.”

The preceding extract of a letter by the last steamer from Europe casts new light upon the magnificent destiny of our country. There seems to be no perceptible limit to our prosperity. No man can undertake to say, “Thus far shalt thou go, and no farther”—the famous expression which is ascribed to Canute, but which he had borrowed from the Holy Scriptures. Let us but use that prosperity well, without abusing it—let us but prove ourselves worthy of our brilliant destiny—let us not run into excesses—let not our enterprise rush into wild speculation, schemes that are too gigantic for our grasp, and overaction and overtrading—into projects of aggrandizement too enormous—and there never was a people under the sun more favored by Providence than those of the United States.—*Union.*

EXTRACTS FROM MR. WALSH'S LETTER TO THE NATIONAL INTELLIGENCER, DATED PARIS, 29TH MAY.

In the chamber the case of Hayti was treated in a strain of some interest for the United States. Regrets and complaints were expressed that the French cabinet had repelled the offer of the sovereignty of the *Dominican Republic*. Spain could never repossess herself of that portion of the island; so that delicacy towards her was idle. The peninsula of Samana, at the east extremity of the *Dominican Republic*, had one of the finest roadsteads in the whole world. It commanded the Gulf of Mexico; and, whether a communication across the Isthmus of Panama were opened by

canal or railroad, the peninsula of Samana must be a *tête de pont* for the junction of the Atlantic with the Pacific Ocean. Soon one or the other would be accomplished, and then France might establish a factory and entrepôts, which, by reason of the safety for her trade and the advantages to be secured by proper custom-house laws, would speedily become the centre of operations highly useful to French commerce and navigation. Mr. Guizot dissented on the score of policy. France was pledged to the independence of Hayti; she would improve as far as possible her commercial relations with the whole island, but not interfere or involve herself in its internal affairs: to recommence the disastrous attempts of old was out of the question. Accept the *Dominican Republic*, and the subjugation of the colored Hayti must be undertaken finally. A deputy rejoined, “Do as the English have done in China: provide yourself with a Hong-Kong on the coast of Hayti, and carry thence your goods into the interior of the island.”

If the following paragraph of a letter of the correspondent of the *London Morning Chronicle* at Constantinople can be trusted, we may judge of the famous “integrity of the Ottoman empire” in the sense of independence:

“The French and Austrian ambassadors here have, within the last few days, exhibited an example of overweening insolence towards the sultan, such as it would be impossible, I believe, to find any parallel for. The occasion was this: The sultan had started on his tour in the provinces by the way of the Black sea, intending to disembark at Varna. The weather, however, was very stormy, and, as the sultan suffered much from sea-sickness, his physicians were afraid, as his chest is very weak, that in his violent retching he might break a blood-vessel. By their unanimous advice, therefore, the Captain Pacha determined to continue the voyage no further, but to return to Constantinople, which he did. The sultan little thought of what awaited him on his return. He was thereupon reprimanded sharply both by M. Bourqueney and M. Sturmer. These envoys from foreign nations have taken upon themselves to chide the sovereign to whose court they are sent. In two notes to the Porte, these representatives of France and Austria comment, in the most insulting vein, on the motives which they suppose occasioned the return of the sultan, and declare that the circumstance must have a most prejudicial effect on the mind of his subjects. If the Porte had sent back to these ambassadors their notes, with their passports, and injunctions to quit the empire within the space of twenty-four hours, it would have sent them the only fitting reply; but they very well knew, when they ventured the insult, that such a reply was impossible.”

The colors taken at the battle of the *Obligado*, in the La Plata war, have been pompously carried to the *Hotel des Invalides*, and five of the French combatants, who were severely wounded, are declared admissible to the hospital on their return to France. National pride relishes the French share in that aggression: the *Sycee* silver from Canton was welcomed in London as a better trophy than the laurels gained by the British at *Obligado*. O ye peace-makers, opium-heroes, and joint mediators!

From Chambers' Edinburgh Journal.

ARTESIAN WELLS IN LONDON.

DURING the late session of parliament, the bishop of London, while advocating the necessity for the building of new churches in the metropolis, stated that its population increased at the rate of 30,000 annually; an increase that requires a proportionate multiplication of all that contributes to the comforts and conveniences of life. Greater quantities of food and clothing will be wanted every year; more houses, involving the extension of streets and thoroughfares; and, above all, a greater supply of water, to quench the thirst of the additional number of throats, as well as to lay an ever-widening surface of dust. It is to be hoped that the new scheme for the erection and working of public fountains will be continued and extended until London may be as usefully embellished with *jets d'eau* as continental cities, of which they are generally considered the chief ornament. The initiative, as is pretty well known, has been taken by the formation of two fountains, with large basins, in Trafalgar Square; the water for which, instead of being supplied from any of the numerous companies, was obtained by boring, or the formation of Artesian wells.

In June last, Mr. Faraday delivered a lecture at the Royal Institution on the subject of these wells, in which he explained and illustrated the practical details of the boring, and showed that the London public must look to the accumulations of water underlying the London clay for their chief supply of the pure element, for drinking and other domestic uses. In inquiring into the geological relations of the waters lying deeply below the surface, he described the soil upon which London is situated as particularly favorable to the realization of this means of raising water. It is composed, in going from above downwards, of a layer of gravel of moderate thickness; then an enormous bed of plastic clay, known, in geology, under the name of London clay; beneath which lie calcareous marls, gravel, sand, and freestone, succeeded by massive strata of chalk; the whole thickness, from the surface to the chalk, varying from 200 to 300 feet. It was further explained that, wherever the sand and chalk crop out, or rise to the surface, they must absorb the water which falls in those parts. This water percolates downwards underneath the clay, and, finding no mode of escape, accumulates in the fissures of the chalk, ready to rush upwards through any opening which may present itself.

"The property of water to seek a level when it has descended between strata concave upwards, or between inclined beds of stratified rock, naturally accounts for the success of the Artesian operation. If two basins be supposed different strata, placed one within another, a little distance apart, and water be poured between, and a small hole be made in the bottom of the inner basin, the water will rise in a jet a very considerable height, and exemplify the nature of these springs, and multiplying the basins would afford an idea of those different springs found at varying depths, and of equally varying qualities. If, instead of the concave form, the plane of the strata be supposed to dip, the

water, seeking the lowest point, and pressed by that which is nearer the surface, would equally rise, and form the Artesian well or spring, if the strata were perforated at their lower level.*

The general mode of constructing an Artesian well is by first digging and bricking round to a certain depth, dependent on the nature of the soil, as in an ordinary well; from the bottom of this the boring into the lower strata of sand and chalk is commenced. In order to prevent the flow of any water into the opening, except that from these particular strata, the bore is lined with iron tubes, which completely shut out all percolations except that from the main source. Two borings were sunk for the works in Trafalgar square—one of which is in front of the National Gallery, the other in Orange street, immediately in the rear, both being connected by a tunnel formed of brick laid in cement, 6 feet in diameter and 380 feet in length. The boring for the deepest well penetrated to a depth of 395 feet, the lower portion of which, passing into the chalk 135 feet, is not lined with tubes.†

A contract was next made with Messrs. Easton and Amos, who furnished the plans and constructed the works—engine-house, tanks, and cisterns in Orange street—by which they agreed to work the engines for ten hours every day, supplying 100 gallons of water per minute to the barracks, National Gallery, Office of Woods and Forests, Admiralty, Horse Guards, Treasury, Scotland Yard offices, Whitehall Yard offices, India board, Downing street, and houses of parliament, in addition to 500 gallons per minute to the fountains in the square, for the sum of £500 per annum; being just half the sum previously paid to the water companies who supplied those departments. The whole expense for sinking the wells, erecting the engine-house, laying down the mains and the pipes to the fountains, was not quite £9000. The water of the fountains is constantly running the same round of duty, being pumped out as fast as it returns from the basins: the supply of 100 gallons per minute is obtained from the deepest well, which, at the end of the ten hours, is not lowered more than five feet under the rest level. With a little more power in the machinery, the contractors are satisfied that the supply might be increased to five times the present quantity.

Not only has an important economical advantage been gained, but the quality of the water is far superior to that supplied for the consumption of the inhabitants generally. The presence of an alkali is shown, by its turning red cabbage-water blue; a reaction due to the carbonate of soda, of which it contains a notable quantity, from 16 to 24 per cent. of the total proportion of saline matter held in suspension. Mr. Faraday found 41.5 grains of solid matter, among which was a small portion of lime, on evaporating a gallon of the water. The excess of soda renders it extremely soft, and particularly useful for domestic purposes. It is at the same

* Encyclopedia Metropolitana, vol. xxv., p. 1183.

† The well sunk three years since at Grenelle, near Paris, is 1800 feet in depth, and throws up 150,000 gallons of water every twenty-four hours.

time very agreeable to the taste. This success, and the certitude which the known natural constitution of the soil affords for procuring the same quantity of water, and in as great abundance as may be desired, in all quarters of the capital, has given rise to the idea of carrying out the practice either by new independent companies, or by concurrence with those already existing, wherever a sufficient number of consumers may be found willing to contribute to the expense.

Professor Faraday stated that the water rent of 2000 houses would suffice for the practical carrying out of the plan, inclusive of the ornamental addition, already alluded to, of a public fountain. In Berkeley square a well has been sunk, from which water is lifted by a hand-pump, for the use of the inhabitants of that fashionable locality; but it was shown that an outlay of £3500 in the necessary machinery, &c., would have produced a supply of water for £350 annually, which now costs £700, without a fountain, that might have been embraced in the other scheme.

Considering the rapid spread of London, and the eagerness with which new business enterprises are seized upon, it is not improbable that Artesian wells may become common, and thus give to the metropolis what its inhabitants so much require—pure water. The idea is not altogether new, for it appears that “an endeavor was made in 1834–5 to form a ‘Metropolis Pure Soft Spring Water Company,’ to supply the existing companies with their requisite quantities by Artesian wells of great magnitude; which failed rather through defects in the provisional committee, than through any demonstrated impracticability in their views, which had been entertained ten years previously, and formed the subject of an unsuccessful company in 1825.”* A remarkable objection has been made to these undertakings, which can only be explained by the prevailing ignorance of the principles of their action. It was said that they would soon drain the wells sunk in the London clay, which can only give back the water gained from the surface; while the Artesian wells derive their supplies from the chalk, where there is not the slightest communication with the clay. Such was the prejudice in this particular, that a formal complaint was instituted against the new well of Trafalgar square, while in course of boring, as having drained the neighboring wells, even before it had yielded a single drop of water.

After his able exposition, Mr. Faraday exhibited a simple apparatus, designed to demonstrate a new property of the *fluid vein*. It is well known that water, in escaping from an orifice of any form, does not long retain that form, but varies with more or less of irregularity: this is called the *contraction of the vein*. It occurred to the inventor of the apparatus that this contraction would be accompanied by a diminution of volume, which would consequently determine, in a close vessel, a diminution of pressure sufficient to cause a smaller column of water to rise from below, under the ordinary pressure of the atmosphere. To effect this, water is made to descend in a tube opening into a glazed box, in communication, by means of another tube, with a reservoir below. As soon as the valve which prevents the descent of the water is opened, the stream rushes into the box, contracts, produces a certain vacuum, when it is immediately seen that the water from below, which was colored,

to render the experiment more striking, *ascends*, and mingling with the descending column, *flows* out with it through the escape-tube. The lecturer stated, in conclusion, that, from the result of his experiments, it was probable that the principle might, in certain cases, be economically applied to practical purposes.

From Chambers' Journal.

VISIT TO THE CRYPT OF THE CAPUCHIN CONVENT AT MALTA.

BY A LADY.

“WILL you go on, or are you afraid?” These words were addressed to me by an old monk, as we stood together on the last step of the stair leading down to certain mysterious vaults which exist under the Capuchin convent of Malta. The monk was very decrepit, very ghastly—indeed, I may say, decidedly unearthly-looking—the voice was sepulchral, and the question not one to be answered without serious consideration; for he held in his hand (and the hand was uncommonly like that of a skeleton) a great key, which was destined to open the ponderous iron door of a very singular charnel-house. This convent is one of the very few, in fact, I believe the only one of importance, now extant, excepting that of Palermo, where the monks still retain the custom of preserving their dead unburied, and are yet in possession of the method by which they can keep the corpses of their brethren entire, with all the appearance of life, for as long a period as they choose. The secret of the process by which the order of the Capuchins have thus learnt to cheat the grave of its lawful prey is not exactly known: I believe it is some sort of baking or boiling. They have always the number of forty carefully preserved; and when a death occurs in the monastery, the most ancient among the dead bodies makes way for the new-comer, and is buried. I had been told that the spectacle of these forty monks, so long departed from existence, yet still unshrouded and uncoffined, was most curious, although sufficiently appalling to render it less frequently visited than it would doubtless have otherwise been. For myself, however, it had been my lot, in my various wanderings, to see death in so many different shapes, that I could hardly shrink from any new aspect under which it might present itself, and I had therefore advanced thus far on my way to visit them. Still, I must own I was a long time of answering the pointed question of my companion: to tell the truth, there was something in his own appearance and manner which awed me considerably; and I could not help wondering what the dead monks must be, if their living brother had so little the semblance of humanity. There was a dulness in his sunken eye, a solemn expression on his livid face, half hid by the huge cowl, and something so mechanical in his every movement, that it was scarce possible not to fancy the soul itself was wanting. These were the first words he had uttered since he had suddenly appeared at my side, in obedience to the call of the superior; and now having spoken, he closed his withered lips again, as though these hollow tones were to issue from them no more, and stood motionless till I mustered up courage to pronounce an emphatic ‘Vado,’ (I go,) when he instantly stalked silently along the dark, narrow passage, and unlocked the massive portal of the

* Journal, Statistical Society, vol. viii., p. 159.

chamber, whose silent inhabitants I was about to visit. The door rolled back heavily on its hinges; the ghostly monk stood back to let me pass; and as I crossed the threshold, I heard him close it behind me with a noise which echoed, as it seemed to me most ominously, from vault to vault.

I found myself in a large hall, constructed entirely of the white Maltese stone, the roof rising in the shape of a dome. It was lighted only from the top, so that although every object was perfectly distinct, the day could only penetrate within it, tempered by a kind of twilight shade. The very first breath I drew in this dead-house, made me gasp and shiver. It was not precisely cold; but there was a chill, and an indescribable heaviness on the air, which caused a most unpleasant sensation. It was some minutes before this feeling could be shaken off; at last I determined boldly to raise my eyes and look around. For a moment I could have fancied we had mistaken our way, and returned to that part of the vast convent which was inhabited by the living, the scene was so very similar to that I had just witnessed in the chapel above, where the vesper service was being performed. Standing upright, in niches cut in the wall, the forty monks were ranged round the room, twenty on either side of me, clothed in the complete costume of their order. At a superficial glance, they seemed all engaged in prayer; and very still and quiet they were, with their heads, from which the dark cowl was thrown back, bent slightly over their clasped hands. Alongside of each one was an inscription, giving his name, and the date of his death; and it really required some such announcement to bring to my mind the full conviction, that it was indeed on lifeless corpses I was gazing; for, except that all had the same uniform hue of dull, ghastly yellow, and the same fixity in the position of the eyes, there was nothing in their outward appearance to indicate that they had not, each one of them, a living, throbbing heart within his bosom. The flesh was firm, the limbs retained their shape, the lips their color; the very eyelashes and nails were perfectly preserved; and the eyes themselves, though fixed, as I have said, did not look dead or rayless. It was a frightful mockery of life, because so frightfully real. I could see no difference between those mummies and their deathlike brethren up stairs; whose long confinement in the cloister, and strict adherence to the most severe of the monastic rules, have wasted their bodies, quenched the fire of their eyes, and banished all expression from their faces. But when I went nearer, in order to examine them regularly one by one, I saw that the Capuchins, who have thus the secret of triumphing over corruption, and, outwardly at least, would seem to set even death at defiance, had altogether failed in one most important point. They had preserved the bodies from decay; they had clothed them in the garments they were wont to wear; they had marvellously banished the likeness of death; the skin, the hair, the hands, were as those of living beings; but, with all their art, they had been powerless to efface from the countenance of each one of these dead men the seal which the soul had stamped thereon as it departed. All the faces wore the expression with which they had died; different according to their various temperament, but fixed, immutable, unchangeably eloquent of the exact frame of mind in which they had separately met that awful hour. It even seemed as

though, in this expressive look (the last trace of spirit petrified, as it were, on the dead face,) might be read not only the record of their dying moments, but also the history of their past lives; showing how the good man, humble and sincere, had departed in peace; and how the disappointed, ambitious soul had clung to a life which years of asceticism had vainly sought to render odious. It is sufficient, however, to look only once in their faces, to lose instantaneously the effect of the delusion, which is so striking at a first glance. The imitation of life, cunning as it is, fails altogether before this palpable evidence of their having undergone the last dread trial.

The body nearest me, which was that of an old man, had a countenance which would have told its tale clearly to the most careless observer. I felt, as I gazed on his serene and placid face, that death had been to him a glad release: he had waited, he had wished for it; and when it came, he had resigned himself to its power, as a child sinks to sleep on its mother's breast. The strong lines round the shrivelled lips, the deeply-furrowed brow, the hollow eye, all told of a weary conflict past—of tears which had been very bitter, of that long struggle with sorrow which can make existence a load most gladly laid aside. But there was a sublimity of repose upon that old man's face, which life could never have known. And the next! I wish I could forget the awful face of the next in order; but I know I never shall: the expression of that countenance will never cease to haunt me! The fierce scowl on the forehead, the eyes starting from their sockets, the lips convulsively drawn back, so as to show the sharp, white teeth firmly clenched, all told an unwillingness to die—an utter dread of dissolution, which it is frightful to think of! Here were, indeed, again the traces of a conflict, but a conflict with death itself. It was easy to see how madly, how wildly, he had struggled to retain his hold on life; and when that life escaped, it had written on his face the record of that last hour as one of most intense despair. Assuredly this man must have been a slave to the memory of some great crime, which made him so very a coward in presence of his invincible foe; or else—for he seemed too young for that—he may have had one of those morbid, restless spirits of inquiry which ever drove him to the burial-places, that he might rifle the secrets of the grave, to learn the details of the universal doom, till he was seized with a frantic horror for the individual corruption which awaited himself, such as I have known men of imaginative minds to feel. Anyway, it was a fearful face. He had fought with the King of Terrors, and been subdued, but the struggle had been a dire one; and what rendered this yet more striking, was the mock resignation with which the hands had been folded together after death. I was glad to pass on, though it was to look on a corpse which could only inspire disgust; it was so evident that this one had died even as the beasts that perish. His heavy features were full of sottish indifference: he could not have foreseen that his hour was come; or, if he did, his must have been one of those narrow, grovelling minds, too completely filled with daily occurrences of life to wake up and look beyond it, and question eternity. Next to him was one who had expired in extreme suffering from some terrible disease: his face told of nothing save bodily pain; but so expressive was it of this, that it was scarce possible not to believe that he

was even then in great agony. Again—I could have looked forever on the face of him who stood next in the line. Where the expression on the face of the dead is beautiful, it must be infinitely more so than it ever can be while living; and in the still eyes of this corpse, in the sweet smile that brightened even that livid mouth, there was a fervor of hope and faith not to be mistaken. He was very young, and had probably been cut off in the first enthusiasm of his vocation, ere time, or the imperishable craving for human sympathy, had quenched the ardent religious fervor, which is so sincerely felt by many young novices on their first profession. I was very glad he died when he did, it was so glorious a look of triumph! Strange to say, the most unmeaning of all these faces was that of a man who had been murdered: there was a mere vacant stare of surprise in his wide, glaring eyes. The spirit seemed to have been so suddenly expelled from her mortal tenement, that she had left no trace of her passage forth. Near to this ghastly corpse stood a young man, who appeared to have fallen gently asleep, with that expression of utter weariness which is the very stamp of a broken heart.

When I had gone round about half the room, and had minutely examined the features of some twenty of this ghostly company, I was seized with a very strange hallucination. On entering into the presence of these forty monks, I had been fully aware, of course, that they were all dead, and I alone was living; and now I was equally conscious that there was some vast difference between the present state of my grisly hosts and my own: only, after I had gone from one to another, ever meeting the gaze of their meaning eyes, and gathering such volumes of eloquence from their still lips, I could almost have believed that they were all living, and I myself dead, or in a dream! It was quite time to hold some communication with the living when assailed by such fancies as these; and I turned to look for my guide, with a strong desire to enter into conversation with him. I looked round and round in vain. I counted forty-one monks, therefore the living man must be amongst them; but the exact similarity of dress, and the motionless attitude with which he had installed himself between two of his lifeless companions, made it no easy matter to distinguish him. When I did find him out, the question with which I addressed him would have been considered passably unfeeling in more polite society; it was, if he himself would one day take his place in this strange sepulchre! "Assuredly!" he answered, with more vivacity than he had yet displayed; "and this one must make way for me," he continued with a grim smile of satisfaction, at the same time dealing a light blow with his bunch of keys on the shoulder of one of the corpses, which caused the bones to rattle with a sound so horrible, that I flew to the door, and begged him to open it, that I might escape from this dreadful room. I had had quite enough of the society, certainly not enlivening, of the Capuchins, both living and dead: indeed, on the whole, I rather give the preference to the latter, for we claim no kindred with the dead. whereas, it must always be painful to come in contact with a fellow-creature so devoid of human feeling as this old man seemed to be. He afterwards conducted me through the whole of the convent, at least of that part of it to which strangers are admitted. It is very extensive, but princi-

pally remarkable from the strange sight I had witnessed. As this order is one of the most rigorous, the brotherhood is composed, for the most part, of men who have committed some crime, and flown thither for refuge from the vengeance of the law, or the yet sterner justice of their own conscience. Judging from the countenances of those I saw, I should say they had sought all mental rest in vain: but so indeed it must have been. It was scarcely possible that the quiet of the cloister should have any effect on them; for it is starting on a false principle to suppose that a man can ever escape from his own deed, be it what it may, good or bad. As soon as he has committed it, he has given it an existence, an individuality which he can never again destroy: it becomes independent of him, and goes out into the world to deal its influence in widening circles far beyond his ken.

From the Union.

RAILWAY TO ASIA.

As the Oregon question is now settled, we can view its position, and see what can be done with it.

At the rate of 15 miles per hour, (as is proposed for the steamers to be built for our navy,) it requires but 84 days from England to New York, or other ports, but say 10 days.

From New York to the Pacific, 3,000 miles by railroad, at 30 miles per hour, allowing one day for detentions 5 "

On the Great Western road from London to Bristol, passengers travel daily at 50 miles per hour with perfect safety.

From Oregon to Chang-hai, in China, at the mouth of the Yang-tse-keang, which crosses the great canal, and where all the commerce of the vast empire centres, is 5,400 miles, at 15 miles per hour, (which can be performed as easily on the Pacific as 12 on the Atlantic,) allowing one day for coaling, &c. 16 "

From England, via New York, to Chang-hai 31 "

From New York to Chang-hai 21 "

But by sea voyage, as at present, either from England or New York, 110 to 160 days, requiring, for a voyage out and home, 10 to 12 months; distance estimated at more than 18,000 miles.

From England, via New York, to Australia 31 "

From New York to Australia 21 "

From England, via New York, to Manilla 34 "

From New York to Manilla 24 "

From England, via New York, to Java 35 "

From New York to Java 25 "

From England, via New York to Singapore 37 "

From New York to Singapore 27 "

From England, via New York, to Calcutta 39 "

From New York (14 days for coaling, &c.) to Calcutta 29 "

On the route are, first, the Sandwich and numerous islands convenient for depots, coaling, &c., &c.; and at Australia is an abundance of coal.

A. WHITNEY.

WASHINGTON, D. C., June 19, 1846.

From Chambers' Journal.

DR. MANTELL ON ANIMALCULES.

WE quote below the title of a recent volume by Dr. Mantell,* the object of which is "to present a familiar exposition of the nature and habits of some of the invisible beings which people our lakes and streams." Invisible beings! and yet not the creatures of superstition and dreamland, but actual, substantial existences, that, unseen by the eye of sense, perform, within a single drop of water, the circle of an economy as perfect in its kind as is that of man himself. The object is in the highest degree commendable. And the name of the author is guarantee sufficient for its correct and agreeable treatment. There is no branch of science more interesting, none whose revelations are more wonderful, than that which unfolds the forms and nature of the minute creatures which people every stagnant pool, inhabit the leaves of every forest, and which take up their abode even in the fluids and tissues of other living beings. Nor is it a study the result of which is merely amusement and wonder; for, like the minute parasitic vegetation whose growth absorbs the elements of decay, and which occasionally create such havoc among human food, and engender disease and death, the myriad animalcules in nature may execute similar missions, sometimes repressing putridity, at others becoming the sources of the most loathsome and fatal diseases. It is, therefore, only by a knowledge of the nature of these creatures, and of the causes and sources of their development, that man can call in their aid or control their results, as his purposes may demand. So simple, moreover, and so easily discernible is the organization of many animalcules, that the physiological functions of their structure are fully exposed to view—functions which find their counterparts in the higher animals, but in whom the mode of operation is hopelessly obscured. Apparent as are the advantages resulting from a study of microscopic life, it must not be supposed that the little work before us either affords an ample exposition, or adds new discoveries to the subject. All that is attempted, is a familiar description of a few common facts, a description which will in some degree instruct the ordinary reader, and lead him—if he can be led at all—to further investigation, while works of greater research and higher pretensions would have been unintelligible and forbidding.

Dr. Mantell's idea is a happy one: he takes a little water from a neighboring pool, and confining himself to the examination of this, describes, in simple but attractive terms, what he sees, figuring at the same time, with the greatest delicacy and elegance, the objects of his observation. "From some water containing aquatic plants, collected from a pond on Clapham Common, I select," says he, "a small twig, to which are attached a few delicate flakes, apparently of slime or jelly; some minute fibres, standing erect here and there on the twig, are also dimly visible to the naked eye. This twig, with a drop or two of the water, we will put between two thin plates of glass, and place under the field of view of a microscope having lenses that magnify the image of an object two hundred times in linear dimensions. Upon looking through the instrument, we find the fluid swarming with

animals of various shapes and magnitudes. Some are darting through the water with great rapidity, while others are pursuing and devouring creatures more infinitesimal than themselves. Many are attached to the twig by long delicate threads; several have their bodies enclosed in a transparent tube, from one end of which the animal partly protrudes, and then recedes; while numbers are covered by an elegant shell or case. The minutest kinds—the monads—many of which are so small, that millions might be contained in a single drop of water—appear like mere animated globules, free, single, and of various colors, sporting about in every direction. Numerous species resemble pearly or opaline cups or vases, fringed round the margin with delicate fibres, that are in constant oscillation. Some of these are attached by spiral tendrils; others are united by a slender stem to one common trunk, appearing like a bunch of harebells; others are of a globular form, and grouped together in a definite pattern on a tabular or spherical membranous case for a certain period of their existence, and ultimately become detached and locomotive; while many are permanently clustered together, and die, if separated from the parent mass. No organs of progressive motion, similar to those of beasts, birds, or fishes, are observable in these beings; yet they traverse the water with rapidity, without the aid of limbs or fins; and though many species are destitute of eyes, yet all possess an accurate perception of the presence of other bodies, and pursue and capture their prey with unerring purpose." To the uninitiated this must be a startling revelation; more wonderful, because real, than all the multitudes with which superstition and fancy have peopled the realms above, beneath, and around us.

The animalcules above enumerated now become the subjects of individual examination—there being nearly a dozen different genera in the small phial of water selected. The first and most conspicuous of these is the *Hydra*, or fresh-water polype, an animalcule visible to the naked eye, appearing, when at rest, a mere globular speck of jelly, but, when active, protruding into a funnel-shaped body, furnished with a number of long, delicate tentacula or arms, by which it secures its prey. This polype is carnivorous in its habits, feeding on small worms and insects. "I have seen," says our author, "a polype seize two worms at the same instant; and to reach them, the arms were extended to such a degree of tenuity, as scarcely to be perceptible without the aid of a lens; and the worms, though very lively, and struggling violently, were unable to break asunder these delicate instruments, and escape, but in an instant were struck motionless. This phenomenon strikingly resembles the effect produced by the electric eel; and it is not improbable that the hydra, like that fish, kills its prey by an electric shock." The fresh-water polypes are exceedingly prolific, several hundreds of thousands springing from one parent stock in the course of a few months. The generation or mode of multiplication in the hydra is one of its most striking peculiarities. In its ordinary condition, this takes place by gemmation, or buds, as in certain plants. A small protuberance appears externally on some part of the body of the polype, and gradually enlarges, and becomes elongated; arms speedily spring forth from the free extremity, and a miniature hydra is formed, which in a short time separates from its parent, and assumes its individual existence. Nor is this all: a

* Thoughts on Animalcules; or a Glimpse of the Invisible World Revealed by the Microscope. By Gideon Algernon Mantell, Esq., LL. D. London: Murray. 1846.

single hydra may be cut into several pieces, either across its body, or longitudinally, and, what is wonderful, every section will in time become a polype, as perfect as the original of which it formed a part! Further, the animal may be turned inside out like a glove, and the original outer surface will perform the function of digestion, while the former lining of the stomach becomes the skin; and this without the creature apparently suffering any inconvenience.

From the examination of the *hydræ* or polypes, which are giants in comparison, Dr. Mantell passes to the consideration of the true Infusoria—those minute animalcules which were sporting in the drops of water between the plates of glass placed in the field of his microscope. "The existence of these minute beings having been first detected in water containing vegetable matter, such as hay, grass, &c., it was taken for granted that they were peculiar to certain infusions; hence the term *Infusoria*, given to this class of animals, in allusion to their supposed origin. This name is still employed as a general designation, although it has long been known that the presence of animalcules in infusions has no necessary relation to the vegetable ingredients, except as far as the decomposition of the latter may tend to the production of a proper medium for the development of the invisible eggs, or germs, of these creatures, which are everywhere present. The essential characters of the infusoria—in other words, those points of organization in which they differ from all other animals—consist in their bodies being destitute of any true articulated or jointed limbs, and locomotive members or feet; their varied movements being performed by means of processes or filaments, which are always in motion, and are termed *cilia*, from their supposed resemblance to the eyelashes. The cilia, in many species of the Infusoria, are more or less generally distributed over the surface of the body; in others they are disposed in one or more circles around the mouth or aperture of the digestive organs; and in some, are arranged in zones on one or more circular or semicircular projections on the upper part of the body." The examination of these minute creatures requires great tact and patience. From the original drop of water a particular species is first selected; it is then removed, transferred to a drop of pure water, and placed under the field of the microscope—the observer beginning with low powers, till he obtain a general knowledge of the form and appearance of the species, and afterwards examining the several parts of the body with the most powerful glasses.

By such a scrutiny, Dr. Mantell detects, in the original glass of water, a number of species of the most beautiful forms, and of the most curious economy. Among these are *Monads*, animated spherules of various colors, little more than the thousandth part of a line in diameter; and yet each exhibits an individual activity, feeding, disporting, and propagating its kind with inconceivable rapidity. The floating colored slime which sometimes appears in the water of stagnant pools, is an aggregation of countless myriads of these beings—not individually distinct, but visible only in the mass. There are also *Vorticelle*, or bell-shaped animals, and *Stentors*, or those of trumpet shapes—fixed singly, or in clusters, by the narrow extremity, and waving in the water their wider extremities, fringed with cilia, like so many animated harebells of astonishing minuteness. The digestive organs of these tiny creatures "consist

of a series of globular stomachs—hence the term *polygastria*—connected by a common tube, which allows entrance to the food, and exit to the effete particles. The food is brought to the mouth by the currents produced in the water by the cilia; aëration is performed by the agency of the same organs; and the increase of the species is effected by spontaneous division, each part, like the severed portions of the polype, growing into a perfect individual." Besides these polygastric animalcules, which are the lowest of the Infusoria, there are in the water under examination numerous species of *Rotifera*, or wheel-bearing animalcules, so called from the circular rows of cilia which fringe the upper parts of their bodies, and which, when in motion, appear like wheels revolving round a common axis. These are more highly organized than the former class: "the digestive canal is a tube more or less straight, which in many genera is provided with jaws and teeth, which, like the masticatory organs in birds, are situated low down, are very distinct, and present considerable diversity of form and arrangement." Jaws and teeth in creatures invisible to the naked eye! Yet so it is: like the miniature watch set in a finger-ring, its wheels and springs are not less perfect because of their tiny dimensions. In the Rotifera there are indications of nerves, muscles, and punctiform eyes, all shadowing forth, as it were, the dawn of higher existences. Some are oviparous, others viviparous—the eggs in many species being in size equal to one third of the animalcule. These ova "retain their vitality for almost an unlimited period, and are transported by the water and wafted by the winds—for, whether dry or moist, they remain uninjured—till, thrown into the conditions suitable to their organization, they become developed, and the apparently pure waters teem with myriads of highly-organized beings. Even the adult animals of some species—the common Rotifers, for instance—after being apparently dried up for several years, will start into life upon the addition of a few drops of water, and throw their rotary organs into full play, as if roused from a refreshing slumber."

Of these Rotifera, Dr. Mantell detects several genera: some flower-shaped, *Floscularia*; some crown-shaped, *Stephanoceros*; the common wheel-animalcule, *Rotifer*; and other species covered with siliceous shells and spines, *Brachionus*. These last are perhaps the most wonderful, as they are, geologically speaking, the most important of their class. "Their cases or shells consist either of lime, siliceous (flint,) or iron; and these retain their form and structure for unlimited periods of time. From the inconceivable numbers of these shell-animalcules, which swarm in every body of water, whether fresh or salt, and the immense rapidity with which the species increase—by spontaneous fission, germination, and ova—extensive deposits, or strata of their cases, are constantly forming at the bottom of lakes, rivers, and seas. Hence have originated the layers of white calcareous earth common in peat-bogs and morasses, the tripoli, or polishing-slate of Bilin,* consisting wholly of the siliceous cases of animalcules, and the bog iron, composed of the ferruginous shields of other forms. In short, the extensive and im-

* The polishing-slate of Bilin, in Prussia, forms a series of strata fourteen feet thick, and is entirely composed of the siliceous shields of Infusoria, of such extreme minuteness, that a cubic inch of the stone contains forty-one thousand millions of distinct organisms.

portant changes that have been produced on the earth's surface by this agency in the earlier ages of the physical history of our planet, and those of a like nature which are going on at the present time, are in the highest degree interesting, and have but lately become the subject of scientific investigation."

The contents of the little phial have now been explored, the microscope removed, and all that remains is a small twig, two or three minute leaves, a few flakes of mucus, and a turbid condition of the water from the presence of earthly particles. "All the diversified forms of life that were sporting in the apparently wide waste of water have vanished from our sight, and are as though they were not; yet what a world of wonders, what a marvellous display of Infinite wisdom, are there concealed! Within that narrow space, the microscope has shown us the mysterious principle of vitality embodied in structures of which we had previously no conception, and under conditions which, if estimated according to our experience of the visible creation, would appear incompatible with animal existence. Were we to describe the facts that have come under our notice to persons unacquainted with the optical powers of the microscope, and tell them that the seeming particles of earth in the water are creatures of various forms and structures, endowed with life, and the capacity for its enjoyment; that those flakes of mucus are aggregated thousands of animals, in the shape of flowers, which increase, like plants, by buds and by self-division; that some of these creatures are carnivorous, feeding on living atoms more infinitesimal than themselves; that others are herbivorous, and nourished by particles of decomposed vegetables too minute to be visible till accumulated in the internal organs of the animalcules; that we selected some of these animals, and caused them to swallow carmine, and thus imparted a red color to their digestive organs, and rendered their structure more obvious; that some are free, and roam through the water at pleasure, others always sedentary, others locomotive in youth, and fixed to one spot in after life; that many have eyes, the number and color of which can be distinguished; that the difference in the relative magnitude of these creatures is as great as that between a mouse and an elephant; that if the water in which these beings are now immersed be allowed to evaporate, and the sediment become as dry as dust, and this be moistened three or four years hence, many of the individuals at this moment sporting through the water will be resuscitated, and appear in full activity, although, had they remained in their native element, the term of their existence would have extended but through a few days—thus realizing one of the beautiful fictions of Arabian story—would not this statement be deemed unworthy of belief!—would it not be regarded as improbable and as extravagant as the wildest chimeras of the imagination! And yet such a narrative would be but the simple truth—an unexaggerated, unadorned matter-of-fact summary of the phenomena that have come under our observation!" Verily, there are more things in nature than the uninquiring dream of.

Like animals of higher organization, these microscopic creatures suffer and perish from sudden transitions of temperature. Atmospheric air is as necessary to their existence as to ours; and they are killed by substances which affect the chemical composition of the water. Fresh-water species instantly die if sea-water be suddenly

added, though the latter may swarm with marine species; but they survive if the mixture be gradual; and many kinds inhabit brackish water. Infusoria always appear in vegetable infusions, because their ova or germs, being everywhere present, find in such fluids a proper medium for their development. Every stream is laden with them; every breeze wafts its myriads of myriads. Though the influence of light is favorable to their life, yet it does not appear indispensable, for they abound in the waters of deep mines, which are always in impenetrable darkness. "The ordinary duration of life in the Infusoria varies from a few hours to several days, or even weeks. Rotifera have been traced to the twenty-third day of their existence. The death of these animals is generally sudden; but in some of the larger species, convulsive struggles attend their dissolution. Shortly after death, the soft parts rapidly decompose, and all traces of their beautiful structures disappear: the species, which are furnished with earthy cases, or shells, alone leave durable vestiges of their existence."

Such is an outline of Dr. Mantell's "Thoughts on Animalcules," which we cordially recommend to the perusal of the young and intelligent. They may or may not become original inquirers—they may never adjust the focus of a microscope, or place one drop of an infusion under the lens of a magnifier—but this need not prevent them from making themselves acquainted, through the discoveries of others, with a department of knowledge than which we know of none more replete with interest and instruction.

SCIENTIFIC PROPHECY.—Newton expresses his deliberate opinion that cohesion, light, heat, electricity, and the communication of the brain with the muscles, are all to be referred to one and the same cause—an ether or spiritus, which pervades all bodies. We might smile at such an opinion from many quarters; and had Newton been only the author of the "Principia," we might perhaps think his head a little exalted by the excitement attending the close of an arduous labor, (though, in truth, the scholium, from which the above is extracted, does not appear in the first edition;) but when we consider his prediction, that the diamond would be found to be combustible, that the earth was between five and six times its weight of water, and others which have turned out correct, we feel something like a presentiment that the opinions just cited may in some degree share the same destiny.—*Dublin Review*.

RIGHT IN THE LONG-RUN.—Mankind do sooner or later make a "good report" of things worthy to be so reported of. The world is long sometimes in estimating merit rightly, but is pretty sure in the end to accord its approbation to the deserving. Too often, it is true, the wreaths that ought to have encircled the brows of living men—the eminent of their race for mental and virtuous attainments—have been twined only for their *monumental effigies*; but once placed on these, they have preserved an imperishable freshness. Milton's bays grow greener with the touch of time. Newton's name shines like the stars with which, while he was upon earth, he held immortal converse. Nature spoke by Shakspeare when he lived, and mankind have since taken care that she shall speak by him forever. Whence we may fairly infer that the world's ultimate judgment is in most things correct, and should be regarded by every man of sense accordingly.—*T. Cromwell*.

From the New York Evening Mirror.

REPEAL OF THE CORN LAWS, AND THE CONSEQUENCES ON ENGLAND AND THE WORLD.

THE last arrivals from Europe have put to rest this long agitated and most important question—the great question of our day—that on which, more than any other, has hinged the commercial policy of the world. We have no hesitation in saying that we regard it as a measure which, taken in connection with the other free trade measures of the British government, and regarded as the consummation of them, is fraught with more important consequences than any other act of our time.

It shows a complete revolution in the governing influences of Great Britain. Those influences have been hitherto wielded by the landed aristocracy. This body has hitherto controlled both lords and commons. It has done, or rather permitted, many liberal things towards the other great interests of the state. Commercial restrictions began to be relaxed soon after the close of the war in 1815, and the relaxation has proceeded with a tolerably steady pace ever since. Mr. Huskisson was the father of the modern free trade system in England, and the principles which he laid down and so ably advocated, have in no important particular been departed from, in any of the changes that have been introduced. These have all been in one direction—in favor of freedom of trade.

Mr. Canning, who was at heart of the Liverpool party, and whose splendid abilities gave the *coup de grace* to the old Tory aristocracy, with their worn-out traditional notions, supported the new views of his friend Huskisson, with the whole weight of his almost matchless oratory. The Whig party came into power a few years after his death, pledged by their principles and professions, to carry out still farther those measures which had for their object the removal of all species of restrictions on the manufactures and commerce of the country, and on its agriculture, *so far as they could*. This party did much, during their ten or eleven years of rule, to establish and extend liberal principles in every direction, *except in regard to the agricultural interests*. Here they found themselves entirely too weak to cope with the landed aristocracy. This body had too long enjoyed dominion in the state to resign it easily. It yielded all it could to the advancing spirit of the age, and to greater freedom of action in all departments of trade and business; but it guarded, as the apple of the eye, its own monopoly. Other interests might be free toward each other; the landholders must be protected against all. There were not wanting plausible arguments for this, in the pressure of the church, and the poor rates on land, and in the necessity for providing employment for the masses, which agriculture does to a greater extent than any of the other great branches of national industry. Here the agriculturists were inaccessible, obstinate, deaf to all argument and entreaty, and defeated every effort of the Whig ministry to repeal or modify the corn laws.

They were finally overthrown [so far as their public measures were concerned] by their ill success in finance. For years preceding their exit from office, there was an unusual deficit in the treasury, and that in spite of some taxes laid expressly to meet it. The nation became alarmed at the aspect of a deficient revenue in the midst of a profound peace, or only a money-making [the

Chinese] war. The government accordingly changed hands, and Sir Robert Peel signalized his accession to power by one of those bold and decisive measures which either bring about triumphant success, or ruin, utter and irretrievable defeat.

This was no other than the imposition of one of the most unpopular and burdensome of the war taxes—a property and income tax, by means of which he not only made up the deficient revenue, but gave a new impulse to the manufacturing and commercial interests, by lessening or repealing a host of duties on the raw material, and by greatly lessening all protective duties on the product of British manufacture. He also made a most important modification in the previous stringency of the corn laws. The success of these measures, bold and decisive as they were, must have exceeded the most sanguine expectations of the premier and his friends. The income-tax yielded nearly one half more than the estimate. The impulse to trade and manufactures was so great that the large reduction of taxes was attended, even at first, with but small loss to the revenue. Instead of repealing the income-tax, upon this success, as a weak or partisan minister would have done, Sir Robert Peel made its continuance the basis for new operations in the same direction, until, at length, British manufactures and commerce were freed from almost every shackle that could impede their competition with the manufactures and commerce of the world. An income-tax of five millions (estimated originally to produce about three and a half) has led to the repeal of over eight millions of other taxes, besides leaving a surplus, the present fiscal year, of over two millions.

This unparalleled and wonderful success, in which the wisdom of the minister had been aided by a most happy combination of circumstances, gave him strength to propose the boldest measure that has ever emanated from a minister of the crown—the death of the corn-laws, with an interval of three years to die in; the process, however, commencing without delay. This is the crowning work of all the free trade measures which have been in progress under the various ministries of Great Britain for a quarter of a century. The threatened famine in Ireland was, no doubt, an important aid in effecting this prodigious revolution. But Peel ought not to deny his obligation to his predecessors. This great measure, upon which he declares himself willing to stake the reputation of a life of great things, could have been carried only in a reformed parliament. It is strictly one of the fruits of that reform, which Peel opposed in the maturity of his years, and with all the strength of his powerful mind. In this sense it may be said that he is indebted to his enemies for his success; and that only the failure of his opposition to reform has enabled him to bring about “the greatest measure of his life.” That this measure, with the class to which it belongs, will be productive of the most important consequences to England and the world, we have not the smallest doubt. It would be too much to expect that these should be all favorable, though a great preponderance of good may reasonably be looked for. But we cannot enter upon so great a subject at the close of an article.

We may however express our doubts whether the success of this great measure ensures the continuance of the Peel ministry. The premier has subjected himself to a load of obloquy, such as

perhaps no minister has encountered since the time of Lord Bute, and should he continue in office, he will have to encounter a vast amount of personal opposition and ill-will, without the warm support of any one party, and without a cordial good-will on the part of the sovereign.

Still, we are inclined to think his strength with the country is such that he may continue to hold office, if he chooses. His best policy, we think, would be to retire until a new election to parliament takes place, when he would be again, almost certainly, called to the head of the ministry. Those are mistaken who consider Peel as past his prime, and needing repose, from age. He is but fifty-eight, of a good constitution, and excellently preserved. He has yet in him ten or twelve good years of service for his country. We are greatly mistaken if for that time, whether in office or out, he be not the foremost man in all the kingdom. He is said to have declared that he would spend his life in the house of commons—that is, would never accept a peerage. We hope he will keep his resolution, convinced that he is on the true theatre of his greatness.

We need make no apology to our readers for continuing our remarks on the changes in the corn laws of Great Britain—a measure which as we have shown closes and perfects the long series of movements in that country in favor of free trade. The doctrine of protection to manufactures and agriculture may be considered as abandoned, and they are left to sustain themselves by their own inherent strength and elasticity. From the immense extent of our foreign commerce with that country, which with her dependencies, takes considerably more than one half of our exports, this commercial revolution there, must have a prodigious influence on the leading interests of our country, and it must demand from us a correspondent attention.

One of the most marked results of the change will be greatly to lessen the cost of living in England to all classes, but especially the poor, who purchase little beyond the necessities of life. Hitherto England has been the dearest country on earth, because food from abroad in all its forms was excluded, unless when at a high price. This is made almost entirely to cease, except in articles which may be denominated luxuries, and including sugar in this list. Vegetables of every class, all grains whether intended as food for man or beast, live animals, meats, fresh and salt, with unimportant exceptions, fish, wherever caught, and however cured, are among articles free or subject only to nominal duty. No country in modern times has ever gone to this extent, except Holland, which is a nation of merchants, and the Hanse Towns, which were free trading cities. England furnishes the first example of a great agricultural nation throwing open its ports and its custom houses, to the almost unrestricted entrance of food from abroad. It certainly is a most remarkable innovation in the custom of nations. It aims a blow at old national antipathies, and jealousies and divisions, the like of which no age has seen, and which if carried out and generally imitated by great nations, would introduce a general national brotherhood, and render wars almost an impossibility. It was not our purpose, however, at present to speak of this result, but to draw attention to the fact of the comparative cheapness of living which must follow the free introduction of all the

leading articles which enter into family consumption.

It is estimated that 190,000 English families live mostly abroad for the sake of economy. Estimating the average income at £300 per annum, £30,000,000 have been spent out of the kingdom for the sake of economy; a large part of which will now be spent at home. Nor has the government provided for a cheap supply of food alone. Woollen and cotton fabrics of all sorts are allowed to be imported free, and there is no tax on leather, and even on garments made up, and on boots and shoes the duty is very light; so that for clothing, England is probably now the cheapest country on earth. Even silks, the use of which is becoming so general, pay for the most part but ten per cent., and England has become an exporting country, as well as an importing one in regard to that article. About eight hundred pounds sterling of silks, were exported the last year. Mr. Huskisson fought hard to get the duty on this article reduced to 30 per cent. Ten per cent. is now thought sufficient—not to exclude the foreign article, for this is not desired; but to encourage the home manufacture. Such a change has been brought about in little more than twenty years.

England then becoming a positively cheap country in regard to clothing, and a comparatively cheap country (her past condition is alluded to) in regard to food, what will be the effect upon her manufactures? This will be three-fold. First, the internal consumption of the kingdom will be affected. The masses, who generally expend nearly up to their income, laying out less for food, will have more for clothing. If their outlay for provisions is diminished, suppose twenty per cent., that for clothing will be augmented probably four or five per cent. Candor, however, obliges us to say that to the increased consumption from this source there may be an offset. If the demand for agricultural labor should be considerably diminished, as is insisted by the advocates for protection, then of necessity the agricultural classes cannot purchase so largely. Here is precisely the difficult, hazardous point of the experiment, and all parties must wait with some anxiety for the result. The manufacturing classes will consume more; *perhaps* the agricultural classes less.

Second, manufactures will be favorably affected by diminishing the cost of production. It is always difficult to estimate the different proportion in which capital and labor are concerned in the cost of production. It is in fact infinitely various in different articles; in some labor constituting a small part—in others nearly the whole. But as labor does enter more or less into the cost of every article, we may take it for granted, that whatever largely affects the price of labor, will affect the cost of production. The operative will in the first instance reap the benefit of diminishing cost of living, and it were earnestly to be wished that he might always retain the great portion of it. But experience forbids us to hope that he can long do more than share it with the capitalist; and whatever benefit the latter derives, is so much added to his power of successfully meeting foreign competition. If, then, English manufactures have, under the disadvantage of dear living, maintained in most branches a superiority over those of other nations, they will be still better enabled to compete with them, when the cost of living is reduced nearly to the same standard. In other words, wholly untaxed raw materials, with almost wholly untaxed

food for her operatives, assures for a long period in foreign markets, at least, the present relative standing of British manufactures. This is a most important gain for that great interest. Its greatest danger lay in dear food at home—that danger is past.

A third way in which British manufactures will be benefited by the free trade measures, now perfected by the virtual abrogation of the corn laws, is by increasing the intercourse with foreign nations. It has been stated as an axiom, that a people will not long buy of those to whom they do not sell. This is only partially true. In order to buy, a nation must of course sell to somebody, though not always to the very people of whom they buy. The statement would have been correct, however, if limited to two or more nations which are competing for the trade of a third. That nation which buys the most freely, will also in this case sell the most largely. The balance of trade with England for the last few years is largely in favor of the United States—the last year reaching the enormous sum of fourteen millions of dollars. In payment she accepts bills from all parts of the world. A good deal of this balance has accrued from the relaxation of her provision laws, which has taken place within the last few years. It is plain, however, that we cannot keep this trade, if the grain-growing nations of the continent consent to receive British manufactures at much lower rates of duty than we impose. Vessels that take British goods as return freight, have an advantage over those that do not, which must ultimately ensure them the market. The irregular and fitful demand of the English corn market, has hitherto prevented any great benefit in the sale of her commodities, from occasional large importations of grain. When this trade, however, shall assume (as it will when free) a tolerable degree of steadiness and regularity, an increased demand for British goods will be the certain result. There will be light freight and means of payment.

Foreign governments will also favor trade with the power which lays the fewest restrictions on their productions. Important relaxations are already making in the Russian system of high and prohibitory duties. All Russian products being received at low or nominal duties in the ports of Great Britain, the emperor will cause an important modification of the Russian tariff to be made, at least so far as British goods are concerned.

It is impossible yet to say how far other nations will be led to follow the example of Great Britain. Authority, or the weight of great names, whether French, English, or German, is wholly on the side of free trade. We doubt whether there is a professorship of political economy on earth, in which the principle of protection is advocated. Theorists at least, as a body, are in favor of free trade. The example of such a country, cannot but have a powerful influence in the same direction, especially with countries whose systems are yet in any degree to be formed.

It will also be somewhat to smooth the way by the prevalence of a better feeling. A large part of the restrictive measures of various countries have had their origin in a spirit of retaliation. It was thought necessary for a nation to show a proper spirit for measures injurious to its trade and commerce by inflicting injury on the opposite party. The blow, it is true, often recoiled, and the party inflicting it was the greatest sufferer.

But in the ill blood excited, this was unseen or disregarded. The great liberal measures of the British government will diffuse throughout the commercial world a better feeling—a feeling that exclusive advantages are no longer sought, and that trade, to be really beneficial to one party, must be so to both.

But these measures will operate in another and still more efficacious way on commercial and manufacturing rivals. The advantages of cheapness of the raw material, and increased cheapness of food, must be met by similar reductions on the part of rival nations, or the foreign markets will be lost. France and Germany must cease to tax British coal and iron, and machinery, and foreign wool, and various other articles, if they would successfully compete with her in the production of cloths, and of various other fabrics in which they now compete with her in the markets of the world. A relaxation—at least a partial one—of their commercial systems will thus be forced upon them.

On the whole, we conclude that a new era of commercial freedom has commenced.

From the New Brunswick Times.

THE WOLF CHASE.

DURING the winter of 1844, being engaged in the northern part of Maine, I had much leisure to devote to the wild sports of a new country. To none of these was I more passionately addicted than that of skating. The deep and sequestered lakes of this northern state, frozen by intense cold, present a wide field to the lovers of this pastime. Often would I bind on my rusty skates, and glide away up the glittering river, and wind each mazy streamlet that flowed on towards the parent ocean, and feel my very pulse bound with joyous exercise. It was during one of these excursions that I met with an adventure, which even at this period of my life I remember with wonder and astonishment.

I had left my friend's house one evening just before dusk, with the intention of skating a short distance up the noble Kennebec, which glided directly before the door. The evening was fine and clear. The new moon peered from her lofty seat, and cast her rays on the frosty pines that skirted the shore, until they seemed the realization of a fairy scene. All nature lay in a quiet which she sometimes chooses to assume; while water, earth and air seemed to have sunken into repose.

I had gone up the river nearly two miles, when coming to a little stream which emptied into the larger, I turned in to explore its course. Fir and hemlock of a century's growth met overhead, and formed an evergreen archway, radiant with frost-work. All was dark within, but I was young and fearless, and as I peered into the unbroken forest that reared itself to the borders of the stream, I laughed in very joyousness. My wild hurrah rang through the woods, and I stood listening to the echo that reverberated again and again, until all was hushed. Occasionally a night bird would flap its wings from some tall oak.

The mighty lords of the forest stood as if nought but time could bow them. I thought how oft the Indian hunter concealed himself behind these very trees—how oft the arrow had pierced the deer by this very stream, and how oft his wild halloo had rung for his victory. I watched the owls as they fluttered by, until I almost fancied myself one of them, and held my breath to listen to their distant hooting.

When suddenly a sound arose, it seemed from the very ice beneath my feet. It was loud and tremendous at first, until it ended in one long yell. I was appalled. Never before had such a noise met my ears. I thought it more than mortal—so fierce, and amid such an unbroken solitude, that it seemed a fiend from hell had blown a blast from an infernal trumpet. Presently I heard the twigs on the shore snap as if from the tread of some animal, and the blood rushed back to my forehead with a bound that made my skin burn, and I felt relieved that I had to contend with things of earthly and not spiritual mould, as I first fancied. My energies returned, and I looked around me for some means of defence. The moon shone through the opening by which I had entered the forest, and considering this the best means of escape, I darted towards it like an arrow. 'T was hardly a hundred yards distant, and the swallow could scarcely excel my desperate flight; yet as I turned my eyes to the shore, I could see two dark objects dashing through the under brush, at a pace nearly double that of my own. By their great speed, and the short yells which they occasionally gave, I knew at once that they were the much dreaded grey wolf.

I had never met with these animals, but from the description given of them, I had but little pleasure in making their acquaintance. Their untameable fierceness and the untiring strength which seems to be a part of their nature, render them objects of dread to every benighted traveller.

“With their long gallop, which can tire
The hound's deep hate, the hunter's fire,”

they pursue their prey, and nought but death can separate them. The bushes that skirted the shore flew past with the velocity of light, as I dashed on in my flight. The outlet was nearly gained; one second more and I would be comparatively safe, when my pursuers appeared on the bank directly above me, which rose to the height of some ten feet. There was no time for thought; I bent my head and dashed wildly forward. The wolves sprang, but miscalculating my speed, sprang behind, while their intended prey glided out into the river.

Nature turned me towards home. The light flakes of snow spun from the iron of my skates, and I was now some distance from my pursuers, when their fierce howl told me that I was again the fugitive. I did not look back—I did not feel sorry or glad; one thought of home, of the bright faces awaiting my return, of their tears if they should never again see me, and then every energy of mind and body was exerted for my escape. I was perfectly at home on the ice. Many were the days I spent on my skates, never thinking that at one time they would be my only means of safety. Every half minute an alternate yelp from my pursuers made me but too certain they were close at my heels. Nearer and nearer they came; I heard their feet pattering on the ice, nearer still, until I fancied I could hear their deep breathing. Every nerve and muscle in my frame was stretched to the utmost tension.

The trees along the shore seemed to dance in the uncertain light, and my brain turned with my own breathless speed: yet still they seemed to hiss forth with a sound truly horrible, when an involuntary motion on my part turned me out of my course. The wolves close behind, unable to stop and as unable to turn, slipped, fell, still going

on far ahead, their tongues lolling out, their white tusches gleaming from their bloody mouths, their dark shaggy breasts freckled with foam; and as they passed me, their eyes glared, and they howled with rage and fury. The thought flashed on my mind that by this means I could avoid them, viz., by turning aside whenever they came too near; for they, by the formation of their feet, are unable to run on ice except on a right line.

I immediately acted on this plan. The wolves having regained their feet, sprang directly towards me. The race was renewed for twenty yards up the stream; they were already close on my back, when I glided round and dashed past my pursuers. A fierce growl greeted my evolution, and the wolves slipped upon their haunches and sailed onward, presenting a perfect picture of helplessness and baffled rage. Thus I gained nearly a hundred yards each turning. This was repeated two or three times, every moment the wolves getting more excited and baffled, until coming opposite the house, a couple of stag hounds, aroused by the noise, bayed furiously from their kennels. The wolves taking the hint, stopped in their mad career, and after a moment's consideration turned and fled. I watched them till their dusky forms disappeared over a neighboring hill. Then, taking off my skates, I wended my way to the house, with feelings better to be imagined than described.

The Poems of ALFRED B. STREET. New York, Clark & Austin, 130 Fulton-street.

WE are pleased to see this complete edition of Mr. Street's poems, for it is difficult justly to estimate a man of genius, when his productions are strewn at random through the periodical publications of the day, like so many scattered rays of light. Our national literature is steadily growing up into manhood, for the reason that the intellect of the country is daily becoming less imitative and more original. It is idle for our authors to attempt occupying any themes of transatlantic origin, unless as they are connected with or terminate on this continent. We should not look too much abroad for subjects of thought and disquisition. American talent can never be developed into fulness upon a foreign nutriment, it must be fed at home; every nation has its peculiar place and sphere in literature, just as much as it has a geographical position, and when confined to this limit the national mind must sooner or later create a peculiar and characteristic national literature. We have been led to these remarks from observing that the marked feature of Mr. Street's poems is their Americanism, and in this we trace an essential cause of his success as a poet. He deals with historical incidents and legends belonging to our own country, and in which we all feel that we have a common property. He describes nature as seen in the depths of our noble forests, by the side of our glorious rivers, on the lakes and mountains, and he thus strikes a chord to which every heart responds.

With all his truthfulness and life-like painting, with all his vivid and spirited sketching of nature, animate and inanimate, we feel that his genius would have been wasted and misapplied upon any other than *home* scenes and events, and we are so far jealous of his muse, as to hope that his fine poetic powers will never be diverted from illustrating the history and scenery of his native land.
—*Protestant Churchman.*

From *Fraser's Magazine*.

PAST AND PRESENT CONDITION OF BRITISH POETRY.

"T is sixty years since a thin quarto volume appeared in London with the plain and unpretending title of *An Ode to Superstition, and some other Poems*, and exactly the same number of years since a thin octavo appeared at Kilmarnock, entitled, *Poems, chiefly in the Scottish Dialect*. The thin quarto was the production of Samuel Rogers, a young gentleman of education, the son of a London banker; the thin octavo the production of Robert Burns, a Scottish ploughboy, without education, and almost without a penny in the world.

"T is fifty years since Burns was buried in the kirkyard of St. Michael's:

"O early ripe, to thy abundant store
What could advancing age have added more!"

While the poet of the *Ode to Superstition* is still among us, full of years and full of health, and as much in love with poetry as ever. "It is, I confess," says Cowley, "but seldom seen that the poet dies before the man; for when once we fall in love with that bewitching art, we do not use to court it as a mistress, but marry it as a wife, and take it for better or worse, as an inseparable companion of our whole life." It was so with Waller when he was eighty-two, and is so with Mr. Rogers now that he is eighty-one. Long may it be so:—

"If envious buckies view wi' sorrow
Thy lengthen'd days on this blest morrow,
May Desolation's long-teeth'd harrow,
Nine miles an hour,
Rake them, like Sodom and Gomorrah,
In brunstane stoure."

Waller "was the delight of the House of Commons, and, even at eighty, he said the liveliest things of any among them." How true of Rogers, at eighty, at his own, or at any other table!

The poet of *An Ode to Superstition* has outlived a whole generation of poets, poetasters, and poetitos; has seen the rise and decline of schools, Lake, Cockney, and Satanic—the changeful caprices of taste—the injurious effects of a coterie of friends—the impartial verdicts of Time and a third generation—another Temple of Fame—a new class of occupants in many of the niches of the old—restorations, depositions, and removals, and, what few are allowed to see, his own position in the Temple pretty well determined, not so high as to be wondered at, nor so low that he can escape from envy and even emulation. Nor is this all; he has lived to see Poetry at its last gasp among us; the godlike race of the last generation expiring or extinct, and no new-comers in their stead; just as if Nature chose to lie fallow for a time, and verse was to usurp the place of poetry, desire for skill, and the ambition and impudence of daring for the flight and the raptures of the true-born poet.

If such is the case, that Poetry is pretty well extinct among us—which no one, I believe, has the hardihood to gainsay—a retrospective review of what our great men accomplished in the long and important reign of King George III. (the era that has just gone by) will not be deemed devoid of interest at this time. The subject is a very varied one, is as yet without an historian, nor has hitherto received that attention in critical detail so preëminently due to a period productive of so many

poems of real and lasting merit—poems as varied, I may add, as any era in our literature can exhibit, the celebrated Elizabethan period, perhaps, but barely excepted.

A new race of poets came in with King George III., for the poets of the preceding reigns who lived to witness the accession of the king either survived that event but a very few years, or were unwilling to risk their reputations in any new contest for distinction. Young was far advanced in years, and content—and wisely so—with the fame of his *Satires* and his *Night Thoughts*; Gray had written his *Elegy* and his *Odes*, and was annotating Linnæus within the walls of a college; Shenstone found full occupation for the remainder of his life in laying out the Leasowes to suit the genius of the place; Johnson was put above necessity and the booksellers by a pension from the crown; Akenside and Armstrong were pursuing their profession of physicians; Lyttleton was busy putting points and periods to his History; Smollett, in seeking a precarious livelihood from prose; and Mallet employed in defending the administration of Lord Bute, and earning the wages of a pension from the minister. Three alone adhered in any way to verse; Mason was employed in contemplating his *English Garden*; Glover, in brooding over his posthumous *Athenaid*; and Home, in writing new tragedies to eclipse, if possible, the early lustre of his *Douglas*.

There was room for a new race of poets. Nor was it long before a new set of candidates for distinction came forward to supply the places of the old. The voice of the Muse was first awakened in Edinburgh and Aberdeen. I can find no earlier publication of the year 1760 than a thin octavo of seventy pages, printed at Edinburgh, entitled, *Fragments of Ancient Poetry, collected in the Highlands of Scotland, and translated from the Gaelic or Erse language*, the first edition of a work which has had its influence in the literature of our country, the far-famed Ossian, the favorite poem of the great Napoleon. "Have you seen," says Gray, "the Erse Fragments since they were printed? I am more puzzled than ever about their antiquity, though I still incline (against everybody's opinion) to believe them old." Many, like Gray, were alive to their beauties: inquiry was made upon inquiry, and dissertation led to dissertation. It was long, however, before the points in dispute were settled, and the authorship brought home to the pen of the translator. The *Fragments* have had a beneficial and a lasting effect upon English literature. The grandeur of Ossian emboldened the wing of the youthful Byron, and the noble daring of the allusions and illustrations countenanced the author of *The Rime of the Ancient Mariner* in what was new and hazardous, when Hayley held, and Darwin was about to assume, a high but temporary position in our poetry.

The Aberdeen volume of poems and translations (8vo. 1761) was the first publication of Beattie, the author of *The Minstrel*. So lightly, we are told, did Beattie think of this collection that he used to destroy all the copies he could procure, and would only suffer four of the pieces—and those much altered—to stand in the same volume with the *Minstrel*. Beattie acquired a very slender reputation by this first heir of his invention; nor would it appear to have been known much beyond the walls of the Marischal College, before the *Minstrel* drew attention to its pages, and excited curiosity to see what the successful poet on this occasion had written unsuc-

cessfully before. In the same year in which Beattie appeared, a new candidate came forward to startle, astonish, and annoy. The reputation of a poet of higher powers than Beattie seemed likely to exhibit would have sunk before the fame of the new aspirant. I allude to Churchill, whose first publication, *The Rosciad*, appeared in the March of 1761, and without the author's name. This was a lucky, and, what is more, a clever hit. The town, a little republic in itself, went mad about the poem; and when the author's name was prefixed to a second edition, the poet was welcomed by the public as no new poet had ever been before. Nor was his second publication—his *Apology*—inferior to his first. His name was heard in every circle of fashion, and in every coffee-house in town. Nor did he suffer his reputation to flag, but kept the public in one continual state of excitement for the remainder of his life. He attacked the whole race of actors in his *Rosciad*; the Critical Reviewers, (the Edinburgh and Quarterly Reviewers of the day,) in his *Apology*; the whole Scottish nation, in his *Prophecy of Famine*; Dr. Johnson, in *The Ghost*; and Hogarth, in *A Familiar Epistle*. Every person of distinction expected that it was to be his turn next; and there was no saying where his satire would not have reached, for he was busy with a caustic dedication to Warburton when, on the 4th of November, 1764, he died at Boulogne, at the too early age of three-and-thirty. Dr. Young survived him nearly a year. What the predecessor of Pope in satire thought of the new satirist, no one has told us.

While "the noisy Churchill" engrossed to himself the whole attention of the public, a poem appeared in May, 1762, likely to outlive the caustic effusions of the satirist, because, with equal talent, it is based on less fleeting materials. This was *The Shipwreck, a Poem, in Three Cantos, by a Sailor*; better known as Falconer's *Shipwreck*, and deservedly remembered for its "simple tale," its beautiful transcripts of reality, and as adding a congenial and peculiarly British subject to the great body of our island poetry. The popularity of Churchill kept it on the shelves of the booksellers for a time, but it soon rose into a reputation, and nothing can now occur to keep it down.

When Goldsmith published his first poem (*The Traveller*) in the December of 1764, Churchill had been dead a month, and there was room for a new poet to supply his place. Nor were critics wanting who were able and willing to help it forward. "Such is the poem," says Dr. Johnson, who reviewed it in the *Critical Review*, "on which we now congratulate the public, as on a production to which, since the death of Pope, it will not be easy to find anything equal." This was high praise, not considered undeserved at the time, nor thought so now. Such, indeed, was the reputation of the *Traveller*, that it was likely to have led to a further succession of poets in the school of Pope, but for the timely interposition of a collection of poems which called our attention off from the study of a single school, and directed the young and rising poets to a wider range for study and imitation.

This collection of poems was Percy's *Reliques of Ancient English Poetry*, one of the most tasteful collections of poems in any language, and one of the best and most widely known: "The publication of which," says Southey, "must form an epoch in the history of our poetry whenever it is written." The first edition appeared in 1765, a year remarkable in more ways than one. Dr.

Young, the sole survivor of the poets of the last generation, died, at the great age of eighty-four, on the 5th of April; and Mr. Rogers, the still surviving patriarch of the past generation of poets, was born on the 30th of July of the same year.

The effect of the *Reliques* was more immediate than some have been willing to imagine. *The Hermit* of Goldsmith, a publication of the following year, originated in the *Reliques*; and the *Minstrel* of Beattie, a publication of the year 1771, in the preliminary dissertation prefixed to the volumes. If Percy had rendered no other service to literature than the suggestion of the *Minstrel*, his name would deserve respect. "The *Minstrel*," says Southey, "was an incidental effect of Percy's volumes: Their immediate consequence was to produce a swarm of 'legendary tales,' bearing, in their style, about as much resemblance to the genuine ballad as the heroes of a French tragedy to the historical personages whose names they bear, or a set of stage-dances to the lads and lasses of a village-green in the old times of the May-pole." This was the more immediate effect; the lasting result of the *Reliques* was their directing the rude gropings of genius in a Scott, a Southey, a Coleridge, and a Wordsworth.

Beattie reappeared in 1766 with a volume of poems, better by far than what he had done before, but still insufficient to achieve the reputation which the *Minstrel* subsequently acquired for the author of the volume. A second candidate was Cunningham, a player, still remembered for his *Kate of Aberdeen*, a short but charming piece of simple-hearted poetry. Poor Cunningham made no great way with his verse; he had dedicated his volume, with all the ambition of an actor, to no less a personage than Garrick; but the head of the patentee players received the stroller's poetry with indifference, and did not on this occasion repay—which he commonly did—his encomiums "in kind." But the poet of the year 1766 was Anstey, with his *New Bath Guide*.

"There is a new thing published," says Walpole, "that will make you split your cheeks with laughing. It is called the *New Bath Guide*. It stole into the world, and, for a fortnight, no soul looked into it, concluding its name was its true name. No such thing. It is a set of letters in verse, describing the life at Bath, and incidentally everything else; but so much wit, so much humor, fun, and poetry, never met together before. I can say it by heart, and, if I had time, would write it you down; for it is not yet re-printed, and not one to be had."

Gray commended it to Wharton, and Smollett wrote his *Humphrey Clinker* (the last and best of his works) on Anstey's principle in his *Guide*.

A publication of the year 1767, called the *Beauties of English Poesy, selected by Oliver Goldsmith*, deserves to be remarked. The selection seems to have been made as a sort of antidote to Percy's *Reliques*. "My bookseller having informed me," he says, "that there was no collection of English poetry among us of any estimation, * * * I therefore offer this," he adds, "to the best of my judgment, as the best collection that has yet appeared. I claim no merit in the choice, as it was obvious, for in all languages the best productions are most easily found." It will hardly be believed by any one who hears it for the first time, that a poet of Goldsmith's taste in poetry could have made a selection from our poets without including a single poet (Milton excepted) from the noble race of

poets who preceded the restoration. Yet such, however, is the case; and I can only account for the principle on which the selection would appear to have been made, that it was meant as an antidote to Percy's publication, or that Goldsmith (and this is not unlikely) was perfectly unacquainted with the poets of a period previous to Dryden and Pope.

Michael Bruce, a young and promising poet, died in the year 1767, at the too early age of twenty-one. Some of his poems—and they were posthumously published, without the last touches of the author—possess unusual beauties. His *Lochleven* is called, by Coleridge, “a poem of great merit;” and the same great critic directs attention to what he calls “the following exquisite passage, expressing the effects of a fine day on the human heart:”—

“Fat on the plain and mountain's sunny side,
Large droves of oxen, and the fleecy flocks,
Feed undisturbed; and fill the echoing air
With music grateful to the master's ear.
The traveller stops, and gazes round and round
O'er all the scenes that animate his heart
With mirth and music. Even the mendicant,
Bowbent with age, that on the old grey stone,
Sole sitting, suns him in the public way,
Feels his heart leap, and to himself he sings.”

Another poet, whose song ceased before he had time to do still better things, was poor Falconer, who perished at sea in the *Aurora* frigate, in the year 1769. He had sung his own catastrophe in his *Shipwreck* only a few years before.

The poem of the year 1770 was *The Deserted Village*—in some respects a superior poem to *The Traveller*. It was immediately a favorite, and in less than four months had run through five editions. Gray thought Goldsmith a genuine poet. “I was with him,” says Nicholls, “at Malvern, when he received the *Deserted Village*, which he desired me to read to him; he listened with fixed attention, and soon exclaimed, ‘This man is a poet!’”

If *The Deserted Village* was, as it certainly is, an accession to our poetry, the death of Akenside and the far too premature removal of Chatterton were real losses in the very same year in which Goldsmith's great poem appeared. Akenside had, no doubt, sang his song, but Chatterton was only in his eighteenth year. What a production for a boy was the ballad of “Sir Charles Bawdin!” There is nothing nobler of the kind in the whole compass of our poetry. “Tasso alone,” says Campbell, “can be compared to him as a juvenile prodigy. No English poet ever equalled him at the same age.”

The Deserted Village of the year 1770 was followed in 1771 by the first book of *The Minstrel*, a poem which has given more delight to minds of a certain class, and that class a high one, than any other poem in the English language. Since Beattie composed his poem on which his fame relies, and securely too for an hereafter, many poems of a far loftier and even a more original character have been added to the now almost overgrown body of our poetry; yet Beattie is still the poet for the young; and still in Edwin—that happy personification of the poetic temperament—young and enthusiastic readers delight and recognize a picture of themselves. Gray lived to commend and to correct it—with the taste of a true poet and the generosity of an unselfish one. “This of all others,” he says, “is my fa-

vorite stanza: it is true poetry, it is inspiration.”
“The stanza is well known—

“O, how canst thou renounce,”

and shares with a stanza in the *Castle of Indolence*, the applause of nations.

Mason, in 1771, put forth a new edition of his *Poems*, and in a separate publication the same year the first book of his *English Garden*. To the *Poems* he has made a few additions, but nothing so beautiful as his epitaph on his wife, inscribed upon her grave in Bristol cathedral. The lines are well known, but not so the circumstance, only recently published, that the last four lines were written by Gray:—

“Tell them, though 't is an awful thing to die,
(‘T was e'en to thee,) yet the dread path once
trod,
Heaven lifts its everlasting portals high,
And bids ‘the pure in heart behold their
God.’”

We learn from the same unquestionable quarter, (the *Reminiscences* of the Rev. Norton Nicholls,) that Gray thought very little of what he had seen of the *English Garden*. “He mentioned the poem of the *Garden* with disapprobation, and said it should not be published if he could prevent it.” There are lines and passages, however, of true poetry throughout the poem, which form in themselves an agreeable accession to our stock of favorite passages. How exquisite, for instance, is this:—

“Many a glade is found
The haunt of wood-gods only; where, if art
E'er dared to tread, 't was with unsandalled foot,
Printless, as if the place were holy ground.”

The poem, however, made but a very slender impression on the public mind, nor is it now much read, save by the student of our poetry, to whom it affords a lesson of importance.

The only remembered publication in poetry of the year 1773 was *The Heroic Epistle to Sir William Chambers*—a caustic attack, replete with wit, humor, and invective, on the architect's Chinese eccentricities in the gardens at Kew. It was long before Mason was suspected of the satire. Tom Warton was the first to attribute it to his pen; he said it was Walpole's *buckramed* up by Mason. But Walpole, from a letter to Mason only recently published, would appear to have had nothing to do with it. “I have read it,” writes Walpole, “so very often, that I have got it by heart, and now I am master of all its beauties. I confess I like it infinitely better than I did, though I liked it infinitely before. But what signifies what I think? All the world thinks the same. No soul has, I have heard, guessed within a hundred miles. I caught at Anstey's, and have, I believe, contributed to spread the notion. It has since been called Temple Luttrell's, and, to my infinite honor, mine. But now that you have tapped this mine of talent, and it runs so richly and easily, for Heaven's and for England's sake, do not let it rest.”

The Heroic Epistle was followed, in 1774, by the *Judah Restored*, of Roberts—“a work,” says Campbell, “of no common merit.” Southey calls the author a poet of the same respectable class as the author of *Leonidas* and the *Athenaid*, and adds in a note, “Dr. Roberts' *Judah Restored* was one of the first books that I ever possessed. It was

given me by a lady whom I must ever gratefully and affectionately remember as the kindest friend of my boyhood. I read it often then, and can still recur to it with satisfaction; and perhaps I owe something to the plain dignity of its style, which is suited to the subject, and everywhere bears the stamp of good sense and careful erudition. To acknowledge obligations of this kind is both a pleasure and a duty.* I have Southey's copy of the *Judah* before me at this moment; on the fly-leaf is inscribed, in the neat hand-writing of the poet, "Robert Southey—given me by Mrs. Doldignon, 1784." The poet of *Kehama* was born the year in which the *Judah* appeared, and was only ten years old when a copy of the poem was given to him by the lady he remembers so affectionately as "the kindest friend of his boyhood." This one book may have had the same effect on Southey that Spenser's works had upon the mind of Cowley: "I had read him all over," he says, "before I was twelve years old, and was thus made a poet as immediately as a child is made an enuch."

On the 4th of April, 1774, died Oliver Goldsmith, leaving unfortunately unfinished one of the best of his lighter pieces—his well-known and inimitable *Retaliation*. It was published a fortnight after his death, and became immediately a favorite. A second posthumous publication of the same poet was *The Haunch of Venison*, a clever epistle to Lord Clare, full of characteristic beauties peculiar to its author. Both pieces owe something to Anstey and his *Guide*—the suggestion certainly.

In 1776 Mickle put forth his translation of the *Luciad*—free, flowery, and periphrastical, full of spirit, and not devoid of beauties, but untrue to the majestic simplicity of the great Portuguese.

While Goldsmith was confining his selection from our poets to a period too narrow to embrace many of the nobler productions of the British muse, Gray was annotating Lydgate, and the younger Warton collecting materials for his *History of English Poetry*. Our literature lies under other obligations to the younger Warton—great as that obligation is for his noble and unfinished *History*. He was the first to explain and direct attention to many of the less obvious beauties of *The Faerie Queene*, and, in conjunction with Edwards, the first to revive the sonnet among us, a favorite form of verse with our Elizabethan poets, with Shakespeare and with Milton, but entirely abandoned by the poets who came after them. The first volume of Warton's *History* was published in 1774; his *Poems* containing his sonnets in 1777. The effect produced by their publication was more immediate than has hitherto been thought. We owe the sonnets of Bampfylde (4to. 1778) to the example of the younger Warton. Nor is the pupil unworthy of the master, or unwilling to own his obligation. Some of the *Sixteen Sonnets* of Bampfylde (for such is the title of his thin unpretending quarto) are "beautiful exceedingly," and in one (the tenth) Warton is addressed in a way which he could well appreciate.

The good effects of Percy's *Reliques*, Warton's volume of *History*, and Warton's *Poems*, received a temporary check in the year 1779, by the publication of the first part of Johnson's well-known *Lives of the Poets*, containing his celebrated criticism on the *Lucidas* of Milton, and his noble parallel between Dryden and Pope. The concluding portion of the *Lives*, containing his famous abuse

of Gray, appeared two years later, (1781,) and, like the former portion of the work, was read with deserved avidity. The effect was catching. The school of Dryden and Pope revived. Hayley wrote his *Triumphs of Temper* in the verse recommended by Johnson; Crabbe composed his *Library* and his *Village* in the same versification; Cowper his *Table Talk*, and even Mason (though the last person in the world to admit it) his translation of Du Fresnoy, in Johnson's *only* measure.

But the fear of Dr. Johnson did not reach beyond the grave, and when Cowper put forth his *Task* in the spring of 1785, the great critic was no more. Not that Cowper was likely to be deterred from blank verse by the criticisms of Johnson, for the *Task* was commenced in Johnson's lifetime, and in the same structure of versification. That Johnson could have hurt the sale for a time by a savage remark at the table of Reynolds, no one acquainted with the literature of the period will for a moment doubt. That he could have kept the poem from what it now possesses and deserves—a universal admiration, it would be equally absurd to suppose for a single moment.

When Cowper put forth his *Task* there was no poet of any great ability or distinguished name in the field. Hayley ambled over the course, to use an expression of Southey, without a competitor. But Hayley had done his best, poor as that was, though his day was hardly by. It was Cowper who forced us from the fetters which Johnson had forged for future poets, and Hayley had done his best to rivet and retain. Nor was Cowper without some assistance at this time. Evans' old ballads did something to extend a taste for the early but unknown masters of our poetry. Some of Mickle's imitations, in the same collection, were read by younger minds with an influence of which we enjoy the fruits to this day. Charlotte Smith put forth a volume of her sonnets, replete with touching sentiment, eminently characteristic of the softer graces of the female mind, and the late Sir Egerton Brydges, a volume of poems, containing one noble sonnet ("Echo and Silence") which, though neglected at the time, will live as long as any poem of its length in the English language.

The *Task* was followed by a volume of poems from a provincial press full of the very finest poetry, and one that has stood its test, and will stand forever. The author of the *Task* was of noble extraction, and counted kin with lord chancellors and earls. His fellow author was a poor Scottish peasant, nameless and unknown when his poems were put forth, but known, and deservedly known, wherever the language of his country has been heard. This poet was Robert Burns. Cowper and Burns were far too nobly constituted to think discouragingly of one another. "Is not the *Task*," says Burns, "a glorious poem?" The religion of the *Task*, bating a few scraps of "Calvinistic divinity, is the religion of God and nature; the religion that exalts and ennobles man." "I have read Burns' poems," says Cowper, "and have read them twice; and though they be written in a language that is new to me, and many of them on subjects much inferior to the author's ability, I think them on the whole a very extraordinary production. He is, I believe, the only poet these kingdoms have produced in the lower rank of life save Shakspeare, (I should rather say save Prior,) who need not be indebted for any part of his praise to a charitable consideration of his origin, and the disadvantages under which he has labored. It will

* Southey's Cowper, vol. iii., p. 32.

be pity if he should not hereafter divest himself of barbarism, and content himself with writing pure English, in which he appears perfectly qualified to excel. He who can command admiration dishonors himself if he aims no higher than to raise a laugh." This, let it be remembered, was written at the time when the poet's reputation was as yet unconfirmed. But the praise is ample, and such as Burns would have loved to have heard from Cowper's lips. "Poor Burns!" he writes in another letter, "loses much of his deserved praise in this country through our ignorance of his language. I despair of meeting with any Englishman who will take the pains that I have taken to understand him. His candle is bright, but shut up in a dark lantern. I lent him to a very sensible neighbor of mine: but his uncouth dialect spoiled all; and before he had half read him through, he was quite *ramfuzzled*." The word to which Cowper alludes occurs in the "Epistle to Lapraik;" the meaning was somewhat difficult at the time, few will need to be told it now. The study of Burns is very general in England, and in Ireland he is almost as much understood and appreciated as in his own country.

Mr. Rogers appeared as a poet in the same year with Burns. But his *Ode to Superstition* was little read at the time, and his fame rests now on a wide and a secure foundation. Another poet of the same year was Henry Headley, a young and promising writer, imbued with a fine and cultivated taste, of which his two volumes of selections from our early poets, published in the following year, is still an enduring testimony. If Goldsmith had lived to have seen these selections published, culled by a boy of barely twenty-one, he surely would have blushed to have looked upon his own.

There were other candidates for distinction at this time, imbued with the same tastes and fostered in the same quarter, the cloisters of Trinity college, Oxford, and the wards of Winchester school. The first was Thomas Russell, prematurely snatched away (1788) in his twenty-sixth year, leaving a few sonnets and poems behind him, which his friends judged worthy of knowing hereafter. That he had intended his poems for publication was somewhat uncertain; that he was gifted with no ordinary genius, the magnificent sonnet supposed to be written at Lemnos has put beyond the pale of cavil or suspicion. The second candidate for distinction was William Lisle Bowles, whose fourteen sonnets appeared in 1789, while he was yet an undergraduate at Oxford. The younger Warton lived long enough to foretell the future distinction of the boy his brother had brought up; Coleridge, to thank him in a sonnet for poetic obligations:—

"My heart has thank'd thee, Bowles, for those
soft strains,
Whose sadness soothes me like the murmuring
Of wild bees in the sunny showers of spring;"

and Southey, to express in prose his gratitude for similar obligations. The Vicar of Bremhill (now in his eighty-fourth year) has reason to be proud of such testimonies in his favor. It would be idle assertion to call them undeserved; his sonnets are very beautiful, full of soothing sadness, and a pleasing love and reverence for nature, animate and inanimate.

When Bowles was seeing his sonnets through the press, his old antagonist, Lord Byron, was a

child in his mother's or his nurse's arms. While they were yet hardly a year before the public, the younger Warton was buried in the chapel of his college at Oxford amid the tears of many who knew the frank, confiding disposition of his nature.

"For though not sweeter his own Homer sang,
Yet was his life the more endearing song."

Other poems of consequence followed at intervals, not very remote. In 1791 Cowper put forth his translation of the *Iliad* into English blank verse, and Darwin his *Botanic Garden*, a poem in two parts, written in the measure of Pope, but polished till little remained save glitter and fine words.

The only poem of repute of the year 1792 that has reached our time, or seems likely to revive, and acquire an hereafter, is *The Pleasures of Memory*. This is a poem which Goldsmith would have read with pleasure, for it is much in his manner. "There is no such thing," says Byron, "as a vulgar line in the book." The versification is very finished, but not in Darwin's manner to too great a nicety, while there are passages here and there which take silent possession of the heart, a sure sign of unusual excellence.

Wordsworth's first poem, *An Evening Walk, an epistle in verse, addressed to a young lady from the Lakes of the North of England*, appeared the year after *The Pleasures of Memory*, and was followed the same year by a volume of *Descriptive Sketches, in verse, taken during a Pedestrian Tour in the Italian Grisons, Swiss, and Savoyard Alps*. Every line in *The Evening Walk* bears the mark of a keen observer for himself; there is not a borrowed image in the poem, though the pervading character throughout reminds one too closely perhaps of *The Nocturnal Reverie of the Countess of Winchelsea*, a wonderful poem, to which Wordsworth was the first to direct attention. Here is a picture from Wordsworth's first volume, something between a Hobbima and a Hondskoeter:—

"Sweet are the sounds that mingle from afar,
Heard by calm lakes as peeps the folding star,
Where the duck dabbles 'mid the rustling sedge,
And feeding pike starts from the water's edge,
Or the swan stirs the reeds, his neck and bill
Wetting, that drip upon the waters still;
And heron, as resounds the trodden shore,
Shoots upward, darting his long neck before."

One feels that our poetry is enriched by a passage of this description—that the poet who could write in this way was likely to make what Addison calls *additions to Nature*, and this Mr. Wordsworth has done in a preëminent degree.

Southey, in 1795, made his first public appearance as a poet in a thin duodecimo volume, printed at Bath, on the poor pale blue paper of the period. This was a kind of *Lara* and *Jacqueline* affair. One half of the volume was by Southey, the other half by Lovell, the poems of the former being distinguished by the signature of "Bion," of the latter by that of "Moschus." The poems are not very many in number, nor are they very good, yet the little volume is not without its interest in the history of a great mind, feeling its way to a proud position in our letters.

The joint publication of Southey and Lovell, in 1795, was followed the next year by a similar kind of publication, between Coleridge and his school-

fellow Lamb. The name of Coleridge appears alone upon the title-page, which is thus described, *Poems on Various Subjects by S. T. Coleridge, late of Jesus College, Cambridge*. Lamb's contributions are distinguished by his initials, and the volume is remarkable in more ways than one. Coleridge calls his sonnets *Effusions*—Effusion 1; Effusion 2. This appellation he removed in a second edition, and called them, what in reality they were, and what, when they were written, he intended they should be, "Sonnets, attempted in the manner of Mr. Bowles." Here is his sonnet of gratitude to the vicar of Bremhill, a mistaken attack on Rogers, subsequently withdrawn, and the following bold panegyric upon Wordsworth: "The expression *green radiance* is borrowed," he writes, "from Mr. Wordsworth, a poet, whose versification is occasionally harsh and his diction too frequently obscure, but whom I deem unrivalled among the writers of the present day in manly sentiment, novel imagery, and vivid coloring."

"'T is certainly mysterious that the name
Of prophet and of poet is the same."

One sees the prophetic eye of taste in the printed judgment of Coleridge on this occasion.

Burns is said to have foretold the future fame of Sir Walter Scott: "This boy will be heard of yet." But the great poet of Scotland was cold in his grave before Scott became a candidate for literary distinction. He died the very year of Scott's first publication. *The Chase, and William and Helen; two Ballads from the German of Gottfried Augustus Bürger*. Edinburgh, 1796. Men who love to trace the hereditary descent of genius, foresee a mysterious something in this seeming transmigration. Be this as it may, there is little of Burns in Scott's early publication, little of his own after-excellence, and, in short, very little to admire.

A third publication of the year 1796 was the *Joan of Arc* of Southey, the production of a boy of two-and-twenty, and the first of a series of epics remarkable for the even level of their flight, and the wide difference of opinion they are known to have occasioned. The new epic, however, had its own little phalanx of admirers; and when a volume of smaller poems from the same pen was published a short time after, the poet of *Joan of Arc* had a second accession of admirers. His noble *Inscriptions* acquired him not a few; and all who were blind to the nobler portions of his epic could comprehend the beauties of a story in verse like "Mary the Maid of the Inn."

Our poetry was infested at this time with the unpoetic invectives of Wolcot, and the puerile inanities of the Della Cruscan school. Verse and poetry were too commonly confounded, ease and smoothness were mistaken for higher powers, and the rough impudence of Wolcot for the keen, caustic irony of the muse of Satire. It was time to put an end to such pretensions and to sing-song prettinesses with nothing in the world to recommend them. The opportunity was great, nor was there a poet wanting, or, better still, one unwilling to rid our literature of the weeds and vermin that infested it. The poet who came forward was William Gifford, and the poem he produced, his *Baviad and Meviad*—a clever, well constructed satire, more in Churchill's annihilating manner than the keen, razor-edged satire of Pope or Young. The triumph was complete, and the *Baviad and Meviad*

is still read, though the works it satirizes have been forgotten long ago.

When Wordsworth, in the following year, (1798,) produced his two duodecimo volumes of *Lyrical Ballads*, few read, liked, or understood them;

"And some him frantic deem'd, and
Some him deem'd a wit."

Every shaft of ridicule was turned against him, and with such success that his "audience" was, indeed, but "few." The principle on which his poems are composed was as yet unrecognized; and if the wits, who should have known much better, were blind to the several excellencies of his verse, he had little to look for from the bulk of readers. It was long, very long, therefore, before he had any ascertained and admitted position in the catalogue of English poets. Every description of circumstance seemed to go against him. Rogers put forth his *Epistle to a Friend* in the autumn of the same year, and Campbell his *Pleasures of Hope* in the following spring.

The effect was all but instantaneous. Two such noble examples of the school and poetry of Pope revived a predilection for a form of poetry in which so many great efforts had been achieved; and the *Lyrical Ballads* of Wordsworth were overlooked in the fresh triumph of a former favorite, and the first production of a new and successful writer.

A third publication of the year 1798 was an octavo volume, since very much enlarged, and entitled, *Plays on the Passions*. This was Joanna Baillie's first publication, and is likely to see an hereafter, not so much from the exaggerated praises of Scott and Southey, for these can effect but little where the substance itself is poor, but from the intrinsic excellence of the work itself, and the fact that it is by far the noblest offspring of the female mind this country has to exhibit, and worth five hundred such *Sacred Dramas* as Hannah More inflicted on the public for a long succession of years, now happily at an end.

The last century closed with *Campbell's Pleasures of Hope*, and the new one opened with Bloomfield's *Former's Boy*, and Moore's first work, his translation of *Anacreon*. Cowper and the elder Warton were removed in 1800 by death from witnessing the full effects of the example they had set us, for the agreeable *Essay on Pope* had its influence certainly in hastening the changes completed by the *Task*. Beattie was suffering from paralysis and age, and Lewis, with his *Monk* and his *Tales of Wonder*, engrossed the attention of a London public. The living Parnassus was as yet without its full complement of tenants, but candidates came forward before long to fill the vacant places. Hogg published, in 1801, a little volume of *Scottish Pastoral Poems, Songs, &c., written in the Dialect of the South*; Leigh Hunt, the same year, a collection of poems entitled *Juvenilia*; Bloomfield, in 1802, his *Rural Tales, Ballads and Songs*; Sir Walter Scott, his *Glenfinlas and Eve of St. John*, more like polished tales than happy imitations of the early ballad, but truly wonderful when viewed in connexion with his after writings; Leyden, in 1803, his *Scottish Descriptive Poems*; Kirke White, his *Clifton Grove*; Campbell, his *Lochiel and Hohenlinden*; and Southey, a second epic, his *Thalaba*, in an irregular measure of his own inventing.

On the 18th of April, 1802, died Dr. Darwin,

and on the following 14th of August L. E. L. was born. In 1803 died Hoole, whose veneer-like translation of Tasso was preferred by Johnson to the glowing and substantial beauties of Fairfax. In the same year Lord Strangford put forward his translation from Camoens, and thus was Darwin perpetuated in the gems, and flowers, and odors of L. E. L., and Hoole in the polished refinements of the noble viscount.

The critic was a wise one who, when he reviewed the *Minstrelsy of the Scottish Border*, in the year 1803, foresaw a score of metrical romances in the materials of three octavo volumes. No better "preparatory school" for a part of Scott's particular genius could have well been found than the course of study which he had formed for himself in bringing the materials of the *Minstrelsy* together. His mind was thoroughly impregnated with the spirit of the past, as much as it would in all possibility have been had he lived in the times he describes so truly. His powers of observation were keen and scrutinizing; his love of books and nature an increasing kind of appetite; and he was only in want of a metre to suit the stories he had floating before him, when a friend recited to him from memory some of the striking passages of Coleridge's *Christabel* then unpublished, and then as now, unfortunately a fragment. The rhythmical run of the verse was catching; and a story over which he had long brooded was commenced immediately, in the wild metre of the poem thus opportunely brought beneath his notice.

The metre found, the work went on at about the rate he tells us, of a canto per week; and was finally published in January, 1805, in a quarto volume, price twenty-five shillings! Few will require to be told that Scott's first poem was *The Lay of the Last Minstrel*, that the success of the work exceeded the fondest day dreams of its author, and at once decided that literature should form the main business of his life. "The favor which it at once attained," says Lockhart, "had not been equalled in the case of any one poem of considerable length during at least two generations; it certainly had not been approached in the case of any narrative poem since the days of Dryden." The work, brought out on the usual terms of division of profits between the author and publishers, was not long after purchased by them for 500*l*, to which Messrs. Longman and Co. afterwards added 100*l*. in their own unsolicited kindness, in consequence of the uncommon success of the work.

The year introduced by *The Lay*, closed with *Madoc* and *The Sabbath*. *Madoc*, a new epic by Southey; *The Sabbath*, a didactic poem by James Grahame—the *sepulchral* Grahame of the satire of Lord Byron. *Madoc* found few admirers at the time, nor has it many now, or the number it deserves to have; and *The Sabbath* of Grahame, though full of fine thoughts, and well sustained throughout, made but little way with poets, or with the public:

"Why, authors, all this scrawl and scribbling
sore!
'To lose the present, gain the future age,
Praised to be when you can hear no more,
And much enrich'd with fame when useless
worldly store."

But *Madoc* and *The Sabbath* are sure of being included in the bulk of our British poetry, whenever that large body is reëdited by a poet of true

judgment and discretion, and not by another Alexander Chalmers.

"The corruption of a poet is the generation of a critic." This, however, like many other popular sayings, admits of some exceptions; for the writers who originated the *Edinburgh Review*, Jeffrey, Brougham, Mackintosh, Sydney Smith, Hallam, and Horner, belonged either to the law or the church, and put forward no pretensions of their own to a grain of ground upon Parnassus. They sat in judgment, however, on the production of the new race of poets with a stern and forbidding countenance. "Hard words and hanging," was the doom of all new candidates for the laurel; so that Hogg's translation of their motto, "*Judex damnatur absolvitur illis*,"—"I'll be d——d if you escape," was true, at least to the spirit in which the journal was conducted. Young men of the present generation can form from the known character of the *Review* for the last eight-and-twenty years but a very slender idea of its influence for the first fifteen years of its existence. Nor is this loss of influence to be attributed to any falling off in the quality and value of its articles, for the *Edinburgh Review*, that can show a paper by Macaulay, or an article like the "Churchill," from the pen of Mr. Forster, may rank in real worth and importance with the best number of the *Review* in the most palmy days of its existence. We are to attribute a decay of influence to another cause, to an abuse of its own power, the reversal of many of its own decrees in its own pages; and the simple circumstance, that merit will buoy up at last, for malice and wit, though they may cause an incalculable deal of mischief for a time—it can be but for a time. Dryden's contempt for Shirley has not prevented what was due to him, the publication of a collected edition of his work; and all the wit that was shot against Wither has failed in keeping him from the place he deserves to hold in the catalogue of British poets.

When the *Edinburgh Review* was in the full first swing of its power and patronage, James Montgomery published his *Wanderer in Switzerland*; Cary, the first part of his well-sustained translation of Dante; Hogg, his *Mountain Bard*; Crabbe, after a silence of twenty years, *The Parish Register*; Tannahill, a volume of Songs; Moore, his *Little's Poems*; Scott, his *Marmion*; and Byron, his *Hours of Idleness*. Crabbe alone was a favorite with the *Review*; Montgomery met with a severe handling; the *Review* of *Little* occasioned a hostile meeting at Chalk Farm; the critique on *Marmion*, the *Quarterly Review*; and the bitter and uncalled-for notice of the *Hours of Idleness*, the swingeing satire, rough and vigorous, of *English Bards and Scotch Reviewers*. "The poetry of this young lord," says the *Review*, "belongs to the class which neither gods nor men are said to permit; and our counsel is," it adds, "that he do forthwith abandon poetry and turn his talents which are considerable, and his opportunities which are great, to better account."

The *Edinburgh Review* may be forgiven all its injurious and unjust decrees in criticism, for the entertaining addition it made to our literature in the satire of Lord Byron. Not that the satire itself is a very noble specimen of Byron's muse, or of the school of poetry of which it forms a part; but it is a fine, fearless piece of writing, with a strain of noble invective at times amidst its more prosaic passages and its mere calling of names. The *Review*, moreover, had this good effect, it

roused a muse of fire before its time, but not before its strength was at its height, and, in all probability, added to the bulk and value of the poems he has left us; for there is little reason to suppose that Byron's life would, under any circumstances, have extended much, if at all, beyond the six-and thirty years to which it ran.

Birds cease to sing when kites are in the sky, but real poets, though depressed by criticisms for a time, revive with wonted vigor, and try a new flight in the poetic heaven. Byron understood this thoroughly when he sang,—

"Yet there will still be bards, though fame is smoke.

Its fumes are frankincense to human thought;

And the unquiet feelings which first woke

Song in the world, will seek what then they sought."

Campbell, the pet of the reviewers, put forward his *Gertrude of Wyoming* in 1809; Crabbe, another favorite, his *Borough*, in 1810; Scott, *The Lady of the Lake*; and Southey, his noblest poem by far, his *Curse of Kehama*, in the same year. Our accessions were considerable, so were our losses. Anstey was removed from among us in 1805, forty years after the publication of *The New Bath Guide*; Charlotte Smith and Kirke White in 1806; Home in 1808, sixty years after the tragedy of *Douglas*, and an ode addressed to him by Collins, had secured his fame; Miss Seward, whose feeble lucubrations I have omitted to detail, was removed in 1809; Tannahill, in 1810; Grahame and Leyden, in 1811; and in the same year the venerable Bishop Percy, whose *Reliques of English Poetry* had wrought the changes of which he lived to see so many noble and permanent effects.

Tales in Verse, *The World before the Flood*, *The Isle of Palms*, and some of the lighter poems of the year 1812, suffered an eclipse in the great quarto publication of that year, the two first cantos of *Childe Harold*. Murray gave 600*l.* for the copyright; the sale was instantaneous, and "I awoke one morning," as the author records, "and found myself famous." The success of the poem was complete, and people applied to the new poet what Waller had said of Denham, "that he broke out like the Irish Rebellion, threescore thousand strong, when nobody was aware or at the least suspected it."

The memorable quarto of the month of March (*Childe Harold*) was followed in October by one of the wittiest little volumes in the English language. *The Rejected Addresses* of the Messrs. Smith. *The Pipe of Tobacco*, by Isaac Hawkins Browne, clever as it is, must sink before the little brochure of the successful brothers. Philips, in his *Splendid Shilling*, is not more happy in his mock imitation of Milton's manner than the Messrs. Smith of Lord Byron's in the stanzas called "Cui Bono?" The Crabbe, the Scott, the Southey, the Wordsworth, are all good—indeed, there is not a bad parody in the volume; the Crabbe, in a word, is better than Crabbe,—

"Something had happened wrong about a bill,
Which was not drawn with true mercantile skill;
So to amend it I was told to go,
And seek the firm of Clutterbuck and Co."

Surely "Emanuel Jennings," compared with the above, rises, as the Messrs. Smith remark, to sublimity itself.

The last publication of the year 1812 was the *Rokeby* of Scott—less successful than any of his former efforts, and with less of the blaze of true genius about it. Copies were scarce at first,—

"Pray have you got *Rokeby*? for I have got mine,
The mail-coach edition, prodigiously fine;

and when copies were got, disappointment almost as speedily ensued. Fine passages throughout the poem unquestionably there are. But the versification was the same with his other poems, and what Curl called "the knack" was caught by a herd of tasteless imitators.

"I well remember," writes Lockhart, "being in those days a young student at Oxford, how the booksellers' shops there were beleaguered for the earliest copies, and how he that had been so fortunate as to secure one was followed to his chamber by a tribe of friends, all as eager to hear it read as ever horse-jockeys were to see the conclusion of a match at New-market; and, indeed, not a few of those enthusiastic academics had bets depending on the issue of the struggle, which they considered the elder favorite as making to keep his own ground against the fiery rivalry of *Childe Harold*."

Byron had novelty on his side, and Scott had to encounter the satiety of the public ear. Other circumstances, moreover, were against him. Moore had given a humorous fling at the poem in his *Twopenny Post Bag*; and the Messrs. Smith, in "A Tale of Drury Lane," in *The Rejected Addresses*, a ludicrous turn to the manner and matter of his former poems. He felt what Byron calls his "reign" was over, and turning from poetry to prose, left the field of verse to a formidable rival, and employed his pen in the composition of a lighter style of literature—one in which he achieved a second reputation, and one in which he is still without a rival.

The public at large have never cared much about poems written in Spenser's stanzas, and Byron was wise when he postponed the completion of his poem in that measure to a later period. Scott had awakened a taste for incident and story. Of mere description the public had had enough already; and of legendary tales in verse more than enough. People were tired, moreover, of border raids and Highland scenery; they longed for novelty and for another clime, and they got their wish. There was no suspense; the poet kept pace with the public: and *The Giaour* and *The Bride of Abydos* were still in the infancy of their fame, when *The Corsair*, *Lara*, and *The Siege of Corinth*, appeared to await the judgment of the public. The poet was not unmindful of the fate of others. He knew, moreover, the capricious turns of the public taste, and how necessary it was, to maintain his ground, that he should frequently renew his title to the rank assigned him. Afraid that people were beginning to get tired of Turkish tales, he added a third canto to *Childe Harold*; and when the fourth and last canto of that noble poem was published, he produced a novelty at the same time, a Venetian story (*Beppo*) in Whistlercraft verse—itsself a novelty. Churchill's four years were not better sustained than Byron's twelve. From tales in tripping verse he turned to dramas; and when *Manfred* and *Cain*, and *Sardanapalus* and *Werner* had done their work, *Don Juan* was taken up as a new string to his bow. This, his last, and in some respects his ablest, work was left unfinished at his death. What new style he would have attempted, or

what success was likely to attend a fifth new manner, I need not stay to conjecture. His career was brilliant but short, and though he excelled in every style he attempted, there is every reason to suppose that he had done his best.

While Byron blazed the comet of a season, Shelley and Keats appeared and passed away, leaving some noble memorials of their genius behind them: *The Adonais*, *The Hyperion*, *The Cloud*, the *Sonnet on Chapman's Homer*. But Shelley is too obscure, and Keats too mythological; not the obscurity of thoughts too great for words, or a mythological taste derived from a repletion of learning, but the obscurity of haste and the mythological abundance of one who was not a scholar. Other poems of repute and consequence appeared in the same short season. Not a year went by without producing more than one volume of a quality we never see now.

In 1813, Hogg appeared with *The Quern's Wake*, containing "Bonny Kilmeny;" Allan Cunningham, with a volume of songs, some of surpassing beauty; Moore, with his *Twopenny Post-Bag*; Coleridge with a tragedy (*Remorse*;) and Scott, in disguise, with *The Bridal of Triermain*. In 1814, Wordsworth enriched our poetry with his much-decried *Excursion*; Moore, with his *Irish Melodies*; Southey, with his *Roderick*; and Rogers, with his *Jacqueline*. Scott, in the following year, gave us *The Lord of the Isles* and *The Field of Waterloo*; and Leigh Hunt, "a real good and very original poem," his *Rimini*. Wilson, already known by his *Isle of Palmas*, gained another wreath, in 1816, by his *City of the Plague*. *Lallah Rookh*, and *The Sibylline Leaves* of Coleridge, containing "The Rime of the Ancient Mariner," will make the year 1817 a memorable year in the annals of poetry whenever they are written. Keats' *Endymion* was a publication of the year 1818; Shelley's *Cenci*, Crabbe's *Tales of the Hall*, Rogers' *Human Life*, and Wordsworth's *Peter Bell* and *The Wagoner*, belong to 1819; Keats' *Lamia*, *Isabella*, *The Eve of St. Agnus*, and other poems, to 1820; Shelley's *Queen Mab* and *Adonais*; Southey's *Vision of Judgment*, and Byron's parody of the poem, to the year 1821; Rogers' *Italy* and Scott's *Halidon Hill*, to 1822; *The Loves of the Angels* of Moore, to 1823; Campbell's *Theodoric*, to 1824, and Southey's *Tale of Paraguay*, to 1825. Song after this began to cease among us; Byron and Shelley, and Keats, were dead; Scott and Southey, silent; Coleridge dreamt away existence,—

"Fond to begin, but still to finish loathe;"

Campbell past his prime; Rogers and Moore unwilling, rather than unable; Wilson busy with the *Noctes Ambrosianæ*; Wordsworth confined

"Within the sonnet's scanty plot of ground;"

Hogg cultivating sheep on Yarrow, and Allan Cunningham superintending the marble progeny of Chantrey. Song, truly, had gone out among us. No one seems to write from the inborn force of his own genius, from Nature, and his own full thoughts:—

"Now each court hobby-horse will wince in rhyme;

Both learn'd and unlearn'd, all write plays.

It was not so of old: men took up trades

That knew the crafts they had been bred in right;

An honest bilboe-smith would make good blades,

The cobbler kept him to his awl; but now—
He'll be a poet, scarce can guide a plough."

BEN JONSON.

But the present condition of our poetry will afford material for another paper.

PART II. AND CONCLUSION.

Hogg has told an amusing anecdote of Wordsworth at Mount Rydal. It chanced one night while the bard of Kilmeny was at the Lakes with Wordsworth, Wilson, and De Quincey, that a resplendent arch, something like the aurora borealis, was observed across the zenith, from the one horizon to the other. The splendid meteor became the subject of conversation, and the table was left for an eminence outside where its effect could be seen to greater advantage. Miss Wordsworth, the poet's sister, who accompanied them, expressed a fear lest the brilliant stranger might prove ominous, when Hogg, thinking he was saying a good thing, hazarded the remark that it was neither more nor less "than jost a treemphal aitch raised in honor of the meeting of the poets." Miss Wordsworth smiled, and Wilson laughed and declared the idea not amiss. But when it was told to Wordsworth he took De Quincey aside, and said loud enough to be heard by more than the person he was addressing, "Poets! poets! what does the fellow mean! Where are they?" Hogg was a little offended at the time, but he enjoyed it afterwards; and we have heard him tell the story in his own "slee" and inimitable manner, and laugh immoderately as he told it. Poor James Hogg! Regino has reason to remember James; nor was the poet of "Kilmeny" forgotten when dead, by the great poet of the *Excursion*. There is nothing more touching in poetry since the time of Collins than Wordsworth's extempore verses on the shepherd's death. He knew his claims to be called a poet, and time will confirm his judgment and make the Rydal aurora a story merely to amuse.

Poets, where are they? Is poetry extinct among us, or is it only dormant? Is the crop exhausted, and must the field lie fallow for a time? Or is it that, in this commercial nation of ours, where everything is weighed in Rothschild's scales of pecuniary excellence, that we have no good poetry because we have no demand for it? We falter while we think it is so. Poets we still have, and poetry at times of a rich and novel, but a cultivated flavor. Hardly a week elapses that does not give birth to as many different volumes of verses as there are days in the week. But then there is little that is good; much that *was* imagination, and much that might have passed for poetry when verse was in its infancy among us. Much of that clock-work tintinabulum of rhyme—that cuckoo kind of verse which falls upon the mind and really disgusts you with verse of a higher character. But now we look, and justly too, for something more. Whilst we imitate others we can no more excel than he that sails by others' maps can make a new discovery. All the old dishes of the ancients have been new heated and new set forth *usque ad* — But we forbear. People look for something more than schoolboy common places and thoughts at second-hand, and novelties and nothing more, without a single grain of salt to savor the tun of unmeaningness which they carry with them. It is no easy matter to become a poet,—

"Consoles fiunt quotannis, et novi pro-consules,
Solus aut rex aut poeta non quotannis nascitur;"
or, as the old water-poet phrased it,—

"When Heaven intends to do some mighty thing
He makes a poet, or at least—a king."

South was of opinion that the composition of an epigram was the next great difficulty to an epic poem.

"And South beheld that master-piece of man."

Coxcombs who consider the composition of a song an easy matter, should set themselves down, as Burns says, and try. Ask Tommy Moore how many days and nights he has given to a single stanza in an Irish melody! Ask Sam Rogers how long he has spent over the composition of a couplet in *An Epistle to a Friend*; or Wordsworth how long he has labored with a sonnet; or Bowles—yes, ask the Vicar of Bremhill, if he does not owe the bright finish of his verse as much to pains as happiness! Dryden toiled for a fortnight over his *Alexander's Feast*, and yet he wrote with ease—not the ease of the mob of gentlemen ridiculed by Pope, but with great fluency of idea and great mastery of expression. Good things are not knocked off at a heat—for a long jump there must be a very long run, and a long preparatory training too. There is no saying, "I will be a poet." Only consider not the long apprenticeship alone, but the long servitude which the muse requires from those who would invoke her rightly.

"In a poet no kind of knowledge is to be overlooked; to a poet nothing can be useless. Whatever is beautiful and whatever is dreadful must be familiar to his imagination; he must be conversant with all that is awfully vast or elegantly little. The plants of the garden, the animals of the wood, the minerals of the earth, the meteors of the sky, must all concur to store his mind with inexhaustible variety, for every idea is useful for the enforcement or decoration of religious truth, and he who knows the most will have most power of diversifying his scenes and of gratifying his reader with remote allusions and unexpected instruction."*

Every one remembers (poets themselves perhaps excepted) the long course of study and preparation which Milton laid down for himself before he stripped for the *Paradise Lost*. And yet one would hardly think, on first reflection, that any course of preparation was necessary for the poet of *Comus*, and *Lycidas*, and the *Hymn on the Nativity of Christ*. But Milton fully understood the height of his great argument, and how unequalled with every lengthened preparation he must be to record it rightly. But people (not poets) start epics now-a-days without any kind of consideration. No subject is too great for them. *Satan*, *Chaos*, *The Messiah*, *The Omnipresence of the Deity*, *the Fall of Nineveh*, *The World before the Flood*. One shudders at the very idea of subjects so sublime taken up as holyday recreations by would-be poets without the vision and the faculty divine, or any other merit (if merit it may be called) than the mere impudence of daring:—

"When will men learn but to distinguish spirits,
And set true difference 'twixt the jaded wits
That run a broken pace for common hire,
And the high raptures of a happy muse,
Borne on the wings of her immortal thought,
That kicks at earth with a disdainful heel,

And beats at heaven's gates with her bright
hoofs?"—BEN JONSON.

Benjamin West, the painter, trafficked with subjects of the same sublime description. And in what way? "Without expression, fancy, or design;" without genius and without art. People forget, or choose to forget, that *subject* alone is not sufficient for a poem. Look at Burns' "Mouse" or Wordsworth's "Peter Bell," or Wilkie's "Blind Fiddler," or Gainsborough's "Cottager" with a dish of cream. It is the treatment which ennobles. But there is no driving this into some people's ears. Big with the swollen ambition of securing a footing on the sun-bright summits of Parnassus, they plume themselves on borrowed wings and bladders of their own, and after a world of ink, a world of big ideas, and a copied invocation, they struggle to ascend, and pant and toil to the end of an epic, in as many books as the *Iliad* or the *Æneid*. Would that your Robert Montgomerys, your Edwin Atherstones, and sundry such who understand the art of sinking in the low profound—would that they would reflect for five minutes on what an epic poem really is! And what it is, and what it ought to be, glorious John Dryden tells us in a very few words. "A heroic poem," he says, "truly such, is undoubtedly the greatest work which the soul of man is capable to perform." And so it is.

"A work," says Milton, "not to be raised from the heat of youth or the vapors of wine; but by devout prayer to that Eternal Spirit who can enrich with all utterance and knowledge, and send out his seraphim with the hallowed fire of his altar to touch and purify the lips of whom he pleases." And yet Murray and Moxon are troubled once a week, at the least, with the offer of a new epic, for a certain sum—so run the terms—or, in case of declining that, for half profits. As if epics were blackberries, and men sought fame as Smith O'Brien seeks reputation—by an impertinent folly of their own! But "fools rush in," and there will still be poetasters—Blackmore and his brethren—in spite of critics, hard words, and something harder still—contemptuous neglect.

Few live to see their fame established on a firm and unalterable foundation. The kind criticisms of friends conspire at times to give a false position to a poem, or the malice of enemies unite to obtain for it one equally undeserved. Who now reads Hayley? How many are there in the position of Gascoigne and Churchyard as described by old Michael Drayton!—

"Accounted were great meterers many a day,
But not inspired with bravefire; had they
Lived but a little longer they had seen
Their works before them to have buried been."

That "lived but a little longer!" It is well they did n't. How will it be with the poets of the past generation two hundred years from this! They cannot possibly go down "complete." There must be a weeding. Fancy Sir Walter Scott in twelve volumes, Byron in ten, Southey in ten, Moore in ten, Wordsworth in six—to say nothing of Campbell in two volumes, Rogers in two, and Shelley in four. The poets of the last generation form a library of themselves. And if poetry is multiplied hereafter at the same rate, we shall want fresh shelves, fresh patience, and a new lease of life, for threescore and ten of scriptural existence is far too short to get acquainted with the past and keep up our intimacy with the present. The literature of the last fifty years is a study

* Rascelas.

of itself—Scott's novels, Scott's poetry, Scott's Miscellanies, and Scott's Life! Then of the present, there are the daily papers, the weekly journals, the monthly magazines, the quarterly reviews, all of which we are expected to have a fair passing acquaintance with. There is Mr. Dickens' last book on the table, which I have not as yet had time to read, and old Burton's *Anatomy of Melancholy* by its side, coaxing me to renew a youthful acquaintance with its pages; and there are *Tristram Shandy*, and *Humphrey Clinker*, and dear delightful *Amelia*, which I fain would read again, but cannot, I fear, for want of time. Only observe the dust on that fine Froissart on my shelves, and that noble old copy of Ben Jonson's works in folio, with a mark, I could swear, in the third act of the *Alchemist* or the *Silent Woman*. There is no keeping pace with the present while we pay anything like due attention to the past. I pity that man who reads Albert Smith who never read *Parthenissa*; but perhaps he pities me because I am indifferently up in the writer he admires. How people are cut off from the full literary enjoyments of this life who never read "Munro his Expedition," or the Duchess of Newcastle's Life of the Duke her husband, or Tom Brown, or Ned Ward, or Roger L'Estrange, or Tom Coryat, or "the works sixty-three in number" of old John Taylor, the sculler on the Thames!

We wish for poets who will write when Nature and their full thoughts bid them, and are not exacting when we look for more than one sprig of laurel to grace a garland. We have already enough of would-be poets—Augustus Cæsar, King James I., Cardinal Richelieu, the great Lord Clarendon, the celebrated Lord Bolingbroke, the famous Lord Chatham; but poetry is what old George Chapman calls it—a flower of the sun, which disdains to open to the eye of a candle.

"No power the muses' favor can command,

What Richelieu wanted Louis scarce could gain,
And what young Ammon wish'd and wish'd in vain."

Your "rich ill poets are without excuse."*

"Your verses, good sir, are no poems, they'll not hinder your rising in the state."† "Tis ridiculous for a lord to print verses; 'tis well enough to make them to please himself, but to make them public is foolish."‡ People affect to think that the same talents and application which raised Lord Mansfield to the highest honor of the gown, would, had they been turned to the study of poetry, have raised him to as high a position in the catalogue of our poets. 'Tis pretty enough when told in verse—

"How many an Ovid was in Murray lost;"

yet we are inclined to think that there is very little in it, and that Wordsworth is nearer the mark, who says of self-communing and unrecorded men—

"Oh, many are the poets that are sown

By Nature; men endowed with highest gifts,
The vision and the faculty divine,
Yet wanting the accomplishment of verse."

But this one word "accomplishment" implies a good deal more than mere dexterity and ease—culture and the inspiring aid of books,

"Pauses, cadence, and well-vowel'd words,
And all the graces a good ear affords."

* Lord Roscommon.

† Ben Jonson.

‡ Selden's *Table-Talk*.

For words are in poetry what colors are in painting, and the music of numbers is not to be matched or done without. Look at Donne. Would not Donne's satires, which abound with so much wit, appear more charming if he had taken care of his words and of his numbers? Whereas his verse is now—if verse it may be called—

"A kind of hobbling prose,
Which limps along and tinkles in the close."

There goes much more to the composition of even a third-rate poet than rhymesters at first are willing to allow, for to nature, exercise, imitation, study, art must be added to make all these perfect—*οὐτε φύσις ἁπλῆ γίνεται τέχνης ἀνεξ ὧντε παν τὰχρη μὴ φύσιν κακτέμνῃ*—Without art nature can never be perfect, and without nature art can claim no being.

One of Boswell's recorded conversations with the great hero of his admiration was on the subject of a collection being made of all the poems of all the English poets who had published a volume of poems.

"Johnson told me," he says, "that a Mr. Coxeter, whom he knew, had gone the greatest length towards this, having collected about 500 volumes of poets whose works were little known; but that upon his death Tom Osborne bought them, and they were dispersed, which he thought a pity, as it was curious to see any series complete, and in every volume of poems something good may be found."

This was a kindly criticism, uttered in the good nature of an easy moment, hardly applicable to the volumes of verse we see published now. Surely there are many put forth without a redeeming stanza or passage to atone for the dry desert of a thousand lines through which the critic is doomed to wander in quest of beauties which he fain would find. Surely Coxeter's collection contained a very large number of one-idea'd volumes!—We could have helped him from our own shelves to a very fair collection of verse printed before 1747, when this "curious" collector died, full of the most trivial nothingnesses. For a little volume of verse of the reign of Queen Elizabeth, said to be unique, or nearly so, Mr. Miller has been known to give twenty guineas or more, and think himself lucky that he has been let off thus easily. Some of these twenty-guinea volumes we have had the curiosity to look into. Poetry there is none; nothing more, indeed, than the mere similitude of verse. Songs, differing from sonnets because the lines are shorter, and sonnets, only to be recognized as such from the fourteen lines which the writer, in compliance with custom, has prudently confined them to.

"Authors, like coins, grow dear as they grow
It is the rust we value, not the gold."

It is curious, however, to see any collector complete; and Mr. Miller is to be praised for unceasing endeavors to make his collection English poetry (literally so called) as complete as possible.

The poet of the *Irish Melodies* made an objection when at Abbotsford, too curious to be put over in a paper of this description, when we consider the merit of the remark itself, the rank of poet who made it, and the reputation of the who responded to its truth:—

"Hardly a magazine is now published," said Moore, "that does not contain verses which, some thirty years ago, would have made a reputation."

Scott turned with a look of shrewd humor on his

friend, as if chuckling over his own success, and said—

"Ecce, we were in the luck of it to come before these fellows!" and added, playfully flourishing his stick as he spoke, "we have, like Boabdil, taught them to beat us at our own weapons."

There cannot be a doubt but that the poetry of the present day is of that mediocre level of description which neither pleases nor offends; and that much of it, if published sixty years ago, or even thirty years ago, would have secured for more than one writer a high reputation at the time, and possibly a place in Chalmers' collected edition of our *British Poets*. Such a reputation as Miss Seward achieved, or Hayley, or Oram, or Headley, or Hurdis:—

"Fame then was cheap, and the first comers sped;

And they have kept it since by being dead."

DRYDEN.

There was a time when a single poem, nay, a decent epigram, procured a niche for its writer in the temple of our poetry; but these times are gone by, inundated as we now are with verses of one particular level of merit, as flat as the waste of Cumberland, and equally unprofitable; so that the poet, ambitious of a high reputation in our letters, must make it upon something that is completely novel; and there, as Scott remarked, will rest the only chance for an extended reputation.

Poetry has become an easy art, and people have been taught to pump for poetry without a Gildon or a Byshe to aid their labors. Wakely can laugh in the house of commons at the poetry of Wordsworth, and treat the senators who surround him with a happy imitation of the great poet of his time. Verse has become an extempore kind of art, a thing to be assumed when wanted; and O'Connell can throw off at a heat a clever parody upon Dryden's famous epigram; as if, like Theodore Hook, he had served an apprenticeship to the happy art of imitation. That the bulk of the so-called poetry of the present day—"nonsense, well tuned and sweet stupidity"—is injurious to a proper estimation of the true-born poets who still exist, there cannot be a doubt; that it is injurious, moreover, to the advancement of poetry among us, is, I think, equally the case. Poetry, in the highest sense of the word, was never better understood, though never, perhaps, less cultivated than it is now. Criticism has taken a high stand; and when the rage for rhyme has fairly exhausted itself, nature will revive among us, and we shall have a new race of poets to uphold, if not to eclipse, the glories of the old. There are many still among us to repeat without any kind of brag-gart in their blood:

"O if my temples were distain'd with wine,
And girt in girlonds of wilde yvie twine,
How could I reare the muse on stately stage,
And teach her tread aloft in buskin fine,
With queint Bellona in her equipage."

SPENSER.

When poetry was all but extinct among us, Cowper and Burns came forward to revive the drooping muse, and show us, unmistakably enough, that men and studies may decay, but nature never dies.

There is little reason to suppose that the great poet of the *Excursion* is likely to remain more than a few years among us; for though, thank

God, in health and vigor, and as fond of poetry as ever, he has outlived by the period of an apprenticeship, the three-score years and ten, the Scriptural limitation of the life of man. When Wordsworth dies, there will be a new session of the poets for the office of poet-laureate. To whom will the lord-chamberlain assign the laurel, honored and disgraced by a variety of wearers? To whom will the unshorn deity assign it? There may be a difference of opinion between the poet's God and the court lord-chamberlain; there have been differences heretofore, or else Shadwell and Tate, Eusden and Cibber, Whitehead and Pye had never succeeded to the laurels of famous Ben Jonson and glorious John Dryden. Who are our young and our rising poets likely to become claimants, and to have their case considered by Phœbus Apollo in the new session he must summon before very long!

"A session was held the other day,
And Apollo himself was at it, they say;
The laurel that had been so long reserved,
Was now to be given to him best deserved."

And,

"Therefore, the wits of the town came thither,
'T was strange to see how they flock'd together;
Each strongly confident of his own way,
Thought to carry the laurel away that day."

How Suckling would put them forward, we must leave to the fancy of the reader. We can do very little more than enumerate the names of candidates likely to be present on the occasion. We can conceive their entry somewhat after the following manner. A herald, followed by an attendant with a tray of epics from *Nineveh* at twelve shillings to *Orion* at a farthing, and the authors arranged pretty nearly as follows:—Atherstone first (as the favorite poet of Lord Jeffrey's later lucubrations;) Robert Montgomery, 2; Heraud, 3; Read, 4; Horne, 5; and Ben Disraeli, 6. To the epic portion of the candidates the dramatists will succeed, fresh from Sadler's Wells and the Surrey, and led by Talfourd and Bulwer, and followed by Mr. Marston, Mr. Trowton, Mr. Henry Taylor, Sir Coutts Lindsay, Mr. Sullivan and Mr. Spicer; Jerrold representing comedy, without a fellow to rival or support him. Then will follow the ballad-writers; Macaulay by himself, and Smythe and Lord John Manners walking like the Babes in the Wood together. To the trio will succeed Alfred Tennyson and Robert Browning, Monckton Milnes, Charles Mackay, and Coventry Patmore, followed by a galaxy of ladies for the gallery, led by Mrs. Norton and Miss Barrett; with Camilla Toulmin, with a bunch of flowers; Frances Brown, with a number of the *Athenæum*; Eliza Cook, with Mr. Cayley's commendation; Miss Costello with a Persian rose; and Mrs. Ogilvy, with her quarto volume of minstrelsy from the north. We can fancy Apollo's confusion at the number; and should in some measure be inclined to abide by his opinion, should he give the laurel at the end, as Suckling has made him, to an alderman of London;

"He openly declared that 't was the best sign
Of good store of wit to have good store of coin,
And without a syllable more or less said,
He put the laurel on the alderman's head."

At this all the wits were in such a maze,
That for a good while they did nothing but gaze

One upon another, not a man in the place,
But had discontent writ in great in his face."

"Only," and how admirable the wit is:—

"Only the small poets cleared up again,
Out of hope, as 't was thought, of borrowing;
But sure they were out, for he forfeits his crown,
When he lends any poet about the town."

"O rare Sir John Suckling!"

Is Alfred Tennyson a poet? His merits divide the critics. With some people he is everything, with others he is little or nothing. Betwixt the extremes of admiration and malice, it is hard to judge uprightly of the living. The zeal of his friends is too excessive to be prudent, the indifference of his enemies too studied to be sincere. He is unquestionably a poet, in thought, language, and in numbers. But the *New Timon* tells us he is not a poet; Peel tells us that he is, and gives him a pension of 200*l.* a-year to raise him above the exigencies of the world. But the satirist has dropped his condemnation from the third edition of his poem, and the pension still continues to be paid. Is it, therefore, deserved? We think it is, not from what Mr. Tennyson has as yet performed, but what he has shown himself capable of performing. His poems are, in some respects, an accession to our literature. He has the right stuff in him, and he may yet do more; but unless it is better than what he has already done, he had better withhold it. His admirers—and he will never be without "the few"—will always augur well of after-performances (though never realized) from what has gone before, and attribute to indolence and a pension what from fear and inability he was unable to accomplish. His detractors, on the other hand, will have little to lay hold of; they may flatter themselves with having frightened him into silence, but their liking for his verses will warm as they grow older. He has nothing, however, to fear, if he writes nobly from himself, and the muse is willing and consenting. Great works—

"A work t' outwear Seth's pillars, brick and stone,
And (Holy Writ excepted) made to yield to none."—Dr. DONNE.

appear too rarely to raise expectation that this or that person is likely to produce one. It is near 200 years since Milton began to prune his wings for the great epic of his age and nation; and what has our poetry produced since then in any way approaching what Milton accomplished? Much that is admirable, and much that will live as long as Milton himself, but nothing of the same stamp, for though Scott may affect to speak of *Manfred* as a poem, wherein Byron "matched Milton upon his own ground," yet we all of us pretty well know otherwise; and that the muse of Byron is as inferior to *Paradise Lost*, as the *Farmer's Boy* to *The Seasons*; or any of the great dramatists of the age of Shakspeare to Shakspeare himself.

Before Mr. Tennyson tries the temper of the public for a third time, (which we hope he will do, and before very many years go by,) it behoves him to consider the structure of his verse, and the pauses of his numbers a little more maturely than he has hitherto done. It behoves him, moreover, to rub off a few affectations of style, the besetting sin of too many of his verses, and too often mistaken, by the young especially, for one of the marks

of originality, and not for what it is—one of the peculiarities; and, what is more, a very bad peculiarity both in matter and in manner. Coleridge understood the deficiencies of Mr. Tennyson's muse when he uttered the following capital criticism upon him:—

"I have not read through all Mr. Tennyson's poems, which have been sent to me; but I think there are some things of a good deal of beauty in that I have seen. The misfortune is, that he has begun to write verses without very well understanding what metre is. Even if you write in a known and approved metre, the odds are, if you are not a metreist yourself, that you will not write harmonious verses; but to deal in new metres without considering what metre means and requires, is preposterous. What I would, with many wishes of success, prescribe to Tennyson—indeed, without it he can never be a poet in art—is to write for the next two or three years in none but one or two well-known and strictly-defined metres; such as the heroic couplet, the octava stanza, or the octo-syllabic measure of the *Allegro* and *Penseroso*. He would probably thus get imbued with a sensation, if not a sense, of metre without knowing it, just as Eton boys get to write such good Latin verses by conning Ovid and Tibullus. As it is, I can scarcely scan some of his verses."

This is something more than a clever criticism on the muse of Mr. Tennyson! it is a most admirable piece of advice, and deserves to be remembered. Tennyson, and Browning, and Miss Barrett, should act upon it forthwith; they would improve their numbers very materially by such an exercise of their ears. Coleridge's own poetry is a lasting exemplification of the rythmical charms of English verse. He never offends you—he always pleases:—

"His musical finesse was such,
So nice his ear, so delicate his touch,"

that every verse he wrote will satisfy the ear and satisfy the fingers.

A second critic of distinction who has passed judgment on Mr. Tennyson is Mr. Leigh Hunt, always an agreeable and not unfrequently a safe critic to abide by:—

"Alfred Tennyson," writes Mr. Hunt, "is of the school of Keats; that is to say, it is difficult not to see that Keats has been a great deal in his thoughts; and that he delights in the same brooding over his sensations, and the same melodious enjoyment of their expression. In his desire to communicate this music he goes so far as to accent the final syllables in his participles passive; as pleachéd, crownéd, purple-spikéd, &c.; with visible printer's marks, which subjects him but erroneously to a charge of pedantry; though it is a nicety not complimentary to the reader, and of which he may as well get rid. Much, however, as he reminds us of Keats, his genius is his own. He would have written poetry, had his precursor written none; and he has also a vein of metaphysical subtlety, in which the other did not indulge, as may be seen by his verses entitled 'A Character,' those 'On the Confessions of a Sensitive Mind,' and numerous others. He is also a great lover of a certain home kind of landscape, which he delights to paint with a minuteness that in 'The Moated Grange' becomes affecting; and, in 'The

* Table-Talk, p. 232.

Miller's Daughter,' would remind us of the Dutch school, if it were not mixed up with the same deep feeling, varied with a pleasant joviality. Mr. Tennyson has yet given no such evidence of sustained and broad power as that of 'Hyperion,' nor even of such gentler narrative as the 'Eve of St. Agnes,' and the poem of 'Lamia' and 'Isabella,' but the materials of the noblest poetry are abundant in him." *

This is criticism in full accordance with the kindlier sympathies of our own nature; but much of the weight and value of it must depend on the rank the reader is willing to assign to Mr. Keats. It is, however, intended as a very high encomium; Mr. Hunt appropriating a place in our poetry to Keats which I am afraid he will find very few willing to concede to him.

Our poetry is in a very sorry kind of plight if it has to depend upon Tennyson and Browning for the hereditary honors of its existence. The *Examiner* will tell us "No!" The *Athenæum* will do the same; papers remarkable for the vigor of their articles, the excellence of their occasional criticism, and the general asperity of their manner. A page out of every ten in Herrick's "Hesperides" is more certain of a hereafter than any one dramatic romance or lyric in all the "Bells and Pomegranates" of Mr. Browning. Not but what Mr. Browning is a poet. He is unquestionably a poet; but his subject has not unfrequently to bear the weight of sentiments which spring not naturally from it, and his numbers at times are overlaid with affectation, the common conceit of men who affect to tell common things in an uncommon manner. He elogs his verses, moreover, with too many consonants and too many monosyllables, and carries the sense too frequently in a very ungraceful manner from one line to the other. Here is a passage from the seventh number of his "Bells and Pomegranates," which it really is a torture to read:—

"But to-day not a boat reached Salerno,
So back to a man
Came our friends, with whose help in the vine-
yards
Grape harvest began;
In the vat half-way up in our house-side,
Like blood the juice spins,
While your brother all bare-legged is dancing
Till breathless he grins,
Dead-beaten, in effort on effort
To keep the grapes under;
For still when he seems all but master,
In pours the fresh plunder
From girls who keep coming and going
With basket on shoulder,
And eyes shut against the rain's driving,
Your girls that are older—
For under the hedges of aloe,
And where, on its bed
Of the orchard's dark mould, the love-apple
Lies pulpy and red,
All the young ones are kneeling and filling
Their laps with the snails
Tempted out by the first rainy weather—
Your best of regales,
As to-night will be proved to my sorrow,
When, supping in state,
We shall feast our grape-gleaners—two dozen.
Three over one plate—
Macaroni so tempting to swallow

* Book of Gems, p. 274.

In slippery strings,
And gourds fried in great purple slices,
That color of kings—
Meantime, see the grape-bunch they've brought
you!

The rain-water slips
O'er the heavy blue bloom on each globe
Which the wasp to your lips
Still follows with fretful persistence—
Nay, taste while awake,
This half of a curd-white smooth cheese-ball,
That peels, flake by flake,
Like an onion's each smoother and whiter!
Next sip this weak wine
From the thin green glass flask, with its stopper,
A leaf of the vine—
And end with the prickly-pear's red flesh,
That leaves through its juice
The stony black seeds on your pearl-teeth
* * * Scirocco is loose!
Hark! the quick pelt of the olives
Which, thick in one's track,
Tempt the stranger to pick up and bite them,
Though not yet old half black!
And how their old twisted trunks shudder!
The medlars let fall
Their hard fruit; the brittle great fig-trees
Snap off, figs and all;
For here comes the whole of the tempest!
No refuge but creep
Back again to my side or my shoulder,
And listen or sleep."

This may be poetry, but it is poetry in the raw material; for the numbers are those of a scannell pipe, and such as Cadmus alone could pronounce when in the state of a serpent. This which follows is the mere twaddle of a cockney at Calais or Cologne:—

"HOME-THOUGHTS FROM ABROAD.

"Oh, to be in England,
Now that April's there,
And who wakes in England
Sees, some morning, unaware,
That the lowest boughs and the brush-wood sheaf
Round the elm-tree bole are in tiny leaf,
While the chaffinch sings on the orchard bough
In England—now!
And after April, when May follows,
And the whitethroat builds, and all the swal-
lows—
Hark! where my blossomed pear-tree in the
hedge
Leans to the field, and scatters on the clover
Blossoms and dewdrops, at the bent spray's edge.
That's the wise thrush; he sings each song
twice over,
Lest you should think he never could re-capture
The first fine careless rapture!
And though the fields are rough with hoary dew,
All will be gay when noontide wakes anew
The buttercups, the little children's dower,
Far brighter than this gaudy melon-flower!"

This is very inferior to Ambrose Philips, who acquired the distinction of Namby Pamby for similar verse, e. g. his "Lines to Cuzzoni," which Charles Lamb had got by heart. Here is something infinitely better, and by a living poet, one of the props our poetry depends on, and a member of parliament withal—Mr. Richard Monckton Milnes:—

"THE VIOLET GIRL."

"When fancy will continually rehearse
 Some painful scene once present to the eye,
 'Tis well to mould it into gentle verse,
 That it may lighter on the spirit lie.

Home yestern eve I wearily returned,
 Though bright my morning mood and short my way,

But sad experience in one moment earned,
 Can crush the heaped enjoyments of the day.

Passing the corner of a populous street,
 I marked a girl whose wont it was to stand,
 With pallid cheek, torn gown, and naked feet,
 And bunches of fresh violets in each hand.

There her small commerce in the chill March weather
 She plied with accents miserably mild;
 It was a frightful thought to set together
 Those blooming blossoms and that fading child.

Those luxuries and largess of the earth,
 Beauty and pleasure to the sense of man,
 And this poor sorry weed cast loosely forth
 On life's wild waste to struggle as it can!

To me that odorous purple ministers
 Hope-bearing memories and inspiring glee,
 While meanest images alone are hers,
 The sordid wants of base humanity.

Think after all this lapse of hungry hours,
 In the disfurnished chamber of dim cold,
 How she must loathe the very smiling flowers
 That on the squalid table lie unsold!

Rest on your woodland banks and wither there,
 Sweet preluders of spring! far better so,
 Than live misused to fill the grasp of care,
 And serve the piteous purposes of woe.

Ye are no longer Nature's gracious gift,
 Yourselves so much and harbingers of more,
 But a most bitter irony to lift
 The veil that hides our vilest mortal sore."

Si sic omnia dixisset! This is poetry in all languages; it is like mercury, never to be lost or killed.

There is a passage in one of Lady Mary Wortley Montague's letters to her daughter which still continues to excite a smile on the lips of every reader,—

"The study of English poetry is a more important part of a woman's education than it is generally supposed. Many a young damsel has been ruined by a fine copy of verses, which she would have laughed at if she had known it had been stolen from Mr. Walter. I remember, when I was a girl, I saved one of my companions from destruction, who communicated to me an epistle she was quite charmed with. As she had naturally a good taste, she observed the lines were not so smooth as Prior's or Pope's, but had more thought and spirit than any of theirs. She was wonderfully delighted with such a demonstration of her lover's sense and passion, and not a little pleased with her own charms that had force enough to inspire such elegancies. In this triumph I showed her that they were taken from Randolph's poems, and the unfortunate transcriber was dismissed with the scorn he deserved."*

* Letters by Lord Wharncliffe, 2d edit., iii. 44.

The reason assigned for the study of English poetry by English ladies, is truly characteristic of Lady Mary and of the female mind. A lady is to read through every volume of verse, and remember what she reads, to see that her lover writes his own valentine. Ye gods, should one swear to the truth of a song! If a woman will marry a poet, she had better go through the course of study Lady Mary recommends. Not that she is safe to secure a poet to herself after a long life of study. How few read Randolph, and yet he is a very fine poet. Lady Mary might have taken a copy of verses from Randolph to every female writer of the day, and passed them off for the production of a young, a handsome, and a rising writer, and no one would have set her right, or detected the imposition that was passed upon her. We are afraid we must recommend the study of our early English poets to English ladies on some other ground than the chance detection of a lover pleading his passion in the poetry of another under pretence of its being his own. Not that we have any particular predilection for "romantic ladies," as the dear old Duchess of Newcastle calls them, or girls with their heads stuffed full of passionate passages; but we should like to see a more prevalent taste for what is good, for poetry that is really excellent; and this we feel assured is only to be effected by a careful consideration of our elder poets, who have always abundance of meaning in them. It is no use telling young ladies that Mr. Bunn's poetry is not poetry, but only something that looks very like it and reads very unlike it; the words run sweetly to the piano; there is a kind of pretty meaning in what they convey, and the music is pleasing. What more would you want? Why, everything. But then, as we once heard a young lady remark with great good sense and candor, (and her beauty gave an additional relish to what she said,) these unmeaning songs are so much easier to sing. Your fine old songs, so full of poetry and feeling, require a similar feeling in the singer, and young ladies are too frequently only sentimental, and not equal to the task of doing justice to passionate poetry conveyed in music equally passionate, and where they can do justice to it they refuse because it is not fashionable to be passionate, and it really disturbs and disorders one to be so, and in mixed society, "above all."

It cannot be concealed that we have never been so well off for lady-poets as we are at present. Only run the eye over Mr. Dyce's octavo volume of *Specimens of British Poetesses*, and compare the numerical excellencies of the past with the numerous productions of the present day! A few specimens of the elder poetesses—such as the "Nocturnal Reverie," and "The Atheist and the Acorn," both by the Countess of Winchelsea, it would be very difficult to surpass, or even, perhaps, to equal; but in the general qualifications for poetry, both natural and acquired, the ladies, since Charlotte Smith, far surpass their female predecessors. Mrs. Norton is said to be the Byron of our modern poetesses. "She has very much of that intense personal passion," says the Quarterly Reviewer, "by which Byron's poetry is distinguished from the larger grasp and deeper communion with man and Nature of Wordsworth. She has also Byron's beautiful intervals of tenderness, his strong, practical thought and his fearful expression." This is high praise. "Let us suggest, however," says the *Athenaeum*, "that, in the present state of critical opinion, the compliment is

somewhat equivocal, it being hard to decide whether it implies a merit or a defect." If Mrs. Norton is an eminently thoughtful writer, Miss Barrett is still more so. She is the most learned of our lady-writers, reads *Æschylus* and *Euripides* in the originals with the ease of *Porson* or of *Parr*, yet relies upon her own mother wit and feelings when she writes,—

"Nor with Ben Jonson will make bold
To plunder all the Roman stores
Of poets and of orators."

If Mrs. Norton is the *Byron*, Mrs. Southey is said to be the *Cowper* of our modern poetesses. But it would be idle to prolong comparisons. Whatever we may think of our living poets, we have every reason to be proud of our living poetesses.

We will conclude with an anecdote. A charming article appeared about six years ago in the *Quarterly Review*, entitled "Modern English Poetesses." It was written, we believe, by the late *Henry Nelson Coleridge*, and is full of cautious but kindly criticism. The conclusion is worth quotation:—

"Meleager bound up his poets in a wreath. If we did the same, what flowers would suit our tuneful line!

1. Mrs. Norton would be the *Rose*, or, if she like it, *Love Lies a Bleeding*.
2. Miss Barrett must be *Greek Valerian* or *Ladder to Heaven*, or, if she pleases, *Wild Angelica*.
3. Maria del Occidente is a *Passion-Flower* confessed.
4. Irene was *Grass of Parnassus*, or sometimes a *Roman Nettle*.
5. Lady Emmeline is a *Magnolia Grandiflora*, and a *Crocus* too.
6. Mrs. Southey is a *Meadow Sage*, or *Small Teasel*.
7. The classical nymph of Exeter is a *Blue Belle*.
8. V. is a *Violet*, with her leaves heart-shaped.
9. And the authoress of 'Phantasmion' is *Heart's-Ease*."

The complimentary nature of the criticism drew a world of trouble upon John Murray, the well-known publisher of the *Quarterly*. He was inundated with verse. Each of the nine in less than a week offered him a volume—some on easy terms, some at an advanced price. He received letters, he received calls, and, worse still, volumes of MS. verse. But the friendly character of the criticism was not confined in its influence to the nine reviewed: parcels of verse from all parts of the country were sent to receive an *imprimatur* at Albemarle Street. Some were tied with white tape, some were sewn with violet riband, and a few, in a younger hand, with Berlin wool. "I wished," Mr. Murray has been heard to relate, "ten thousand times over that the article had never been written. I had a great deal of trouble with the ladies who never appeared before; and, while I declined to publish for the nine, succeeded in flattering their vanity by assuring them that they had already done enough for fame, having written as much or more than *Collins*, *Gray*, or *Goldsmith*, whose reputations rested on a foundation too secure to be disturbed." This deserves to be remembered.

From the Manchester Guardian.

ONWARD STILL.

ONWARD, brothers! though we're weary,
Though the way seems long and dreary;
Pause not now to view the past,
Flinch not! flinch not! at the last;

Nerve each heart
To take a part,
Till the Rubicon is passed—
Onward! onward still!

Onward! for a nation's eyes
Are fixed upon us now;
Haggard men with doleful cries,
And men of thoughtful brow;
Famished women—tears are stealing
Down their pale cheeks, as they're kneeling
By their babes and madly pray
That God who gave, would take away
Their infants ere the coming day.

England's sons, ye have the power!
Britons! help us in this hour;
Place your shoulders to the wheel,
Help us, for a kingdom's weal,
Manfully, with tongue and pen—
Truthfully, as honest men.

"God helps those who help themselves."
Will ye, then, like stupid elves,
Carelessly
Stand to see,
With folded arms, the misery
That time is weaving in his woof,
Whilst ye coldly stand aloof;
Nor lift a finger to assuage
A nation's pain? What! would ye ban
Yourselves with deathless infamy,
And desecrate the name of man?

Onward! let no laggard heart
Be ranked amid our band—
Coward minds, that take no part
For the cause in hand:
Cased in soulless apathy,
Talking of "consistency,"
Human souls may die for bread,
What care they—if they are fed?
Still toil we
Faithfully,
Firm to win the victory—
Onward! onward still!

Men of powerful intellect,
Cheer us on our way—
Many noble ones of earth
Lend their genial ray;
With our right
Comes our might,
Truth o'er error must have sway;
Soon will come the glorious day—
Onward! onward still!

Onward, brothers! though we're weary—
Onward, though the way be dreary;
Nerve each heart
To take a part,
Till the Rubicon be passed—
Till the goal be reached at last—
Onward! onward still!

ELAU.

LORD MURRAY.

At break of day, to hunt the deer,
Lord Murray rides with hunting gear :
Glen Tilt his boding step shall know,
The 'minished herd his prowess show ;
And savory haunch and antlers tall
Shall grace to-morrow's banquet hall.

Lord Murray leapeth on his horse,
A little hand arrests his course ;
Two loving eyes upon him burn,
And mutely plead for swift return—
His lady stands to see him go,
Yet standing makes departure slow.

"Go back, my dame," Lord Murray said,
"The wind blows chilly on thy head ;
Go back into thy bower and rest,
Too sharp the morning for thy breast.
Go tend thy health, I charge on thee,
For sake of him thou 'st promised me."

Lord Murray gallops by the brae,
His huntsmen follow up the Tay,
Where Tummel, like a hoyden girl,
Leaps o'er the croy with giddy whirl,
Falls in Tay's arms a silenced wife,
And sinks her maiden name for life.

Lord Murray rides through Garry's den,
Where beetling hills the torrent pen ;
And as he lasheth bridge and rock
The caves reverberate the shock,
Far as the cones of Ben-y-Glo,
That o'er Glen Tilt their shadows throw.

Great sport was his, and worthy gain,
The noblest of the herd were slain ;
Till, worn with chase, the hunter sank
At evening on a mossy bank ;
And as his strength revived with food,
His spirit blessed the solitude.

A silvery mist the distance hid,
And up the valley gently slid ;
While, softened through its curtain white,
The lakes and rivers flashed their light,
And crimson mountains of the west
Cushioned the sun upon their breast.

Hushed was the twilight, birds were dumb,
The midges ceased their vexing hum,
And floated homewards in their sleep ;
All silent browsed the straggling sheep ;
E'en Tilt, sole tattler of the glen,
Ran voiceless in Lord Murray's ken.

An infant's cry ! such hails at birth
The first-pained feeble breath of earth ;
Lord Murray starteth to explore,
But there is stillness as before.
Nothing he sees but fading skies,
The cold, blue peaks, the stars' dim eyes,
The heather nodding wearily,
The wind that riseth drearily ;
It was a fancy, thinketh he ;
But it hath broke his reverie.

In closing night he rideth back,
His heart is darker than his track ;
It is not conscience, dread, or shame—

His soul is stainless as his name—
But shapeless horrors vaguely crowd
Around him, black as thunder-cloud.

He spurs his horse until he reach
His castle's belt of aged beech ;
His lady sped him forth at morn,
But silence hails his late return ;
The little dog that on her waits,
Why runs he whining at the gates !

Lord Murray wonders at the gloom,
His halls deserted as the tomb,
And all along the corridors
Against the windows swing the fires ;
Closed is his lady's door—he stands,
Too weak to ope it with his hands,
Yet bursteth in he knows not how,
And looks upon his lady's brow.

She lay upon their bridal bed,
Her golden tresses round her shed,
Her eyelids dropped, her lips apart,
As if still sighing forth her heart,
But cold and white, as life looked never,
For life had left that face forever.

On her bosom lay a child,
Flushed with sleep wherein it smiled—
Sleep of birth and sleep of death,
Icy cheek and warm young breath,
Rosy babe and clay-white mother
Sully laid by one another.

The nurse, a woman bowed with years,
Knelt by the bed with bursting tears,
And wailed o'er her whose early bloom
She thus had nurtured for the tomb.
A piteous sight it was, in sooth—
The living age, the perished youth.

"The way is long," at last she said ;
"Oh, sorrowing lord, the way is dread,
Through marsh and pitfall, to the rest
God keeps for those who serve Him best ;
And unto man it ne'er was given
To win with ease the joys of heaven.

"But Mary, queen beside her son,
Such grace for woman's soul hath won
(Remembering the manger rude,
Her pangs of virgin motherhood,)
That blessed most of mortals they
Whose life, life-giving, flows away.

"No pains of purgatory knows
The sleeper in that deep repose,
No harsh delays in upper air
The mother, birth-released, must bear ;
For angels near her waiting stand,
And lift her straight to God's right hand.

"No masses need ye for her soul,
Round whom the heavenly censers roll ;
Pure as the babe she bore this day,
Her sins in death were washed away ;
'To win him life 't was hers to die,
And she shall live in heaven for aye ;
Pale in our sight her body lies,
Her soul is blessed in Paradise !"
Lord Murray's voice took up the word,
"Her soul is blessed, praise the Lord !"

Mrs. Ogilvy's Highland Minstrelsy.

From Chambers' Journal.

LITERARY IMPOSITIONS.

THE Count Mariano Alberti sold to a bookseller at Ancona several unedited manuscripts of Tasso, some of which he interpolated, and others forged. In 1827, he declared himself in possession of two till then unknown poems in Tasso's hand-writing; afterwards he produced four other autographs; and then a volume containing thirty-seven poems, which he offered for sale to the Duke of Tuscany, whose agents, however, declared them to be spurious and modern. He then produced a file of Tasso's letters, which were regarded as genuine; till, in 1841, when, on his property being sequestered, the whole affair proved a tissue of almost unexampled forgery.

The literary world is now very generally of the belief that that very beautiful poem, John Chalkhill's *Thealma and Clearchus*, first published by Isaac Walton, (1683,) was actually the production of that honest angler.

The copies of the "English Mercurie" (regarded as the earliest English newspaper) in the British Museum, have been discovered to be forgeries, and Chatterton is supposed to have been concerned in their fabrication.

At least a hundred volumes or pamphlets, besides innumerable essays and letters in magazines or newspapers, have been written with a view to dispel the mystery in which for eighty years the authorship of Junius' Letters has been involved. These political letters, so remarkable for the combination of keen severity with a polished and brilliant style, were contributed to the "Public Advertiser," during three years, under the signature of Junius, the actual name of the writer being a secret even to the publisher of that paper. They have been fathered upon Earl Temple, Lord Sackville, Sir Philip Francis, and fifty other distinguished characters. At present, an attempt is again being made to prove them the productions of Mr. Lauchan Maclean; but we need scarcely wish for anything like a positive or convincing result.

Some time before his death, Voltaire showed a perfect indifference for his own works; they were continually reprinting, without his being ever acquainted with it. If an edition of the "Heuriade," or his tragedies, or his historical or fugitive pieces was nearly sold off, another was instantly produced. He requested them not to print so many. They persisted, and reprinted them in a hurry without consulting him; and, what is almost incredible, yet true, they printed a magnificent quarto edition at Geneva without his seeing a single page; in which they inserted a number of pieces not written by him, the real authors of which were well known. His remark upon this occasion is very striking—"I look upon myself as a dead man, whose effects are upon sale." The mayor of Lausanne having established a press, published in that town an edition called complete, with the word London on the title-page, containing a great number of dull and contemptible little pieces in prose and verse, transplanted from the works of Madame Oudot, the "Almanacs of the Muses," the "Portfolio Recovered," and other literary trash, of which the twenty-third volume contains the greatest abundance. Yet the editors had the effrontery to proclaim on the title-page that the book was wholly revised and corrected by the author, who had not seen a single page of it.

In Holland some forgeries were printed as the "Private Letters" of Voltaire, which induced him to parody an old epigram:—

Lo! then exposed to public sight,
My private letters see the light;
So private, that none ever read 'em,
Save they who printed, and who made 'em.

Steevens says, that, "not the smallest part of the work called Cibber's 'Lives of the Poets' was the composition of Cibber, being entirely written by Mr. Shiells, amanuensis to Dr. Johnson, when his Dictionary was preparing for the press. T. Cibber was in the King's Bench, and accepted of ten guineas from the booksellers for leave to prefix his name to the work; and it was purposely so prefixed, as to leave the reader in doubt whether himself or his father was the person designed."

William Henry Ireland having exercised his ingenuity with some success in the imitation of ancient writing, passed off some forged papers as the genuine manuscripts of Shakspeare. Some of the many persons who were deceived by the imposition, subscribed sums of money to defray the publication of these spurious documents, which were accordingly issued in a handsome folio volume. But when Ireland's play of "Vortigern" was performed at Drury Lane as the work of Shakspeare, the audience quickly discerned the cheat; and soon afterwards the clever imposter published his "Confessions," acknowledging himself to be the sole author and writer of these ancient-looking manuscripts.

Poor young Chatterton's forgery of the poems of Rowley, a priest of the fifteenth century, is one of the most celebrated literary impositions on record. Horace Walpole, in a letter written in 1777, says, "Change the old words for modern, and the whole construction is of yesterday; but I have no objection to anybody believing what he pleases; I think poor Chatterton was an astonishing genius."

In all probability the exact nature of Macpherson's connection with what are called "Ossian's Poems" will never be known. Although snatches of these poems, and of others like them, are *proved* to have existed from old times in the Highlands, there is no proof that the whole existed. Macpherson left what he called the original Gaelic poems to be published after his death; "but," says Mr. Carruthers, "they proved to be an *exact* counterpart of those in English, although in one of the earlier Ossian publications, he had acknowledged taking liberties in the translations. Nothing more seems to be necessary to settle that the book must be regarded as to some unknown extent a modern production, founded upon, and imitative of, certain ancient poems; and this seems to be nearly the decision at which the judgment of the unprejudiced public has arrived."

A species of literary imposition has become common latterly, namely, placing the name of some distinguished man on the title-page as editor of a work the author of which is not mentioned, because obscure. This system, done with a view to allure buyers, is unjust towards the concealed author, if the work really merit the support of an eminent editor, for it is denying a man the fair fame that he ought to receive; and if the work be bad, the public is cheated by the distinguished name put forth as editor and guarantee of its merits. Still, however, the tardiness of the people themselves in encouraging new and unknown

writers of merit, is the reason why publishers resort to this trick to insure a sale and profit.

Several ingenious deceptions have been played off upon geologists and antiquaries. Some youths, desirous of amusing themselves at the expense of Father Kircher, engraved several fantastic figures upon a stone, which they afterwards buried in a place where a house was about to be built. The workmen having picked up the stone while digging the foundation, handed it over to the learned Kircher, who was quite delighted with it, and bestowed much labor and research in explaining the meaning of the extraordinary figures upon it. The success of this trick induced a young man at Wurzburg, of the name of Rodrick, to practise a more serious deception upon Professor Berenger, at the commencement of the last century. Rodrick cut a great number of stones into the shape of different kinds of animals and monstrous forms, such as bats with the heads and wings of butterflies, flying frogs and crabs, with Hebrew characters here and there discernible about the surface. These fabrications were gladly purchased by the professor, who encouraged the search for more. A new supply was accordingly prepared, and boys were employed to take them to the professor, pretending that they had just found them near the village of Eibelstadt, and charging him dearly for the time which they alleged they had employed in collecting them. Having expressed a desire to visit the place where these wonders had been found, the boys conducted him to a locality where they had previously buried a number of specimens. At last, when he had formed an ample collection, he published a folio volume, containing twenty-eight plates, with a Latin text explanatory of them, dedicating the volume to the Prince-Bishop of Wurzburg. The opinions expressed in this book, and the strange manner in which they are defended, render it a curious evidence of the extravagant credulity and folly of its author, who meant to follow it up with other publications; but being apprized by M. Deckard, a brother professor, of the hoax that had been practised, the deluded author became most anxious to recall his work. It is therefore very rare, being only met with in the libraries of the curious; and the copies which the publisher sold after the author's death, have a new title-page in lieu of the absurd allegorical one which originally belonged to them.

From the Commercial Advertiser.

THE MISERERE.

ROME, May, 1846.

THURSDAY, April 9th, was a great day for ceremonies at Rome. The pope attends mass in the morning, in the chapel of St. Peter's; thence he passes to the balcony above the middle door of the church, and gives his benediction to the kneeling thousands in the piazza. Afterwards he returns to the church to perform the ceremony of washing the feet of the thirteen pilgrims of every nation. Meantime the whole church has been filling. The guards in double file have kept out of the north transept all not habited in black. The seats on either side are filled with ladies, with black veils over their heads, not enough obscured, however, to forbid being seen, and if they had been arranged like the Greek slaves, for inspection, no order would have been fitter—ranged rank above rank

on either side, with the crowd of examiners between.

Every nation has its representatives in both the sexes—not easily distinguished in the women for their common dress; still, there is no mistaking the red faces and long necks, albeit sometimes pretty blue eyes, of the English women; the easy, inviting, at home manner of the French; the dark, passionate glances of the Italian women; the modest, curious, perhaps somewhat vain air of the Americans—not enough, however, to make a class; the broad faces, soft skins, laughter-loving eyes of the Germans, and the indescribable high contour of the Russian faces. Among the men, the peaked collars and trimmed whiskers and neat cravat, and stiff hair, pointed out unmistakably English blood; there were besides, German beards and cropped heads, and Italian sleekness covering dirtiness, and greasy hair, and black moustaches—and the easy, familiar air of the French in his broad-bottomed pantaloons, and waistcoat reaching to his thighs; and the stiff, heavy moustache of the Russian, and the court coat of Austria, and the uniform of Sardinia, and the red coat of Indian captaincy, and the grey hood of Carmelites, and the red frocks of neophytes, and the shaved pates of scores of men in orders, and the crosses of men of honor, and the ribbons of princes, and the republican air of Americans, and the rich dresses of diplomats, and the splendid uniform of the Guard Noble, and the quaint Swiss men with their halberds and striped doublets, and over the railing, as the cortege entered, came in more robes of cardinals and prelates and senators than could be remembered.

In the boxes royal appeared presently the Russian phalanx, escort of the sister of the empress, with her family—their uniforms rich as possible; the son a lout of a boy in martial dress, the mother a weak-looking old woman, the daughter fair enough for a pretty girl, if she had not been a princess. They acted very much like other people, which is somewhat strange considering they formed the focus for the direction of more than five thousand pairs of eyes.

At length the pilgrims to be washed came marching in, in pasteboard caps and white frocks, of all colors, and speaking all languages; and all seeming curious in their strange position of being served by one whose toe they kissed on other days, and who rode on occasions in a carriage of gold, while they walked over Europe staff in hand, in an oil-skin cap cape, and with shells pinned to the corners. After them came the pope, with five or six to bear up his robe, and sat himself on a throne; and afterward, with his attendants still about him, marched toward the pilgrims and stooping with a towel he wiped their feet, that had been dipped in the water of a silver basin, carried by an attendant. Meantime the choir are chanting—the pope's choir—and in a way no other choir can chant.

The crowd drift out and up to secure places for seeing the ceremony of the "tavola" above. In it I go, *volens volens*, through church and corridor, and up the stairs regal, and into the ante-chamber of the Chapel Paolina, where a line of soldiers three deep keep off the multitude, admitting the papal costume and the billeted only, through the narrow pass-way formed by soldiers of the guard. The hall of the table gained, all is a jam. Ladies that have sat for three hours alone have a chance of seeing the ceremony, and the push from church to tavola is an exercise of muscular strength which

none but an English woman should hazard. The table is adorned as one should be which is served by popes, and the pilgrims eat as hungry men should eat, who pay nothing for their dinner but the price of being looked at. The ladies look as ladies should look at what has cost them three long hours of waiting, and what will serve for chat in Italian, in French, in German, and in broad English, perhaps beside some New England fireside.

The whole world throng into the Vatican after, for all the galleries are open. To-day they are the more curious idlers, and the Laocoon and Apollo are passed by for the lion in breccia and the crab in basalt. Even Raphael suffers under the indiscriminate, and the fire of his burning city blazes unheeded.

Tired with the hurried views that the crowd imposes, and after giving my final looks at the masterpieces of sculpture, and lounging my leave taking in the room of the priceless pictures, I went into one of the little, dirty cafés adjoining the piazza of St. Peter's, for a dish of coffee to sustain the energies which even pompous processions of papal magnificence and pictures of world-wide reputation failed to keep up.

Afterward came the gathering for the miserere of the Sistine Chapel. The soldiers were at the foot of the Scala Regia, and forbade admission. Even stars and garters, and livried footmen, were jammed among us in the bustle of the throng. At length, when patience was well nigh expired, the line opened, and there was a push up. Already many seats were filled by those who had had the hardihood to wait five hours. The rest were filled in half an hour, and after came another long hour of expectation.

Some study the fresco of the Judgment, or the figures of the ceiling, and others the living beauties around, gathered from every nation. The twelve candles, in the twelve branched candlesticks, are lighted; the choir appear, in their white robes, through the grating of their little balcony. The cardinals, in their red caps and ermine, come in and take their places on the low cushioned seats within the rail. The ambassadors appear in the reserved places, and the service commences with slow and solemn reading; the choir chant a response in full tones for ten minutes. Another reading, and the kneeling of the cardinals—a silence for a moment—and then steal out from the obscure balcony the first sweet notes of the miserere. There is a hush in the crowd—whispering ceases, and the melodious accents flow thicker and faster, and are renewed, and die away into a long sweet wail, as if the angels had turned mourners. Then came other chantings, not without rich beauty, if they had not been contrasted with the richer beauties gone before. As the chant went on, the chapel became gradually obscure, the twelve lights upon the candlesticks before the altar were one by one diminishing, as the service proceeded; only three or four remained. The sun had gone down, and the red glow of twilight came through the dusky windows.

A pause in the chant, and a brief reading from an officiating cardinal, and then all knelt, and the sweet deep flow of the miserere commenced again—growing in force and depth till the whole chapel rang, and the balcony of the choir trembled; then subsiding again into a low strain of a single voice, so prolonged, so tremulous, and so real, that it made the heart ache, and feel the ceremony that

commemorates the death of Christ. Long time prolonged, the wail died not wholly, but just as it seemed expiring was caught up by another stronger voice, which carried it on and on, plaintive as ever—nor stopped with him, for, just as you looked for silence, three voices more began the lament, sweet, touching, mournful, and bore it up to a full cry, when the whole choir caught it and changed it into the wailings of a multitude—wild, shrill, hoarse—by turns a swift chant intervening, as if despair had given force to anguish—again, sweetly, slowly, step by step, voice by voice, note by note, falling into the moan of one low strain, tremulous, faltering, as if tears checked the utterance—increasing, as if grief that would not be comforted sustained it.

I shut my eyes, to enter more fully into the spirit of the scene and of the ceremony. I thought of the hours of agony, of the darkness, of the laments of the beloved of Christ. I know not how long I had indulged thus in the reveries of thought, but as I opened my eyes, the last sad wail was finished—the candles were all gone out—the twilight had passed, and the grey dimness of night stole in at the windows, making the figures of Angelo's fresco seem the gaunt phantoms of a dream; the cardinals were rising, the crowd was bustling to the door, and another day of the ceremonies of the Holy Week was ended. Don.

THE WEST AND THE EAST.

AMONG the items of news brought by the last British steamship, was an announcement that Mr. Rawlings of New York, had arrived in London, for the purpose of establishing there an agency for the sale of nine hundred thousand acres of land, a great portion of which was located in Western Virginia. This led us to think upon a very interesting statement, of the progress of population in certain regions of the United States, prepared by William Darby, Esq., in the early part of the present year. It would be natural to suppose that where a high state of civilization existed, and all the comforts of life were to be had in perfection, there would at least be an indication of a steady increase in population in a degree commensurate with the growth of other and less favored portions of the country. That where great cities were planted, the thriving villages and towns, with the necessary farming country around it for the growth of the necessary supplies, would attract and keep together a population whose numbers should increase, and not diminish. But this is in many instances not so, and the fact that in so old a State as Virginia, an immense body of land remains unsettled—that in Pennsylvania and New York there are thousands of acres of land upon which the foot of a white man, it is said, has never trod—that all along the Atlantic coast, from Virginia to South Carolina, huge plains measuring by miles in extent remain undevoted to any profitable purpose—will suggest the query: Why is it?

The answer may be found not in any aversion of our people to a crowded population, for they are not Daniel Boones, and can bear the sight of a fellow creature, the sound of his voice, and be grateful for the interchange of the courtesies of life—but from the desire of owning more land, and it is the idea of possession, that is the solace for the discomforts of Western settlements, and for the dangers which in the beginning frequently cluster around them.

The tide of emigration from the East to the West is so great, that in many portions of the country the population is not only in a great degree stationary, but in some instances has retrograded. As illustrating what we say it will be found that the population of Vermont, New Hampshire, Massachusetts, Connecticut, and Rhode Island, was, in 1810, 1,243,216 souls; and in 1840, only 1,733,029, leaving as an increase during thirty years of prosperity and no war, only 513,185—or a ratio of 1.31. There are in these States 33,326 square miles, and this population is but 52 to the square mile, while nearly the whole of this country is capable of sustaining 200 to the square mile.

In New Jersey, Pennsylvania, Delaware, Maryland and Virginia, the population in 1810 was 2,487,508; and in 1840, 3,685,287; or an increase of 1,197,779; the greatest portion of this being in Pennsylvania.

The ratio of increase, and the population to the square mile has been during the period named, as follows:—

	Rate of increase.	Pop. sq. mile in 1840.
Pennsylvania,	2.12	41.4
New Jersey,	1.49	54
Delaware,	1.07	37.7
Maryland,	1.23	43
Virginia,	1.33	19.3

A comparison of these statistics, with those of Michigan, Indiana, Illinois and Missouri, will show a startling difference; the ratio of increase and population being as follows:

	Ratio of increase.	Pop. sq. mile in 1840.
Michigan,	44.6	40
Indiana,	27.9	40
Illinois,	38.9	19
Missouri,	18.4	8

This increase is too great for an equal growth of the country, and it is a matter for serious consideration, why the East and its advantages should be in such a great degree forsaken for the west and its disadvantages. Why the desire for the possession of a large amount of land cheaply obtained, and dearly held at cost of labor and privations innumerable, should overbear the strong inducements for settlement on the Atlantic border. The annexation of Texas, the addition of Oregon, and the prospective extension of our boundaries, so as to embrace California, are all additional causes for speculation, as to whether the next thirty years will show an increase or decrease in the population of the old States. The immense tide that is rushing thither from us will have a serious effect, but what that is, remains yet to be seen.

It cannot be known so well as it ought to be, that there are such abundant opportunities for profitable and cheap investment this side of the Mississippi, or in all likelihood there would be a better exhibit of increase in fixed population than we have made. And it would be well that means were adopted to spread the knowledge that would in all probability be very acceptable to many who are determined to make the yet sparsely populated West their home.—*United States Gazette*.

IBRAHIM IN TOWN.—Nearly every one acknowledges that there is something almost terrific in the idea of Ibrahim Pacha being actually in London. We have been so in the habit of reading about his impetuosity and all that kind of thing, that we cannot conceive his putting up quietly at

Mivart's hotel, and going down to Ascot on the day of the races. We used to hear that Ibrahim, at the head of his mountain horde, was doing this, that, and the other; routing somebody on one side, ravaging coasts, and carrying his furious arms in all directions; and we are therefore unprepared for finding his name every morning in our newspapers among the fashionable movements of the season. Considering the military impetuosity of his character, we should suggest that a court circular should be specially written to record his acts during his visit to London, in language similar to that in which we have been in the habit of hearing him spoken of. We submit a few specimens:—

“The impetuous Ibrahim left his lair at Mivart's, at an early hour, and made a descent upon the breakfast-room. He ravaged a plate of ham, and spread desolation among the French—rolls that were placed before him. The energetic heir of Mehemet Ali then planted his yatagan in the bosom of a fowl, and made a desperate attack upon it, exclaiming, in his strong Egyptian accent, ‘Thus will I cut off both wings of the army of my enemy!’ Having finished a hearty meal, he rushed into the fastness of a carriage, and scoured the country until he arrived at the Paddington terminus of the Great Western Railway. The haughty Ibrahim was met by Mr. Russell, M.P., and the impetuous Pacha having exchanged a few signs of courtesy precipitated himself upon the ottoman in the saloon carriage.

“With his usual rapidity of movement he reached the race-course, and came to a stand in a position commanding a view of all that was passing round him. Wine was offered to the wily Egyptian, who did honor to his old friend, the Porte, by finishing an entire bottle.”

The above are only a few of the incidents occurring on one of the days of Ibrahim's sojourn in this country. The narration of events should be continued in the same spirit, when a very interesting record of his visit would be furnished to the public written in a style appropriate to the habits and character of the illustrious person, whose proceedings cannot be faithfully chronicled in the mere every-day language of a *Court Circular*.

Punch.

ABD-EL-KADER AND PELISSIER.—The Parisians denounce Abd-el-Kader for his recent murder of French prisoners. The barbarian killed them by sword and ball. Now, at the Cave of Dahra, Colonel Pelissier, blessed by the light of civilization, magnanimously used it as a torch.—*Punch*.

“THE HOUSE OF PEEL.”—Such is the heading given by some of our contemporaries to the subjoined paragraph:—

“The following passage occurs in the Rev. John Wesley's Journal, bearing date July 27, 1787:—‘I was invited to breakfast, at Bury, by Mr. Peel, a calico printer, who, a few years ago, began with 500*l.*, and is now supposed to have 50,000*l.*’”

We take it, there is many a “house”—for the sneer implied in the word is not to be mistaken—that could not give so truly noble a beginning. How many “houses,” for instance, began with plunder—how many with debauchery? There are a few escutcheons we could name, that, with all their dragons glorified, and bend-sinisters, would look very small before Mr. Peel's spinning-jenny.

From the Journal of Commerce.

OUR OWN OREGON.

As the great problem is at length solved, showing what portion of the Oregon territory belongs to Great Britain, and what portion to the United States, the next thing is to examine the value of the possessions thus allotted to us. Many descriptions of Oregon have been published—but none which we have seen, bears so evidently the marks of candor, and a personal acquaintance with the subject, as one which has just reached us from Canton, China. We learn from a correspondent there, that it was written by Rev. Mr. Hines, who for several years has resided in Oregon as a missionary of the Methodist Church, and has recently returned to this country, taking China in his way. He there left the manuscript of his description, and it was printed at the Hong Kong Register office, after his departure for the United States. He arrived here on the 4th of May last.

Mr. Hines describes the Oregon Territory as bounded northerly 120 miles by Puget Inlet, and from the eastern termination of that inlet by a ridge of mountains which divides the waters of Frazer's river from those which flow into the Columbia,—said ridge extending in a direction east-north-east to the Rocky Mountains. According to this definition, the United States have in truth got nearly "the whole of Oregon," though they have stopped a long way short of 54.40. The natural boundary described by Mr. Hines, is the boundary which would have resulted from Mr. Calhoun's able argument in support of the American title, addressed to the British minister, Mr. Pakenham. Mr. C. claimed for the U. States all the country drained by the Oregon or Columbia river. It is however better to adopt the 49th parallel, agreeably to the treaty just signed and ratified by the American government, (and which is sure to be signed and ratified by the British government,) because it leaves no chance for future differences, and gives us a territory more symmetrical and compact.

The Pacific coast which falls to us under the treaty, is about 450 miles in length, extending from lat. 42 to Cape Flattery at the entrance of Puget Inlet. Along the inlet we have a "water front" of 120 miles; making a total of near 600 miles of coast, without including the gulf which projects from the east end of Puget Inlet, far to the southward, commonly called Admiralty Inlet. These two inlets—the latter of which is wholly ours—contain a plenty of good harbors, and they are the only good harbors we possess on that coast. South of Cape Flattery, the only harbor which a ship can enter is the mouth of Columbia river, and *that*, as all our readers know, is difficult of access, and often extremely dangerous.

The area of surface embraced within American Oregon as defined by the treaty, is probably not less than 300,000 square miles; or more than six times that of the state of New York. From Mr. Hines' description of it we now proceed to quote, in his own words. The reader will observe that the country about Puget Sound, which has been generally described as an excellent agricultural district, is represented by Mr. Hines as extremely barren, although "level, and exceedingly beautiful." Strictly speaking, he says, there is *no soil*. The prairies are covered with shingle, or small stones, with scarcely any admixture of earth. Indeed, there are but few places on this somewhat

extensive tract, where anything can be raised. And this, be it observed, is the tract, or district, about which two great nations have been disputing these thirty years, and for the possession of which they have at times been in imminent danger of incurring the direst calamities.

The face of this country (says Mr. Hines) is wonderfully diversified, and presents every variety of scenery, from the most awfully grand and sublime to the most beautiful and picturesque in nature. In the vicinity of Puget's Sound the country is level and exceedingly beautiful, and consists mostly of prairie land, with but a small portion of timber; but, with this exception, all along the coast it is broken and mountainous. On approaching the coast at the mouth of the Columbia river, ridges of high lands appear on either hand as far as the eye can reach, and the more elevated points serve as land-marks to guide the mariner through the intricate channel across the fearful "Bar of the Columbia." One high mountain called by the Indians "Swalalahoot," from an Indian tradition, and from its appearance, is supposed to have once been an active volcano. With but little variation the country from 30 to 50 miles back from the coast, presents a rough, wild and mountainous aspect, and is covered with dense forests of fir, spruce and cedar trees. Passing over this broken border of the country, you descend on the north side of the Columbia into the valley of the Cowlitz, and on the south into that of the Wallamette river. These valleys extend eastward to that range of mountains which, crossing the Columbia river, forms the Cascades, and is therefore called the "Cascade Mountains." Comprised in these valleys are many extensive prairies, beautiful woodlands, numberless hillocks, rising grounds and majestic hills, from the top of some of which, scenery, as enchanting as was ever presented to the eye, delights and charms the lover of nature, who takes time to visit their conical summits. That part of Oregon extending from the Cascade mountains to the Pacific Ocean, is called the "Lower Country," and is about one hundred and thirty miles wide.

The Cascade Mountains extend in one continuous range, parallel with the coast, quite to California, and have therefore sometimes been called the "Californian Range." Those whose mountain observations have not been very extensive, can form no just conceptions of the grandeur and magnificence of this stupendous range. The highest peaks are covered with eternal snows, and presenting their rounded tops to the heavens, appear like so many magnificent domes to adorn the great temple of nature. Some of them are more than fifteen thousand feet above the level of the sea. From one elevation, near the Wallamette river, and from sixty to one hundred and fifty miles distant, the writer has counted eight of these snow-capped mountains without moving from his tracks. Surely no sight can be more enchanting.—One of these mountains, viz., St. Helen, requires a more particular account from a phenomenon which it presented three years ago. In the month of October, 1842, this mountain was discovered, all at once, to be covered with a dense cloud of smoke, which continued to enlarge and move off in dense masses to the eastward, and filling the heavens in that direction, presented an appearance like that of a tremendous conflagration viewed at a vast distance. When the smoke had passed away, it could be distinctly seen, from various parts of the country,

that an eruption had taken place on the north side of St. Helen; and from the smoke that continued to issue from the chasm or crater, it was pronounced to be a volcano in active operation. When the explosion took place vast quantities of dust or ashes were thrown from the chasm, and fell in showers for many miles distant. This mountain is the most regular in its form, and most beautiful in its appearance of all the snow-clad mountains of Oregon, and though on the north side of the Columbia, it belongs to the Cascade Range. Mount Hood, on the south side of the Columbia, is more elevated than St. Helen, and presents a magnificent object on which the eye can gaze without weariness, from innumerable points more than one hundred and fifty miles from its base. But any description of these gigantic piles of Basalt and snow must fall far below the reality; and it is only necessary to gaze for one moment upon these majestic glaciers, to be impressed with the insignificance of the works of art, when compared with the works of nature.

Passing over the Cascade Range to the eastward, you come into another extensive valley, which reaches to the foot of another range, which from its azure like appearance, is called the "Blue Mountains." This valley is about two hundred miles broad, and is called the "middle country." A number of beautiful rivers flow through this valley, and it is also intersected by broken ridges, which divide the numerous streams by which it is watered. This part of the country abounds in extensive plains and "prairie hills," but timber is so very scarce, that the eye of the traveller is seldom delighted with the appearance of a tree. "The Blue Mountains" are steep, rocky and volcanic, and some of them are covered with perpetual snow.

They run nearly parallel with the Cascade Range, though, far to the south, branches of them intersect with the latter range. They are about midway betwixt the Pacific Ocean and the Rocky Mountains. The country east of the Blue Mountains, is the third, or upper region, and extends to the eastern boundary of the Territory of Oregon. The face of it is more varied, if possible, than it is in that part of the country lying west of the Blue Mountains, the southern part being distinguished by its steep and rugged mountains, deep and dismal valleys, called "Holes" by the mountaineers, and wide gravelly plains.

The northern part is less objectionable in its features; the plains being more extensive, the mountains less precipitous, and the valleys not so gloomy. Many portions of this upper region are volcanic, and some of the volcanoes are in constant action. Many of the plains of this region are covered with carbonate of soda, which, in some places, may be gathered in vast quantities, and renders the soil generally unproductive. On the eastern limits of this region, rise in awful grandeur the towering summits of the Rocky Mountains, which have been very properly called the "backbone" of North America. The highest land in North America is in this range, and is near the 53d parallel of north latitude. It is called "Brown's Mountain."

Near this, and in a tremendous gorge of the mountains, one of the principal branches of the Columbia takes its rise. In this region the country presents the wildest and most terrific appearance.

Stupendous glaciers, and chaotic masses of

rocks, ice and snow, present themselves on every side, and defy the power of language fully to describe them.

So far as the face of this entire country is concerned, perhaps no other in the world presents a more varied or a more interesting appearance.

The climate of Oregon varies materially as you proceed from the coast into the interior. To a proper understanding of the climate, it is necessary to consider the winter and summer separately. The winds which prevail in the winter are from the south and east, sometimes veering to the southwest. They usually commence about the first of November, and continue till the first of May.

Sometimes they come on gradually, but at some seasons, they burst upon the country at once, and with the violence of a thunder storm. They are always attended with continued falls of rain, and the period of their continuance is therefore called the rainy season. During the rainy season there are intervals of warm pleasant weather, which are generally followed by cold chilly rains from the south and west. In the latter part of winter there are generally light falls of snow throughout the country, though in the valleys, and particularly in the Wallamette valley, it seldom falls more than two or three inches deep. However, in the winter of 1841 and '42 the snow fell in this valley twelve inches deep, but eight days afterwards it had all disappeared.

Though the winters are disagreeable on account of the chilliness of the southeast winds, and the extreme humidity of the atmosphere, yet the cold is very moderate, the thermometer seldom falling below freezing point. As a matter of course the ground is seldom frozen, and therefore ploughing may be done a great portion of the winter. Occasionally, however, there is an exception to this. A few days before the great fall of snow already mentioned, the mercury fell in some parts of the country, to fifteen degrees below zero; and it continued excessively cold for several days. The lakes were all frozen, so that cattle and horses could pass over them on the ice, and the Columbia river as far down as the mouth of the Wallamette, was bridged with ice for the period of fifteen days. A similar circumstance occurred in the winter of 1834.

In the middle region the rains are not so abundant as in the lower country; the weather is colder, and there is consequently more snow. In that portion of Oregon east of the Blue Mountains called the upper region, it seldom rains except in the spring, and then the rains are not protracted. Vast quantities of snow fall in this region, particularly in the mountains. This part of the territory is distinguished for the extreme dryness of its atmosphere, which, with the vast difference in the temperature betwixt the day and night, forms its most peculiar trait, so far as climate is concerned. From sunrise till noon, the mercury frequently rises from forty to sixty degrees.

It should be observed that none of the winters of Oregon are either so stormy or so cold, but that cattle, horses, sheep, &c., find ample supplies of provender on the wide spread prairies, whither they are driven, to roam at large.

If the winters of Oregon are rather stormy and unpleasant, the summers are sufficiently delightful, to counterbalance all that is disagreeable in the winters.

In the month of March, the weather becomes sufficiently warm to start vegetation, so that thus

early, the prairies become beautifully green and many of Flora's choicest gifts appear, to herald the approach of summer. The summer winds are from the west and north, and there is seldom any pleasant weather, except when these prevail. After a long rainy winter, the people of this country look for the healthy and exhilarating breeze from the bosom of the Pacific, with great solicitude. At length, the wished-for change takes place. The howl of the storm, and the roar of the southern winds, are hushed to silence; the hills and valleys are gently fanned by the western zephyr, and the sun, pouring his floods of light and heat from a cloudless sky, causes nature as by enchantment, to enrobe herself in all the glories of summer. The delightful weather thus ushered in, continues through the entire summer, with but little deviation, and the temperature of the atmosphere, particularly in the Wallamette valley, is agreeably warm and uniform. At noon in the warmest weather the thermometer ranges at about 82° in the shade, but the evenings are considerably cooler. The coolness of the evenings doubtless goes far to neutralize the effects of the malaria that is exhaled through the influence of the sun, from the swamps and marshy places, which are found in some parts of the country. From personal experience, and extensive observation in reference to this particular, the writer is prepared to express the opinion, that the climate of Oregon is decidedly favorable to health. And why should it not be? The temperature, particularly in the lower country, is remarkably uniform. The country is not therefore subject to the evil resulting from sudden changes from extreme heat to extreme cold. The exhilarating ocean breeze, which sets in almost every day during the summer, contributes greatly to purify the atmosphere. These circumstances, connected with the fact that there is but little decaying vegetable matter in the country, and but few dead swamps and marshes to send forth their poisonous miasma, to infect the surrounding regions, are sufficient to show that Oregon must be the abode of health, and that human life is as likely to be protracted, and men to die of old age in this country, as in any other portion of the world. Indeed, such is the healthiness of the climate of this country, that but very few white persons have here sickened and died, since its first occupancy by such, more than thirty years ago. Yet, with these facts before them, there are persons who are ready to publish far and near that the climate of Oregon, and particularly of the lower country, is "decidedly unhealthy. That the most malignant and fatal fevers prevail," than which no representation could be more erroneous.

True the ague and fever, in a very modified form, sometimes prevails in the lower country: but it is easily controlled by proper remedies, and finally leaves the person with a vigorous, and an unimpaired constitution, and seldom returns the second season. Those persons who have lived longest in the country, are generally the most healthy and vigorous; which of itself is a sufficient proof of the friendliness of the climate to the promotion of health. If there is any difference between the different portions of Oregon in regard to the healthiness of its climate, the middle region, and that immediately along the coast, are the most salubrious. The climate of the valleys of the Wallamette, Cowlitz, Umpqua, and Clameth rivers is well calculated for wheat, barley, oats, peas,

apples, peaches, potatoes, turnips, and all other vegetables usually cultivated in the temperate latitudes, while horses, cattle, sheep, hogs, &c., flourish and multiply beyond all parallel; but in the middle and some parts of the upper region, the climate is well adapted to all the pursuits of a pastoral life.

With a uniform, salubrious, and delightful climate, as well adapted to purposes of agriculture as any within the same degrees of latitude in any part of the world, Oregon loses much of its importance, if the *fertility* of the soil does not correspond with the nature of the climate.

The soil of Oregon has been variously represented by persons who have visited the country. Some have viewed it in altogether too favorable a light, while others have greatly underrated it. Some have placed it among the first in the world, while others have considered Oregon as a boundless desert, fit only to be the habitation of wild beasts and savage men. These conflicting representations doubtless have arisen from a superficial acquaintance with the country by the authors of them. They have either not stayed in the country a sufficient length of time to become acquainted with its real productiveness, or they have relied upon that information which has been artfully designed to prevent the country from being known.

The bottom lands, on each bank of the Columbia river, are subject to an annual inundation which is occasioned by the melting of the vast quantities of snow which fall on its upper branches, among the mountains. This flood continues through the month of June and into July, so that whatever may be the richness of the land thus overflowed, but small portions of it will ever be brought to contribute to the support of man. There are however some portions which lie above high water mark, and are remarkably fertile, and produce in abundance all the grains and vegetables common to the best parts of the country. Fort Vancouver is situated on one of these higher parts of the Columbia valley, and here a farm of two thousand acres is cultivated, and produces annually several thousand bushels of grain. Here also apples, pears, and peaches are cultivated successfully, and grapes are brought to a degree of perfection.

Though but few attempts have as yet been made to cultivate the uplands, or timbered lands, yet sufficient has been done to prove that the soil of these portions must be of a superior quality. And indeed this is attested by the immense growth of the timber itself. No inferior soil could send forth those enormous trunks, which in their upward progress spread their magnificent branches to the skies, and often rear their heads to the amazing height of three hundred feet.

Clatsop Plains, on the south side of the Columbia river, near its mouth, embracing an area of about sixty square miles, are amazingly fertile, being composed of a rich alluvial deposit, and producing all kinds of vegetables in the greatest abundance. The country around Puget's Sound on the north side of the river, is altogether of a different character. The prairies are extensive and beautiful, the scenery most delightful, but strictly speaking, there is *no soil* to the country. The prairies are covered with shingle, or small stones, with scarcely any mixture of earth. Indeed there are but few places on this somewhat extensive tract, where anything can be raised. Attempts have been made to redeem it from "native barrenness," but as yet, all have failed.

The Hudson's Bay Company transported some of their surplus population at Red River, to this region, but in consequence of the sterility of the country, they soon became discouraged, and, though contrary to the wishes of the Company, they have abandoned the place and have settled elsewhere. And yet this region has been represented as distinguished alike for the salubrity of its climate, and the fertility of its soil. The climate is indeed delightful, but the soil is exceedingly forbidding, and can never perhaps be recovered from its extreme barrenness.

Of all the different parts of Oregon, those watered by the Cowlitz and Chehalish rivers on the north side of the Columbia, and those on the south, through which the Wallamette with its numerous tributaries and the Umpqua and Clameth rivers flow, are unquestionably the most fertile. The valley of the Wallamette, which embraces an area of 25,000 square miles, is undoubtedly entitled to the appellation of the garden of Oregon. The close observer in travelling through this valley will discover several kinds of soil. On the lower bottoms in some places is a sandy soil, in others a kind of black marle, or loam. There is but little difference in the productiveness of the two kinds. They are both the alluvial deposits of the Wallamette river. On the second bottoms or high prairies as they are called, the soil is a dark loamy clay, and is as strong and fertile as the lower grounds. Some yellow gravelly sand is found high up the river, but this embraces but a small proportion of the valley. The ability of the soil to produce is best ascertained by considering the crops which are annually taken from the land. Under the present system of cultivation the average amount of wheat taken from the English acre, is from twenty-five to thirty bushels. The amount of labor required to accomplish this, is comparatively trifling. The writer has formerly resided in the great wheat-growing country of Genesee, in the State of New York, and understands the amount of labor necessary to raise a thousand bushels of wheat in that country, and from observations in Oregon, he has been brought to the conclusion, that it requires much less labor to raise a thousand bushels in the latter country, than it does in any part of Genesee Flat. The prairies of the Wallamette and other valleys are unlike anything that can be found in any other country. They are naturally very mellow, and appear, as one is passing over them, as though it had been but a year or two since they were cultivated. They are not swarded over with a thick strong turf, as in the western states, but they can be easily ploughed with one good pair of horses, and with once ploughing are ready to receive the seed, and seldom fail, even with the first crop, bountifully to reward the husbandman.

The first crop, however, is never so good as the succeeding ones. It is not an uncommon thing for farmers, without using any extraordinary means, to take from fifty to sixty-five bushels of wheat from an acre, and this has been the average through entire fields.

Doubtless, if farmers would take more pains in cultivating the land, they would realize much more from the acre than they do now; but, if they lose anything in this respect, they gain an equivalent in the immense number of acres which they cultivate. The amount of English grain raised by the different farmers in the country varies from 50 to 300 acres each. As wheat never suffers

from blight, and as there are no insects to trouble it, a good crop is as sure to reward the labor of the husbandman who sows his seed, as day and night to continue until harvest time. This certainty of a good crop is owing as much to the nature of the climate, as to the quality of the soil. Some other crops are not so certain. Potatoes frequently suffer from drought, as also Indian corn. But the soil and climate are well adapted to raising melons, cucumbers, beets, cabbages, and all kinds of garden vegetables. Apples, peaches, and all kinds of fruits which abound in New York, flourish so far as they have been cultivated, and will soon become abundant.

The soil of the middle region differs materially from that of the low country. It bears one general character, and consists of a yellow sandy clay. It produces in great abundance a kind of bunch grass, as also a variety of small shrubbery, and the prickly pear. It is on the almost boundless plains of this region that the Indians raise their immense herds of horses. It is no uncommon thing for one Indian to own fifteen hundred of these animals. Large portions of this country will admit of being cultivated, particularly on the river "De Chutes," the Uritalla and the Walla-Walla, while the whole of its vast extent is most admirably adapted to purposes of grazing. The soil as a whole, though not of the first quality, may be pronounced tolerably good.

The upper region of Oregon is less fertile than the middle, though there are many thousands of acres in various parts of it of good arable land. What has often been said of Oregon as a whole, may be said in truth of a large portion of the upper country, viz., that "it is an extensive barren waste, capable of supporting but a very small number of inhabitants."

But this remark will only apply to the upper region of this vast territory. To apply it to that part of Oregon extending from the Blue Mountains to the Pacific Ocean, would be doing the country great injustice. For instead of this being the case, it is the opinion of those who have been longest in the country, and who consequently know best what the resources of the country are, that this portion of Oregon is capable of sustaining as large a population as all of the New England States. In fact, the natural resources of this country are great, and it is only necessary for them to be known, to be duly appreciated.

It is only necessary to present one single circumstance to show what the country would be capable of doing, provided it was filled with an industrious population. It will be borne in mind that in the fall of 1843 an emigration arrived in the country numbering from eight to ten hundred persons. But few of these raised anything by farming, towards their support, the first year. In the fall of 1844 another emigration, equal to the former, arrived, and all those persons, numbering at least 1800, with the former population, which was about equal to the two emigrations, depended upon the products of 1844 for subsistence until the harvest of 1845. Probably not more than one fourth of the entire population cultivated the land in 1844, yet they were all supported from the granaries of the country; fifteen thousand bushels of wheat were shipped to the Russian settlements; one thousand barrels of flour were exported to the Sandwich Islands; and thousands of bushels yet remained on hand, before the abundant harvest of 1845 was gathered in. With these facts in view,

it does not require much foresight to see that Oregon *can* and *will* compete with any other portion of the world in supplying the islands of the Pacific, the Russian settlements, and every other flour market contiguous, with bread stuffs at as low a rate as can reasonably be desired. In connection with this it may be remarked that pork and beef, of an excellent quality, can be raised in this country with greater ease and facility even than wheat. And the climate being favorable for curing them, the time is not far distant, when these articles will also be exported in abundance.

Already there are many settlers in the country who have from two hundred to five hundred head of cattle, and it is not an uncommon thing for a man to be the owner of one hundred hogs. At present, however, from the great influx of population, these kinds of property bear a high price in the country, but the time may be anticipated when the home market will not be so extensive, and the vast supplies from this quarter must find an outlet.

As in many portions of the country, spruce, fir and pine timber abound, and as there are many water-falls, which afford excellent hydraulic privileges, the facilities for procuring timber in the country are abundant. Already considerable quantities of lumber are exported annually. It should also be observed that salmon in any quantity, and of the very best quality, may be yearly barrelled, which, with the products of dairies, that the country offers the greatest facilities for conducting, in addition to what has already been said concerning the products of the country, is sufficient to show that the exports of Oregon, in proportion to the number of its inhabitants, *may* equal those of most other countries.

There are but few countries in which a poor man can place himself above want, with greater facility than in this. This is the testimony of every one that settles in the country. But every country has its defects, and this certainly is not free from them.

It is not the garden of Eden, nor is it a barren desert. It does not "flow with honey" like the land of Canaan, but in some places it literally abounds in milk. And though it is not "a land of wine," yet in the more necessary articles of "corn and oil" it greatly abounds.

Though gold and silver are not yet found in the rich veins of the earth, nor in great abundance in many coffers, yet a competency of whatever is necessary, is always awarded to industry and economy.

That it is a land of mountains and valleys, of rivers and streams, of mighty forests and extended prairies, of a salubrious climate, and a rich and fertile soil, the foregoing remarks will sufficiently show. And in summing up the character of the country, it may be said to be not the *best* country in the world, but it is well entitled to be called a *good* country.

THE BRITISH UNICORN.

"MR. PUNCH,

"You have made my companion, the British Lion, very popular; can you do nothing for me? Understand, I shall be well content with half the notoriety you have bestowed upon my leonine friend; for certainly, since you have signalized him by your notice—since you have drawn him from the obscurity of the National Arms, and discussed the length of his mane and tail, the sharpness of his teeth and claws, and the various modu-

lations of his roar—the poor beast has been worked and belabored more than any costermonger's donkey. 'T will not surprise me, soon, to see the British Lion advertised as peculiarly fitted for 'the most timid lady.' Certainly, timid gentlemen, who might pass for ladies, have of late ridden him hard enough. I much question whether the Culling Smiths, the Sibthorpes, and the Plumptues, are not—for their sharp taskwork inflicted on the British Lion—obnoxious to an information for cruelty to animals. However, to my own case.

"I am a modest brute; so modest, that I have suffered all sorts of scholars and philosophers—men who take the universe to bits and put it together again, like a child's puzzle—to question even my existence. By some I have been called the Indian ass; by others the rhinoceros; and all these presumptuous men have flatly denied my right to the graceful form made familiar by the royal arms to every true-born Briton. But, sir, patience has its limits. Trodden worms will turn; and—it will be found—outraged unicorns will gore.

"Nevertheless, for myself, I could still endure the contempt and slander of the world with perfect indifference. Yes, sir: I could hear my companion, the British Lion, praised for his courage, his magnanimity, an very other after-dinner virtue—(though, between ourselves, I have known him guilty of certain rogueries and fooleries more worthy of the British fox and the British goose; only lions, by virtue of their claws, are privileged as occasional knaves and simpletons)—I say, I could, unmoved, listen to his praises—unmoved as one opera-singer hears the applauding fame of another, (my frequent position over the proscenium has familiarized me with all play-house virtues,) were I alone concerned. But, sir, consider; if I am called a fabulous beast, a fictitious nonentity, a thing that never had a place in the ark, what a rebellious insult is thereby cast upon the Royal Escutcheon! The Lion is a terrible verity, says the world, and with his truthful strength, his awful looks, supports and watches the Royal Shield; but the Unicorn is a nondescript nincompoop: a fib upon four legs: at the very best, a horned flam! Now, I ask it, is not this opinion treasonous? Does it not make the Royal Arms lopsided? On the right they are supported by leonine power; on the left by a worse than nothing—by a fiction! Now, sir, will you urge Lord George Bentinck to move for a committee to inquire into the truth of the existence of the British Unicorn? I suggest Lord George, because, as I am more than half equine, the inquiry could be best carried out by his stable mind. Did I really feel myself the ass that some naturalists have written me down, I could name other honorable members of the honorable house as being peculiarly fitted for the investigation.

"And in the mean time, *Mr. Punch*, do think of me. Let me not suffer for my long endurance. Folks must be tired of the roar of the British Lion; therefore, do now and then say something about the honor of the British Unicorn. For I put it to you, whether it is not too bad that I should bear half the weight of the Royal Shield, and the Lion monopolize all the glory? Besides, the British Lion, for a time at least, has had his day; therefore, do justice to his long-silent and long-suffering companion,

"THE BRITISH UNICORN."

SYDNEY SMITH A FLAGIARIST.

[In order to show that the sincere scorn and horror, with which this most original wit regarded repudiation, was consistent with something like it in his own practice, we copy the conclusion of a review by the Christian Observer, showing, first, that he could appropriate the writings of other men without acknowledgment—and secondly, and this is more important, that he held a high and lucrative office in a church whose doctrines he did not believe. The first fault we could readily forgive, as he *did better* than preach his own sermons; but Sir Roger de Coverley would not have excused the other.]

SYDNEY SMITH again! Yes; we have not quite done with him. In our last number we took up his posthumous sermons wet from the press; and as we did not suppose that our readers would anxiously wish to possess themselves of the book, we thought we should meet their convenience, and perhaps sufficiently satisfy their curiosity, by a selection of extracts. It seemed also desirable to provide a caution against the always defective, and often grossly erroneous, doctrines and the

1809.

"Those who have not strength of character to deviate *materially* from the customs of the world in the patronage of folly, and estimation of vice, need not go all lengths; some scanty limits, some feeble shame they may still preserve."

This is a singular specimen of *ne-quid-nimis* advice. He would not have persons either too good or too bad. He is far from being so harsh as to require the ungodly "to deviate materially" from their vain and vicious customs, or "to keep themselves unspotted from the world;" but "they need not go all lengths" in wickedness; they should retain some regard to respectability of character. On the other hand, he would not have the godly too zealously occupied "with sacred things," but would that they should be decently "conformed to this world," and even "give way a little more than their strict judgment may approve."

In the critique in 1809 our reviewer showed that Sydney Smith had imitated some peculiarities in the style of Jeremy Taylor; and expressed a suspicion that he had "dipped deeply into a little volume of Selections from the Works of Taylor, Hooker, Hall, and Bacon, by Basil Montague;" and in writing the paper last month, some of the titles and contents of the sermons sounded to us rather familiarly; but it did not occur to us, penning our first thoughts as we cut open the fresh pages, to look into the matter. It is due, however, to our readers and the public, that we should not pass it over; and the editor of this posthumous volume will doubtless be vexed with himself for having ushered into the world, as the original compositions of his friend, much that is borrowed;—how much, we have not ascertained; having only compared a few of the sermons with those of Dr. Barrow: though, from internal evidence, we suspect that the larceny is very extensive, and from several authors. Sydney Smith acted prudently in not following the advice of the Times News-
paper:

pernicious principles, upon which the work is based, before it comes generally into circulation.

There was, however, one point upon which we did not touch, and which we had no right even to hint at, unless we were prepared to verify any remark which we might let fall; namely, how far Sydney Smith—most original as Peter Plymley and an Edinburgh Reviewer—was also original as a writer of discourses for the pulpit.

In the year 1843, the conductors of the Times Newspaper recommended our reverend author to publish a volume of his sermons. They were not aware that the facetious canon did perpetrate that enormity in the year 1809; and we took occasion (Christ. Observ. 1843, p. 800) to furnish from our review of the old discourses some anticipations of what the new ones suggested by the Times might be likely to contain; and the prediction has been fulfilled; as for instance, in regard to his constant ravings against "enthusiasm" as the great vice of the age; his dread of being "righteous over much; and what we called his *ne quid nimis* advice, of which we will lay side by side two specimens from the volumes of 1809 and 1846.

1846.

"Do not wage war against the innocent pleasures of life; give way a little more than your strict judgment may approve, rather than alarm others by an air of austerity and needless denial; and above all things do not fall into the fatal mistake of attempting to rack the human mind to too high a pitch of enthusiasm, and to make men occupy themselves more with sacred things than the nature of the mind will admit of, or the condition of human life allow."

per: unless at least he had been more careful in his selections than his friend has been for him.

It is not necessary that we should here discuss the question, under what circumstances, and to what extent, it is desirable or lawful for a clergyman to copy, adapt, digest, or abridge, the writings of other divines in the composition of his discourses for the pulpit. But there can be no doubt that adequate care should be taken not to put into print after his death, as his own, what was not so; and in the case of Sydney Smith, whose celebrity as an author, and in former days as a preacher, was very great, his hearers or readers would scarcely suspect that his discourses from the pulpit were not his own productions, as much as the Peter Plymley Letters; and would feel, when the substitution was discovered, that their credulity had been practised upon;—and what is more painful, that much which raised the writer in their estimation as a divine and a Christian, was not his rightful property.

We confessed ourselves last month very much puzzled in reading these discourses, on account of their manifest inequality, not to say inconsistency, in doctrinal and practical statements. Our readers must have thought that we wrote in a vague and vacillating manner, as in truth we did; for sometimes we described him as saying nothing but what an Arian, and, we might add, a Socinian, might have penned; degrading Christianity into mere practical good sense in attending to the external social duties of life; and writing as though all the doctrines of the Gospel were despicable cant; yet at others putting forth sentiments which embodied many of its essential principles. The inconsistency was not ours, but the author's; who,

in laying hold of the good things of other men, does not always succeed in deteriorating them to his own standard. When our readers shall have perused the passages which we are about to quote from these discourses, side by side with extracts from those of Dr. Isaac Barrow, they will be able to account for the perplexity under which we wrote last month; as for instance at p. 294, where, having spoken of the genuine Sydney Smith, we added:

"We are far from saying that in this volume there is nothing which rises above this manner of address. On the contrary, we have been pleasantly surprised at much that is contained in these sermons, which ever and anon advance into the territories of religion to an extent which was not to be predicted from the ordinary style of Sydney Smith's Reviews, Plymley Letters, popular pamphlets, and, we may add, colloquial intercourse. There is a recognition of various truths of the Gospel which might have surprised some of the author's Holland-House acquaintance, and led them to ask whether their facetious friend had become a fanatic. In truth there is some discrepancy, or inconsistency, which it is not easy to reconcile."

The reconciliation is now to our minds easy enough. Sydney Smith paid no attention to theological study; he was not a diligent reader of the word of God, as is evinced by his strange blunders in reference and quotation; he had no doctrinal system, except that of having none; he had no taste for writing sermons;—we mean discourses for the pulpit, embodying Christian doctrines and precepts, as distinguished from mere essays upon human life and manners;—no understanding of the Gospel of Jesus Christ, as the power of God unto salvation; or if he understood it as a matter of theory, he was apparently skeptical in regard to it. Everything approaching to true religion in the heart, and evinced in the life, he scoffed at as rant and fanaticism; and, whether from distaste, or from a consciousness that divinity was not within the range of his attainments, he evidently eschewed it; so that wherever we find any remark in his discourses of a more than usually doctrinal character—the doctrine being sound—we strongly suspect that it is borrowed.

Our task will now be to exhibit a few specimens of Sydney Smith's obligations to Dr. Barrow, confining our collation to that one writer, and to three of our author's discourses.

The first which we select for notice, is that entitled "The Excellency of the Christian Gospel," from Philippians iii. 8: "Yea doubtless, and I count all things but loss, for the excellency of the knowledge of Christ Jesus my Lord." On this sermon we remarked last month:

"One solution which has occurred to us of the seeming discrepancy in his sermons is, that in speaking of the Gospel, or its essential peculiarities, (so far as he touches upon them,) he does so in an extenuated sense; meaning little more by the Gospel than a code of moral conduct. He would keep down everything to this, so as to prevent what he calls enthusiasm. The proof of our remark is rather to be gathered from the general strain of his discourses, and from what they do not include, than from particular passages which may be briefly quoted. As an illustration, however, we will give some account of the sermon entitled, 'The Excellency of the Christian Gospel;' from that glowing declaration of the Apostle

Paul: 'Yea doubtless; and I count all things but loss, for the excellency of the knowledge of Christ Jesus my Lord.' If there is any text in the Bible which exhibits what Canon Smith would have considered 'enthusiasm,' it is this; yet he manages to take the glow from it; by confining the excellency of the knowledge of Christ Jesus to the social benefits conferred by the Gospel—its effects upon our temporal concerns. We say he confines it to this; for though what he predicates of it does not necessarily exclude something else not predicated; yet that something else, though the highest object of the Gospel, is not touched upon by him; the inferior, the secular, blessing engrosses all his attention; he does not intimate that St. Paul referred to anything higher: and he forbears to give the Apostle's own reason why he was not ashamed of the Gospel of Christ—not because of its excellent effects upon our temporal concerns; but because it is 'the power of God unto salvation to every one that believeth.' We know that in offering these remarks, we subject ourselves to rebuke, as though we wished unfairly to lower the tone of the volume. We only wish to speak the words of truth; our desire would be to give to every passage the highest spiritual construction which it is able to bear; but if we find ourselves limited in one page by what we read in another, what can we do, as honest men, but state what appears to us to be the actual result of the whole? When we meet, for instance, with the words gospel, redemption, and salvation, we should not be justified in giving to them a meaning which Canon Smith would have deemed 'enthusiastic;' and then palming this meaning upon him.

"But let us see how the sermon on 'The Excellency of the Knowledge of Christ,' bears out our estimate. The reader should weigh each sentence in the balance of the sanctuary to ascertain the momentum of the whole. In the very first line, for example, 'the excellency of the knowledge of Christ Jesus my Lord,' is called 'This eulogium upon our blessed religion.' Here at once 'Christ Jesus' is made a sort of abstraction for 'religion;' and all that relates to the Redeemer in his Person and Offices is quietly but effectually set aside. Try the experiment with another of the Apostle Paul's declarations respecting 'Jesus Christ, and Him crucified.' He says, 'I know whom I have believed; and am persuaded that he is able to keep that which I have committed unto him against that day.' Is this 'enthusiastic?' The 'pious Apostle' (as Sydney Smith terms him) gloried in Christ; counted all loss for Christ; knew 'Whom he had believed;' not merely *what* he had believed; not simply 'our blessed religion;' but its divine Author, our prophet, priest, king; who is made unto us wisdom, righteousness, sanctification, and redemption; whom having not seen, we love; in whom though now we see him not, yet believing we rejoice with joy unspeakable and full of glory."

After these remarks, we gave illustrative extracts; but expressed ourselves much puzzled to understand how the merely secular or temporal benefits of religion could be accounted "the excellency of the knowledge of Christ Jesus;" and after quoting Sydney Smith's account of the "advantages of religion," we added that "The pious Apostle (as the canon calls him) would not have known his own words in this free paraphrase."

The solution is now evident to us. This discourse upon Philippians iii. 8, is copied from one

of Barrow's, entitled "The Profitableness of Godliness," from 1 Tim. iv. 8, "Godliness is profitable unto all things, having the promise of the life that now is, and of that which is to come." Barrow's line of argument was striking and appropriate; namely, to show that even as concerns the life that now is, "Godliness is profitable;" but it becomes almost nonsense when made to illustrate quite another passage; a passage of as apparently opposite a character as was consistent with both being true; for in Philippians iii. the Apostle is speaking not of "the temporal advantages of Christianity," but of the severe trials which had befallen him in this life for the excellency of the knowledge of Christ, for whom he counted all things but loss; but, walking by faith and not by sight, he consoled himself for his present secular disadvantages, by a realization of the countervailing value of spiritual and eternal blessings. (See verses 9—11, and 20, 21.) Sydney Smith had better have adopted the satirical suggestion of another facetious prebendary, one Laurence Sterne, who advised clergymen, when they were at a loss

for a text that suited their sermon, to choose "Parthians, and Medes, and Elamites, and the dwellers in Mesopotamia;" which had Sydney Smith done, though his text would have been irrelevant, he would not have needed to turn it inside out.

To show fully the extent of Canon Smith's obligations to Dr. Barrow in this discourse, we should be obliged to quote the whole; but a few paragraphs will suffice as a specimen. The sermon was preached at the Cathedral of St. Paul; so that, not only in addressing his village congregation, but in the few discourses which it was his duty to deliver in the Metropolitan church, in return for the large emoluments of his canonry, he did not deem it worth his while to think out a topic on so dry a subject as divinity; but was content to mangle one of Dr. Barrow's sermons—the second of the first volume; as if his balloon alighted upon almost the first which presented itself. His reply, in his off-hand manner, would perhaps be, "Oh, I took the second, because I had already used the first."

DR. BARROW.

"It hath been ever a main obstruction to the practice of piety, that it hath been taken for no friend, or rather for an enemy to profit; as both unprofitable and prejudicial to its followers: and many semblances there are countenancing that opinion. For religion seemeth to smother or to slacken the industry and alacrity of men in following profit many ways: by charging them to be content with a little, and careful for nothing; by diverting their affections and cares from worldly affairs to matters of another nature, place, and time; prescribing in the first place to seek things spiritual, heavenly, and future; by disparaging all secular wealth, as a thing, in comparison to virtue and spiritual goods, very mean and inconsiderable; by checking greedy desires and aspiring thoughts after it; by debarring the most ready ways of getting it (violence, exaction, fraud, and flattery); yea, straitening the best ways, eager care and diligence, by commending strict justice in all cases, and always taking part with conscience when it clasheth with interest."

"For voiding which prejudices, and the recommendation of St. Paul's project, I shall, as I said, propose some of those innumerable advantages, by considering which the immense profitableness of piety will appear."

"First, then, we may consider, that piety is exceedingly useful for all sorts of men, in all capacities, all states, all relations; fitting and disposing them to manage all their respective concerns, to discharge all their peculiar duties, in a proper, just and decent manner. It rendereth all superiors equal and moderate in their administrations; mild, courteous, and affable in their converse; benign and condescending in all their demeanor toward their inferiors."

"It is therefore the concernment of all men, who, as the Psalmist speaketh, desire to live well, and would fain see good days: it is the special interest of great persons, (of the magistracy, the nobility, the gentry, of all persons that have any considerable interest in the world,) who would safely and sweetly enjoy their dignity, power, or wealth, by all means to protect and promote piety, as the best instrument of their security, and undisturbedly enjoying the accommodations of their state. 'T is in all respects their best wisdom and policy;

SYDNEY SMITH.

"It has ever been one of the principal obstructions to Christianity, that it has been considered as unfriendly to worldly advantages, for Christianity seems to smother and slacken the industry of men, by charging them to be content with a little; by disparaging secular wealth, and praising spiritual feeling; by debarring men of what seems to be the readiest instruments of profit—violence, exaction, fraud, and flattery, and by limiting the use even of those instruments which are good—care, vigilance, and dexterity; by paring away the licentious use of wealth, and always taking part with conscience whenever it clashes with interest."

"For a remedy to these prejudices, and for a justification of the assertion contained in my text, I shall mention some of those worldly advantages, both general and particular, which render apparent the excellence of the Christian religion."

"First, then, it appears that the Gospel is exceedingly useful for all sorts of men, in all capacities, states, and relations; inasmuch as it disposes them to manage all their respective concerns, and discharge all their peculiar duties, in a proper, just, and decent manner. It renders superiors equal and moderate in command, mild in conversation, and benign in demeanor."

"It is, therefore, the concern of all men who (as the Psalmist says) desire to live well, and would fain see good days—of all who have any considerable interest in the world, to consider the Gospel (independently of all other considerations) as the best instrument of their security, and the undisturbed enjoyment of the accommodations of their state. It is in all respects, then, the best wisdom and policy; that which will as well preserve their outward state here, as save their souls hereafter. All the arts and tricks, all the sleights

DR. BARROW.

that which will as well preserve their outward state here, as satisfy their consciences within, and save their souls hereafter. All the Machiavelian arts and tricks, all the sleights and fetches of worldly craft, do signify nothing in comparison to this one plain and easy way of securing and furthering their interests."

"If, then, it be a gross absurdity to desire the fruits, and not to take care of the root, not to cultivate the stock whence they sprout; if every prince gladly would have his subjects loyal and obedient, every master would have his servants honest, diligent, and observant, every parent would have his children officious and grateful, every man would have his friend faithful and kind, every one would have those just and sincere, with whom he doth negotiate or converse; if any one would choose to be related to such, and would esteem their relation a happiness; then consequently should every man in reason strive to further piety, from whence alone these good dispositions and practices do proceed."

"Is a man prosperous, high, or wealthy in condition? Piety guardeth him from all the mischiefs incident to that state, and disposeth him to enjoy the best advantages thereof. It keepeth him from being swelled and puffed up with vain conceit, from being transported with fond complacency or confidence therein; minding him, that it is purely the gift of God; that it absolutely dependeth on his disposal, so that it may soon be taken from him; and that he cannot otherwise than by humility, by gratitude, by the good use of it, be secure to retain it; minding him also, that he shall assuredly be forced to render a strict account concerning the good management thereof. It preserveth him from being perverted or corrupted with the temptations to which that condition is most liable; from luxury, from sloth, from stupidity, from forgetfulness of God, and of himself; maintaining among the floods of plenty a sober and steady mind."

The discourse continues in the same manner; but we have quoted enough. But much of the best of Barrow's matter is omitted. We will give an illustration from another sermon.

DR. BARROW.

"On the duty of Prayer.

"1 Thess. v. 17.—Pray without ceasing.

"It is the manner of St. Paul in his Epistles, after that he hath discussed some main points of doctrine or discipline, (which occasion required that he should clear and settle,) to propose several good advices and rules, in the observance whereof the life of Christian practice doth consist. These he rangeth not in any formal method, nor linketh together with strict connexion, but freely scattereth them, so as from his mind (as out of a fertile soil, impregnated with all seeds of wisdom and goodness,) they did aptly spring up, or as they were suggested by that Holy Spirit which continually guided and governed them."

"*Pray without ceasing.* For understanding these words, let us first consider what is meant by the act enjoined, *praying*; then what the qualification or circumstance adjoined, *without ceasing*, doth import.

"The word *prayer* doth, in its usual latitude of acceptation, comprehend all sorts of devotion * * It includeth that praise which we should yield to God, implying our due esteem of his most excellent

SYDNEY SMITH.

and resources of worldly cunning, signify nothing in comparison of this one plain, easy way, of securing and promoting our interest; it is so excellent even in this point of view, that but for it, all things would be lost."

"If, then, it is the greatest of all follies to covet the fruit, and not cultivate the stock from whence it springs—if a ruler would have his subjects loyal, if a master would have his servants observant, if a parent would have his children grateful, if a man would have his friend faithful—if every one would have those with whom they converse just and sincere—if to bear any relation to men of this stamp be happiness, then is the Gospel most excellent, even in this world, for from the Gospel do these good dispositions and sound practices ever proceed."

"If a man be prosperous and wealthy in condition, the Gospel guards him from all mischief incident to that state, and while it disposes him to enjoy its best advantages, it keeps him from being swelled with conceit, and transported with fond complacency in his fortune. It reminds him that his lot is the gift of God, that it depends upon His disposal, that it may be soon taken away from him, and that he cannot otherwise than by humility and gratitude, and by the good use of it, be sure to retain it. It preserves him from luxury, sloth, forgetfulness of God and himself; it maintains among the floods of plenty a sober mind."

SYDNEY SMITH.

"On the necessity of Prayer.

"1 Thess. v. 17.—Pray without ceasing.

"It is the manner of St. Paul in his Epistles, after he has discussed doctrines, to propose rules, in the observance of which the life of a Christian consists: these he ranges not in any formal manner, but freely scatters them as they are suggested by the Holy Spirit which guided him."

"*Pray without ceasing!* For understanding these words I will first consider what is meant by praying, then what is meant by the qualification adjoined, of praying without ceasing.

"The word *prayer* in its usual meaning, comprehends every sort of devotion. It includes the praise we yield to God, implying our admiration of his perfections, of his works, of the wise dispen-

DR. BARROW.

perfections, most glorious works, most just and wise dispensations of providence and grace; that thanksgiving whereby we should express an affectionate presentment of our obligation to him for the numberless great benefits we receive from him; that acknowledgment of our entire dependence upon him, or our total subjection to his power and pleasure; together with that profession of faith in him, and avowing of service to him, which we do owe as his natural creatures and subjects; that humble confession of our infirmity, our vileness, our guilt, our misery, (joined with deprecation of wrath and vengeance,) which is due from us as wretched men, and grievous sinners; that petition of things needful or convenient for us, of supply in our wants, of succor and comfort in our distresses, of direction and assistance in our understandings, of mercy and pardon for our offences * * * * All these religious performances, prayer, in its larger notion, doth comprise; according whereto in common use, the whole body of divine service, containing all such acts, is termed *prayer*; and temples, consecrated to the performance of all holy duties, are styled *houses of prayer*."

"*Praying incessantly* may import the maintaining in our souls a ready disposition or habitual inclination to devotion; that which in Scripture is termed *the spirit of supplication*. This, in moral esteem, and according to current language derived thence, amounteth to a continual practice; a man being reckoned and said to do that, to which he is ever prompt and propense; as it is said of the righteous man, that *he is ever merciful and lendeth*, because he is constantly disposed to supply his neighbor with needful relief; although he doth not ever actually dispense alms, or furnish his neighbor with supplies for his necessity. *My heart*, said David, *is fixed; I will sing and give praise: fixed*, that is, readily prepared, and steadily inclined to devotion. So should ours constantly be. If there be (from stupidity of mind, from coldness of affection, from sluggishness of spirit, from worldly distraction) any indisposition or averseness thereto, we should, by serious consideration and industrious care, labor to remove them; rousing our spirits, and kindling in our affections some fervency of desire toward spiritual things."

"*Praying incessantly* may denote a vigilant attendance (with earnest regard, and firm purpose) employed upon devotion: such attendance as men usually bestow on their affairs, whereof although the actual prosecution sometimes doth stick, yet the design continually proceedeth; * * * as we say that such an one is building a house, is writing a book, is occupying such land, although he is at present sleeping, or eating, or following any other business; because his main design never sleepeth, and his purpose continues uninterrupted. This is that which is so often enjoined under the phrase of *watching about prayer*. *Watch ye therefore, and pray always*, saith our Lord. *Continue in prayer, and watch in the same*, said St. Paul. *Be ye sober, and watch unto prayer*, saith St. Peter. Which expressions import a most constant and careful attendance upon this duty; that we do not make it a matter of small consideration or indifference, of curiosity, of chance, to be transacted drowsily or faintly, with a desultory and slight endeavor, by fits as the humor taketh us; but that, accounting it a business of the choicest nature and weightiest moment, we do adhere thereto

SYDNEY SMITH.

sessions of his providence and grace; it includes that thanksgiving by which we express an affectionate remembrance of our obligations to God for numberless benefits; it includes acknowledgment of entire dependence, of subjection to his power and pleasure; it includes possession of faith, and avowal of service; it includes humble acknowledgment of guilt and misery due from grievous sinners. We must ask in prayer supply for our wants, succor for our distress, direction for our undertaking, pardon for our offences. All these religious performances prayer comprises; according to which, our whole body of divine service is called prayer, and temples consecrated to the performance of all holy duties, are called houses of prayer."

"*Praying incessantly* may mean, a ready disposition to devotion, that which in Scripture is termed the spirit of supplication: this in common language amounts to a continual practice, a man being said to do that to which he is ever prompt, as it is said of the righteous man that 'he is ever merciful, and lendeth;' because he is constantly ready to supply his neighbor with needful relief. 'My heart,' says David, 'is fixed: I will sing and give praise;' fixed—that is, readily prepared, and steadily inclined to devotion. So should ours constantly be! If there be from coldness, from sluggishness, from distraction, any aversion to prayer, we should by consideration and care labor to remove them, rousing in our spirits, and kindling in our affections, fervor towards spiritual things."

"*Praying incessantly* may denote a vigilant attendance with an earnest regard and firm purpose employed upon devotion: such attendance as you bestow in your affairs, where, though the prosecution sometimes stops, the design always proceeds; as we say that such a person is building an house, or writing a book, or occupying land, though he is at the moment following some other business, his main design never sleeps, and his purpose continues uninterrupted. This is that which is so often enjoined under the phrase of *watching about prayer*. 'Watch ye, therefore, and pray,' says our Lord. 'Continue in prayer, and watch in the same,' saith St. Paul. 'Be ye sober, and watch in prayer,' saith St. Peter. Which expressions import constant and careful attendance upon this duty, that we do not make it a matter of small consideration or indifference, of curiosity, or chance, to be transacted faintly, and with slight endeavor, just as the humor takes you; but that, accounting it a business of choice nature, and weighty moment, you adhere to it immovably, regard it without distraction, and pursue it with diligence unwearied."

DR. BARROW.

with unmovable purpose; regard it with undistracted attention, pursue it with unwearied diligence."

"*Praying incessantly* may signify, that we do actually embrace all fit seasons and emergent occasions of devotion. This in moral computation doth pass for continual performance: as a tree is said to bear that fruit which it produceth in the season; and a man is accounted to work in that trade, which he exerciseth whenever he is called thereto. The sense is, in several precepts parallel to that in hand, plainly expressed. *Pray*, saith St. Paul, *with all prayer and supplication*.

"*Every one* (saith the Psalmist) *that is godly will pray unto thee in a time when thou mayst be found.* * * * Thus, when we have received any singular blessing or notable favor from God, when prosperous success hath attended our honest enterprises, when we have been happily rescued from imminent dangers, when we have been supported in difficulties, or relieved in wants and straits; then is it seasonable to render sacrifices of thanksgiving and praise to the God of victory, help, and mercy; to admire and celebrate him, who is our strength and our deliverer, *our faithful refuge in trouble, our fortress and the rock of our salvation.* To omit this piece of devotion, then, is vile ingratitude, or stupid negligence and sloth. In surveying the glorious works of nature, or the strange events of Providence; then is a proper occasion suggested to send up hymns of praise to the power, the wisdom, the goodness of the world's great Creator and Governor."

"When we undertake any business of special moment and difficulty, then it is expedient (wisdom prompting it) to sue for God's aid, to commit our affairs into his hand, to recommend our endeavors to the blessing of him, by whose guidance all things are ordered, without whose concurrence nothing can be effected, upon whose arbitrary disposal all success dependeth. * * * When we do fall into doubts or darknesses, (in the course either of our spiritual or secular affairs,) not knowing what course to steer, or which way to turn ourselves, (a case which, to so blind silly creatures as we are, must often happen,) then doth the time bid us to consult the great Oracle of truth, the mighty Counsellor, the Father of lights, seeking resolution and satisfaction, light and wisdom from him; saying with the Psalmist, 'Shew me thy ways, O Lord, lead me in thy truth, and teach me; for thou art the God of my salvation: Order my steps in thy word, and let not any iniquity have dominion over me.'"

"When any storm of danger blustereth about us, perilously threatening, or furiously assailing us with mischief, (so that hardly by our own strength or wit we can hope to evade,) then with the wings of ardent devotion we should fly unto God for shelter and for relief. * * * When also (from ignorance or mistake, from inadvertency, negligence or rashness, from weakness, from wantonness, from presumption) we have transgressed our duty, and incurred sinful guilt; then (for avoiding the consequent danger and vengeance, for unloading our consciences of the burden and discomfort thereof) with humble confession in our mouths and serious contrition in our hearts, we should apply ourselves to the God of mercy, deprecating his wrath, and imploring pardon from him; remembering that promise of St. John, *If we confess our sins, he is faithful and just to forgive us our sins, &c.*"

SYDNEY SMITH.

"*Praying incessantly* may signify that you embrace all fit seasons for devotion; as a tree is said to bear that fruit which it produces in the season, and a man is accounted to work in that trade which he exercises whenever he is called upon. 'Pray,' says St. Paul, 'in every season.'"

"Every one," says the Psalmist, 'that is godly will pray unto thee when thou mayest be found. My prayer is made unto thee in an acceptable time.' Thus when you have received any singular favor or notable blessing from God, when success has attended your honest enterprises, when you have been happily rescued from danger, when you have been supported in any difficulty or relieved in want, then it is highly seasonable to render sacrifices of thanksgiving to the God of mercy; to celebrate him who is our strength and our deliverer, our faithful refuge in trouble, our fortress, and the rock of our salvation. To omit devotion under such circumstances is base ingratitude or stupid sloth. In surveying the glorious works of nature, or the awful events of Providence—then is a proper occasion to send up hymns to the power, the wisdom, and the goodness of the world's Creator and Governor."

"When you undertake any business of special moment and difficulty, then is it expedient to sue for God's aid, to commit your affairs into his hands, to recommend your endeavors to the blessing of Him by whose guidance all things are ordered, without whose consent nothing can be effected, upon whose disposal all success depends. When you fall into doubt and darkness, not knowing what course to steer, or which way to turn, (and to which of you all, does not this sometimes happen?) then is the time also to consult the great oracle of truth, the mighty counsellor, the Father of lights, and saying with the Psalmist, 'Show me thy ways, oh Lord! lead me in thy truth, and teach me, for thou art the God of my salvation. Order my steps in thy word, and let not any iniquity have dominion over me.'"

"When any storm of danger threatens, then on the wings of ardent devotion you should fly to God for shelter and relief. When any strong temptation invades you, which by your own strength you cannot grapple, but are likely to sink under it, then is it needful that you should seek from God a supply of spiritual force and the succor of Almighty grace. When from ignorance, or mistake, or rashness, you have transgressed your duty and incurred guilt, then for turning away vengeance and for disburthening your conscience, with humble confession in your mouth, and serious contrition in your heart, you should apply yourself to the God of mercy; deprecating his wrath, and imploring pardon from him. 'If you confess your sins, he is faithful and just to forgive you your sins,' &c."

We again presume that the above will suffice as a specimen of Sydney Smith's borrowings and mutilations. His discourse is not an honest digest, making the matter his own; but (in a man so able in composition) either sheer idle larceny, or an indication of consciousness that he could not write on the subject to any good purpose. He is too lazy even to take a reasonable portion of what he pillages; for the whole of his discourse may be read in ten minutes; a very meagre repast for a congregation hungering for the bread of life. It was evident he loved not his employment, and took very little pains in it.

We leave our readers to compare these extracts for themselves. It will be seen that some passages which last month we said surprised us from the pen of Sydney Smith—such, for instance, as that above-cited, where he speaks of the Holy Spirit as guiding the Apostle; and another a few lines after the last extract, where he urges his auditors "Not to quench or damp any sparks of devout affection kindled by the Divine Spirit,"—are mere quotations from Barrow, and not the suggestion of his own thoughts. We much doubt whether in any passage the essential peculiarities of the doctrines of Jesus Christ were referred to spontaneously and heartily by him; though he might endure some reference to them in copying a sermon, as he did in the Church Service, in condescension to the weakness of "fanatics."

The Sermon entitled "Upright Walking sure Walking," from Psalm x. 9, is so notoriously one of Barrow's, and the heading is so conspicuous, that it indicated a great defect of recollection in us last month that we did not recognize it at the first glance. Extracts would be superfluous. It is Barrow's, as those above mentioned are;—not the full feast of that munificent purveyor, but a few scraps of his dainties, and the washings of his dishes.

How far the same system is pursued with respect to other authors, or to Barrow himself, we have already said that we have not examined; for to do so might require us to refer to hundreds of volumes; and with no certainty at last that we had tracked all his sources. We feel quite sure that many passages or discourses are borrowed; they have not the native turn of Sydney Smith's mind; and in various places we seem to have reminiscences of having read them in substance elsewhere. We conjecture that the preacher's habit was very much to limit the original working out and composition of sermons, to those cases in which he had some passing and favorite topic to dilate upon; and to content himself in regard to the ordinary subjects of pastoral instruction with giving to his auditors what cost him least.

We survey such a volume as this with pain. What might a man, gifted as Sydney Smith was, have been as a preacher of Christ's holy gospel, had he understood and felt it in its real character; had it been the joy of his heart; and had he determined, by God's grace, not to know anything among men save Jesus Christ, and him crucified; setting forth his salvation as the only remedy for the sins and the sorrows of a guilty world? There might have been peculiarity of manner; he might

have been as original as an evangelical instructor, as he was as a political satirist;—every man has his gift—and it is not necessary or desirable to drill all the ministers of Christ into a platoon uniformity of topics or style; but the characteristics of the Gospel are unchangeable; its essential features must ever be kept in distinct prominence; and never must the preacher overlook man's desolate and degraded condition by reason of the fall; the work of the Holy and undivided Trinity in his recovery; the Father giving his Son as a ransom for lost mankind; the Son undertaking and completing the mighty task; the Holy Spirit enlightening, regenerating, and purifying the soul; justification by faith, which receives the Redeemer, as made unto us wisdom, righteousness, sanctification, and redemption; and the heavenly graces divinely implanted in the heart of the believer, and evinced, as the necessary fruits of faith, in a holy and spiritual life. Such was not the character of Sydney Smith's preaching; he did not recognize such principles, or look for such effects; and he would have scoffed at any man as a fanatic who should set forth the Gospel after this fashion. But if it be anything, it is this; if it is not "a cunningly devised fable," it is "the power of God unto salvation unto every one that believeth." There is no middle course consistent with Scripture, or the documents of the Anglican confession; and those who declare that they believe themselves moved by the Holy Ghost to take upon them the office of a Gospel minister, and upon that declaration are admitted thereto, but when admitted become mere lecturers in good morals or good manners, abuse their trust, and are answerable for "the blood of souls." Whether Sydney Smith seriously considered his responsibility in this awful light, and acted upon it, was a question between him and his God; but his published sermons are before the world, and we dare not assert that they bear evidence that such were his views; or that he had duly weighed the solemn declaration of St. Paul, "Woe is unto me if I preach not the Gospel."

COAL GAS LIGHTING IN CHINA.—Whether, or to what extent, the Chinese artificially produce illuminating gas from bituminous coal we are uncertain. But it is a fact that spontaneous jets of gas, derived from boring into coal beds, have for centuries been burning, and turned to that and other economical purposes. If the Chinese are not manufacturers, they are, nevertheless, gas consumers and employers on a large scale; and have evidently been so ages before the knowledge of its application was acquired by Europeans. Beds of coal are frequently pierced by the borers for salt water; and the inflammable gas is forced up in jets, twenty or thirty feet in height. From these fountains the vapor has been conveyed to the salt-works in pipes, and there used for the boiling and evaporation of the salt. Other tubes convey the gas intended for lighting the streets, and the larger apartments and kitchens. As there is still more gas than is required, the excess is conducted beyond the limits of the salt-works, and there forms separate chimneys or columns of fire.

From the *Gentleman's Magazine*.

Anecdotes of Dogs. By EDWARD JESSE, Esq. 4to.

IN very ancient times, we do not at present recollect the exact country—but there was once a dragon that fell deeply in love with a very beautiful young lady, whom he had seen when he went in disguise to her father's court, for in those early periods of the world it did not seem unusual for dragons and princesses to fall in love with one another. Now this young lady, who was the daughter of the king of the country, had the misfortune to be blind from her birth; but, notwithstanding, her eyes were so bright that no one could possibly suspect the defect, and, so carefully was the secret kept by the strict command of the king and queen, her august and afflicted parents, that it would probably have remained unknown to this day, had not a favorite *dog* of the princess accidentally sitting by her on the sofa, as she was helping herself to a small plate of minced veal;—but we are afraid that if we begin our history of *dogs* so far back, not only may the further details appear somewhat too redundant and copious, but, besides, we shall deprive ourselves of the power of mentioning the more authentic anecdotes given by Mr. Jesse of the canine species in the excellent, interesting, and instructive volume before us—for Mr. Jesse has most judiciously made his book a repository of *facts*, and has neither bewildered himself nor his readers in an endless maze of metaphysical speculations regarding the *theory* of instinct. Every additional and authenticated fact is a step gained in our knowledge of the animal. We must first know what dogs do, before we can reason as to how they do it. It is not every one who has the opportunity of gaining such acquaintance with the singularities of character here mentioned. We meet everywhere plenty of *sad* dogs and *comical* dogs; but dogs who can think, and talk, and argue, and act, like Christians—these are dogs worth knowing, and a larger acquaintance can be gained among them in this volume than in any other we have ever met with. But to read it with advantage requires, we think, some preparatory education. Thus, to those of our readers who are quite unacquainted with the genus which is called by Linnæus "*Canis*," by Buffon "*Le Chien*," and by English naturalists, as Pennant, Shaw, and others, "*The Dog*," it may be as well to describe it, or perhaps it would be better to refer to the very scientific and learned volumes of the authors we have mentioned; when, after making themselves masters of the description—as *Ordo*, *Ferarum*; *Genus*, *Canis*; *Species*, *Culinarius*, or *Turnspit*—the plan we should devise them to adopt is as follows; when they have mastered the definitions, they should then, in order to understand the internal structure, attend a few mornings at the Hunterian Museum, where Professor Owen will be happy to exhibit them specimens of the various skeletons from that superb collection; and perhaps one or two subsequent days spent attentively with Mr. Gray of the British Museum in inspecting the various skins of the animals in his cases, will suffice for general purposes; after which they will find little difficulty in becoming acquainted with specimens of the living animals in the zoological and other collections. We have only to say, that this is the method we pursued, and so successfully that there is not a single dog mentioned in Mr. Jesse's book that we

are not more or less acquainted with, except, indeed, the "*Irish-Wolf-dog*," and that we should have known had it not been *extinct*.

But, before we give any notices from the volume itself, we may as well mention what are the somewhat extraordinary results of a closer investigation of the peculiar and individual characteristics of dogs, as witnessed and recorded by persons who have devoted much attention to the subject, and who have been equally acute in their observations and accurate and faithful in their record. It appears, then, that there is scarcely a *character* which it has been supposed the human being is alone able to possess, but the dog can also, whether by imitation, by instinct, or intelligence, claim his share.

Thus, a dog is a poulterer; he is a time keeper; a penny postman; a butler. He is a member of the Humane Society; he is a calculator; he possesses imagination; understands hospital practice; is a goal deliverer; a ferryman. He is one of the detective police; a thief-catcher; he carries a lantern by night; he provides dinners; he is a caterer; he is a fireman; he dislikes new married ladies—eschews all brides; he knocks and rings; he peels turnips; he has an antipathy to whips; he is a hypocrite—an imposter; he is a truly excellent person; he likes apples; he calls Mr. Williams by his name; he detects house-breakers; he is given to melancholy; he remembers injuries; he is kind and attentive in sickness; he does not take bribes; he is an undertaker; he will not do other people's work; he comes from Asia, but does not seem inclined to go back; he never tells lies; he takes long tours; he knows those who are descended from the kings of Ireland; he is superior to the generality of mankind; he dislikes parts of the morning service; he does not appear to believe in a future state, &c. &c. Such is the result of the information in the volume before us, where we find an account of twenty species of dogs, consisting of those most remarkable and most interesting; and we must say that there is not a single species described in which Mr. Jesse has not introduced some *new* matter—some additional information regarding their habits, instincts, and peculiarities, which stamp an authentic value on the work, and add another link to the chain of science. On the very disputed subject of the "*Irish wolf-dog*" he has collected, we think, all the information that is available; and the result in our minds agrees with the conclusions of Mr. Scrope, that it is probably the same animal as the original Highland deerhound, the dog described in the chase (p. 84;) and we reluctantly but firmly repudiate the authority of the picture we saw at Mr. Lambert's (now at Lord Derby's,) said to be taken of one of Lord Altamont's breed, as a resemblance of the true animal; and so we told Mr. Lambert at the time.

Some persons have objected to the identity of the Irish and Scotch dogs, on the ground that the latter, in the few specimens still remaining, would not be able to cope with the wolf or master him. Probably not, nor generally would a single foxhound master a fox. The destruction of the wolf was not trusted *alone* to the dog; he was no doubt pursued in Ireland and England formerly, as in France now, by chasseurs with guns, *assisted* by dogs; just as Mr. Scrope describes the system adopted in the deer-stalking. The large wolf-dogs would either retard, or bring the wolf to bay till the hunters came up, or follow and destroy him if

wounded; or a *couple* such dogs as Bran and Boska might possibly attack and overpower him; but no dogs could ever be employed to *destroy* wolves *suis viribus*. In the course of two or three such deadly encounters they must be severely and perhaps fatally maimed, and rendered unable to do further service; and yet writers seem to take for granted that the wolf-dog would destroy wolves, as greyhounds do hares, and upon that argument bestow on it greater size and strength than it probably ever had, *certainly* if it was the same as the Highland deer-hound. When we were in Germany and Switzerland we heard many stories of the Great St. Bernard dogs destroying wolves, but they were too vague to be true; and we once saw at Gex in Switzerland a dog of this breed, that was said to be the largest dog in Europe, and for which large sums had certainly been refused, who we were told by the owner had killed several; but we still maintain our doubts on the subject. The wolf is much more agile and active in its movements than the dog, and could easily evade him; while he has not courage to attack an enemy able to encounter him. This animal has indeed a very strong natural antipathy to the dog; and in the severe winters in Germany it comes into the villages and carries off all the *smaller* dogs it can meet with, while in Russia even the large mastiffs or sheep-hounds are torn to pieces by the wolves if they stray too far from home. Nor could anything be gained in the breed of dogs by *crossing* with the wolf; it would create a restless, cunning, half ferocious, half cowardly, we may call it untamable, animal, instead of the long civilized, long attached, noble, courageous, gentle, and man-loving dog. That in all our menageries and zoological collections no experiments have been made on the various breeds of *wild* dogs, such as those of Andalusia, India, and the Cape, and no attempts to discover whether by domestication they would change their habits, and even fall into different varieties, we much wonder. It would be a rational and curious inquiry, and might throw light on the history of the domesticated dog, and show on what foundation such theories as those of Buffon and others have been built, whether wrong or right.

Were we to extract the new and curious illustrations which in the work have been brought to bear on the instincts and powers of the dog, it would be to transcribe half the volume; therefore all we can do is to give two or three extracts, and leave the rest to the reader's curiosity, which will be amply gratified.

P. 22. "During a very severe frost and snow in Scotland the fowls did not make their appearance at the hour when they usually retired to roost, and no one knew what had become of them. The *house dog* at last entered the kitchen, bearing in his mouth a hen, apparently dead. Forcing his way to the fire, the sagacious animal laid his charge down upon the warm hearth, and immediately set off. He soon came again with another, which he deposited in the same place; and so continued, till the whole of the poor birds were recovered. Wandering about the yard, the birds had been benumbed by the extreme cold, and had crowded together, when the dog, observing them, effected their deliverance."

P. 23. "I have been informed of two instances of dogs having slipped their collars, and put their heads in again, of their own accord, after having committed depredations during the night; and I

have elsewhere mentioned the fact of a dog, now in my possession, who undid the collar of another dog chained to a kennel near him."

P. 48. "At Albany in Worcestershire, at the seat of Admiral Maling, a dog went every day to meet the mail, and brought the bag in his mouth to the house. The dog usually received a meal of meat as his reward. The servants having on one day only neglected to give him his accustomed meal, the dog, on the arrival of the next mail, buried the bag, nor was it found without considerable search."

P. 206. "Mr. Morritt had two terriers of the pepper and mustard breed. These dogs (females) were strongly attached to their excellent master, and he to them. They were mother and daughter, and each produced a litter of puppies at the same time. Mr. Morritt was *severely* ill at the time, and confined to his bed. Fond as these dogs were of their puppies, they had an equal affection to their master; and in order to prove to him that such was the case, they adopted the following expedient:—They conveyed their two litters of puppies to one place, and while one of the mothers remained to suckle and take care of them, the other went into Mr. Morritt's bedroom, and continued there from morning until evening. When evening arrived she went and relieved the other dog, who then came into the bedroom, and remained quietly all night by the side of the bed; and this they continued to do day after day in succession."

P. 210. "A few years ago a *blind* terrier dog was brought from Cashibury Park, near Watford, to Windsor. On arriving at the latter place he became very restless, and took the first opportunity of making his escape, and, *blind* as he was, made his way back to Cashibury, his native place."

P. 227. "A gentleman residing at Worcester, had a favorite spaniel, which he brought with him to London *inside the coach*. After having been in town a day or two he missed the dog, and wrote to acquaint his family at Worcester with the loss. He received an answer informing him that he need not distress himself about *Rose*, as she arrived at Worcester five days after she had been lost in London, but thin and sadly out of condition."

P. 243. "The late Duke of Argyle had a favorite poodle, who was his constant companion. The dog, on the occasion of one of the duke's journeys to Inverary Castle, was, by some mistake, left behind in London. On missing his master, the faithful animal set off in search of him, and made his way into Scotland, and was found early one morning at the gate of the castle. This anecdote is related by the family, and a portrait of the dog is shown."

P. 301. "There is a story of the Bath turnspits, who were in the habit of collecting together in the abbey church of that town during divine service. It is said—but I will not vouch for the truth of the story—that hearing one day the word '*spit*,' which occurred in the lesson for the day, they all ran out of the church in the greatest hurry, evidently associating the word with the task they had to perform."

Probably some other phrases had previously caught the attention of these canes *gulae dediti*, as, "Thou shalt eat it *roast*," &c., or, "Not *roast* with fire;" and perhaps these dogs did not like the frequent repetitions of the word "*concur*," especially as followed by "*concord*." However,

they were evidently very clever, sensible dogs, and knew, as well as the *footmen* do, the proper moment to leave the church.

And now we must reluctantly leave this entertaining and instructive volume. How far the possession of such materials may enable us hereafter, by *induction*, to throw light on the mysterious nature of animal instinct, we cannot say: probably it is altogether out of our reach, a spiritual world unknown to us, and unapproachable. There are strange and singular circumstances we should not have expected connected with it. Perhaps the minds of the animal creation are constructed on different principles from ours, and possessed of quite other means and springs of action. The most wonderful powers are given to the *smallest insects*. What is a dog, or an elephant, the most sagacious of the larger animals, compared to a bee, who has solved a problem in the highest mathematics without possessing a knowledge of the differential calculus, in order to enable her to deposit a drop of honey in a little case? Much difficulty has been thrown round this inquiry from the want of precise terms to express what we really intend to signify when we speak of the faculties of animals. Instinct, intelligence, understanding, reason, are all terms with difficulty admitting strict definition. When we say, on witnessing some remarkable action of an animal, "Surely this is reason!" do we mean that same reason given to man, which makes him a responsible being? If it is answered, "the same in kind, but not in degree," then it is possible that some animal may appear who has passed the limits of the ordinary faculties bestowed on his race, and, improving his *reason*, at last brings it to a comparison with man's; and thus we should have a responsible monkey, or a poodle regulating his actions on the greatest-happiness principle; an Ipswich coach-horse refusing to travel on Sundays, or a Bengal tiger taking during Lent to vegetable food. Or who is to define the exact limits beyond which animal reason is not to go? But if it is allowed that it is not the same in *kind*, then it is not "reason;" and then we have to retrace our steps, and find some other term. We may talk about animals possessing "reason," but with what astonishment and alarm should we not really behold such a phenomenon! Instinct certainly appears sometimes to advance beyond its proper boundaries, and touch upon the line of reason, but as surely it instantly recedes from it.

Ἀνθρώπους δ' οὐ μόνους τῶν ἄλλων ἰσὺν ἔχουσι Ζεὺς.
There are, however, one or two circumstances we should not lose sight of in this inquiry. The question being, When do animals appear to show some quality different from, and superior to, instinct, and which seems to form a part of the *animus rationalis*? Now we think that this variation from the general law is seldom shown in *wild* animals, with the exception of the bee; nor is their instinct able to expand and alter itself sufficiently to meet great and unexpected demands. Every animal is gifted with the power to endeavor to preserve itself from its *natural* enemies—the antelope from the leopard, the swallow from the hawk, the flying-fish from the dolphin. But when, instead of meeting their *natural* enemies, they are opposed to the superior powers and complicated artifices of man, then their instinct does not proportionably advance, as reason would do. We call a hen stupid because, taking out her eggs from her nest, we put some chalk stones in their place, on which she remains brooding in perfect satisfaction. Now there is no stu-

pidity in this, but the fact marks the limits and the intent of instinct in the bird; because no animal, no hawk, no carrion crow, nor any other enemy of hers, would thus change her eggs, and she was not provided by nature with a faculty to meet the philosophical ingenuity of man, endeavoring by these *sleight-of-hand* tricks to investigate the nature and extent of her faculties. The salmon can escape from its natural enemies, the porpoise and dogfish, but cannot distinguish the artificial fly from the natural one. But this shows no want of sagacity in the creature; for the deception of the artificial fly lies *beyond* the boundary of its natural and necessary instinct. Every animal in short is gifted with an instinct sufficient to preserve itself, in accordance with the tenure of life given by the Creator: but no animal can preserve itself from the superior power, the mechanical ingenuity, and inventive skill of man. Hence we conclude, that in the animal creation, in their wild and natural state, *instinct* acts by laws limited, and regular, and sufficient for the preservation of the creature or its species.

But the case is somewhat altered, and the investigation becomes more complicated, when animals are domesticated with man, taken under his protection, and living in his presence, and artificial habits are superinduced. They then are removed from their natural sphere, and placed in circumstances where some qualities are no longer wanted, and others are required. They first begin by seeing they are under a power superior to their own: they fear and they love; and through love and fear they obey. Then they are naturally led to watch, to observe, to learn, and to imitate. Some instinctive qualities, as those of assiduity and activity in procuring food, are no longer wanted, and are disused; while others are required, and exercised, and improved. Their mental faculties are enlarged and sharpened, by living with an intelligence, and obeying a power superior to their own. The *wild* elephant, the *wild* dog, exhibit no superior faculties whatever: these are developed by domestication and education; but it must be remarked, whenever an animal that has been tamed and instructed regains its liberty, its acquired faculties all cease, and it relapses into its original nature; if not, "a monkey who had seen the world," when he escaped from confinement, might become the Socrates of his native forests; introduce both the fine and useful arts among his brethren, and have a school of young philosophers with cheek-pouches and prehensile tails. Again, it must be observed that the acquired habits of an artificial life become *hereditary*; but it requires that the change should be transmitted through successive generations before the domestication is complete; and then it is observed that an alteration of structure takes place, as in the goose, rabbit, &c. We should also observe that we are ignorant of the degree to which the *senses* of animals are developed. It is, notwithstanding various and careful experiments, quite a doubtful and disputed question, whether the vulture detects its distant prey by the sight or smell; in fact, the experiments are contradictory; but either the power of sight or that of smell in the bird must be developed to an excess we can scarcely appreciate. In the same manner the wolf can at a distance scent the fallen beast; and the seagulls assemble rapidly in multitudes from all quarters to a single small spot where the retreating tide has left their proper food. This may however be accounted for, by supposing an

extraordinarily developed nervous system, as superior to ours, as a magnifying glass is to a common one. But how shall we explain actions still more perplexing, and yet perfectly authenticated!—as that a cat should be put in a basket, and that basket placed in a carriage, and it should go twelve or fifteen miles in the dark to its new home, and yet in a few days should be found at its old abode. Here we should suppose neither eye nor ear, neither sight nor smell, nor any *known sense* or faculty, could supply the knowledge and power wanted. We know of no mental processes, nor corporeal sense, analogous to what must be requisite for the execution of such a journey as this; or was it, may we ask in reverence, a hand divine that for this poor animal lighted a lamp within the recesses of its nature pregnant with ethereal fire, and drew for it a *meridian* to guide it in safety in its dark and solitary way; and yet we confess *ἀγνοοῖν ὁ τρόπος τοῦ θεοῦ καὶ τῶν ἀρχῶν αὐτοῦ*. But we must now stop; we are not satisfied with any theories or speculations that have been advanced on this subject, however ingenious or profound; and for ourselves, we think it is safest and wisest, as it is most accordant to our own feelings, to believe that we are surrounded and served by creatures the able and willing ministers of our wants and desires; who yet exist as a living world unknown to us, and the nature of whose mental faculties are to ours a mysterious, an awful, and an impenetrable secret. Deo omnipotenti detur gloria!

LEAGUE—ANTI-CORN-LAW.—An association formed to do a certain thing, and wonderful to relate, actually doing it. The Anti-Corn-Law League originated at a public dinner given to Dr. Bowring, in 1838, at Manchester, and is a remarkable instance of after-dinner enthusiasm having led to anything like sincerity and earnestness. As the league progressed it took to publishing tracts against the corn laws, and issued about one hundred tons; but it is a well-known truth that tracts never make a subject attractive. The arguments are believed to have been weighty, and put the question on a broad scale, for they succeeded in putting it on those very broad scales that are generally used by the cheesemongers. The other measures of the Anti-Corn-Law League were, however, taken with so much judgment, and pursued with so much energy, that the government, placed in power for the purpose of protecting the corn laws, became so completely converted as to propose and carry their abolition.—*Punch*.

LONDON'S SAFETY.—Napoleon, when he conquered Italy, carried away all the statues. London, in the event of an invasion, is at all events protected from a similar spoliation, for all its statues are so bad that not the greatest barbarian would do us the friendly turn to carry away one of them.—*Punch*.

CORRESPONDENCE.

WE copy from Mr. Walsh's letter of 29th May a few paragraphs which could not be crowded into the last number.

A war of tariffs has been commenced between the government of Sardinia and the Austrian in Italy. As the King of Sardinia has encouraged eloquent publications in favor of Italian nationality

and unity, and liberal institutions and administration, it is inferred that the tariff-contest may mean, on his side, a design of ultimate Italian independence. King Charles Albert, it is said, could raise, in a fortnight, an excellent army of a hundred thousand men, and the finances of Piedmont are remarkably prosperous: all Italy would answer to his call, and the Austrian domination be at once crushed. But the Holy See would not confederate with the house of Savoy against the Austrians, its protectors: moreover, that house would dread the too constitutional or republican tendencies of a revolution. An eminent Sardinian refugee charges the Sardinian monarch with seeming to encourage the patriotic and liberal oracles, in order the better to beguile the party of reform and peninsular nationality, which, ever and anon, effervesces and occasions a popular glow and monarchical panic. The independence and union of Italy is an ancient and beautiful theme; genius of every kind has lavished all inspiration and national instinct upon it in exquisite prose and verse. We have never seen it near to be realized; more may be hoped, however, than in the case of Poland.

The house on the Quay Napoleon which was inhabited by Abelard and Eloisa has just been demolished. Well if their whole memory could be so; it is strangely consecrated in French literature. A sealed inscription, which I saw accidentally some years ago, in the wall of the first story of the quaint old edifice, certifies their residence.

In a discussion in the central congress of agriculture on the 25th instant, a member expatiated on the success with which the "masses" in the United States were "moralized" by labor, especially in the manufactories. Thousands of young operatives in the same *fabrique*, and morals yet as pure, could be desired! Let us, he exclaimed, try to employ, in this country, in a similar way, the hundreds of thousands of children of indigent families, to whom the state grants and seems to owe nothing, but who have claims on our charity and our prudence. Mix your myriads of *foundlings* with them indiscriminately, and you will doubly preserve and moralize the latter. The stain of the birth will be effaced in the common existence and training; an excellent scheme. You may find, in the late debates in the house of commons, very honorable mention of the discipline and the moral and intellectual superiority of the operatives of Lowell. In the British factory question stress is laid there on the number of hours of labor in the week—greater, it is observed, than in England; but the feeding, lodging—the whole being of the American operative, give faculty for more labor with much less fatigue or disadvantage, of whatever description, than those of any European. Awful testimony was borne in the house to the effects of the usual labor in Great Britain on both adults and children. Still, said Sir James Graham, "if we restrict the hours, we risk all national supremacy and vitality; then we would be bound, in justice to the workmen, to adopt a *minimum* of wages; and, if they did that, the consequence would be that capital would take unto itself wings, and would be invested abroad, where wages were lower and there was no such legislative interference. The commencement of that career would be the first step towards the destruction of our manufacturing prosperity, and with the downfall of our manufacturing prosperity we might look for the loss of our position amongst the nations of the earth. [Hear, hear.]"

From Chambers' Journal.

FOUR-AND-TWENTY HOURS AT SMYRNA.*

It must be almost impossible for those who have never had an opportunity of visiting eastern countries, or experiencing a greater degree of summer heat than our own temperate climate can produce, to form any idea of the marvellous brilliancy of those striking landscapes when the noonday sun is pouring down his full splendor upon them. It is but seldom, indeed, that persons habitually resident in those regions ever witness such a sight. There are few admirers of nature sufficiently enthusiastic to brave a *coup de soleil*, or a brain fever, one or other of which fatal consequences are too often the result of incautious exposure. Yet although it was on one of the most sultry days in the month of May that we landed at Smyrna, I think any one would have risked a good deal to have witnessed the scene which gradually opened upon us as we approached that interesting spot. Sky, earth, and sea, all were bathed in one flood of light; and the full blaze of an unclouded sun at once illuminated and embellished the beautiful Asiatic shore and the picturesque city which lay before us. Only one dark spot, which even that flaming orb could not brighten, gave effect to the landscape; and this was the grove of sombre cypress-trees which, spreading over the side of the hill almost to the sea-shore, marked out the Moslem cemetery. There are few, if any, of the eastern cities more deeply interesting than Smyrna; the very name must at once suggest its principal claim for a more than ordinary share of attention; and in fact it is only in reference to it, as one of the seven churches of Asia, that the more prominent features of its present condition become so remarkable. From its central position as well as from its commercial influence, it is the resort of persons of every country and denomination, besides being the resting-place of travellers to many different quarters; and, in consequence of this, I believe there is no place where so many different religions are not only tolerated, but firmly established and flourishing, in perfect harmony with each other. Mohammedanism is of course the religion of the country, but its various sects are here more than usually distinct. Judaism greatly prevails—the Hebrew population being numerous, and the members of the Armenian church scarcely less so. Then there is the Gueber, or fire-worshipper, whose adoration of the sun is at least less astonishing here than it would be in England: the Greek; the Roman Catholic; the Nestorian; and many others, which I have neither time nor space to enumerate; besides a considerable number of Protestants from all parts of the globe. There are several European families which have become naturalized at Smyrna; and notwithstanding the lapse of a generation or so, they cling with the greatest tenacity to the manners and customs of their countries, and in many instances have preserved the purity of their faith, both in doctrine and ritual,

far more perfectly than it now exists in the lands whence they brought it. Besides all this, Smyrna is, as it were, the focus of the numerous branches of missionary societies in the East, and it is consequently inhabited by a vast number of Americans. It was my favorite plan, that we should endeavor to visit all the places of worship to which we could gain access in the city; but we were on our way to the Black Sea, and the steamer only remained four-and-twenty hours at Smyrna, which was undoubtedly too short a stay for so interesting a place, and rendered my project scarcely feasible.

We had scarcely anchored, when the fact that we had passed, within the last twelve hours, from one quarter of the globe to another, was brought with full conviction on our minds by the arrival of sundry most Asiatic-looking figures, whose manners and appearance afforded a striking contrast to the Greeks of the classical island of Scio, which was the last place we had touched at. Although nothing could be more picturesque than these fine-looking, majestic men, with their black eyes, long beards, and dark olive complexions, they were merely "valets de place" come to offer their services; and it seemed very strange to hear them, in their flowing garments and heavy turbans, talking French, English, and Italian with the greatest ease. The process of going on shore appeared to us one of considerable difficulty; for the only means of transporting ourselves and our luggage was in boats, so extremely small and narrow, that we fancied the weight of one person would be sufficient to capsize them; but as there was no alternative, we consented to embark in a slender little caïque, which, though it danced on the waves as if it had been made of India-rubber, certainly brought us safely to land. We had so many friends and near connexions in Smyrna, that we scarcely felt ourselves in a strange country, as we walked, accompanied by them, to the house of Madame W—, whose kind hospitality was to save us from the miseries of a night in a *soi-disant* European hotel. The streets, as in all eastern towns, were dirty, dark, and narrow; but we were too much delighted with the endless variety of costume, to think either of the rough stones, or of the heat of the sun, from which we were only partially protected by the projecting balconies and canopied stalls. We passed along the whole length of the "Street of Roses," scarcely finding time to ask to what nation each fantastic figure belonged. There was the Armenian, with his narrow, straight robe, and his black head-dress, which I can only describe as an enormous square cushion; the dervish, with his blue mantle and high conical cap; the Cossack, with a perfect mountain of fur on his head; and numbers of women, with their white or black veils and huge brown cloaks.

The house of Madame W—, to which we were going, was in the Quartier Franc, and, like most other good houses in that part of the town, was surrounded by a large court, filled with trees, the entrance to which was by a stone passage, so long and wide, that we fancied ourselves still in the street, until the ponderous gate was closed behind us. We were not sorry to remain quietly under shelter for several hours, till the heat had

* We are indebted for this paper to the same lady who lately graced our pages with descriptions of the Slave Market of Constantinople and the Harem of Eiredeen Pacha.

abated; but as soon as the streets were somewhat in shade, we set out to walk to the Bridge of the Caravans, which is the fashionable evening promenade in Smyrna. To reach this spot, we had to traverse almost the whole town, in fact but a continuance of ill-paved streets. It is the custom of the Smyrniote ladies (rather a singular one, according to our ideas) to pass the evening in the open air, at the doors of their houses. Amongst the higher classes, they even have their vestibules arranged for this purpose, with ottomans, cushions at no allowance, and tables loaded with sweetmeats and all sorts of "fricandises;" and really they looked so charming, as they reclined in graceful attitudes, laughing and talking together, in their little red and gold capes, short velvet jackets, and silk petticoats, that we were quite disposed to approve of a practice which thus enabled us to judge of the famed beauty of the Smyrniote women; and I must own that, except in the island of Naxos, which I think unrivalled on this score, I have never seen a greater collection of lovely faces. We could not, however, pay them all the attention they deserved, from the very evident necessity of taking care of ourselves in the narrow streets; for the Turks treated us with indifference; and I think they would really have walked over us quite coolly, rather than give themselves the trouble of making way. We had especially to keep clear of all the magnificent Osmans and Mustaphas who came jogging towards us, mounted on little miserable donkeys, and looking most pompously ridiculous with their solemn faces and ponderous turbans, whose weight alone would have seemed sufficient to have overpowered the wretched animals they rode on. The change was delightful when we emerged from the stifling atmosphere of the town into the lanes which led through green vineyards, and beneath the pleasant shade of mulberry-trees to the bridge; nor did we find the walk too long, though the distance is considerable from the Quartier Franc.

This much-vaunted bridge derives its name from the number of caravans that hourly pass over it on their way to the interior of the country, and is remarkable only from the extreme beauty of its position. It is high, long, and narrow, stretching over a clear and rapid stream, and surrounded on all sides by magnificent old trees. At a short distance rises a green and vine-clad hill, whose summit is crowned by a ruined castle, which, though picturesque, is of no great antiquity or interest. On the one side of the river—the refreshing murmur of whose waters has, in this sultry land, a charm we never could imagine elsewhere—numberless little establishments have been erected, where coffee, pipes, ices, &c., are provided for the promenaders, and chairs are placed under the trees, that they may sit luxuriously in the shade, and partake of these refreshments; and here does the whole fashionable world of Smyrna congregate every evening, to walk and talk, to see and be seen. On the other side of this narrow stream, but a few yards distant, silent, desolate, and shrouded in impenetrable darkness, lies a vast Turkish burial-ground, extending much farther than the eye can reach, and possessing, in the highest degree, the picturesque beauty for which those cemeteries have always been celebrated. It was impossible for the most unimaginative mind not to be struck with this singular sight: that little sparkling river, dancing on its way with, on the one hand, life busy, gay, and frivolous; and,

on the other, death in its most solemn gloom and stillness! We determined to visit both; but we chose first to inspect the portion devoted to the living; and certainly it presented life under a novel aspect. Everything that retained the true "souleur locale" was delightful, especially the portly Mussulmans, seated in a circle on their rich carpets, smoking gravely, and emitting a short sentence once in half an hour. But amidst the crowds from every nation that surrounded us, there were not a few who laid claim to being thoroughly Europeanized; having, in their own opinion, arrived at this happy consummation by caricaturing outrageously the Parisian fashions of the last season—just as they are apt to do in provincial towns at home; though nowhere could the glaring mixture of colors, and the indescribable hats and feathers, have looked so absurd as when contrasted with the native costume, and surrounded by that truly Oriental scenery. We were watching a group of Turks who were supping together—each one partaking in turn of a greasy ball of rice, which was administered to him by the head of the party, whose green turban distinguished him as a descendant of the prophet—when an exclamation from one of our companions attracted our attention to a caravan that was crossing the bridge. The procession was headed by a little, sober-looking donkey, unburdened, and without saddle or bridle, which led the way with great sagacity; and notwithstanding his humble appearance, we were assured that, without his assistance, the drivers would have found it impossible to have induced the camels to proceed. Next came a long and almost interminable line of those huge animals, walking in single file with that slow undulating movement which is so peculiar to their species; they were heavily loaded, and each one was mounted by his master, who guided him merely by the voice. The long train, with its gay eastern dresses, had an admirable effect as it wound under the trees and across the bridge; it was altogether in perfect keeping with the landscape. We watched them till the last camel, of which there were some fifteen or twenty, had disappeared, and then we also crossed the bridge, in order to explore the cemetery.

The distance was but short which separated the haunts of the living from the dwelling of the dead; yet scarcely had we penetrated a few steps into those thick shades, when we found ourselves shut out completely from all sight or sound that told of human life, and in the very midst of that most awful of all desolation—a solitude peopled with the ashes of those who were and are not! Around us, on every side, dark and silent, rose an interminable forest of gigantic cypress-trees, so closely grouped, that even the light of day could scarcely penetrate amongst them, and spreading on and on in unbroken gloom, till the eye became bewildered in attempting to limit their empire; and beneath, yet more interminable, yet more sad and silent, lay the forest of tombs, each cold white stone strangely distinct in the surrounding darkness, and yet so innumerable, so thickly strewn upon the earth, that a chill struck on the heart at the thought of how immense was this population of the dead. There was not a sound: for the summer breeze, passing through the unbending branches of the cypresses, drew no murmur from those mournful trees, and the slanting rays of the setting sun, as they shot at intervals across the graves, made the turbaned monuments look, in the faint glimmering

light, like the pale phantoms of the departed, each one watching over his own slumbering ashes. We sat down among the tombs to wait the termination of sunset, whose influence we felt in the deepening shadows round us; though it was rarely that we caught a glimpse of that fading glory, or of the softer light of the rising moon, whose silver crescent, appearing among the trees, amply compensated for the entire absence of twilight. Monsieur V—— read to us the inscription on one of the graves near us, whose highly-gilt monument and painted turban seemed to indicate that the dust it contained had once been honored of men. It stated that this son of the faithful had, throughout a long life, so perseveringly performed all the outward acts of devotion in which the religion of the Moslem consists, that he was most assuredly wandering even now with the dark-eyed houris by the shores of that lake where lie the sparkling bowls filled with the water of immortality. To me, in that vast abode of the dead, which in its deep stillness seemed so far removed from the hopes and fears of human life, it was quite painful to be recalled by this pompous panegyric to the gross and lowering ideas with which the Mohammedans have clothed even the heaven of their dreams; for their creed does not allow the soul to disengage itself from the trammels of the flesh, even in their hope of an immortality beyond the grave. It is a very characteristic trait of this people, the care with which a little basin is scooped out on the stone of every grave, to catch the rain-water, that the birds may come and drink; thus carrying out their principle of universal charity even after death. We left the cemetery as soon as it was dark, passing once more through the merry groups who were proceeding homewards, each one carrying his little paper lantern to light his steps as he went along.

Before six o'clock the next morning we were all astir, anxious to accomplish what we could in the short time allotted to us. We proceeded first to the bazaars, in search of some of the beautiful Smyrniote embroidery, which is nowhere else to be found. These bazaars are as spacious as they are interminable, and their shops displayed the produce of every part of the globe. We entered into several of them, finding each furnished with its Persian carpets, and comfortable cushions placed round the wall, where we were invited to sit and drink coffee as long as we chose. But the most interesting sight, where everything was new and picturesque, were the traders who had come from the interior of the country, and who, with their singular dresses, wild gestures, and strange dialect, attracted much of our attention as they stood in groups round the seats of the money changers, or at the stall of the public weigher—his balance and weights being in constant requisition for the grains and spices which formed the principal part of their merchandise.

I was very anxious to gain admittance into a mosque, which is as difficult in Smyrna as it is easy in Constantinople; and accordingly proceeded to one of the largest, in hopes of being able to effect an entrance with the help of Monsieur V——. Numbers of Turks were collected on the wide steps which lead to the three principal doors, and round the fountains, where they performed their ablutions before daring to enter within the sacred precincts. As soon as we had passed the railing which enclosed the outer court, they hurried towards us, with the evident intention of opposing our further progress. Monsieur V—— addressed

them in Turkish; and for some time his utmost eloquence was only met by the most angry refusals; at last, however, they consented, with very surly looks, to admit us, provided we would take off our shoes; nor would they even allow us to substitute slippers, as is the custom at Constantinople. None of the party were disposed to undergo the penance of walking in this manner up the stone stairs excepting myself; and I therefore entered alone, but not until each of the Turks had separately knelt down to ascertain that I really had, in all sincerity, complied with their request. The mosque was extremely large, divided into three compartments, the centre of which was the most sacred, and separated from the others by a few low steps. At the east end, much in the same position as the altar in Christian churches, was a representation of the tomb of the prophet, and near it was a sort of pulpit, from which a portion of the Koran was read every day. From the vast domed roof hung a long rope, supporting innumerable little glass lamps, and various strange-looking ornaments—such as ostriches' eggs, horses' tails, &c.; and in the centre were inscribed the seven names of God in Turkish, Persian, and Arabic, forming a large circle of gilt letters. The floor was entirely covered with those beautiful little carpets of which even one is considered a treasure elsewhere. A few early worshippers were scattered here and there, bowed towards Mecca, with their foreheads touching the ground; and, difficult as it is to attract the attention of a Turk when engaged in his devotions, my entrance roused them all. They stared at me for a moment in utter amazement, and then simultaneously starting from their knees, crowded round me, vociferating and even throwing themselves on the ground, to ascertain if I had not already desecrated their sanctuary by walking as though on common ground. The mullah, through whose influence I had been admitted, came to my assistance, and showed them that I had left my shoes outside, upon which they returned to their places, though with looks of great discontent. I was standing near the principal door, which was wide open, and so large, as to afford a view of the interior of the mosque from the street; at that moment a Frenchman, who was on board of the same steamer with ourselves, happening to pass by, saw me there, and imagined that any one might enter at will. He therefore came up the stairs, and had advanced to the door, when he was observed by a man, apparently belonging to the mosque, who was sweeping the carpets. I suppose he was already exasperated at my presence; but he had scarcely perceived this new intruder, than he uttered a howl of rage, and seizing a pole which stood near, he ran at him with it in the most ferocious manner. The attack was so sudden and so determined, that the poor Frenchman had no time to collect his ideas; he ejaculated one faint "*Miséricorde!*" then tumbled head-foremost down the stairs, and disappeared in a whirlwind of dust. I soon after made my exit also, but in a quieter manner, and we then turned our steps in the direction of the Jewish synagogue, which, to my great delight, Monsieur V—— had promised I should visit, as he was well acquainted with one of the rabbins.

The synagogue is in a crowded part of the town, and so hemmed in by houses, that it is not easy to distinguish its outward form; and the more so, as it is surrounded by a high wall. We were admitted at a side door, where we waited a few minutes

till Monsieur V—— returned with the Rabbi Michaël. I do not think I ever saw a more pleasant looking person. He wore a high black cap, with a loose robe and inner garment of striped silk; his hair, unlike the generality of Jews, was quite fair, and combed back from a broad open forehead, and his long beard did not at all detract from his youthful appearance. His manner was full of quiet dignity, though perfectly unassuming, and his voice was peculiarly sweet and low-toned. He conducted us up the stairs, and, unlocking the door, admitted us into the synagogue, with which, to say the truth, I was much disappointed, though it was totally unlike any other place of worship I had ever seen. It was a large square room, lighted by narrow windows, and surrounded by seats made of plain new wood; for it had only been recently built, the former building having been destroyed in a late conflagration. In the centre was a small platform, raised a few steps, and enclosed by a high close railing, hung with thick curtains of crimson silk. These the rabbin drew back, and we saw a small table, with a covering also of silk, embroidered with gold, on which were laid the books of the Pentateuch, and various parchments inscribed with Hebrew characters. At the upper end of the room an ample curtain concealed some object, apparently too sacred to be exposed to view; and the rabbin looked so uneasy when we approached it, that we could not venture even to inquire what it was. He showed us the garments of the high priest, which were kept in a large iron chest, and which were both magnificent and curious. There was the linen ephod, the embroidered robe, the breast-plate, and the girdle—the two latter were engraved with the sacred words. We had not time to examine many minor details in the arrangement of the synagogue, but it was altogether less interesting than I expected. The rabbin invited us most earnestly to go and rest a few minutes in his abode; and Monsieur V—— persuaded us to agree to his request, as he said his house was one of the most beautiful in Smyrna, and well worth seeing. We had merely to cross the street to reach the door, and, after ascending a wide stone staircase, we entered into a large hall paved with marble, and abundantly furnished with ottomans and carpets. The upper end of the room was entirely occupied by three immense windows cut down to the ground, and opening on a flight of white marble steps, which led down into one of the loveliest little gardens imaginable; the light was almost obscured by the clustering vines and thick rose-bushes; and the fragrance of these and other plants, the cool shade which they produced, and, above all, the refreshing murmur of the fountains, certainly rendered this a most charming abode. The rabbin's wife, who came in with refreshments, was a most suitable inhabitant for such a dwelling, for she was really a beautiful woman, with all the distinguishing features of the Jewish race. Though less dignified than her husband, she seemed gentle and amiable, and her dress was particularly becoming—the bright green handkerchief which bound her forehead showing off to great advantage her clear black eyes and dark complexion. We remained with them for some time, and after seeing the interior of this family, we no longer wondered at the high respect in which the Jews are held in Smyrna. We left them at last, to pay a visit which, for me at least, had no small attractions.

I had received a letter written in Arabic, of

which I was anxious to procure a translation, and Monsieur V—— found, after many inquiries, that there was but a single person in Smyrna to whom I could apply for one with any chance of success. This was a venerable dervish, famed for his sanctity and learning, who was universally resorted to for advice, and whose wisdom and knowledge were supposed never to be at fault. There is a very attractive degree of mystery connected with the sect of dervishes: their origin, and the exact nature of their peculiar tenets, are not, as far as I could learn, precisely known; but they are everywhere held in high estimation. The dancing and howling dervishes live together in monasteries, which are in many points similar to those in Roman Catholic countries; but the sage we were going to visit did not belong to either of those orders, and therefore lived quite alone. Monsieur V—— thought it highly improbable that he would consent to receive the visit of a lady—an event which certainly never could have occurred in his life before; but as my anxiety was principally to obtain a translation of my letter, I was quite willing to wait till this should be accomplished. We soon reached the place, a small solitary house on the outskirts of the town, and my companion went up the narrow stair, and disappeared, leaving me, too happy to escape from the burning sun, under the cool matting that sheltered the terrace. In a few minutes he came back, laughing heartily, and told me that the old dervish was in the highest state of excitement at the idea of being visited by a European lady, and that he would willingly translate my letter, if I would only come in and let him see me. Two negro slaves held up the curtain which hung before the door, and I entered the “sanctum” of the wise man. It was a room of moderate size, with a large recess at one end, three sides of which were of glass. Several steps, covered with a splendid Persian carpet, raised this part of the room above the rest, and it was almost filled by a high divan, on which the dervish was seated in great state. He wore the conical cap and flowing robes of his sect; and really his long beard, streaming down to his waist, and his solemn countenance, impressed me with a very sufficient idea of his vast wisdom. A large box stood beside him, filled with curious old parchments; and the divan, as well as the platform beneath, was strewn with books of all kinds. In the lower part of the room there were a number of astronomical instruments, and various extraordinary looking machines, of which I could not even divine the use. The only other inhabitant of the room was a younger dervish, who, though seated on the same ottoman, evidently felt much awed in the presence of his superior, and sat stroking his beard in silence. The sage decidedly thought it beneath his dignity to exhibit any astonishment at my appearance, and he returned my salutations in a most majestic manner; though I was much amused at the sly glance he fixed on me when he thought I did not observe him. A chair was placed for me in the outer part of the room, as he could not allow the infidel to approach nearer to him, or even to ascend the steps which led to his seat. After the usual complimentary speeches, coffee was brought, which I was forced to swallow, much against my will, as it was without sugar, and excessively thick. He then took out his writing materials, which he wore, according to the eastern custom, in his belt, and received my letter from the younger dervish, to whom it had been transmitted by Monsieur V——,

with all due formality. He read it, then solemnly bowed to me, as an indication that he understood it; he next proceeded to take a small sheet of paper, which he laid on the palm of his hand, and began to write, using a pen made of a reed. It seemed to me impossible to form a single letter in this position; but in the course of a few minutes he presented me with a translation of the manuscript in Persian, Syriac, and Turkish, and the writing of each separate character was a perfect model. This was all I required, as it was easy to obtain a translation from the Turkish. But the good dervish seemed to think I ought now to make myself agreeable to him, and he commenced a conversation through the medium of Monsieur V——, who acted as interpreter. First he asked me questions innumerable about myself, my family, and my whole history past and present. Having then ascertained that I belonged to that very distant and barbarous island of Great Britain, he composedly begged that I would give him a distinct account of the government, laws, religion, and institutions of that country, with which, he assured me, he was wholly unacquainted. My companion laughed outright at my look of despair at this exorbitant demand; and as we could distinguish from the windows the steamer which was to carry me away with its chimney already smoking, he pointed it out to the dervish as a reason for terminating our visit immediately. He seemed very reluctant to let me go; but I at last arose, and having made him a flowery speech, which he heard most graciously, I prepared to go out. He then turned with considerable energy to Monsieur V——, and asked him to bid me stop one moment. I complied, and extending one hand towards me, while he raised the other to heaven, he uttered, in the most impressive manner, what seemed to me to be a short prayer, as it commenced with the words, "Allah il Allah!" The younger dervish and Monsieur V—— listened to it with the greatest reverence; and when he had concluded, my friend translated it word for word to me. It was a blessing, solemn and fervent, which he had called down upon me; beginning with saying that, infidel as I was, he prayed of Allah to hear him in my behalf, and, with the beautifully figurative language of the East, asking that my voyage through life to the eternal shore might be brightened with sunshine as gay as that which now smiled on my journey to my native land; and, above all, that the most secret wish of my soul might be gratified. The solemn manner in which this prayer was uttered by the good old man made no small impression on me, and I was not sorry to carry such a blessing away with me, when, a few hours after, we left Smyrna with a calm sea and a fair wind on our way to the Dardanelles.

Dial of the Seasons; or, a Portraiture of Nature.

By THOMAS FISHER, of Philadelphia. Harvey & Darton.

THE minds of some men are most singularly constituted; and present so many seeming anomalies that it becomes impossible to measure them by any scale, or to reduce them within the limits of comprehensibility. Of this peculiar order is, evidently, the mind of the author of the "*Dial of the Seasons*;" which, so far from exhibiting the regu-

larity he would lead us to believe that he admires, exposes in every page the most tortuous system and in every chapter plays the most eccentric tricks. Having taken some trouble to understand the peculiarities of this work—full of right and wrong—truth and error—correct reasoning and false deductions—knowledge and ignorance—correct feeling and false sympathies—industrious research and the most hasty and unwarranted assertions—we think we have got a glimpse of something like the condition of its author's mind. We have no desire to be in the slightest degree uncharitable; but there are really so many intelligent—and, in some respects, estimable—persons doing mischief to themselves, and injury to the world of science and literature, by means similar to those employed by the author of the "*Dial of the Seasons*," that we feel ourselves called upon to cut deep—that we may cure.

Gifted naturally with minds above the common order, with quick perceptions and good memory, the laborious routine necessary to subdue those minds to thought, is intolerable to such men; and, having heard or read of the wonders of genius, self, flattering self, looking at his own image, sees there all the phenomena which are supposed to mark this spontaneous development of intelligence, and so perpetrates the eccentricities believed to constitute some of its attributes. The knowledge obtained by desultory reading—which, as in the case of our author, is often mistaken for research—is put forward in a garb which is offered as the easy robings of a finished thought, but which is too often the braided *blouse* of ignorance and conceit. This pernicious habit ruins everything within its influence:—and, on both sides of the Atlantic, the efforts of human thought are at present suffering from the disease in which the resemblance is substituted for the reality—the shadow mistaken for the substance.

In the book before us, we have the sciences of meteorology, astronomy and optics, united with natural history and all its allied sciences, mixed into an *olla podrida*, with poems on the Creation of Light—The Prairie—The Song of the Sea and Isles—and The Retreat of the Berinsina; the whole flavored with the high spice of moral reflections on external order—whilst all within is in the most admirable confusion. If the author, and others of his class, could be induced to bend their minds to humble themes, and carefully and minutely examine into the truths which lie at their feet, they might achieve for themselves a triumph—they would certainly derive a pleasure—unknown to them as yet; and escape the disappointments to which they doom themselves. "All noble growths are slow," was a truth uttered by an American philosopher. The excellent in anything can only be attained by honest zeal and careful and uniring labor. To attempt to reach at one stride the top of the hill on which rest the giants of the earth after efforts the most toilsome, is a folly which certainly involves its own punishment. Let us then recommend the author of the "*Dial of the Seasons*" to bow himself to labor; and, connecting with his most humble tasks, the highest thoughts, to train his wandering mind into truth. If this be done ere he next attempts a "*Portraiture of Nature*," he will not then produce a mere caricature—mistaking it for a true copy—as in the present volume he has done. —*Athenæum*.

From Chambers' Journal.

FATHER BLACKHALL'S SERVICES.

"A BRIEF NARRATIVE of the Services Performed to Three Noble Ladies, by Gilbert Blackhall," is one of the books printed by the Spalding Club in Aberdeen. It affords some curious peeps into the state of society in the north of Scotland in the first half of the seventeenth century, especially those families by whom the Catholic faith was still adhered to. The reverend father is an arrant gossip. He is curious in the every-day pursuits, the tempers, the occupations, nay, the clothing and feeding, of those with whom he was concerned. Moreover, he was an ill-requited man. He had the highest possible opinion of his own merits and exertions: but he did not find other people ready to acknowledge his claims; hence he set them forth, with all due precision and minuteness, in a narrative which fills a considerable quarto volume. Had he not been a weak-minded man, occupying himself in trifles, he probably had gained a great reputation by some folio volume, written in Latin, against Luther and John Knox, but we would not have had the curious pictures of national customs and grotesque incidents with which his garrulous narrative supplies us. The first person to whom we find Father Blackhall performing his services is the Lady Isabel Hay, daughter of the Earl of Errol. This lady, after her mother's death, went to France in 1630. A certain Mr. James Forbes was her father's friend and correspondent in France, and she was, as merchants say, "consigned to him." He appointed Blackhall her confessor; "which he did repent thereafter," as Blackhall says; and indeed the chief purport of the narrative is to describe the efforts which her spiritual adviser made to protect her from the unseasonable addresses of Mr. Forbes. There is much curious matter in this part of the father's narrative; but we must pass from it to another portion of his adventures, in which we think the reader will probably be more interested.

At the conclusion of his engagement with Lady Isabel, he received an application from the Lady Frendraught, celebrated for the suspicion under which she fell, a few years before, of having set fire to her house, in order to burn Lord Aboyne in it. The horror of this event appears to have deterred the reverend father from such a connexion. He says—"My Lady of Frendraught did send to me, praying me to come to her, for the *frère* she had before was lately departed from this life. I refused absolutely to see her, because she was suspected to be guilty of the death of my lord of Aboyne, who, seven years before, was burned in the castle of Frendraught: whether she be guilty or not, God knoweth, for that hath not been yet discovered." Fate determined that, instead of the suspected murderess, he should ally himself with the Dowager Lady Aboyne, the widow of the victim; and he entered the service of "this truly noble and religious lady" about the middle of July, 1638. Though the Roman Catholics were a proscribed body through Scotland generally, the Marquis of Huntly, and some other Catholic lords in the north, possessed a considerable extent of feudal power for the protection of themselves and their adherents; and such a person as Blackhall, if not absolutely secure, would be removed from many causes of apprehension by such an alliance. In addition to their claims on the respect of the people as their spiritual advisers, these priests

could found on the dangers and hardships they were perpetually liable to; and as they were executed and hunted beyond their own community, they seem to have obtained the greater privileges, immunities, and benisons within it. In his new appointment, the reverend father loses none of that spirit of inquiry and interference regarding small matters for which he has already appeared so conspicuous. We find him thus describing his position in the household, and the order he thought fit to take concerning it. "I did eat in my chamber as they who were before me used to do: four dishes of meat was the least that was sent to me at every meal, with ale and wine conforming; which I thought superfluous; but knowing the noble disposition of the lady, who gave the order herself for all the tables, as well of her servants as her own, I would not so soon utter my mind, until I should know better how my admonitions would be received. I asked my man what was done with the relics of my table. He answered me boldly that he sold them, and said the relics of priests were due unto their men. When I did hire you, said I, did I promise you such casualties? No, sir, said he; but it is the custom of this house, as all the servants will bear witness. They are fools, said I, and not capable to bear witness who give testimony to their own prejudice. What prejudice is that to thee? said he. My lady doth bestow the meat upon you, and asketh no count of it back again; so what you leave, I think should be for me rather than for any other body. If I did buy the meat myself, said I, was I bound to give you all that rested over my own suffisance, so that I could not bestow it in any other way after you had got your suffisance of it? No, said he; you might dispose of it at your own pleasure, and so doth my lady, who wills your man [to] get what you leave. No, said I; my lady wills, and I likewise, that thou carry to the kitchen all that I leave, both meat, bread, and drink, that all may serve the common table; and go thou to it, and there take your part of all, as the others do. And if thou determine anything another way, thou shalt not serve me one hour longer. I told my lady afterwards this dialogue which passed between my man and me, whereat she did laugh well; and this did acquire me the affections of the servants, who grudged, but could not mend it; for they knew that my lady would not take notice of such base things, much less correct them."

The people in the neighborhood seem not to have been in general Roman Catholics; for the father complains much of their importunate curiosity, saying that "if he but opened the window, they ran to see him as some monstrous thing;" and one woman declared she hoped to wash her hands in his heart's blood. Aboyne castle stands near the village of Charlestown of Aboyne, close to the river Dee, and thirty miles from its mouth at Aberdeen. Eastward, descend fine sweeps of arable land towards the coast, while to the west begins the great Highland range of the Grampians. There, in the close vicinity of their strongholds, the lands of Aboyne were subject to perpetual depredations by the Highland reivers of the day. The lonely widow appears to have had but a scanty retinue for so wild a neighborhood, and we find her obliged to add to the accomplished Blackhall's titles of priest and chamberlain, that of captain of her castle. He describes the manner in which he repelled one of these invasions; and it is clear that his own prowess on the occasion has not been neg-

lected by the historian. When a visitation by friends was of the following character, the nature of an inroad from neutrals or enemies may be anticipated :—

"The very first that obliged us to make use of our arms were the Marquis of Huntly's* own men of Badenoch. They had been at Aberdeen getting arms, some forty or thereabout, with their officer, Thomas Gordon, a proud and saucy rascal. They, coming up the north side of the water of Dee, came to Aboyne, and presented themselves upon the Peat Hill; and Thomas Gordon, leaving the rest there, did come with three others to the gate, which I made to be kept fast. I sent Thomas Cordonier, the porter, to the gate to ask what they desired. Thomas, the officer, answered boldly that they would lodge in the house, because they were my lord's men, and the house was also his; and that the night before they had lodged in the place of Drum; which I knew to be false, for the laird of Drum was not a man to lodge such rascals in his house. When the porter told me this so insolent answer, I did go to the gate; for I had the key in my pocket, and did not give it to the porter, fearing that he might be so simple as to let them in, and we should have had more pain to put them out than to hold them out. I did take with me six good fellows, every one with his sword at his side and a light gun in his hand, and placed them all on one side of the alley that goes from the outer gate, betwixt two walls to the court, every one three or four spaces from another, and made them turn their faces and the mouths of their guns a slanting way, not right to the port, nor to the wall over against them, but a middle way betwixt them both, that they might see both at once. * *

"When I had placed them thus, and encouraged them, I did go to the gate with a bended pistol in my hand; and before I did open the wicket, I told them to retire themselves, all but one, to speak to me: they did so. Thomas Gordon only stayed; the rest were retired only the matter of ten paces, ready to rush in if he could have thrust up the wicket fully. Then I did open it a little, so that he might see my soldiers in the alley. Before he did see them, I asked them what they did come here to seek? He very confidently said, 'We will see my lady, who we know will give us money, and lodge us; and with that was pressing in his shoulder; and I, seeing his impudence, said, 'As you love your life, stir not to win in, otherwise I will discharge my pistol in your heart; and you shall not see my lady, nor get anything from her, unless it be meat and drink without the gate; but none of you shall come within it, and go out again living. Sir, said he, we are my lord's men, and this house is his, and why may we not lodge in it? Have you an order from my lord, says I, to lodge here? Let me see his order. Sir, it is my lord's will that we lodge in his land. Then go seek his land, and lodge in it; for he hath no land nor house here so long as my lady liveth; but if my lord were dwelling here himself, durst you present yourselves to this gate to lodge with him? No, said he, we must respect my lord. You base fellow, said I, should not ladies be respected as much as lords, and more? But you have not so much honesty as to respect anybody. But put in your head, and see how we are prepared to receive you; and tell your neighbors that you shall get no

other money here than that which shall come out of these guns, nor lodging, unless it be graves to bury you; and therefore retire yourself, that I may shut the gate. He retired malcontented; and my lady did send meat and drink at the foot of the Peat Hill, forbidding them to live upon her tenants, but bade them lodge in taverns, paying what they should take; otherwise, they should not go far unpunished. They did so, and went away the next day peaceably."

The next visit was from a party of the clan Cameron, who were at first perplexed by the diplomatic skill of Blackhall, but had subsequently to yield to his warlike prowess. The marauders commenced operations by plundering a tenant's house.

"So we marched with a dozen of guns, eight pistols, and my big carabine. Before we went out at the gate, I told them what order I desired to be kept, which was this: we must seek by all means to surprise them in the house plundering; and to do it, we must march as the Highlanders do, every one after another, without any words among us."

Blackhall then gives all the necessary orders to his men as to where they were to place themselves, so as to guard both door and windows; and says, "How soon we were in the court, I said with a loud voice, Every one to his post; which was done in the twinkling of an eye. Then I went to the door, thinking to break it up with my foot; but it was a thick double door, and the lock very strong. Whilst I was at the door, one of them did come to bolt it; and I, hearing him at it, did shoot a pistol at him. He said afterwards that the ball did pass through the hair of his head: whether he said true or not, I know not. I did go from the door to the windows, and back again, still encouraging them, and praying them at the windows to hold their eyes still upon our enemies, and to kill such as would lay their hands to a weapon; and to those at the door to have their guns ever ready to discharge at such as would mean to come forth without my leave; and still I threatened to burn the house and them all in it, if they would not render themselves at my discretion; which they were loath to do, until they saw the light bundles of straw that I had kindled to throw upon the thatch of the house; although I did not intend to do it, nor burn our friends with our foes. But if Malcolm Dorward, and his wife and servants, and his son John Dorward, and John Cordonier, all of whom the Highlanders had lying in bonds by them, had been out, I would not have made any scruple to have burnt the house and all the Highlanders within it, to give a terror to others who would be so brutal as to oppress ladies who never wronged them."

"They, seeing the light of the burning straw coming in at the windows, and the keepers of the windows bidding them surrender themselves before they be burnt, called for quarter. I told them they should not get other quarter but my discretion; unto which, if they would submit themselves faithfully, they would find the better quarter; if not, be at their hazard. Thereupon I bade their captain come and speak with me all alone, with his gun under his arm, and the stock foremost; but if any did press to follow him, they should kill both him and them who should press to follow him. He did come out as I ordained, and trembled as the leaf of a tree. I believe he thought we would kill him there. I did take his gun from

* The deceased Lord Aboyne was son to this great noble, the chief of the clan Gordon.

him, and discharged it, and laid it down upon the earth by the side of the house. Then, after I had threatened him, and reproached their ingratitude, who durst trouble my lady or her tenants, who was, and yet is, the best friend that their chief Donald Cameron hath; for, said I, he will tell you how I and another man of my lady's went to him where he was hiding himself with his cousin Ewan Cameron, in my lady's land, and brought them in croup to Aboyne, where they were kept secretly for three weeks, until their enemies the Covenanters had left off the seeking of them; and you, unthankful beasts as you are, have rendered a displeasure to my lady for her goodness toward you. He pretended ignorance of that courtesy done to his chief." Blackhall then made him swear that all that had been plundered from the tenants should be restored, and what had been consumed should be paid for: and also "made him swear by the soul of his father that neither he, nor none whom he could hinder, should ever hereafter trouble or molest my lady or any of her tenants." He then ordered every man separately to come out and take the same oath.

"They did all come out severally, and took the same oath as I had commanded them; and as they did come to me, I discharged their guns, to the number of six or eight-and-forty, which made the tenants convene to us from the parts where the shots were heard; so that, before they had all come out, we were nearly as many as they, armed with swords, and targets, and guns. When they had all made their oaths to me, I ranked our people like two hedges, five spaces distant from one another's rank, and but one pace every man from another in that same rank, and turned the mouths of their guns and their faces one toward another, so as the Highlanders might pass, two and two together, betwixt their ranks: they passed so from the door of the hall in which they were, to the place where their guns were lying all empty. They trembled passing, as if they had been in a fever quatern." He and his men then saw the marauders fairly off Lady Aboyne's lands, and, returning to Aboyne, "told my lady the event of our siege, who was very joyful that there was no blood shed on either side."

The state of letter-writing is fully disclosed by the fact, that, in the space of eleven and a half years, Lady Aboyne had only received two letters, and these were from two of her sisters. Indeed, she appears to have lived a most lonely, desolate life. At her death, all her care seems to have been that her daughter, her only child, might be brought up in the Catholic religion. For this purpose she had previously charged Blackhall with the care of her; and manfully did he redeem the pledge, as we find related in the chapter entitled "The Good Offices done to Madame de Gordon, now Dame D'Attour to Madame; by Gilbert Blackhall, priest"—which we shall make the subject of a separate paper.

The leading features in Father Blackhall's history, at least the sole ground on which his memory has been reanimated by the printing of a substantial quarto volume, is the services he performed to "three noble ladies," as they are minutely set forth by himself. In the preceding article we have given whatever appeared curious or entertaining in his intercourse with the second of his noble employers. We now examine the third book of his circumstantial history, in the hope that

it may provide some further incidents worthy of notice.

His former patroness, the widowed and lovely Lady Aboyne, on her deathbed earnestly recommended to Blackhall's protection her daughter, the Lady Henrietta Gordon. It is in the form of a letter to this lady that Blackhall describes his efforts to accomplish her mother's dying exhortation. His main object was to secure an appointment for the young lady in the household of the queen of France, the French court being then an asylum in which many of the decayed or oppressed aristocracy of Scotland found refuge. To pass over from the north of Scotland to France was a journey accompanied by no small array of perils in the early part of the seventeenth century; and it was not the less so, that the country was now raging from end to end with the troubles arising from the Covenant. The father had not proceeded many miles, before he encountered a rather formidable adventure. Along the northwest border of Aberdeenshire, where it marches with Banffshire, there is a wide, desolate moor, stretching over many miles of country to the foot of the mountain mass called the Buck of the Cabrach. It is a wild, dreary district at the present day, differing probably but slightly in its outward features from its state in Blackhall's time, however different may be the guests one would find in the primitive inn of Rhynie, which, when we last partook of its hospitalities, had as venerable an air as if it had been the actual house in which the following scene occurred. The narrative is, by the way, remarkable as illustrating the antiquity of *Finnan haddies*, which must have been a highly esteemed dish; otherwise they would not, as in this instance, have been conveyed inland nearly forty miles from the place where they were cured.

"Passing by the muir of Rhynie," says Blackhall, "I intended to give my horse a measure of oats there, because I had eight miles to ride over the Cushnie Hills, as wild a piece of ground as is in all Britain." He then inquires of a man coming out of the inn if he would get good oats there; and "the unhappy rascal answering, said, Yes, sir; and good ale and beer also; but did not tell me the house was full of men, as drunk as men could be."

"I entered in the court, suspecting nothing; and as I descended from my horse, a gentleman, called John Gordon, son to Leicheston, did embrace me very kindly. He was exceedingly drunk."

Blackhall then enters into the hall with him, which hall he describes as being "full of soldiers, as drunk as beasts, and their captain, William Gordon of Tilliangus, was little better;" adding, "that Tilliangus had got a patent to list a company for the then holy, but now cursed, Covenant; and John Gordon of Leicheston was his lieutenant; and hinting that every covenanting man was then more loyal than the king himself."

Blackhall, when he went into the hall, kept his valise in his own hand, because there was in it a suit of mass clothes, which might have discovered him; and as he was about to salute the company, "the captain, in a commanding way, said, Who are you, sir? which did presently heat my blood. And as I thought he spoke disdainfully to me, I answered in that same tone, saying, This is a question indeed, sir, to have been asked at my footman, if you had seen him coming in to you. He said it was a civil demand. I said it might pass for

such to a valet, but not to a gentleman. He said it was civil, and I said it was not. Leicheston seeing us both very hot, and ready to come to blows, taking me by the hand, said, Go with me, sir, to a chamber, and let this company alone;" to which Blackhall agrees; but the captain follows them, refuses to drink with them, but sits down, and again reiterates his demand, when Blackhall tells him that, if at first the request had been made with kindness, it would have been complied with, but having been made in a disdainful manner, and refused, he could not now with honor grant it, lest it should seem that fear, not complaisance, had been the cause; adding, "And I am resolved not to do anything prejudicial to my honor, neither for fear of death nor hope of reward; but at the next meeting, whensoever it is, I shall freely tell you, for then I hope our party will not be so unequal as it is now, and therefore will not then be ascribed to fear or baseness, as it is now."

"With this answer he went from us to his company; and, as we thought (that is, Leicheston and I,) if not contented, at least paid with reason. In the mean time Leicheston did call for Finnan haddocks (or fish like whittings, but bigger and firmer.) The mistress did give four to her servant to roast for us. When they were roasted, the captain did take them from her, and ate them up, with his soldiers. The servant came and told us that the captain would not suffer her to roast any for us, nor bring us those she had roasted for us. Whereupon I said to the mistress, in great anger, Goodwife, I pray you give me some haddocks, and I will go into your hall and roast them, or some better thing for them, for I will not be so braved by your captain. My money is as good as his, and therefore I will have haddocks for my money, or know wherefore not. She said, You shall have, sir, but you shall not go in among them who are bent to kill you. I pray God deliver my house from murder. I would give all I have in the world to have you safe out of my house. I shall go and roast the haddocks, and bring them to you myself; which she did, and we did eat them, and drink to the health of one another without any trouble; for our resolution was taken, to sell our skins at the dearest rate that we could, if it behoved us to die; for Leicheston had already sworn to die or live with me."

The captain is then represented as returning to them, sitting down and renewing his first demand, to which he receives the same answer, and departs in great wrath to his soldiers. Then Leicheston's servant comes and tells his master, in Irish, that they were making ready to compel Blackhall to tell who he was, or kill him; upon which Leicheston and Blackhall take measures for their reception. But the captain having delayed to come, Blackhall sent Leicheston to show him that it would be a blot against his honor to bring twenty men against two, and offering rather to fight with him hand to hand. Whereupon the captain was highly delighted with his courage, and said, "I did never meet with a man of greater resolution, wherefore I shall honor him wheresoever I shall see him; and tell him I need not fight combats to show my courage: it is well enough known in this country where I live, and I believe so be his where he is known." And shortly after the captain came to Blackhall, and said, "I am come to crave your pardon for the affront that we have done. Good sir, said I, be pleased to change the

name, and call it wrong, but not affront; for a man who is resolved to die in defending his own honor, may receive wrong indeed, but not an affront; and as to me, I never yet received an affront, nor do I think to be so base as ever to receive any." Then, after further demonstrations of cordiality between Blackhall and the captain, the soldiers are brought in unarmed, to testify their friendship also; and Blackhall says, "I did take each of them by the hand very kindly, and drank to them, and they to me. They were in all five-and-twenty; and a minister called Mr. Patrick Galloway, who had been lately banished out of Ireland, in the insurrection that the Irish made against the Scotch in the north of Ireland; whereby ye may judge if I would not have been a good prize to these soldiers of the unholy covenant. They would have been better rewarded for taking a priest nor [than] for a lord." He then diverges to the praise of John Gordon of Leicheston, who had stood by him so staunchly in his extremity, saying, "He was a very gallant gentleman, and as personable a man as was of any name in Scotland; tall, well-proportioned, with a manly countenance, which his generous heart did not belie. For without any other obligation, but only because he did casually meet me in the court, and civilly did bring me in by the hand to their company, he resolved to share with me of life or death, and did embrace my cause as if it had been his own; showing no less interest for my life than he would have done for his own."

When the worthy father had accomplished the object of his mission, he joyfully prepared to leave France; but if, in his native country, he met with dissipated, quarrelsome people, he was exposed in that where he was now sojourning to greater danger from a multitudinous array of robbers. "I passed on my way," says he, "asking in the villages, as I passed, if they did hear anything of voleurs [robbers] on the great way. Their answer was commonly, It is marvellous how you have escaped them, for the way is all covered with them. These were no comfortable news to me, who had all my money upon me in gold." But if it was practicable for one man so to fortify himself as to be impregnable to multitudes, Blackhall had done so. Behold his account of his travelling arsenal. "I had behind my saddle a great cloak-bag, in which were my new clothes and cloak, and a new hat; and at the top of my saddle two Dutch pistols, with wheelworks; and at my two sides two Scotch pistols, with snap-works; and a very wide musket, charged with nine pistol balls, hanging from my neck; and a good sword at my side." It was not to be wondered at that, so accoutred, robber after robber passed him unmolested; but it must be remembered, that we have only his own word for the statement, that they had ever any design to meddle with him. The following is one of his escapes:—

"When I was passing Fleurie, the taverners, as their custom is, cried, Monsieur, we have good wine and good oats; will you give your horse a measure of oats? to whom I answered, My horse hath dined, and myself also: I will not light down. Then a strong, young fellow did come out of a tavern, who said to me, Monsieur, it is very dangerous for you to go through the wood alone in these times: if you will stay but a little, my master is in the tavern drinking a chopin with another gentleman; they will convoy you through the wood. I answered him, saying, I do not fear

any man, neither in the wood nor out of it; and therefore I will not stay one moment for any company. I suspected that they might be voleurs; and he also then said, Since you have so good courage, I will go with you. The way, said I, is free to all men. But why do you not wait upon your master, to come with him, seeing, as you say, the danger is so great? Oh, said he, they are two, well mounted, and fear no voleurs. I believe you, said I. So we went on until we entered into the wood, and then my fellow redoubled his pace, to come nearer to me; which I seeing, turned the mouth of my musket towards him, and commanded him to stay there. Wherefore that? said he. Because I will so, said I: thou shalt not make me thy prey. Therefore, if thou advance but one foot, I shall discharge my musket into thy belly. He stood, and said, You need not fear, having so good a baton in thy hand. I fear no man, said I; but I will make thee fear if thou remove one foot forward until I be out of the wood. In the mean time I was ever advancing forward, and mine eye towards him. So, seeing that I did hold my gun bent towards him, he turned his back to me, and went into the thick of the wood, and I did not see him any more. Then the peasant, who all the time had kept a good distance from me, but so as he did both see and hear what was passing betwixt us, said, God be blessed, sir, who inspired you with His grace to distrust this voleur, and hold him back from you; for if you had suffered him to come near you, he would undoubtedly have got hold of your clothes, and pulled you down from your horse, and stabbed you. Behold, he is hiding himself in the wood: you have saved your own life and mine; for how soon he had killed you, he would have killed me also, for fear I might have discovered him hereafter."

On his way back to Scotland, the father was wrecked on the coast of Holy Island; and he gives the following most expressive account of the state of society among a people who profit by shipwrecks:—"The country people convened the next day, to take the goods which the sea had cast to the land; amongst which there was a caseful of castor-hats, with gold hat-bands, for which the minister of the parish, a Scotsman, named Lindsay, and a gentleman dwelling near the island, did fight; and the minister did sore wound the gentleman; and the common people did get away the case, and broke it, and every one took away what he could get of it, whilst the church and the state were fighting for it in vain." He then mentions, "that the tempest having ceased, we went a walking in the island, and did go to the governor, Robin Rugg, a notable good fellow, as his great red nose, full of pimples, did give testimony. He made us breakfast with him, and gave us very good sack, and did show us the tower in which he lived, which is no strength at all, but like the watch-towers upon the coast of Italy. We did take him with us to our inn, and made him the best cheer that we could. He was a very civil and jovial gentleman, and good company; and among the rest of his merry discourses, he told us how the common people there do pray for ships which they see in danger. They all sit down on their knees, and hold up their hands, and say, very devoutly, Lord, send her to us; God, send her to us! You, said he, seeing them upon their knees, and their hands joined, do think that they are praying for your safety; but their minds are far from that. They pray God, not to save you, or send

you to the port, but to send you to them by shipwreck, that they may get the spoil of her. And to show that this is their meaning, said he, if the ship come well to the port, or eschew shipwreck, they get up in anger, crying, The devil stick her, she is away from us!"

After a multitude of difficulties and dangers, which we cannot follow out in detail, the father returned with his ward to France; and here he found a new impediment in her intractable, haughty temper. With true Highland pride, the damsel thought that crowned heads were her only earthly superiors; and in the palaces of the French nobility, as different from her own rude home as a peer's mansion in London is from a farmer's cottage at the present day, her Highland blood boiled against the etiquettes and deferences to which the highest of the young nobility of France gave implicit obedience. Being placed in the family of the Countess of Brienne, to be trained for attendance at court, we are told that "Both the count and countess, for the queen's sake, were very civil to her; but the more they honored her, the less did she respect them. Whether that proceeded from pride, thinking that and much more was due unto her, or from inadvertency, not reflecting upon their civilities, which is called a kind of brutality, I know not; God knoweth. But what I have seen with my own eyes, and heard with mine ears, that I write here, and nothing more; for I have seen my Lady of Brienne sit in her own carriage, without her gate, upon the street, fretting a whole quarter of an hour for Mademoiselle de Gordon, sending and sending over and over again for her to go to the mass; and which did highly displease me, when she was at the carriage, stepped into it, not opening her mouth to make any excuse for making the lady stay for her, no more than if she had been mistress of the carriage, and the lady but only her servant. This I have, with much grief, seen more than two or three times; and that lady did complain to me of her as often as I did go to see her."

We must conclude with a specimen of the extremities to which the damsel's pride reduced her, notwithstanding the anxiety of her courtly friends to serve her; premising, for the reader's comfort, that the whole ended in her being received into the queen's household.

"When they arrived at St. Germain, the queen knew not how to dispose of her, because the number of her filles [maids of honor] was complete, and Madame de Brienne would not meddle with her any more. The queen told her that she, having no vacant place for her, would place her with Madame la Princesse. She answered her majesty very courageously, saying she had never done anything to displease her relatives, who, she knew, would be highly displeased, hearing that she, who came to France to wait upon her majesty, had descended to serve the Princess of Condé; and prayed her majesty to excuse her, if she refused to do what her relatives would disavow in her. The queen did not take it ill of her, this her generous answer, but did pray monsieur the prince, and madame, to keep her with them as a friend, until she could take her to herself, which at the present she could not do. They, to oblige the queen, did accept of her as a friend, and made her sit at their own table, where she remained in that posture until the princes—to wit, Condé, Conti, and Longueville—were sent prisoners to Bois de Vincienne; and then the princess would

not keep her any longer, but, a few days after their imprisonment, sent her to Madame de Brienne in a sedan; and Madame de Brienne would not receive her, but sent her to my Lord Aubeny, who sent her back to Madame de Brienne, and bade tell her that he had no woman in his house, and therefore could not receive her without disparagement of her honor and his. Madame de Brienne would not let her come within her house, but sent for Madame de Ferrand, a councillor's lady, and prayed her to take the young lady in her carriage, and deliver her to Madame de la Flotte in the Palais Royal. When they arrived there, it was near nine o'clock at night. Madame de la Flotte, seeing them come to her at that time of night, and thinking that this lady—to wit, Madame de Ferrand—had been but one of Madame de Brienne's gentlewomen, did claw her up soundly for bringing Mademoiselle de Gordon to her at that time of night." But Madame de la Flotte, when she saw she was mistaken in the lady, asked her pardon, and showed her how she could not possibly receive Mademoiselle de Gordon that night, but would next day; and back she was taken to Madame de Brienne, who, late as the hour was, refused to let her in; and Madame de Ferrand was at last constrained to take her with her to her own house; Blackhall remarking, "So Mademoiselle de Gordon might have learned, by Madame de Brienne's unkindness towards her, how improvident a thing it is to neglect powerful persons, able both to do good and evil."

GAME ALLIGATORS.

Your Alligators are looking up. They have been considered dull, stupid wretches; but are now discovered to have a world of light in them, when properly extracted and kindled: in a word, they are to be killed for their oil. We have almost used up whales, and shall now begin to burn the midnight alligator. An expedition has started from Montreal, for Black Creek, for the fishery. The writer says—

"You know how many of these enormous animals are shot out of wantonness, from the decks of the steamboats that plough our waters. I expect hereafter to hear of laws passed for their protection."

We would do more than protect—we would suggest that they be fed by a regular supply of men, women, and children. We—in merry England here—compare peasants, their wives and families, to our game, our birds and partridges: why should not the folks on the border of Black Creek make alligators game, and so fatten them upon live Indians! But this will come. A sense of the value of alligators is evidently gaining ground.

"We must allow them to be killed only at a proper season, when they are fattest, and not permit their destruction at the season when they lay their eggs."

Thus, doubtless, there will be alligator preserves; and to poach alligators' eggs in the south, will be made as criminal as to poach the eggs of pheasants in the west. Foreign states besought Bentham for constitutions—why do not the folks of Montreal apply to Mr. Grantley Berkeley for a short, concise, stringent law—or a set of laws, like a set of razors—one for every week-day, and a particularly sharp one for Sundays, for the protection of alligators! Surely he might work

into a code his grand panacea—his never-failing "punch on the head"—with the most beneficent effect.

"The alligator is a formidable-looking creature. It is true, but he is generally harmless. His office is to prowl in the sluggish waters of this southern region, *pick up what he can*, and digest it into excellent oil for the illumination of our houses."

Is not this the perfect type of a penny-a-liner? Are not his looks—his office—his brilliant result, as burning in the columns of the press—all shadowed forth in this? The Egyptians were a wise people. We call them barbarous idolaters for worshipping the crocodile. They put jewelled rings in his ears, and built a city—Crocodylropolis—in his honor. A hideous, ravenous, filthy wretch he seems to us; but the Egyptians, doubtless, knew of his oil, and treating him like an unacknowledged genius, worshipped him for his hidden light.—*Punch*.

A "FORLORN HOPE."—Marshal Bugeaud has hit upon a new expedient for capturing Abd-el-kader. He has taken his dog. The cunning Marshal evidently thinks that his only chance of finding out Abd-el-kader's hiding place is by following in the track of his dog. It would make a fine picture for Versailles—"The French army marching to Victory," and a poodle at the head of it.—*Punch*.

THE APPEALS IN THE LORDS.—A foreigner would be very much struck by the air of calm decency that pervades the hearing of appeals in the house of lords. Three peers are sufficient to form a house, and these three are not required to keep awake during the proceedings; so that the chairman generally goes off first, into the arms of Somnus, and his example is speedily followed by his two supporters. Lord Brougham, who never will go to sleep under any circumstances, generally smuggles the last new novel under his papers, and amuses himself with a "quiet read;" or, while pretending to take notes, he is not unfrequently rattling off some "copy" for one of the numerous works that he always has in the hands of the printer. The counsel go quietly on with their speeches, utterly regardless of the inattention they experience; and the whole affair has an aspect of sober quietude that is peculiarly imposing on all who witness it. We shall look in some day, and give a *verbatim* report of the proceedings.—*Punch*.

REFORM OF THE LAW.—Chancellors, ex-chancellors, and queen's counsel, are members of a society for the reform of the law. They meet and denounce the wickedness of costs, and then hie away to practice. This reminds us of a passage in Borrow's *Gipsies of Spain*:—"And now, my dears," says the head of the family to the younger branches—"now you have said your prayers, go out and steal."—*Punch*.

ENCOURAGEMENT TO FIGHT.—The State of Louisiana has passed an act for the protection of all debtors who are willing to take arms against Mexico; thus offering a premium to those heroes who, at home, are not "worth powder and shot."—*Punch*.

DETERMINED SUICIDE.—Sir Robert Peel intends to persevere in endeavoring to carry the Coercion Bill.—*Punch*.

MR. JEAMES AGAIN.

"DEAR MR. PUNCH,

"As newmarus inquiries have been maid both at my privit resddence, The Wheel of Fortune Otel, and at your Hoffie, regarding the fate of that dear babby, James Hangelo, whose primumture dissappearnts caused such hagnies to his distracted parents, I must begg, dear sir, the permission to occupy a part of your valuable collams once more, and hease the public mind about my blessid boy.

"Victims of that nashnal cuss, the Broken Gage, me and Mrs. Plush was left in the train to Cheltenham, sougtring from that most disagreeble of complaints, a halmost broken Art. The skreema of Mrs. Jeames might be said almost to out-Y the squeel of the dying, as we rusht into that fashnable Spaw, and my pore Mary Hann found it was not Baby, but Bundles I had in my lapp.

"When the old Dowidger, Lady Bareacres, who was waiting heagerly at the train, that owing to that abawminable brake of Gage, the luggitch, her Ladyship's Cherrybrandy box, the cradle for Lady Hangelina's baby, the lace, crockary, and chany, was rejucied to one immortal smash; the old cat howld at me and pore dear Mary Hann, as if it was huss, and not the infunule Brake of Gage, was to blame; and as if we ad no misfortns of our hown to deplaw. She bust out about my stupid imparence; called Mary Hann a good for nothing creecher, and wep and abewed and took on about her broken Chayny Bowl, a great deal more than she did about a dear little Christian child. 'Don't talk to me about your bratt of a babby,' (seshe;) 'where's my bowl!—where's my medsan!—where's my bewtiffle Pint lace!—All in rewins through your stupidatty, you brute, you!'

"'Bring your haction against the Great Western, Maam,' says I, quite rileed by this crowel and unfealing hold wixen. 'Ask the pawters at Gloster, why your goods is spiled—it's not the fust time they've been asked the question. Git the gage haltered against the nex time you send for medsan—and meanwile buy some at the Plow—they keep it very good and strong there, I'll be bound. Has for hus, we're a going back to the cussid station at Gloster, in such of our blessid child.'

"'You don't mean to say, young woman,' seshee, 'that you're not going to Lady Hangelina: what's her dear boy to do! who's to nuss it?'

"'You nuss it, Maam,' says I. 'Me and Mary Hann return this momint by the Fly.' And so (whishing her a suckastic ajew) Mrs. Jeames and I lep into a one oss weakle, and told the driver to go like mad back to Gloster.

"I can't describe my pore gals hagny juring our ride. She sat in the carridge as silent as a milestone, and as madd as a march Air. When we got to Gloster she sprang hout of it as wild as a Tigris, and rusht to the station, up to the fatle Bench.

"'My child, my child,' shreex she, in a hoss, hot voice. 'Where's my infant! a little bewtiffe child, with blue eyes—dear Mr. Policeman, give it to me—a thousand guineas for it.'

"'Faix, Maam,' says the man, a Hirishman, 'and the divvle a babby have I seen this day except thirteen of my own—and you're welcome to any one of them, and kindly.'

"As if his babby was equal to ours, as my darling Mary Hann said, afterwards. All the station

was scrouging round us by this time—pawters & clark and refreshmint people and all. 'What's this year row about that there babby?' at last says the Inspector, stepping hup. I thought my wife was going to jump into his harms. 'Have you got him!' says she.

"'Was it a child in a blue cloak?' says he.

"'And blue eyes!' says my wife.

"'I put a label on him and sent him on to Bristol; he's there by this time. The Guard of the Mail took him and put him in a letter-box,' says he: 'he went 20 minutes ago. We found him on the broad gauge line, and sent him on by it, in course,' says he. 'And it'll be a caution to you, young woman, for the future, to label your children along with the rest of your luggage.'

"If my piguniary means had been such as *once* they was, you mav imadgine I'd have had a speashle train and been hoff like smoak. As it was, we was oblidged to wait 4 mormal hours for the next train (4 ears they seemed to us,) and then away we went.

"'My boy! my little boy!' says poor, choking Mary Hann, when we got there. 'A parcel in a blue cloak,' says the man! 'Nobody claimed him here, and so we sent him back by the mail. An Irish nurse here gave him some supper, and he's at Paddington by this time. Yes,' says he, looking at the clock, 'he's been there these ten minutes.'

"But seeing my poor wife's distracted histarri-cle state, this good-naturd man says, 'I think, my dear, there's a way to ease your mind. We'll know in five minutes how he is.'

"'Sir,' says she, 'don't make sport of me.'

"'No, my dear, we'll telegraph him.'

"And he began hoppersating on that singlar and ingenus electrickle inwention, which aniliates time, and carries intelligence in the twinkling of a peg-post.

"'I'll ask,' says he, 'for the child marked G. W. 273.'

"Back comes the telegraph, with the sign 'All right.'

"'Ask what he's doing, sir,' said my wife, quite amazed. Back comes the answer in a Jiffy—

"'C. R. Y. I. N. G.'

"This caused all the bystanders to laugh excep my pore Mary Hann, who pull'd a very sad face.

"The good-naterd feller presently said, 'he'd have another trile;' and what d'ye think was the answer! I'm blest if it was n't—

"'P. A. P.'

"He was eating pap! There's for you—there's a rogue for you—there's a March of Intellect! Mary Hann smiled now for the fust time. 'He'll sleep now,' says she. And she sat down with a full heart.

"If hever that good-naterd Shooperintendent comes to London he need never ask for his skore at the Wheel of Fortune Hotel, I promise you—where me and my wife and James Hangelo now is; and where only yesterday, a gent came in and drew this pictur of us in our bar.

"And if they go on breaking gages; and if the child, the most precious luggage of the Henglishman, is to be bundled about in this year waw, why it won't be for want of warning, both from Professor Harris, the Commissioner, and from

"My dear Mr. Punch's obeajent servant,

"JEAMES PLUSH."

From the Art-Union.

THE TALBÓTYPE.—SUN-PICTURES.

THROUGH the courtesy of H. Fox Talbot, Esq., we are enabled to present, with this number of the Art-Union, an example of the "sun-pictures," of the method of the production of which this accomplished gentleman is the inventor. It will be remembered that we have from time to time called attention to these truly wonderful representations, in our notices of Mr. Talbot's work, "The Pencil of Nature." By the public these "sun-pictures" are still misapprehended—still "misnomered;" we shall accordingly, in this notice, show what they are not, and endeavor to explain what they are, as it is yet far from generally accepted that they result from the action of light alone, and are not produced by some *leger-de-main* of art. On their first appearance, artists who were not as yet cognizant of the discovery were utterly at a loss to pronounce upon them—they could, at once, understand that they were characterized by nothing like human handling; there was no resemblance to *touch*, for the eye to rest upon—they resembled nothing that had ever been done, either in the broad or narrow styles of water-color washing—they had nothing in common with mezzotint—nothing with lithography—nothing with any known method of engraving. By the artist all this was determinable, but still the main question was unsolved. By the public they were considered drawings, or some modification of lithography, or mezzotint—and this is still extensively believed. It cannot be understood that these are veritable *Phæbi labores*—that no two are exactly alike, and that to copy them surpasses all human ingenuity, inasmuch as they are a transfer to paper of the masses and tracery of light and shade by a means utterly inimitable by the ordinary resources of art. On every print or plate, of what kind soever, the trace of manipulation is perceptible; but an examination of a sun-picture by a magnifying glass serves only to render the problem more difficult of solution, if the mind of the inquirer be occupied with art without reference to nature.

A due consideration of these productions suggests to us at once those works which are essentially the triumphs of the Dutch school—as the nearest approach which the labors of the human hand have ever effected to the sun-picture. No detailed comparison can be instituted; but we are here taught—and there is no appeal from the precept—that finish is by no means incompatible with breadth. How skeptical soever the eye may be, there is nothing inharmonious in nature; therefore the closest imitation of nature is the nearest approach to the beautiful; and she is, consequently, outraged in proportion to any amount of discordant hardness which may exist in professed representations of truth.

These photogenic* drawings are not extensively known in proportion to the importance of the discovery. The picture which accompanies this number of the Art-Union, as an example, will, to those to whom the art is entirely new, afford some idea of the style in which these productions are brought forward, and will, at the same time, support the observations we have already made on the subject. To meet the inquiries to which the in-

imitable representation will naturally give rise, we supply a brief account of the process and its invention.

Early in October, 1833, the inventor, H. Fox Talbot, Esq., F. R. S., was amusing himself in sketching, by the aid of Wollaston's camera lucida, passages of the enchanting scenery of the shores of the Lake of Como. But the results effected by this means were unsatisfactory, inasmuch as to lead to the conclusion that the use of the instrument required a certain knowledge of drawing, which the operator unfortunately did not possess. The rejection of this instrument by Mr. Talbot induced him to make trial of another instrument, the *camera obscura*, which prompted the wish that the beautiful imagery which it displays could be made a fixed and permanent picture or impression upon the paper. Reflecting on the known chemical influence of light, it occurred to Mr. Talbot that a certain action might be exerted upon paper in a manner so entirely subject to the degrees of light and shade by which it was promoted, as to bear a strict resemblance to the forms on which the light fell; and "although," says Mr. Talbot, "I knew the fact from chemical books that nitrate of silver was changed or decomposed by light, still I had never seen the experiment tried, and therefore I had no idea whether the action was a rapid or a slow one—a point, however, of the utmost importance, since, if it were a slow one, my theory might prove but a philosophic dream."

Early in the year 1834, Mr. Talbot began to reduce his speculations to experiment by employing a solution of the nitrate of silver for the purpose of preparing the paper; but the result was unsatisfactory, and not less so was an experiment with the chloride of silver already formed. The effect was then tried of the formation of the chloride on the paper, by first washing the paper with a strong solution of salt, and afterwards with nitrate of silver; but this proceeding was not more satisfactory than the others.

In the course of numerous experiments, Mr. Talbot discovered that the paper was rendered more sensitive by the employment of a weaker solution of salt than he had before used, having hitherto erred in the formation of a too perfect chloride; whereas that which was really necessary to the desiderated end was an imperfect chloride. The result of this step was a facility in obtaining distinct and very pleasing images of such things as leaves, lace, and other flat objects of complicated forms and outlines, by exposing them to the light of the sun; but the paper was not yet sufficiently sensitive for the purpose of obtaining pictures with the *camera obscura*.

At Geneva, in the autumn of 1834, Mr. Talbot prosecuted the inquiry by varying the experiments in many ways. His attention was directed to iodide of silver by a remark of Sir H. Davy, as to a superior susceptibility in the iodide; but, in making the trial, the result was the contrary of the statement of Sir H. Davy—that the iodide of silver was more sensitive to light than the chloride. It proved itself not only less sensitive than the chloride, but did not in any way respond to the influence of the strongest sunshine, but would retain its original tint (a pale straw color) for any length of time unchanged in the sun. By this fact the operator was convinced that little dependence could be placed on the statements of chemical writers with regard to this particular subject—in fact, those aids and resources which are available

* The name photogenic drawing, or photography, was invented by Mr. Talbot, having been previously unknown.

in other inquiries were here altogether wanting, so that every step towards the discovery, and in its progress to perfection, is, it may be truly said, the result of the unassisted labors of Mr. Talbot, to whom alone be the whole honor.

Although the experiment was not according to the observation of Sir H. Davy, the fact of the iodide of silver being insensible to light was of immediate utility: for the iodide of silver being found to be insensible to light, and the chloride being easily convertible into the iodide by immersion into iodide of potassium, it followed that a picture made with chloride could be fixed by dipping it into a bath of the alkaline iodide.

"This process of fixation" (extracted from the "Pencil of Nature"—Mr. Talbot's work already mentioned) "was a simple one, and it was sometimes very successful. The disadvantages to which it was liable did not manifest themselves until a later period, and arose from a new and unexpected cause, namely, that when a picture is so treated, although it is permanently secured against the darkening effect of the solar rays, yet it is exposed to a contrary or whitening effect from them; so that after the lapse of some days, the dark parts of the picture begin to fade, and gradually the whole picture becomes obliterated, and is reduced to the appearance of a uniform pale yellow sheet of paper. A good many pictures, no doubt, escape this fate; but, as they all seem liable to it, the fixing process by iodine must be considered as not sufficiently certain to be retained in use as a photographic process, except when employed with several careful precautions, which it would be too long to speak of in this place."

During the summer of 1835, Mr. Talbot renewed his attempts to execute pictures of buildings with the camera obscura; and having communicated to the paper a greater degree of sensibility by means of repeated alternate washes of salt and silver, and using it in a moist state, the time for obtaining a representation with the camera obscura on a bright day was reduced to ten minutes. But these were small, and, although others of larger size were obtainable, a much greater amount of patience was necessary for their production; and, moreover, they were less perfect than the smaller ones, as it was difficult to keep the instrument steady for any great length of time pointing at the same object; and, the paper being employed in a moist state, the action was not sufficiently uniform.

At the close of 1838, Mr. Talbot discovered a fact of a new kind, of which he thus speaks:—"Having spread a piece of silver leaf on a pane of glass, and thrown a particle of iodine upon it, I observed that colored rings formed themselves around the central particle, especially if the glass was slightly warmed. The colored rings I had no difficulty in attributing to the formation of infinitely thin layers or strata of iodide of silver; but a most unexpected phenomenon occurred when the silver plate was brought into the light, by placing it near a window; for then the colored rings shortly began to change their colors, and assumed other and quite unusual tints, such as are never seen in the colors of thin plates. For instance, the part of the silver plate which at first shone with a pale yellow color was changed to a dark olive green when brought into the daylight. This change was not very rapid—it was much less rapid than the changes of some of the sensitive papers which I had been in the habit of employing;

and, therefore, after having admired the beauty of this new phenomenon, I laid the specimens by for a time, to see whether they would preserve the same appearance, or would undergo any further alteration." This experiment, as our readers will see, was a curious anticipation of the first part of the Daguerreotype process about six months before Daguerre announced it.

In September, 1840, Mr. Talbot discovered the process first called Calotype (but the name has since been changed by some of his friends into Talbotype.*). By this process the action of light on paper was rendered many hundred times more rapid, allowing portraits to be taken from the life, which could not previously be accomplished. The method of obtaining the Calotype pictures, communicated by Mr. Talbot to the Royal Society, shortly after the discovery is as follows:—

"*Preparation of the Paper.*—Take a sheet of the best writing paper, having a smooth surface, and a close and even texture.

"The water-mark, if any, should be cut off, lest it should injure the appearance of the picture. Dissolve 100 grains of crystallized nitrate of silver in six ounces of distilled water. Wash the paper with this solution with a soft brush, on one side, and put a mark on that side whereby to know it again. Dry the paper cautiously at a distant fire, or else let it dry spontaneously in a dark room. When dry, or nearly so, dip it into a solution of iodide of potassium containing 500 grains of that salt dissolved in one pint of water, and let it stay two or three minutes in this solution. Then dip it into a vessel of water, dry it lightly with blotting paper, and finish drying it at a fire, which will not injure it even if held pretty near; or else it may be left to dry spontaneously.

"All this is best done in the evening by candle-light. The paper so far prepared I call *iodized paper*, because it has a uniform pale yellow coating of iodide of silver. It is scarcely sensitive to light, but, nevertheless, it ought to be kept in a portfolio or a drawer, until wanted for use. It may be kept for any length of time without spoiling or undergoing any change, if protected from the light. This is the first part of the preparation of Calotype paper, and may be performed at any time. The remaining part is best deferred until shortly before the paper is wanted for use.

"When that time is arrived, take a sheet of the iodized paper, and wash it with a liquid prepared in the following manner:—

"Dissolve 100 grains of crystallized nitrate of silver in two ounces of distilled water; add to this solution one sixth of its volume of strong acetic acid. Let this mixture be called A.

"Make a saturated solution of crystallized gallic acid in cold distilled water. The quantity dissolved is very small. Call this solution B.

"When a sheet of paper is wanted for use, mix together the liquids A and B in equal volumes, but only mix a small quantity of them at a time, because the mixture does not keep long without spoiling. I shall call this mixture the *gallo-nitrate of silver*.

"Then take a sheet of iodized paper and wash it over with this gallo nitrate of silver, with a soft brush, taking care to wash it on the side which has

* Specimens of the Talbotype may be procured in great variety of Messrs. Gambart and Co., Berners street, and Messrs. Ackermann and Co., Strand, London; and may be ordered of any respectable printseller in town or country.

been previously marked. This operation should be performed by candle-light. Let the paper rest half a minute, and then dip it into water. Then dry it lightly with blotting-paper, and finally dry it cautiously at a fire, holding it a considerable distance therefrom. When dry, the paper is fit for use. I have named the paper thus prepared Calotype paper, on account of its great utility in obtaining the pictures of objects with the camera obscura. If this paper be kept in a press, it will often retain its qualities in perfection for three months or more, being ready for use at any moment; but this is not uniformly the case, and I therefore recommend that it should be used in a few hours after it has been prepared. If it is used immediately, the last drying may be dispensed with, and the paper may be used moist. Instead of employing a solution of crystallized gallic acid for the liquid B, the *tincture of galls* diluted with water may be used, but I do not think the results are altogether so satisfactory.

Use of the paper.—The Calotype paper is sensitive to light in an extraordinary degree, which transcends a hundred times or more that of any kind of photographic paper hitherto described. This may be made manifest by the following experiment:—Take a piece of this paper, and, having covered half of it, expose the other half to daylight for the space of *one second* in dark cloudy weather in winter. This brief moment suffices to produce a strong impression upon the paper. But the impression is latent and invisible, and its existence would not be suspected by any one who was not forewarned of it by previous experiments.

The method of causing the impression to become visible is extremely simple. It consists in washing the paper once more with the gallo-nitrate of silver, prepared in the way before described, and then warming it gently before the fire. In a few seconds the part of the paper upon which the light has acted begins to darken, and finally grows entirely black, while the other part of the paper retains its whiteness. Even a weaker impression than this may be *brought out* by repeating the wash of gallo-nitrate of silver, and again warming the paper. On the other hand, a stronger impression does not require the warming of the paper, for a wash of the gallo-nitrate suffices to make it visible, without heat, in the course of a minute or two.

A very remarkable proof of the sensitiveness of the Calotype paper is afforded by the fact that it will take an impression from simple moonlight, not concentrated by a lens. If a leaf is laid upon a sheet of the paper, an image of it may be obtained in this way in from a quarter to half an hour.

This paper, being possessed of so high a degree of sensitiveness, is therefore well suited to receive images in the camera obscura. If the aperture of the object-lens is one inch, and the focal length fifteen inches, I find that *one minute** is amply sufficient in summer to impress a strong image upon the paper, of any building upon which the sun is shining. When the aperture amounts to one third of the focal length, and the object is very white, as a plaster bust, &c., it appears to me that *one second* is sufficient to obtain a pretty good image of it.

The images thus received upon the Calotype paper are for the most part invisible impressions.

They may be made visible by the process already related, namely, by washing them with the gallo-nitrate of silver, and then warming the paper. When the paper is quite blank, as is generally the case, it is a highly curious and beautiful phenomenon to see the spontaneous commencement of the picture, first tracing out the stronger outlines, and then gradually filling up all the numerous and complicated details. The artist should watch the picture as it develops itself, and when in his judgment it has attained the greatest degree of strength and clearness, he should stop further progress by washing it with the fixing liquid.

The Fixing Process.—To fix the picture, it should be first washed with water, then lightly dried with blotting-paper, and then washed with a solution of *bromide of potassium*, containing 100 grains of that salt dissolved in eight or ten ounces of water. After a minute or two it should be again dipped in water, and then finally dried. The picture is in this manner very strongly fixed, and with this great advantage, that it remains transparent, and that, therefore, there is no difficulty in obtaining a copy from it. The Calotype picture is a *negative* one, in which the lights of nature are represented by shades; but the copies are *positive*, having the lights conformable to nature. They also represent the objects in their natural position with respect to right and left. The copies may be made upon Calotype paper in a very short time, the invisible impressions being *brought out* in the way already described. But I prefer to make copies upon photographic paper prepared in the way which I originally described in a memoir read to the Royal Society in February, 1839, and which is made by washing the best writing-paper, *first*, with a weak solution of common salt, and, *next*, with a solution of nitrate of silver. Although it takes a much longer time to obtain a copy upon this paper, yet, when obtained, the tints appear more harmonious and pleasing to the eye; it requires in general from three minutes to thirty minutes of sunshine, according to circumstances to obtain a good copy on this sort of photographic paper. The copy should be washed and dried, and the fixing process (which may be deferred to a subsequent day) is the same as that already mentioned. The copies are made by placing the picture upon the photographic paper, with a board below and a sheet of glass above, and pressing the papers into close contact by means of screws or otherwise.

After a calotype picture has furnished several copies, it sometimes grows faint, and no more good copies then can be made from it. But these pictures possess the beautiful and extraordinary property of being susceptible of revival. In order to revive them and restore their original appearance, it is only necessary to wash them again by candlelight with gallo-nitrate of silver, and warm them; this causes all the shades of the picture to darken greatly, while the white parts remain unaffected. The shaded parts of the paper thus acquire an opacity which gives a renewed spirit and life to the copies, of which a second series may now be taken, extending often to a very considerable number. In reviving the picture it sometimes happens that various details make their appearance which had not before been seen, having been latent all the time, yet, nevertheless, not destroyed by their long exposure to sunshine.

I will terminate these observations by stating a few experiments calculated to render the mode of action of the sensitive paper more familiar.

* Subsequent experiments, during the summer of 1841, showed that *ten seconds* was the proper time under the circumstances above mentioned.

"1. Wash a piece of iodized paper with the gallo-nitrate; expose it to daylight for a second or two, and then withdraw it. The paper will soon begin to darken spontaneously, and will grow quite black.

"2. The same as before, but let the paper be warmed. The blackening will be more rapid in consequence of the warmth.

"3. Put a large drop of the gallo-nitrate on one part of the paper, and moisten another part of it more sparingly, then leave it exposed to a very faint daylight; it will be found that the lesser quantity produces the greater effect in darkening the paper; and, in general, it will be seen that the most rapid darkening takes place at the moment when the paper becomes nearly dry; also, if only a portion of the paper is moistened, it will be observed that the edges or boundaries of the moistened part are more acted on by the light than any other part of the surface.

"4. If the paper, after being moistened with the gallo-nitrate, is washed with water and dried, a slight exposure to daylight no longer suffices to produce so much discoloration; indeed, it often produces none at all. But by subsequently washing it again with the gallo-nitrate, and warming it, the same degree of discoloration is developed as in the other case (experiments 1 and 2.) The dry paper appears, therefore, to be equal or superior, in sensitiveness to the moist; only with this difference, that it receives a *virtual* instead of an *actual* impression from the light, which it requires a subsequent process to develop."

The date of the announcement of Daguerre's discovery, (January, 1839,) being five years after the commencement of the labors of Mr. Talbot, makes it sufficiently clear that, had Daguerre's researches been unsuccessful, the discovery of this other branch of photography had still been secured to the world by those of Mr. Talbot—since the inventions are altogether independent of each other. The announcements in both cases, as we have already stated, were simultaneous, and it was conjectured by the public, before the processes were known, that the means employed were the same; but, when the processes were described, their difference was at once acknowledged. The Daguerreotype is now so well known to the public that it is not necessary, in reference to it, to do more than state a broad difference between it and the Talbotype: for the execution of portraits and pictures by the former process, plates of polished silver are used; while, in the latter, paper is employed, as may be seen in the example which accompanies this notice. The Talbotype is less extensively known than the Daguerreotype, although meriting, at least, an equal publicity: for it may be considered superior to the latter in respect of the material upon which the picture is cast, and fully equal to it in power of detail. Every means has been employed in propagating a knowledge of the Daguerreotype, and its merits have done the rest. On the other hand, the Talbotype has been hitherto only circulated in private societies, and is, consequently, less generally known. We presume, however, that the circulation of the very large number of examples with which Mr. Talbot has supplied us, will have the effect of making many thousands acquainted with it who had previously only heard of it as one of the wonders of the age.

It is now nearly thirteen years since Mr. Talbot commenced his labors, which he has, up to this period, prosecuted with so fortunate and happy a

result; while yet, by the constancy of his exertions, the invention is increasing in excellence; as it is now in his power to execute much more beautiful things than have hitherto been attempted.

In the sixth number of the "Pencil of Nature," a plate is published to show another important application of the photographic art. This is a repetition of a sketch of "Hagar in the Desert," by Francesco Mola, which has been taken from a facsimile executed at Munich: hence we are furnished with indubitable proof that by this means can original sketches of the old masters be illimitably multiplied, with a nicety of execution surpassing any imitative effort of the human hand.

As we have already stated, had M. Daguerre never effected any discovery, we should still have had that of Mr. Talbot. Of each of these inventions the comparative available utilities must not be forgotten: to the former, for his ingenious and persevering experiments, all honor is due; and also to the claims of the latter not an iota less of distinction is to be awarded. In reducing the two inventions to a consideration of their real utilities, the preference must be given to the Talbotype. The invention of Daguerre was matured at its announcement: we hear from time to time of improvements, but, on examination, these have never added one truly useful feature to the first development. On the other hand, the Talbotype, since it was first made known, has, through the unremitting labors and research of its inventor, been wonderfully improved: we have just spoken of a most valuable capability—that of increasing ancient and valuable drawings upon the material whereon they were originally made, and so fitting them for the portfolio. The Daguerreotype is most faithful in repeating prints, &c.; but what can be done with metal plates? The powers of the Talbotype are admirably adapted to book illustration, and in this respect they have yet to be shown; in short, the microscopic precision with which texture and form are rendered by this means is not to be attained by any attempts at imitation by any manipulative process, however elaborate.

Hence, as to the real utility of the two inventions, there is no question. Mr. Talbot is still assiduously laboring for the further perfection of the invention, the advancement of which will be sufficiently seen in other works, shortly to appear, which are much superior to anything that has yet been produced.

The Life of MARTIN LUTHER, gathered from his own Writings. By M. MICHELET, Author of the "History of France," "The People," &c., &c. Translated by G. H. SMITH, F.G.S.

THE peculiar value of this work consists in the fact that it is "neither the life of Luther turned into an historical romance, nor a history of the establishment of Lutheranism, but a biography consisting of a series of transcripts from Luther's own revelations." With the exception of the events of the earlier years of his life, when Luther could not have been the penman, the transcriber has seldom occasion to hold the pen himself. His task has been limited to selecting, arranging and fixing the chronology of detached passages. Throughout the whole work, Luther is his own spokesman—Luther's life is told by Luther himself. We need not add that by an author so accomplished as M. Michelet, this task is admirably executed.—*Protestant Churchmen.*

From Godey's Lady's Book.

CHARACTER AND OPINIONS OF THE LATE REV. SYDNEY SMITH.

BY WILLIAM KIRKLAND.

WHEN a great man is inearthed, there usually springs up such a crop of memoirs, eulogies, defamations, and what not, that it would seem as if the mortal seed had been committed to the ground only to reappear, even in this world, in a more etherealized or intellectual form. When a conspicuous man dies, there is a somewhat kindred tendency to supply the blank he leaves in the public eye by notices and discussions of his claims to public attention.

Sydney Smith certainly was not a great man, but his pungent and ready wit made us ever sensible of his presence, and of late his hard hits at American repudiation drew our attention to him peculiarly. We had learned almost to regard him as the exponent of English feeling on this sore subject. When he died, those Pennsylvanians whom he had praised as behaving with great decorum and refraining from any attempt to pick English pockets at the queen's coronation dinner, must have felt somewhat relieved. He threw stones with great dexterity where the object was vulnerable, and those who suffered from his blows suffered in silence, forgetting, through the boldness of their assailant, that his house was of glass if they chose to retaliate.

The glory of Sydney Smith is to have set on foot the *Edinburgh Review*—his shame, that after having contributed to it some of the most impudent and illiberal articles, he should have said, when all was over and hot blood cold, that he saw very little to alter or repent of. He who saw other people's prejudices and littlenesses so keenly, was even thus lamentably blind to his own. He who could rebuke with such scorching causticity what he considered as pecuniary dishonesty, was capable of dishonesty of another kind quite as disgraceful to the perpetrator, and far more ruinous to the sufferer.

That there has been a vast progress in the political condition of Great Britain within the present century is undeniable. That the *Edinburgh Review* has advocated with steadiness and ability the leading beneficial changes, is equally true. It is impossible to assign to this or to any one cause the precise degree of merit to which it may be entitled, but from the talent with which that journal has been conducted from the outset, the high place it has maintained in the literary and political world, and its large circulation, we may safely award it the first place. This is only saying that Brougham, Jeffrey, Sydney Smith, Macaulay and their associates, have unitedly done more than any other set of men in effecting what may be termed the second English Revolution. Some of these men have, it is true, figured in parliament; but we doubt much whether their influence individually has been as great, even there, as in the *Review*—collectively we are very sure it has not. They are men of the closet and the pen, far more powerful in the silent page than in the animated debate, which calls for personal qualifications possessed by so few scholars.

Very properly, then, may Sydney Smith pride himself, as he does in the preface to his works, on having set on foot such a journal and contributed to it for so many years. Many a man has

passed for a hero on account of achievements or happy accidents of far less importance. But a part of his self-glorification on this topic makes us smile, and we hardly know whether the witty canon can be in earnest or is merely playing off a joke that may take in at least the uninitiated. He says, "To bear patiently the reproach and poverty which it caused, and to look back and see that I have nothing to retract and no intemperance and violence to reproach myself with, is a course of life which I must think to be extremely fortunate." We would gladly have been informed of the duration of this martyrdom. We have a hint of oatmeal commons at the outset, to be sure, but we think before long the "reproach" of being the associate of Brougham, Jeffrey and Macaulay, and the "poverty" of two guineas a page or fifty pounds an article, must have been "boiled peas" in comparison with any real sacrifice. Peter Plymley's Letters, too—a pretty good sized book and not particularly clerical—twenty thousand copies sold!—good picking for somebody, and we do not believe the reverend gentleman one likely to let it all fall into other hands; at least his Pennsylvania groans never seemed to us quite disinterested virtuous indignation. A few years after the "poverty" complained of, and subsequent also to the fall of Pennsylvania stocks, we find this victim's estate sworn under the value of seventy thousand pounds. To American perceptions, at least, this is very tolerable poverty—one that would console most men like Sydney Smith for a good deal of reproach.

Old Lord Stowell once said to him—"Mr. Smith, you would have been a much richer man if you had joined us;" and he claims not a little merit that he did not act on the old lord's hint. We know not how rich the tory clergy usually are, but we think most of them would be content to pass from the tutorship of a juvenile member of the squirarchy to an estate of £70,000.

As to the other boast, of having no intemperance and violence to reproach himself with, we think many years' enjoyment of the titlings of this world's fat things must have dulled the good man's memory, or the near approach to that other state of being when sincerity and earnestness in religious matters will stand us in better stead than church preferment, would have brought to his mind, with some compunctious visitings, the many bitter things he had written against the Methodists. Take an instance: "We shall use the general term Methodism to designate these particular classes of fanatics"—i. e., "Arminian and Calvinistic Methodists and the *Evangelical clergymen of the Church of England*"—"not troubling ourselves to point out the finer shades and nicer discriminations of lunacy, but treating them all as in one general conspiracy against common sense and rational orthodox Christianity." The class thus disposed of, it will be remembered, includes, among a host of eminent persons, Wilberforce, Hannah More, Leigh Richmond and Lord Teignmouth. It includes those who built up the British and Foreign Bible Society, and those who put down the slave trade. Yet after thirty years' interval, the Reverend Sydney Smith finds no cause to wish such things unsaid. And again: "Not that they preach faith without works, for if they told the people they might rob and murder with impunity, the civil magistrate must be compelled to interfere"—that is, fear of the civil magistrate prevents the preaching of robbery and murder by the Methodists.

No intemperance and violence here against Whitefield and Wesley, who "did not run naked into the streets or pretend to the prophetic character—and therefore were not committed to Newgate!"

The preaching of Whitefield and Wesley did certainly differ somewhat from that of Mr. Smith. Two of the four sermons* he has given us with the essays are addressed to lawyers, and one to a mayor and corporation. The occasions were what is called extraordinary, and the sermons are certainly no less so. "And behold, a certain lawyer stood up and tempted him, saying," &c. From this text a sermon was preached "before the Hon. Sir John Bayley, Knt.," and we pity Sir John. "We must not forget," says the witty priest—"we must not forget the question, and we must not forget who asked the question, and we must not forget who answered it, and what that answer was." He must have a hard heart who does not sympathize with a writer who, having a reputation to support, is put to such shifts for sentences wherewith to occupy the orthodox "just fifteen minutes." He tells the lawyers he shall address them on their particular duties. Very well—all right and proper. The first paragraph contains an appeal to them as living flesh and blood lawyers, whether they do not find their *devotion* interfered with, their taste for devotion lessened, their time for devotion abridged. Trying questions—for the preacher himself allows, in the same paragraph, that "rivals are to be watched, superiors are to be cultivated, connexions cherished"—evidently the *nine* points of the law. But there is a *tenth*—"what time for the altar—what time for God?" Then the "particular duties." "The genuine and unaffected piety of a lawyer is of great advantage to the general interests of religion, inasmuch as to the highest member of that profession a great share of church patronage is entrusted." A lawyer, then, ought certainly to be genuinely and unaffectedly pious, for—he may get to be lord chancellor! The Rev. S. S. (not Sinner Saved, of leather breeches memory) must have his joke even in the pulpit. Then follow more "particular duties" for such of his hearers as may come to the woollack, of which zeal for the church as by law established is first, second and third—and, in fact, no other is alluded to.

Mr. Smith does not tell us that he was the proposer of the motto of the Edinburgh Review, but no one construed it more strictly, as its earlier pages abundantly testify. Impaling of authors was a favorite sport with him, as well as with other reviewers of that period. They and their brethren have been taught better manners since. Some of Smith's articles abound in abuse and insult, and descend even to the most disgusting allusions to accomplish the object. Even his wit would hardly make such coarseness taking in our day. The reviews have assumed a tone more earnest and more conciliating, recognizing the probability that an author possesses human feelings, and the possibility that he may be inclined to appease them by retaliation. Mr. Smith's wit is not of the highest order, but it is abundant—more like the incessant heat lightning of a summer evening than like the dazzling ribbons

that split the clouds asunder at intervals, blinding the beholder so that black looks white for a while. He is not a little indebted to quaint and funny words, such as *anserous*, *armigeral*, *mumpsimus*, *furfurous*, *agricolous*, *plumigrinous*—a class of adjectives, which it would require but a schoolboy's knowledge of Latin to enlarge indefinitely. He is still more indebted to that entire unscrupulousness which generally becomes the characteristic of the professed wit—a freedom which holds nothing sacred, and which overleaps all the nice and delicate boundaries that prevent other men of equal ability from acquiring the reputation of wit. But with all allowances he is rich in genuine fun, and holds some of the abuses of his country up to ridicule with all the hilarious *abandon* of a boy who has stolen a few moments in which to kick a prohibited foot-ball. He seems not so much determined to get the laugh on his side as to enjoy it himself—not so desirous of making the absurdity in question odious as of extracting all possible amusement out of it. The subjects which he handles in this temper are fair game certainly: witness "the Persecuting Bishops" and others of like character. On subjects which touch his kinder feelings he can be serious. With the Methodists he keeps nowhere any terms either of justice or decency.

Mr. Smith's opposition to the "godly" school is accounted for by the way in which, as he tells us, he formed his conceptions of true, practical piety. We always suppose the Bible to furnish the means by which all men, and clergymen in particular, were to be guided on this point. But there is, it seems, a more excellent way: "It has been our good fortune to be acquainted with many truly religious persons—and from their manly, rational and serious characters, our conceptions of true practical piety have been formed." These models must have been Edinburgh reviewers. To the same source, it is to be presumed, we are to trace the morals of the reverend critic.

What are those morals? The morals of the only parson in that powerful body—the high priest of that despotic junta—become a matter of no little consequence. The utilitarianism of Paley lies evidently at the root of them. Expediency he owns, in almost all cases, for his god. Paley's white lies form, consistently, a part of the code. "I have always denied the authorship of the Plymley Letters," &c. The Bible he seldom alludes to, except to draw from it some ludicrous image; and, in fact, we should think he had studied Rochefoucault much more. Like most persons of the merely practical school, he rarely ascends to principles. Gifted with keen sagacity, he perceives that honesty is the best policy, and advocates it because it is so, and just so far as it seems to be so, but no farther. Accordingly, like other reasoners of that school, he stops short when policy appears to stop—at the point where the doctrine begins to affect themselves. This political parson, therefore, argues most strenuously and ably for Catholic emancipation—it will be sound policy, and—it will help the established church. He urges reform in the state with great vigor—he opposes reform in the church with at least equal force. Humanize your game laws, amend your poor laws, reform your house of commons, remove the crying abuses of the state; but lay no hands on cathedrals—especially on that of St. Paul—and diminish no church patronage, least of all, that of the reverend canons of that foundation. They enjoy each a sinecure of fifteen hundred or two

* These remarks do not apply in general to the volume of sermons published since Mr. Smith's death, of which the writer entertains a high opinion. He can abate nothing, however, of what he has said concerning those selected for publication by Mr. Smith himself and incorporated by him with his essays.

thousand pounds per annum, but let that alone! And you, my lords bishops, beware how you sanction such an attempt, for your own £15,000 or £20,000 will be endangered by the precedent. "I ask the Bishop of London—does he think, after reformers have tasted the flesh of the church, that they will put up with any other diet? Does he forget that deans and chapters are but mock-turtle—that more delicious delicacies remain behind?" Such are the arguments of a man who prides himself on being a reformer—an old reformer, all his days a reformer. Reform is good so long as it keeps within proper bounds; let it pass these, and it will unsettle the foundations—it will mar the superstructure of society! Is it proposed to abolish a church sinecure after the death of the present incumbent? Think of the oaths of the archbishops! (the coronation oath had been abundantly ridiculed in the case of Catholic emancipation)—think of the sanctity of private property! think of the danger of innovation! So clamors the reverend moralist who had for years been contending against all these bugbears, and meantime reached the fat canonry of St. Paul's. "The honest boldness of the Edinburgh Review," says he, "effected much;" but honesty becomes folly when it would lead to the lessening of church revenues, however enormous.

Time and space allow us to touch only on the more striking points in the character of this able reviewer and most widely influential writer. No man labored more zealously or more efficiently in the cause of Catholic emancipation, or with a more generous and at the same time caustic warmth in the defence of humanity against certain barbarities in English law and English custom. His papers on the latter class of subjects are eminently pungent and striking, while those on the Catholic question are equally admirable, sparkling with wit, and, what in a popular argument is of great practical importance, level to the comprehension of every one. He does not, it is true, advocate measures on the highest ground, but on the ground best calculated to produce conviction in the minds of those whom he addresses. He was no man to throw away his pearls.

Sydney Smith was far from possessing a mind of the highest order. He effected much, not through any extraordinary reach of thought, but by strong common sense, aided by a lively wit and a keen sense of the ludicrous, all directed against certain popular errors of his day. But he was a man of maxims, not of principles—one who aimed at nothing higher than people's conduct, and that by means of the head and not the heart.

Another proof that his mind was not of a high order is, that he was infinitely more engaged in pulling down than in building up. He attacks existing abuses with eagerness and success, but even where the occasion calls for it, (and the occasion does sometimes call for it,) he offers no substitute, proposes no remedial plan. He attacks the Methodists with a virulence and vulgarity altogether inexcusable, and bewails their influence over the middling and lower classes, but he considers the case hopeless. "A man of education and a gentleman—cannot contend against such artists"—"the regular clergy—are too dignified;"—but "something may be done in the way of ridicule," and in allowing members of the establishment to open chapels *without* the consent of the rector. Education might do something, but "none of these things will be done." No great fertility

or resource here, and no very admirable boldness, since some discussion of the reasons why "Methodism" grew out—a huge scion—from the establishment, and some suggestions as to the mode of preventing further secessions by the offer of spiritual bread rather than polished stones, might have come very properly from a professed reformer.

It is the same with East India missions. The duty of Christianizing those countries is admitted, but the plan adopted is bad, and the men concerned are not to be trusted. Yet no other method is proposed, and it is even said that *suited* persons cannot be found to undertake it. Some severe attacks and many bitter innuendoes against the clergy of the established church are found in the writings of our political reformer, but not a hint as to how they shall be made better. Our conjecture that as an originator or supporter of positive measures he was held in but little esteem, is confirmed by the fact that he scarce appears at all as a politician after his party obtained the chief power in the state. His vocation was gone. He was a potent assailant of old abuses, but not fitted to bring forward and defend the new measures which the times demanded.

His views of education are marked by sterling sense and judgment. His papers on the subject deserve to be studied by every enlightened person in this country as well as in England. In them his natural acumen triumphs over all the prejudices of his time and country, and they are as well suited to the democratical side of the water as to the other.

In all matters of morals and religion, Sydney Smith appears to have been a good deal of a Mr. Worldly Wiseman—wise, truly, for himself and others—as regards worldly matters, but not possessing nor caring to possess other wisdom. His opinion of human nature was evidently low, and he looked to low means for influencing mankind. He was a warm friend to the established church, for it made himself and many other gentlemen very comfortable, giving them, besides abundant means, rank, influence and consideration, which they could hardly have found anywhere else. But he was apparently no warm friend to the established clergy, titled or otherwise, if we may judge from the innumerable slurs which he casts upon them in his writings. He allows them, to be sure, the credit of calmness, moderation and dignity, but marks them, nevertheless, as abundantly dishonest, selfish and grasping. What a satire upon them is contained in the following remark: "No Orthodox clergyman can do so (open a church) without the consent of the parson of the parish, who always refuses because he does not choose to have his monopoly disturbed; and refuses in parishes where there are not accommodations for one half the persons who wish to frequent the Church of England." Fit persons, truly, to be entrusted with a monopoly in such things! Though Mr. Smith seems to have annexed to the term "sound religion," (a favorite term with him,) only the idea of adherence to the established church, yet nobody deals the clergy harder blows. He inverts the rule of Mrs. Ranby, who was all sin without a single fault; for he credits the clergy with all excellence as a body, while he allows them individually no merit under heaven but decency.

Mr. Smith attributes an extraordinary efficacy to money. He speaks of "the English curse of poverty," but he certainly shows himself in this

point as in many others, a true Englishman. He does not, indeed, say that the gift of the Holy Ghost may be purchased with money, but he comes as near it as anybody since the days of Simon Magus. To give one example. In the Letters to Archdeacon Singleton, he states that he had found out the capital possessed by seven clergymen taken promiscuously in his neighborhood, and he finds it to be £72,000, while the average income from the livings is £400 *per annum*. And he draws the conclusion "from the gambling propensities of human nature, and the irresistible tendency to hope they shall gain the highest prizes, you tempt men into your service who keep up their credit and yours, not by your allowance, but by their own capital," &c. Keeping up the credit of the church by large fortunes! Americans are thought to place a high estimate on money, but it may be doubted whether any clergyman or layman among us would consider four hundred pounds a year insufficient to keep up the credit of the religion founded by our Saviour and his apostles. But Mr. Smith in this case only echoed the sentiment of the mass of his countrymen. He says—"It is always considered a piece of impertinence in England if a man of less than two or three thousand a year has any opinions at all upon important subjects." True—and evidently no less an impertinence in Mr. Smith's eyes than in those of others of his class. Witness his advocacy of the church as it is, because it attracts men of wealth; and his dread of anything approaching to an equalization of livings, because the average would be only £385, or \$1400, a year! His whole argument is based upon the supposition that riches are indispensable to the respectability and influence of the clergy, and his unmeasured abuse of the Methodists turns in part upon their poverty.

That Mr. Smith was no friend to the reform bill we infer with confidence from the absence of all allusion to it in his long gratulatory list of the beneficial measures accomplished by "the talents of the good and able men" of his time. In short, he was a genuine English aristocrat, a term which we use not all in an invidious sense. He was a friend to the middling and lower classes, but there is nothing in his writings which would lead us to think that he regarded them as fit depositaries of political power. He was an enemy to all oppression of the poor by the rich, but he had at least an equal dread of the beggar on horseback. He could commend in our land of equality certain qualities which agreed with his own natural bias—economy, industry, common sense, enterprise—but he had a supreme contempt for the democratic character, and was never better pleased than when he could find room for a fling at the Yankees. The aristocratic feeling of England is, in our view, still more strongly inherent in the church, the army and the navy, than in the hereditary wealth and station of the country. Whoever belongs to either of the first-mentioned classes, in a place above the rank of subalterns, has a position from which he derives a certain respectability, and by which he is somewhat linked to the higher classes. All are paid "once in money and three or four times in hope," and the zeal of expectants is always greater and their appreciation of the desired good more intense than those of actual possessors. Hence a sort of official and officious loyalty to the established institutions of the country, always observable in British clergymen and officers in both

services. These are the very people, generally speaking, who have honored us by visits of exploration, and their report has usually been such as would prove satisfactory at home, and furnish racy articles about America to such reviewers as Mr. Smith. We regret that our countrymen have evinced such a sensitiveness to opinions thus concocted.

In the Council of the Beasts, (says Lessing,) which met to determine their respective claims to rank and consequence, the nobler animals declared the decision a matter of no moment, as each had its own claims, good and substantial, whether allowed by others or not. All acquiesced in this view of the matter except the ass and the ape, who took it much to heart that no decision was pronounced.

Upon the whole, we conclude Mr. Smith to have been a keen-witted and sensible worldling, more capable of discerning the faults and absurdities of others than desirous of correcting his own; having a glimmering perception of how things ought to be, but lacking courage to recommend unpopular means of making them such. We regard him as a poor teacher of morals, and of religion no teacher at all. He pleaded the cause of down-trodden humanity less through sensibility and sympathy than through acute perception of wrong. He can characterize as "holy poltroonery" an unwillingness to examine religious or political tenets, but no man shows more weakness when the temporalities of the church are called in question. He hated the Methodists because they pretended to a warmth of piety which, if sincere, must put to shame the lifeless ministrations of the establishment, and he advocated the emancipation of the Catholics because it secured the foundations of his own church. He occupied the position of a professed servant of God, and he lived and died emphatically a man of this world. At another time we may attempt some detailed examination of his writings.

From Chambers' Journal.

ARGUIN AND ITS VICTIMS.

THOUGH discovered by the Portuguese four hundred years ago, and successively possessed by them, by the Dutch, and the French, the island of Arguin, adjacent to the western coast of Africa, was, till within a few months since, a perfect *terra incognita* to the English public. At that time circumstances of a distressing nature aroused attention to the subject; it being reported that several of our countrymen were held in captivity, and barbarously treated by the islanders. Among the most zealous advocates for the liberation of the unhappy captives was Captain Grover, whose name is so familiar to the public in connexion with the Bokhara victims. Through him we now learn some particulars respecting the island, its inhabitants, and our then suffering brethren—his information having been collected from Mr. Northwood, commanding the barque *Margaret*, who was detained three weeks in captivity; from William Honey, who was kept eleven months a prisoner at Arguin, and in a neighboring island; and from Mr. Vaughan, commanding the merchant brig *Courier*.*

* Arguin, which has been successively a trading post of the Portuguese, Dutch, and French, and finally abandoned by the latter, with the view to the concentration of the

It appears, by the log of the brig *Courier*, that, on the 26th May, 1844, the chief mate, Mr. Wilson, was sent with three hands to take soundings near Arguin, and that, on approaching the shore, they saw some natives, among whom was a white man, who hailed them in English. This induced Mr. Wilson to run his boat on shore, for the purpose of relieving his supposed countryman; but as he neared, the natives began to beat their captive with clubs, and it was not till the boat's muskets were levelled at their heads that they desisted, and took to their heels. The white man immediately made for the boat, and was taken on board the *Courier*. He stated that his name was Samuel Phillips, that he was a seaman belonging to the *Margaret*, of London, commanded by Captain Northwood, who, with a portion of the crew, was there in captivity, and subjected to the most cruel treatment by the natives.

Captain Vaughan immediately determined to release his fellow-countrymen by ransom or otherwise; and therefore brought up his ship, and anchored on the west side of the island, in four and a half fathoms water, about a mile from the shore. Four men then appeared on the beach, and made signs for them to land. This was not complied with; and on the following morning the *Courier* got under weigh, and proceeded to the south-west point of the island, anchoring again in five fathoms water. The chief mate then landed with six men, and were kindly received by the natives, who promised to bring down Captain Northwood and the other prisoners early next day, to be ransomed. At the appointed time the natives came to the beach with Captain Northwood, who waved his hat, and requested Captain Vaughan to send a boat ashore; and accordingly the mate was again despatched with six hands, and provided with a supply of tobacco and other things, to offer in ex-

change for the captives. The chief was, however, not satisfied with the proposed ransom; and Captain Northwood desired the men to return to the *Courier*, and request Captain Vaughan to send everything he could possibly spare. The latter, accordingly, gave his mate in addition three or four dozen handkerchiefs, and other articles, and the crew collected among themselves twenty-five shirts. These were all put in the long-boat, under the charge of Mr. Wilson and his six hands, accompanied by the cutter, with five men, all well armed. Captain Vaughan gave positive orders that they were on no account to land, but to anchor near the shore, exhibit the articles they had brought, and only to allow two or three chiefs to approach them to treat. Unfortunately these orders were disregarded, and as the islanders appeared friendly, the whole party went on shore. Captain Vaughan, seeing from his ship that about forty natives were hastening to the beach, called loudly to Mr. Wilson to return on board—an order which, although it was heard, was not attended to. The islanders, as Captain Vaughan expected, fired as soon as the party landed; and the only one who escaped was Mr. Barrington Daines, the second mate, who succeeded in swimming off to the ship, although desperately wounded, having received two shots in the arm, and one in the side. Mr. Wilson and two men were killed, while three were dangerously wounded. William Honey received two balls in the left arm, close to the shoulder. Being considered dead, he was, with Mr. Wilson and the other two men, thrown into the sea; but, revived doubtless by the salt water, had contrived to crawl to land. Captain Vaughan having only two seamen and two landmen left in his ship, and seeing that the Arguins were preparing to attack him, slipped his cable, and was reluctantly compelled to leave his countrymen to their wretched fate.

trade at their factory on the Senegal, is situated in 20 degrees 27 minutes north, and 16 degrees 37 minutes west. It is between thirty and forty miles long, and about one mile wide. It is about eight miles from the mainland, (west coast of Africa,) between which and the island the water is shallow. There are three or four channels, the main having a depth of five feet. On the outer or seaward side there is, according to the positive assurance of Captains Northwood and Vaughan, and of W. Honey, from five to seven fathoms water close in-shore; a fact which is, moreover, attested by a person in Bathurst, and signed by Lloyd's agent. This is important, as a different opinion has been entertained. The island is of a whitish rock, covered with a constantly shifting sand. The northern portion is flat, but the southern rises to an elevation which admits of its being seen at a distance of thirty miles. The soil produces no wood but a small shrub, yielding a caustic juice applied medicinally by the natives. Fuel is brought to the island from a place fifty miles in the interior of the continent. Water is abundant and excellent, though it has the appearance of milk. Two fairs are held annually on the island, in June and December; many strangers from a distance frequent them, bringing for barter necklaces, beads, cloths, and tobacco, for which they receive dried fish and oil.

The inhabitants are about sixty in number, including women and children. Their only food is fish and fish-oil: they have neither bread nor vegetables, except a small portion of rice, which is reserved for the sick. These people are remarkably affectionate to their children, and seldom quarrel among themselves. They are strict Mohammedans in all things but their ablutions, which they neglect. The people are tall and well-proportioned, and their dress simple. They go armed with musket, dagger, and scimitar, and possess six boats, including those captured from the British. The only quadrupeds on the island, exclusive of dogs and cats, are white rats. The heat is very great, though generally tempered by a breeze from the north-east; and healthiness appears to be characteristic of the island.

The wounded were now carried to a small hut, where their sufferings during the night were intense. The next day, however, Captain Northwood induced the natives to dress their wounds; and though the system of surgery was rude in the extreme, it proved efficient. Indeed, all the men recovered, even those whose limbs, in Europe, would have been subjected to instant amputation. After a preliminary dressing, of a somewhat novel and not very delicate character, their wounds were the next day scraped with a common knife, and cauterized with the head of a red-hot nail. They were then washed with fish-oil, which gave great relief. The sufferings of Honey were dreadful; he was burned eighteen times, and eight pieces of the main bone of his arm came away. The wound in his breast they cut out with an instrument, resembling in shape a blacksmith's shovel, while they forced out the balls with brass rods. John M'Donald received three balls in the abdomen, two very severe sabre cuts on the head, by which his skull was fractured. His head and skull were scraped with a common knife twice a-day. Strange to say, the sufferings of these men seemed to afford great amusement to the women and children, who imitated their moans and cries. However, they all recovered, though, during the eleven months of their captivity, their only food was fish; and they were often kept a considerable time without water, although there was abundance of it. Even the women, who among the most savage tribes show almost always some sign of compassion, appeared to take delight in their sufferings,

and the little children pelted them with stones. To add to their miseries, they were in daily expectation of being sent to the mainland and sold to perpetual slavery.

There was, however, one person who had heard of their captivity, and who was taking active measures for their deliverance; namely Captain Isemonger, commanding the merchant brig *Africanus*, who happened fortunately to be on the coast. This gentleman possesses great influence on that part of the coast of Africa; and, on communicating the intelligence to the king of Trazars, who is very friendly to the English, this monarch immediately sent to Arguin, ordering the restoration of the captives, or threatening to send an expedition to destroy the whole tribe. Captain Northwood, and all his men who could be moved, were accordingly placed in an old fishing-boat, escorted by ten of the natives, and, after a painful voyage of nine days, were delivered over to the gallant Isemonger. Honey and his two wounded companions were left behind, and Captain Northwood did not then think there was the least chance they would survive their sufferings. However, through the exertions of the man who effected the deliverance of all, these wounded men were ordered to be delivered up, without ransom, to any European ship that would receive them. No vessel appearing to claim them, despite the efforts made at home for that purpose, they were, after eleven months of great suffering, conveyed by the Arguins themselves to the Gambia. It must appear extraordinary that these men should have been allowed to remain eleven months in this dreadful state, within eight days' run of our shore. Despite the efforts of the owners to induce government to act, some misapprehension seemed to exist; for, in reply to the urgent intreaties of the mother of William Honey, the secretary of state forwarded an extract from a despatch written by Captain Bosanquet, commanding her majesty's ship *Alert*, which states that he had communicated with one of the chiefs of Arguin, who "stated that the three Englishmen had died of their wounds, and that they had no white prisoners." This despatch is dated 7th November, 1844, and the men were not liberated until the 1st May, 1845. They arrived in London on 3d of August. It is most unfortunate that this report should have been fully credited, as, but for the benenolent and patriotic exertions of Captain Isemonger, they would have lingered out their wretched lives upon the island.

From Chambers' Journal.

SALEABLE CIVILITIES.

We observed the other day, in a popular magazine, an anecdote of a gentleman who, having dropped a package of papers, and getting it restored to him by a working man, who ran across a street for the purpose, *was so shabby* as merely to render thanks in return. The writer seemed to consider it necessary that the gentleman should have given at least sixpence as a remuneration for this act of ordinary civility. This way of thinking touches upon a feature of our age, especially as regards metropolitan life, which is worthy of a few remarks.

It seems now to be held as a fixed point of duty amongst us, that whenever a gentleman, by choice or accident, receives the least civility from his inferiors, he should reward them in money. It may be something costing hardly an effort, some-

thing called for by the exigency of a moment, and done through merely instinctive impulse; yet coin must honor it. The simplest charities of life become a matter of tariff between superiors and inferiors.

Let us proceed to illustrate this part of our national code of morality. We were once placed in circumstances in Paris strongly reminding us of Sterne and his grisette. Wandering along its obscure streets, we lost our way, and appeared likely to have roamed on forever, as each new street seemed the precise facsimile of the last, until at length we ventured to ask the way from a busy, little Frenchwoman, seated at the door of her shop. A thousand different directions, uttered in a thousand different phrases, sent us away as perplexed as before. Led by blind chance, we directed our steps straight on, and passed a street down which we ought to have turned. We had not gone far, when a great outcry was heard behind us, joining itself to the clatter of a couple of wooden shoes. Monsieur was altogether wrong; and we were led to understand that we might have girdled the globe in that direction without arriving at our destination; however, the error was corrected, and we speedily reached home. We were in precisely the same predicament in London, and had occasion to ask for similar instruction from one of two lumping boys idly lounging at the corner of a street. What was our success? The boy declined affording the requisite information gratuitously, but offered to put us right in two minutes for twopence. Behold the contrast! Assuredly, many though the social errors of our neighbors are, mercenary civility is not to be reckoned among them.

Every-day life supplies us with abundant instances—they must occur to every one—of the venal light in which all little good offices are regarded in England. If a horse has broken his bridle, and gambolled a few yards down the street, and is brought back an unwilling captive by some adventurous person; if a memorandum is dropped, and some lucky boy has picked it up, and restored it to its rightful owner; if, on a blustering day, the wind *will* take your hat off, and it scampers down some hilly street, and is caught by some fleet-legged errand-boy, who has participated with some half dozen others in the fun of the capture; if your handkerchief hangs from your pocket, and some extra-honest passer-by informs you of the circumstance, with a touch of his hat, intimating that your honor might have lost it; if you sprain your ankle, or fall over a shred of orange-peel, or are knocked down by some runaway horse, and are assisted by some humane members of the surrounding mob into a neighboring surgery; if, in short, in any of the thousand misfortunes which are daily apportioned to us, an inferior renders assistance to, or does some little office for, his superior, a debt is incurred; it is a cash account; creditor and debtor are the synonyma for obliger and obligee: humanity, good-nature, nay, the first elements of the Christian duty of man to man, are obliterated from the minds of both parties, and the obligation can only be discharged by treating it as so much merchandise, and paying for it. It would be far from difficult to construct a scale of metropolitan civilities, and to affix the orthodox rates to each of the minor kindnesses; thus—

Holding a horse for a few minutes, twopence—
if with extra politeness, fourpence.

Directions in topography, or street-seeking, twopence—with personal attendance, threepence.

Picking up a handkerchief, one penny to boys, twopence to men.

Shutting a cab-door, to the waterman one penny—where does your honor want to go!—twopence.

Assistance in case of accident—varies from sixpence to a shilling;

and so on. He who would be so foolhardy as to refuse these regular demands, while his bravery might be extolled, would incur the odium of every bystander, and might think himself fortunate if he escaped the open execrations of the disappointed benefactor.

Such a state of things is very disgraceful in an age calling itself an era of refinement, and turning up its nose at all bygone times, as if there were nothing that was good or great in them. If out-of-door civility must have its price, let there be a regular body of such "helps" enrolled at once; give them a regular livery, and let each wear a brazen badge, denoting his number and the regular rate of payment for all sorts of civilities; and thus deliver honest men from the insult and injury of the degradation of their brotherly-kindness to the level of, or rather to an inferiority to, the base metal with which it is bought and for which it is sold.

We are continually being disgusted with applications for beer, for something to drink our health, for something to grease the wheels of our gig with, for something to water our garden with, or to sprinkle the dusty road with. If the carpenter has done some trifling job, when he comes to be paid, something must be given over and above his regular pay to wet the work with, or it is impossible that it will stand. If the dustman perform his arduous office, and, after relieving our dustbin of its contents, comes up, with cindered hair and grimy face, to acquaint us with the fact, surely we could not deny him something to wash down the dust with which he is pretty nigh choked. If the sweep has been putting the chimney to rights, then "the heap of soot there was to be sure—never seed a chimbley so foul—he was always so pettickler about them smoke jacks—he knowed a many sweeps as 'ud smesh them all to nothing: could our honor give him something to oil his husky throat with?"

The principle on which such demands are made seems to us wholly bad. It is on this, the hydra whose hundred heads spring up in every possible direction, that we would animadvert. The work done, of course, is worth its pay, just as much as twenty shillings are worth a sovereign. The demand is made for the civility with which its performance is attended—a demand, by the way, invariably greater in proportion to the civility with which the workman himself has been treated. Such civility, we would say, is due, and ought to be rendered, merely as a requirement of the social compact between man and man in all ranks and spheres of life. This custom of performing work in a civil manner, merely with the ultimate view to certain pence, sixpences, and shillings, must be directly injurious to the workman's own character, lowering him in his own esteem, and derogating, in no inconsiderable degree, from his respectability in the estimation of his superiors. We regard it in its least serious light, simply as unreasonable. The matter puts on a more serious aspect when we look at it, as we have strong reason to do,

with regard to its normal consequences, as the A B C of a course of beggary. The tale of the officer who gave one of his men a sovereign to drink his health with, and was astonished to find that, in the man's anxiety to obey orders, he had drunk his health so assiduously for three or four days, as to be brought at last to the guardroom, and disgraced in his regiment, is one which is continually enacted. The money given and received in the manner to which we are alluding, is sacred to the alehouse, and to the fellowship of pot-companions; and the libations made at such a shrine, commenced under the sanction, authority, and recommendation of the donor, are perpetuated by the taste and newly-acquired habits of the recipient, until, in too many instances, they reduce him to rags, and his family to wretchedness.

We are here looking at the subject in a strong, but in by no means a singular light. We know many who deplore the necessity they are continually under, in order to avoid insult, of contributing to keep up a custom in direct opposition to their deliberate convictions; and we believe that few ordinary doings of the affluent classes are more injurious to the character and wholesome self-esteem of the humbler classes, than when, instead of reciprocating kindness for kindness, or expressing simply a sense of sincere obligation in return for a minor good office, they make unworthy, and, after all, inadequate returns of money. If brotherly-kindness be the bond of union among men, and a series of mutual obligations the links of that chain, can it be otherwise than that the rude attempt to cut asunder one of these links by the strong hand of money, will injure, if not loosen the rest! The example set by railway companies, in making a demand for money by any one of their officials a sufficient ground for his dismissal, is one which, if its principle were carried out in private life, would tend to the complete abolition of the nuisance; but we regret to add that, even at railway stations, in spite of the urgent request that no money should be offered, and the threat that its acceptance would be followed, if discovered, by immediate dismissal, persons are yet found, on the one side, stimulated by a weak and foolish pride, to offer the temptation, and, on the other, sufficiently blind and unprincipled, for the sake of a few paltry pence, to hazard the security of an otherwise permanent and comfortable situation. We can vouch for the correctness of our assertion.

Like some diseased atmosphere, this custom has penetrated the remotest recesses of social life, spreading its infection on high and low, from the palace to the prison, in the streets, by the roadside, in the grand hotel, in the petty tavern, in the playhouse, and even inside the church-door; and though now and then some ultra-reformer of a commercial traveller, in a fretful letter to the *Times*, goes into an elaborate calculation of how much a year the item of civility costs him, and denounces the whole host of waiters, and chambermaids, and hostlers, and boots, and ostlers, and porters, spreading wild dismay throughout the hostels of our quendom; and though some Boanerges of a public writer hurls his thunderbolts at the stolid head of that sluggish giant, the people; and though some mighty preacher proclaims it, as practised within consecrated walls, to be on the one side an insult, and on the other a sin, like a noxious weed, it only springs up the ranker, whether it is cut up or cut down.

We cannot help believing that it is to the upper classes of society that the origin of the evil is attributable; and among them, its parent may be found in pride—we would not say an ungenerous, but a mistaken pride, productive of an unwillingness to receive the smallest assistance from the hands of an inferior, without the endeavor to return it. How salutary a sentiment under the control of a sound judgment—how unsalutary when misdirected! The error was mainly in the head. The dangerous consequences of introducing a species of moral barter were unforeseen, and no definite line was drawn between good offices costing the poorer man little, and those costing him much. Thus was the custom developed. How easy its conception, how rapid its growth, how ripe its maturity, when, lost to a sense of mutual esteem, the poor man renders, and the richer pays for, a civility whose venal character defiles its purity, and robs it of its value!

Thus neither is honesty nor civility suffered to be its own reward. Well might the (I believe) virtuous old man in "The Mysteries of the Forest" exclaim, "What! must I be paid for doing my duty?" Let us hope for the time when, under a second Lycurgan code, money will resume its proper level; when *pour l'amour de Dieu* and *pour l'amour d'homme*, will be tenfold more constraining motives to the relative discharge of moral duties, than heaps of silver or bags of gold; the time when there will be no more charges for "fash," no more touching of the forelock, and "Please remember the boots, sir;" no more money-seeking officiousness of your host's lacquey, as he tenders your hat and glove; no more the half extended hand of the pew-opener, and the "Would you like a seat nearer the desk, sir?"—the time—oh, Utopian dreamer!—when he who would offer to pay by money for an act of humanity, performed from no mercenary motive, would be rebuked as one who had offered an insult to his fellow-man, and an injury to society; the time when civility shall have lost its venality, and when love shall be shown for love, and not love for money!

THE VULGARITY OF RAGS.

At the last meeting of the Ragged School Union Society, Lord Ashley said—"Many persons objected to these schools, on account of their name; and one friend of his own had told him that if the name were changed, he would give a large sum towards their support." Lord Ashley's friend—whoever he may be, whether of the clergy or the laity—is a wise man; a man who knows the world, and all its learned double-meanings. Why—can there be a doubt of it?—if we begin to label things with their proper names—if we call "rags" rags—dirt, dirt,—hypocrisy, hypocrisy—there is an end of the great business of society. For, we contend that it is the work of one moiety of the world to put off certain pocket-pieces, as though they were sterling coin; and the other half to take them with a grave, smug face, as current gold; though occasionally each party puts his tongue in his cheek, to show that at all events he is too clever not to see the counterfeit that passes for sterling money. Now, many people, like Lord Ashley's friend, do not choose to have their benevolence associated with raggedness—it is not respectable. Rags, to be sure, are the gowns of the pupils. They con their books in their "looped and win-

dowed wretchedness;" but why say so? Why should the gentility of very genteel benevolence be turned from its purpose by the nasty poverty—the foul and tattered condition of the recipients? Why should not wretchedness be at least, nominally, laid in lavender? Why cannot we have pleasant destitution? Now rags—real working-day rags, fluttering about unwashed flesh—are too true. Therefore, although we see the tatters of the students—although we nose them, can we not, at the least, sink the foul, frowsy truth, in some sweet, conventional lie? Yes: we will not say "Ragged Schools." We will amend the sinful verity, and, laying down a counterfeit, will call them—"Academies for Youths of Limited Circumstances."

Lord Ashley's friend—you, who will not subscribe to the real thing; come, pull out your purse to the name:—

"Lord Ashley's friend—one hundred guineas!"

And now, John Bull—you lover of a lie—as the thing is made respectable—as there are no "rags,"—canvas your friends and acquaintance; and although you know that you ask for the "Ragged Schools," sink the vulgar name, and beg subscriptions for the "Youths of Limited Circumstances."—*Punch*.

We regret to learn, that letters from the island of Bourbon destroy the hope which had been entertained, as we informed our readers, of the safety of M. Maizan, a young naval officer, who, at the close of the year 1844, undertook an exploring expedition into Central Africa—giving the certain particulars of his melancholy fate. That gallant gentleman left Zanzibar, in April, 1845, furnished with a firman of Sultan Saïd for the principal chiefs—who, however, are, practically, very independent of his authority. Having learnt that a chief named Pazy manifested hostile intentions towards him, M. Maizan remained some time on the coast; but, after having collected information as to the country through which he had to pass, he ventured to proceed—making a considerable circuit, to avoid the territory of his savage enemy. A march of twenty days brought him to the village of Daguelamohor—three days' journey only from the coast in a direct line; and here he waited for his baggage, which he had confided to an Arab servant. This servant would appear to have been in communication with Pazy—and informed him of the road which his master had taken; for the chief, with some men of his tribe, came suddenly upon the latter at Daguelamohor, at the end of July, and surrounded the hut in which he had taken up his abode. Having dragged him out, and tied him to a palisade, they cut his throat and the articulations of his limbs, in the presence of another servant, who has since been redeemed from Pazy by the Sultan—and has furnished these details to the French consul at Zanzibar. The last letter received by the consul from M. Maizan is dated from this village of Daguelamohor; and must have been despatched but a few minutes before that unfortunate young gentleman met his death.—We may mention, in this paragraph, that tidings from La Plata announce the death of M. Aimé Bonpland, the celebrated naturalist, and fellow-traveller of Baron Humboldt—so long held prisoner by Dr. Francia in Paraguay—as having taken place in Corrientes; where, since his release, the philosopher has resided.

From *Fraser's Magazine*.

MR. SHEIL.

EVERY public speaker who can arrest the attention and act upon the feelings of an audience, is, in the most loose or enlarged acceptance of the term, an orator; even in its strict and literal sense, the same definition would almost apply. But it is needless to remind our readers that there are almost as many gradations of excellence included in that general term as there are in similar ones used in reference to painting, or sculpture, or poetry, or acting. As the circle of public intelligence becomes expanded, by the greater spread of general knowledge among the people, and the more universal excitement of all classes in questions of a political or social nature in reference to legislation, the number of public speakers who excite attention and maintain a hold upon the feelings of the people, becomes almost indefinitely multiplied; the intellectual quality of their speeches is deteriorated in proportion as their practical utility is increased; and it becomes more and more difficult to settle the old and often-disputed question, "What is an orator?" Several speakers have already been included in this series, and more will probably follow, whom it would have been absurd to place upon the list of those, so few in names, but so brilliant in performances, who, by the common consent of mankind, by the testimony of history and the evidence of their works, happily undestroyed, are recognized as being the great masters in the art of oratory. Yet, on the other hand, the individuals so excluded exercise a direct and powerful influence over their fellow-countrymen scarcely paralleled, and certainly not exceeded, by the higher order of public speakers. Their utilitarian value fully compensates to the general mind for their want of artificial enhancement. The public, perhaps, would care little to know what were the brilliant excellencies of Mr. Sheil or Mr. Macaulay, or what a critical analysis would discover of their defects, if the plan of the writer gave them that information on the condition that in the exercise of a somewhat hypercritical judgment, he left them in ignorance of the oratorical qualifications of Lord John Russell, or Sir Robert Peel, or Mr. Cobden, or even Lord George Bentinck, men with whose names the whole country is ringing. Yet a speech from Lord Lyndhurst, Lord Brougham, Mr. Sheil, Mr. Macaulay, or Mr. Disraeli, or from Mr. Fox and some of the most distinguished platform speakers, wholly differs not merely in the degree but also in the nature of its excellence from those of the more practical orators—they who really lead the public mind. The one is a study for the intellect and a pleasure to the imagination, for its intrinsic excellence or beauty, while the other derives its interest from extraneous causes, ceasing with the excitement of the hour; such as the position of the speaker, the nature and position of the subject he is handling, and, generally, from the exciting political causes which every year of struggling perpetuates. But the men of the higher order have their ultimate reward. The others have the applause of the present hour alone. Their lumbering speeches are duly reported in the newspapers, in their inglorious rivalry which shall produce the greater number of columns of print; but after the lapse of a week they are forgotten, or only remembered that they may be quoted at a future time against themselves, when, in the mutations of

modern politics, they shall find it necessary to contradict all their former assertions and argue against all their former opinions. But the real orator of the highest class—he who has had a nobler end in view than forensic sophistry or mere clap-trap and cajolery—not only is admired at the time he utters his speech, but is remembered long after his temporary rivals are forgotten. His effusions are read and studied as models by successive aspirants to fame; they are admired by the poet as he admires his Milton, his Wordsworth, or his Tennyson; by the artist as he admires his Titian or his Turner; and it is to them also that the most valuable praise of all is accorded—that of posterity. The practical men secure the present only, the men of genius enjoy both the present and the future.

Mr. Sheil is a man of genius, and, making allowance for some defects which shall be hereafter adverted to, an orator of the highest order. Whether his speeches be read in the closet years after they were delivered, or whether they be heard with all the advantage of that burning eloquence, that brilliancy of diction, that fiery impetuosity of action, which have now become almost associated with the name of Sheil, they are still the same powerful, beautiful, soul-stirring works, still models of the finest rhetorical art. Scarcely any terms of admiration would be too strong as applied to some of his speeches, while even those which do not rise to the highest pitch of excellence have, nevertheless, so decided and so distinctive a character, that they may be at once known to be the production not only of a superior mind, but of the particular man from whom they have proceeded. The very faults of his style cease to be defects when regarded in connection with the pervading tone of his mind, and the leading features of his character.

Mr. Sheil's parliamentary reputation is now of about fifteen years' standing. For that period he has reigned without a rival as the most brilliant and imaginative speaker, and the most accomplished rhetorician, in the house of commons. That assembly—heterogeneous as are the materials of which it is composed—possesses a marvellous instinct in the discovery and the appreciation of oratorical talent. It is their interest that they should have among them those who can occasionally charm them from the plodding realities of legislation, and the dull lucubrations of the practical men. Therefore, they are always alive to excellence, and stamp it at once. Not very long since a new member, a Mr. Cardwell, made a remarkably valuable speech on a question of a practical nature, full of powerful reasoning, concentration, and mastery of the facts. Till the evening when he made that speech, he was comparatively unknown; but he had not been on his legs a quarter of an hour, before the unerring instinct of the house (which operates as closely upon good business speeches as on the most eloquent) discovered that, in his degree, he was a superior man, and the cheering with which he was greeted at the close of his address was the stamp they set on his ability. Sir Robert Peel was among the listeners, and in a few weeks afterwards Mr. Cardwell became a minister. If, in these days of statistics and sophistry, a modest and undistinguished individual was thus singled out, *a fortiori*, it could not have been long before such an orator as Mr. Sheil was elevated to the highest point in the admiration of the house, at a time

when high oratory was more valued. He came but to be heard and to be triumphant. Heralded by the hyperbolic praise of his Irish admirers, his first speech was looked for with a curiosity not unmingled with doubt. But he passed the ordeal successfully, and from that hour has been regarded as one of the most distinguished and remarkable of the many great orators which his country, fertile in genius as in natural riches, has ever produced.

Our mention of the Hibernian admirers of Mr. Sheil reminds us that we have something to say of that gentleman beyond what is prompted by a recollection of his speeches in the house of commons. For, unlike most of our most distinguished men, Mr. Sheil was famous as an orator long before he entered parliament. His eloquence had not been the least important element in causing that unanimity of feeling among the people of Ireland which ultimately led to the great political and religious revolution of 1829. There are very few instances on record of men who have become famous as speakers at the bar, or at the hustings, or at public meetings, having equally stood the test of the house of commons. It is one of Mr. Sheil's many claims on our admiration, that having been an energetic, enthusiastic, and successful leader in a great popular, or rather a great national movement, he should have had the taste and tact to so subdue his nature in the very hour of triumph, as afterwards to adapt his speaking to the tone most agreeable to the house, and to charm them as much by the fire of his eloquence as by the delicacy of his rhetorical artifices, without the aid of those stronger and more stirring stimulants to the passions which form the very essence of successful mob-oratory. In very few instances indeed has he even discarded these voluntary fetters on the exuberant vigor of his patriotism and nationality.

Not as an orator merely will Mr. Sheil assist to rescue this age from the charge of mediocrity. Thirty years ago he first began to be known and appreciated as a poet—when he was only looking forward to the bar as a profession, and long ere visions of applauding millions, or of high ministerial office, or a place in the councils of his sovereign, ever crossed his ardent and aspiring soul. As the author of the tragedies *Eradne* and *The Apostate*, Mr. Sheil already occupied a high place among the writers who were then his contemporaries—a place not very much unlike that now held by Talfourd. In the intervals of those productions, and for some time afterwards, he contributed to the periodicals of the day, and had altogether, even at the early age of twenty-two, made himself that kind of reputation for originality and a high order of talent which floats about society and interests, by some means or other, more certain in their action than perceptible, the general mind in the career of particular individuals. Still, although there were at all times vague predictions that he would “do something” some day or other, no one seems at that time to have suspected that he contained within him the powers which soon afterwards made him second but to one man as a leader of the Irish people, and ultimately have enabled him to compete with the most illustrious men of the day in those qualifications which ensure parliamentary success.

But with the time came the man. The Roman Catholic question had of late years assumed a great parliamentary importance. The stalking-

horse of an ambitious party, the cause had come at last to be regarded as “respectable.” English statesmen and orators—men who in a few years became the rulers of the country—succeeded those great and eloquent Irishmen in whom the advocacy of Roman Catholic freedom from civil disabilities had always been regarded as justifiable—nay, a matter of duty. In the mean while, all the legal dexterity of Mr. O'Connell had been devoted to the construction of an artful but comprehensive scheme of agitation, by which the people of Ireland might be organized and an unanimous call be made on the English parliament for emancipation. This organization went on, with more or less success, for years. Under the name of the Roman Catholic Association it rose from the most insignificant revival (after a temporary dispersion) in the year 1823, until it assumed that gigantic shape which ultimately terrified the government of England into an undignified submission. It was in that year, 1823, that Mr. Sheil and Mr. O'Connell, who were destined at no very distant time to be the great leaders of the association, first met, under circumstances somewhat romantic, at the house of a mutual friend in the mountains of Wicklow. There a congeniality of object overcame the natural repulsion of antagonist minds, and they laid down the plan of a new agitation. That their meeting was purely an accidental one made the results which followed still more remarkable.

Their first efforts were received with indifference by the people; but in a very few weeks the association was formed, and the rolling stone was set in motion. To those who are curious in such matters it will be instructive and amusing to observe the parallel circumstances of the origination of the Roman Catholic Association by some six or seven enthusiasts at a bookseller's shop in Dublin, and that of the anti-corn-law league, by a few merchants at Manchester, or at Preston—for the cotton-heroes of the late campaign have not yet determined at which place the nucleus was formed.

We have alluded to the natural repulsion of antagonist minds. Contrast more marked could scarcely exist than that which was exhibited by the two great leaders of the association. That their mental qualities were so different, and the sources of the admiration which each in his sphere excited so opposite, may be held to be one of the causes of the great success the association achieved. If Mr. Sheil was great in rhetoric—if his impassioned appeals to his countrymen and to the world stood the test not merely of Hibernian enthusiasm, but also of English criticism, Mr. O'Connell was greater in planning, in organization, in action, and he had in his rough and vigorous eloquence a lever which moved the passions of the Irish people. He perhaps had the good sense to see that as an orator, in the higher sense of the term, he could never equal his more brilliant and intellectual colleague. His triumphs lay in the council-chamber on the one hand, and in the market-place or the hill-side on the other. It was in the forum or on the platform that the more elevated and refined eloquence of Mr. Sheil, adorned with all the graces of art, charmed while it astonished a higher and more cultivated audience. Thus they never clashed. While all Europe rang with the fame of the “peaceful agitator,” who had taught his countrymen to use the forms of the constitution to the subversion of its spirit and objects;

every scholar, every statesman, every lover of the beautiful in oratory as an art, had already learned to admire that new, thrilling, imaginative, yet forcible style of eloquence, which ever and anon, amid the din and clamor of noisier warfare, sounded the spirit-stirring tocsin of nationality and religious liberty, breaking forth like intermittent lightning-flashes amid the thunders of the agitation. Mr. Sheil, on the other hand, looked up to Mr. O'Connell for his indomitable energy and perseverance, his craft, cunning, caution, his thorough nationality and identification with the feelings of the people, and would as little have thought of substantially opposing his decision or resisting his general control over the proceedings of the association, as the other would have attempted to vie with him in eloquence. So they went on together, side by side, though really exercising so distinct an influence, with scarcely any of that jealousy or rivalry which has so often stifled similar undertakings in their very infancy. If Mr. Sheil's ideas of agitation were more grand and comprehensive; if he would fain have gone by a more direct and manly but more dangerous road to the intelligence of the English parliament and people; if, in his anxiety to impress on the world a deep and startling conviction of the union and nationality of the Irish people, and their absolute, even their slavish devotion to their leaders; if in this his superabundant energy and velocity of purpose, he would have drawn the association into the meshes of the law, there was Mr. O'Connell at his right hand to repress and guide, to steer clear of the rocks and shoals, to accomplish by that crafty prudence and keen dexterity in escape which savors so much of political cowardice, those objects which, in the other case, would have been realized by a more manly display of political audacity. Mr. Sheil might be the braver man at the boarding-pike or the gun, but Mr. O'Connell was the safer at the helm.

To Mr. Sheil was owing the idea of at once teaching the people of Ireland union and a sense of their strength, while obtaining an universal expression of their wish for emancipation, by means of simultaneous meetings throughout Ireland, in every parish in the kingdom, for the purpose of petitioning parliament to concede the Catholic claims. He would have gone further. He would have had a form of prayer prepared, by means of which, in every chapel in Ireland, the people might simultaneously join in an appeal to Heaven for the advancement of what *they* had been taught to believe was a sacred cause; that millions of men and women might breathe the same aspiration to their Creator, at the same moment throughout the length and breadth of the land. The conception, apart from its impropriety in a religious point of view, was a grand one, and strongly illustrative of its author's character. It was an idea more likely to occur to an enthusiastic and ardent imagination like that of Mr. Sheil, than to the more practical mind of Mr. O'Connell; who again was much more at home in framing a resolution or organizing an association, or holding a meeting, in such a manner as to evade the law. It was his successful boast that there was no act of parliament through which he would not drive a coach-and-six. Mr. Sheil had a poet's conception of agitation and organization; Mr. O'Connell's was that of a lawyer. Characters more opposed could scarcely have been brought together; that they harmonized so well, notwithstanding the many

daily causes of instinctive antagonism that must have arisen, is a miracle only to be accounted for by the influence which a popular movement always exercises on its leaders, so long as they are all pressing forward towards the same goal.

The Mr. Sheil, who now sits and speaks in the house of commons, who is a right honorable member of her majesty's privy council, and was not, so very many years ago, one of the most ornamental, if not quite the most useful, of the members of the whig cabinet, is, however, a very different personage, indeed, from the young, enthusiastic Irishman, barrister, poet, orator, agitator, whose fiery spirit fused into one silver flow of brilliant eloquence so many pure elements of democratic power. Except at intervals, when the old habit recurs, or when some tempting opportunity presents itself to urge the wrongs of Ireland without compromising his new associates, Mr. Sheil is one of the most quiet, silent, unobtrusive members of the house of commons. Indeed, he has become so identified with the whigs, that you scarcely remember him even as an Irishman, still less as one of those who, for so many years, defied the whole parliamentary power of the empire. He has of late years thrown himself almost entirely into the conventionalities of the house of commons, and has undergone mutation from a popular leader into a partisan. This is said in no spirit of disparagement; on the contrary, however "Young Ireland" may affect to scorn such apparent lukewarmness and subserviency to circumstances, it is really one of Mr. Sheil's most solid claims to our respect. Nor is his oratorical power diminished when, on occasion, he deigns to resort to it. On several occasions he has delivered speeches on great questions not affecting Ireland alone, but the whole empire, which, for vigor, beauty of imagery, boldness of conception, and sarcastic power, will vie with the best of those made in the very heat and fervor of his patriotism. It is not that his strength is diminished, but that it is more under the regulation of his taste and judgment.

Some of the speeches—harangues they would bear to be called—made by Mr. Sheil at the meetings of the Roman Catholic Association, will bear comparison with the most memorable ever called forth by the spirit of democracy. Almost from the first day he appeared on the platform of the association, the attention of the political world, indeed of all thinking men was fixed upon him. Those who could not be present to witness the powerful aid lent to his burning words by his striking and original action, still saw unquestionable genius in the exquisite language, the novel metaphors, so bold yet so well controlled, the forcible antithesis, the luxuriant imagery, the unapproachable sarcastic power, and, above all, in an irrepressible spirit of patriotism, an indignant sense of insulted national honor, that bore onwards the stream of his thoughts with a wild and reckless abandonment, perilous at every fall, yet, torrent-like, free again at a fresh bound and rushing far away in flashing beauty. By the side of the deep, steady current of Mr. O'Connell's eloquence, slow moving like a mighty river, the rapid flow of Mr. Sheil's pure, clear, poetical diction, gave a delightful and refreshing relief to the mind. Take up the proceedings of those meetings, and the very sentences, so short and exquisitely framed, seem as it were to gleam and glitter. Never was sedition clothed in more seductive language, or democratic principles

made more fascinating to the most fastidious intellect. In his strong conviction of the justice of his cause, he would certainly at times broach doctrines as to the means to be employed, which it required all the moral weight of Mr. O'Connell and his timorous prudence to counteract. But if the fiery and impetuous young advocate of a people was sometimes thus hurried on, by the ardor of his imagination, to lengths which his calmer judgment would have hesitated to confront, it was so clearly only the irrepressible enthusiasm of the poet-agitator, not the significant appeal of the designing demagogue, that the poison of the thought had its antidote along with it in the chosen and beautiful words through which it was conveyed. But, with all their faults, and in spite of the meagre and imperfect reports of them which appeared in the newspapers and the published proceedings of the Roman Catholic Association, those speeches spread the reputation of Mr. Sheil far and wide—wherever public opinion was aroused on the Roman Catholic question—a question which, to the opponents as well as to the supporters of the Roman Catholic claims, was growing to be one of the most vital importance. Their faults were, indeed, many. The politician might be able to find excuses in the singular position of the then leaders of the Irish people, and the momentous nature and exciting interest of the contest, for the occasional bursts of anti-English feeling, the exultation over English faults and follies, the unconstitutional tone of many of those orations, by which the suppressed hatreds of centuries were arrayed against the comparatively innocent statesmen and people of a single age; the poisoned arrows of the rash rhetorician might rebound from the mail of principle in which the Protestant legislator encased himself, confident in its strength against all but the artillery of popular enthusiasm poured in by the more crafty and designing genius of O'Connell. But the critic, fastidious in eloquence, could not forgive, in one whose genius he was compelled to admire, the frequent violations of good taste which the rising orator had not then learnt to avoid—the use, without selection or abstinence, of metaphors, whose extravagance could not be excused, however their boldness might be felt or their force acknowledged, and the sacrifice to political passions of the symmetry and poetical harmony of what, but for those errors of a luxuriant fancy, might have been grand models of oratorical perfection for all time, each, for its eloquent history of national wrongs, an epic, not spoken only to listening thousands, but recorded as at once a delight and a warning to millions yet to come. And, indeed, we do not overrate the political value of those speeches while thus looking back at their faults. Time has obliterated their immediate effects, there are not many who remember to have heard them; and, of the multitudes who read them and felt their power at the time they were delivered, the majority have forgotten, in the excitement of subsequent contests, the great moral influence which they once exercised. But history is already recording their results, and, happily for his own fame, and for the gratification of his countrymen, he who delivered them is yet strong, ay, still stronger in those powers which he possesses in such rare perfection, toned down and chastened as they now are in their exercise, by increased intercourse with mankind, and the natural effect which time and the absence of all causes of excitement have produced on an ardent and irritable temperament. The

speeches to which we more particularly refer were delivered at intervals between 1823 and 1829. Bad as the reports of these speeches are, still their intrinsic worth, their powerful eloquence, and exquisite beauty, make themselves felt through ever so debased a medium. Perhaps the most remarkable of his speeches—the most original and characteristic of his peculiar mind—were those he made at the different aggregate meetings of the Roman Catholics which took place at intervals during the agitation for emancipation. Then he had a wider field and a more inspiring audience than even at the meetings of the Association; for, at the latter, the cautious spirit of O'Connell prevailed almost without restraint; the jealous eye of the government watched, with lynx-like precision, every movement of so dangerous an organization; and even the enthusiasm and valorous fancy of a Sheil were restrained within the limits of a technical construction of the liberty of public speech. But the aggregate meetings were more a matter of open public constitutional right, and there the enthusiastic and indignant orator revelled in the wild freedom of conscious power and irresistible impulse. The full force and beauty of those speeches can now scarcely be appreciated but by those who were so fortunate as to hear them. They left an impression which has never been effaced by even the more perfect and chastened productions of the maturer mind of the orator. One of his greatest triumphs was on the occasion of that miracle—morally, still more than politically, a miracle—the Clare election. Nor should we forget to mention, among his great orations, his speech at a great meeting, (at Carlow, if we remember rightly,) where, taking the first chapter of Exodus for his theme, and with the Bible in his hand, he quoted with a solemnity and effect electrical on the sympathies of a religious and enthusiastic people, the words of the inspired writer, and founded on them an impassioned appeal to his countrymen to persevere in their career—to press onwards to the goal appointed for them, heedless of the fears of the timid or the suggestions of the compromising. Words are inadequate to convey the effect of this speech: nor was the speech one of words only; it was the action, the fine harmony between the thoughts and the expression, when the feelings were wrought up to the highest pitch of tension in the enthusiasm inspired by the cause, and the sympathy of the multitude around; all these drew forth the hidden strength of his nature till he poured the full force of his fervid soul into his solemn theme.

A very short period found him in the House of Commons. As soon as the Emancipation-bill qualified him, as a Roman Catholic, to sit, his ambition, or the tactics of the Association, led to his being put forward for the county of Louth. He was unsuccessful; and was ultimately content to slip into Parliament for a nomination borough—that of Milburne Port. In 1831, on the 21st of March, he made his first speech in the House of Commons, on the second reading of the Reform-bill. He had not long proceeded with his address ere the House perceived, and acknowledged by their cheers, that they had in him, as in Mr. Macaulay, a mine of oratorical wealth, and a perpetual source of the highest gratification. His reputation for power and originality as a speaker had preceded him; and the utmost anxiety was manifested to hear his maiden essay. In this respect he was differently situated from his eloquent rival. From

Mr. Sheil, all men expected much; Mr. Macaulay's powers, except, of course, as an essayist, were known only to a comparatively few of his personal friends, and those who had been his contemporaries at Cambridge. If he therefore made, by comparison, a more brilliant speech, and achieved a more complete triumph, great allowance must be made for surprise. Mr. Sheil, notwithstanding the extravagant expectations formed of him, also achieved a triumph; but it took him a longer time to acquire his absolute ascendancy as an orator. People, too, were always afraid that his nationality, which had been so useful in the agitation, would every now and then break out in some anti-English demonstration.

But Mr. Sheil showed himself almost as great a tactician as he was a rhetorician. The war over and the victory won, he buried the sword and forbore to exult over the vanquished. Throughout his subsequent parliamentary career, he has identified himself with an English party; and, while still advocating, with eloquence as energetic but more chastened, the "wrongs" of Ireland, he has never run counter to the feelings of the English as a nation. In this respect he differs from Mr. O'Connell and the *parti prêtre* as much as from "Young Ireland" or the party republican. Gratitude for emancipation made him, together with the new Irish Catholic members, vote with the mass of the English people on the Reform question. That gratitude has never died within him. The penal laws on the Roman Catholics he conceived to be the real badge of national subjugation; those once abrogated, he considered himself one of the people of the British empire, and, while still urging on Parliament the gradual fulfilment of the contract of 1829, in what he would call its spirit as well as its letter, he never forgot that justice to England was quite as sacred a duty as justice to Ireland. Not so all his friends.

This tact and abstinence in Mr. Sheil very materially lessen the difficulty of criticizing the speeches he has made in Parliament. If they are ever disfigured, it is not by wrong sentiment or the undue infusion of political feeling; their blemishes are obvious only in a critical point of view, and are at the same time so entirely counterbalanced by their beauties, that they might be passed over, were it not that their exposure might possibly prevent a very seductive example being followed by others. It should be added, too, that our remarks apply to Mr. Sheil's speeches *as delivered*, not as printed in the newspapers. From the extraordinary rapidity of his utterance, and the abrupt transitions of voice in which his enthusiasm and ardor lead him to indulge, even the most experienced reporters find a difficulty in rendering his speeches with perfect fidelity and freedom. It is obvious that an orator whose beauties of style depend so much upon the most slight and evanescent touches, the nicest discrimination of language, the artful collocation of words and sentences so as to make emphasis supply in many cases the thought which parliamentary custom will not permit to be expressed in words, must suffer irrevocable damage if in the process of transmutation the fine aroma is lost, or the exquisite tints and shades confounded in a general flatness and tameness of coloring. Nor is the case mended when he afterwards writes his own speeches. He then falls into nearly the same error. The heat of his mind has cooled, and he cannot so speedily reproduce it. Sometimes an intelligent and able reporter will produce a better version than his own.

An analysis of Mr. Sheil's speeches would show them to be in the highest degree artificial. It is his object to produce, by the most elaborate selection of themes, the most chosen forms of phrase, and the most refined art in their arrangement, the same effect which the spontaneous efforts of an earnest orator would have had in the highest powers always at command. Mr. Sheil speaks but seldom, and takes much time to prepare his speeches, which, though delivered with all the air of passion and abandonment which the enthusiasm of the moment might be supposed to inspire, are studied even in the most minute particulars—in the words chosen, the contrasts of ideas and imagery, the tone of voice, the very gesture. This preparation may not extend perhaps to every part of the speech. In the level portions, or in those allusions which are called forth by what has happened during the debate, he trusts in a great measure to the impulse or the judgment of the moment, though even here you may every now and then detect a phrase or a thought which smells of the lamp; but the great passages of the speech—those which the world afterwards admires, and which, in fact, form the foundation of the fame of the orator—these are hewn, chiselled, and polished with all the tender care of a sculptor, rehearsed with all their possible effects, and kept in reserve until the moment when they may be incorporated in all their brilliancy and perfection, with the less conspicuous parts, where they shine forth resplendently like bright gems in a dull setting. It is in rhetoric and sarcasm that he is most distinguished. As a rhetorician he is almost perfect. No man whom this generation has ever heard speak equals him in the power with which he works out an idea, an argument, or an illustration, so as to make it carry all the force and weight of which it can possibly be made capable. And this, although it is really the result of such art, is done by means apparently so simple that the hearer's mind is unconsciously captivated. A happy adaptation of some common thought, an infusion of nervous metaphor, which gives a coloring to a whole passage without leaving open any point tangible to opposition; delicate antithesis, the more effective from its not appearing forced;—these are among the many arts which Mr. Sheil uses to insinuate his views and feelings into the mind, while avoiding the appearance of making a deliberate assault, or laying himself out to entrap or to persuade. Occasionally there are bursts of passionate eloquence which it requires all your skepticism to make you believe are not the warm outpourings of an excited mind; but so you may say of a Kemble or a Macready. In his speeches on Irish subjects especially this apparent sincerity is most conspicuous. His heart always appears to be in his appeals to the English nation on behalf of his country, and no doubt at many times he must fling off his habits of preparation and give rein to his feelings or his imagination. In speaking of Ireland he personifies her—talks of her and her wrongs as he would of some lovely and injured woman, whose cause he was espousing. Sometimes his propensity to personify runs him into extremes. Speaking of the address for a Coercion-bill in 1833, he characterized it as one "which struck Ireland dumb, and clapped a padlock on her lips; though it never could stop the throbbing of her big and indignant heart!" One of his most remarkable and beautiful outbursts of nationality was in 1837, in his celebrated attack on Lord Lyndhurst for his "alien" speech. Alluding to

the alleged charge that the Irish were aliens in blood and religion, he delivered this magnificent burst :—

“Where was Arthur Duke of Wellington when those words were uttered! Methinks he should have started up to disclaim them.

‘The battles, sieges, fortunes that he ‘d pass’d’

ought to have come back upon him. He ought to have remembered that, from the earliest achievement in which he displayed that military genius which has placed him foremost in the annals of modern warfare, down to that last and surpassing combat which has made his name imperishable—from Assaye to Waterloo—the Irish soldiers, with whom your armies were filled, were the inseparable auxiliaries to the glory with which his unparalleled successes have been crowned. Whose were the athletic arms that drove your bayonets at Vimiera through the phalanxes that never reeled in the shock of war before! What desperate valor climbed the steepes and filled the moats of Badajoz! All, all his victories should have rushed and crowded back upon his memory; Vimiera, Badajoz, Salamanca, Albuera, Toulouse—and last of all, the greatest. Tell me, for you were there—I appeal to the gallant soldier before me, (pointing to Sir Henry Hardinge,) who bears, I know, a generous heart in an intrepid breast—tell me, for you must needs remember, on that day when the destinies of mankind were trembling in the balance, while death fell in showers upon them; when the artillery of France, levelled with the precision of the most deadly science, played upon them; when her legions, incited by the voice, inspired by the example of their mighty leader, rushed again and again to the contest;—tell me if for an instant, when to hesitate for an instant was to be lost, the ‘aliens’ blanched! And when, at length, the moment for the last decisive movement had arrived; when the valor, so long wisely checked, was at last let loose: when with words familiar, but immortal, the great captain exclaimed, ‘Up, lads, and at them!’—tell me if Catholic Ireland with less heroic valor than the natives of your own glorious isle precipitated herself upon the foe! The blood of England, Scotland, Ireland, flowed in the same stream, on the same field; when the chill morning dawned their dead lay cold and stark together; in the same deep pit their bodies were deposited; the green arm of spring is now breaking on their commingled dust: the dew falls from heaven upon their union in the grave. Partakers in every peril, in the glory shall we not participate! And shall we be told, as a requital, that we are estranged from the noble country for whose salvation our life-blood was poured out!”

The effect produced by this passage will not be easily forgotten. The passionate vehemence of the speaker and the mournful music of his voice were a living echo to the deep emotions with which his soul seemed charged. Lord Lyndhurst was in the house at the time, and although conscious that the whole passage was only a beautiful phantasmagoria raised by the art of the rhetorician, still he could not but admire. It would seem invidious to attempt to neutralize so fine a burst of feeling; but a few words of truth will go far to do it. It unfortunately happens that Mr. Sheil himself, in a speech at the Roman Catholic Association, in January, 1823, laid down in distinct and unequivocal terms the very same doctrine—that the Irish were aliens—for giving currency to

which he so successfully assailed Lord Lyndhurst with the keen arrows of his oblivious passion.

Metaphor and antithesis are the chief agents he uses in his speeches. Sometimes the latter is exquisitely perfect; sometimes, on the other hand, labored and clumsy, and so forced as to defeat itself. Too often he is run away with by the seduction of this pleasing but mechanical mode of pointing thoughts, to the manifest injury and weakening of his argument or of the general tone he wishes to convey. Then you see that he is only the orator, the sentence-maker, the painter of brilliant pictures; that he wishes his triumphs to be more over the passions or the imagination than over the reason or the judgment. His style has other defects akin to these. For instance, he will often sacrifice the real strength of a phrase and endanger the success of the thought or argument it conveys, led away by the seductive sound of some word or words rhythmically pleasing in combination, but the application of which in such a manner the judgment rejects; and he will also lose the force and beauty of real antithesis in the glitter or the novelty of its false counterpart. For an odd paradoxical phrase he will risk the simplicity and truth of a sentence. Speaking of the Whig Tithe-bill, he exclaimed, “Tithes are to be abolished. How! By providing for them a sepulchre from which they are to rise in an *immortal resuscitation!*” This is an abuse of language. His metaphors are bold and striking. Among many brilliant things in his speeches against Lord Stanley he said—“The people of Ireland behold the pinnacles of the Establishment shattered by the lightning of Grattan’s eloquence.”

He excels in sarcastic humor, which is generally conveyed in the most delicate touches. He is like Lord Lyndhurst in the apparent ease and artlessness with which he infuses the most keen and cutting allusions by the addition of a word or the turn of a sentence in the midst of the most level argument. Henselwood makes a “dead set” at his victim, like Lord Brougham; and he therefore produces the more effect. Some of his smartest hits of this kind were at Lord Stanley. It was he who spoke of that minister as “the then Secretary-at-war with Ireland;” and, when alluding to Sir James Graham in council with the noble lord, he spoke of them as “Lord Stanley and *his confederate*.” On another occasion, speaking of “divine service,” as referred to in an act of parliament, he jetted in a parenthesis (“divine is an *alias* for Protestant”) well understood by the Roman Catholics, and having as much force as twenty elaborate speeches. He is not very reverent in his jokes. Alluding to the Temporalities act, he observed that “Lord Stanley had struck off ten bishops at one blow; he blew off ten mitres from the head of the hierarchy at a single puff.” If he can make a witty point or shape a felicitous phrase, no fastidiousness of taste or delicacy of feeling restrains him from wreaking his wit on an antagonist. There are several instances on record where he has done this towards individuals, though never in an ill-natured or spiteful spirit. He is equally liberal in his sarcastic allusions to classes or bodies of men, and not more delicate. We remember an instance in one of his speeches which illustrates this peculiarity in his style. He had been drawing a somewhat glowing and overcharged picture of the good results to ensue from church reform, and he summed them up in terms of characteristic power, and of a degree of coarse-

ness not often met with in his speeches. He said, as a climax to his anticipations of good, that when these reforms should have been effected, "the bloated paunch of the unwieldy rector would no longer heave in holy magnitude beside the shrinking abdomen of the starving and miserably prolific curate."

Sometimes his sarcasm on individuals is really searing, sometimes playfully severe. We remember one amusing instance of the latter. One day, at the Catholic Association, a volunteer patriot—a Mr. Addis, we believe—came forward and made a very strong speech, more remarkable for enthusiasm than prudence, in which he offered, if necessary, to lay his head on the block in the cause of Ireland. His address was rather a dangerous one to those whom he professed to serve, as the crown lawyers were at that time more than usually on the alert. Mr. Sheil desired publicly to counteract the possible mischief. He rose, and, with his peculiar sarcastic emphasis, observed, "The honorable gentleman has just made us an oblation of his head; he has accompanied his offer with abundant evidence of the value of the sacrifice." Columns of abuse from Mr. O'Connell would not have proved half so effectual as this quiet rebuke.

But we must draw these observations to a close. The characteristics and defects of his speeches have been more dwelt upon, because his eccentricities of delivery have been frequently and powerfully described. There is a striking correspondence between his personal peculiarities and the leading features of his speeches. He is unique as an orator. There is a harmony between the outer and inner man which you do not find in others—for instance, in Mr. Macaulay. Having read his speeches, if you see him, you are not surprised to find that it was from him that they proceeded. Small in stature, delicately formed, with a strongly marked countenance full of expression, he looks the man of genius, and betrays in every motion that impulsive temperament on which excitement acts like a whirlwind. He seems "of imagination all compact." You see the body, but you think of the mind. It is embodied passion, thought, fancy; not mere organized matter. "Look! what comes here!—a grave unto a soul, holding the Eternal Spirit against its will!" you are tempted to exclaim with the poet who of all others could have appreciated such rare products of nature's love-labor, such unusual blendings of the spiritual and the material. Yet there is nothing of the beautiful in a physical sense, little of that personal perfection or refinement which made a Byron or a Shelley so loved or worshipped by their intimates. The charm of Mr. Sheil's appearance consists in the striking and powerful development of intellect; in the quick reflex of thought in the features; the mobility of body, the firm grasp, as it were, which is taken by the mind of the corporeal frame, making it the ready and obedient slave of its slightest and most sudden will. Thoroughly masculine in moral strength, in the intensity of his feelings, and the strong power with which he impresses them on others, Mr. Sheil has also all the femininity which we attach to our idea of the poetical temperament, though it shows itself not in personal delicacy or symmetry so much as in a supreme and serene control over the body by the spirit. There is more of Edmund Kean than of Shelley in this transparency of the corporeal man to the intellectual light within. A writer, who would seem to be well acquainted with his subject,

has said, speaking of Mr. Sheil's personal appearance,—

"Small in stature and make, like so many men of genius, he bears the marks of a delicate organization. The defects of a figure not disproportioned, and yet not strictly symmetrical, are overlooked in the play of the all-informing mind, which keeps the frame and limbs in rapid and harmonious motion when in action. The body, though so small in itself, is surmounted by a head which lends it dignity—a head, though proportionately small in size, yet so full of intellectual development, so wide-browed, that, while it seems large in itself, it raises the apparent stature of the wiry frame on which it rests. The forehead is broad and prominent, but, at first sight, it rather contradicts the usual development of the intellectual; though really deep and high, it seems to overhang the brow. Under it gleams an eye, piercing and restless even in the repose of the mind, but indescribably bright and deep-meaning when excited. The mouth, small, sharp—the lips chiselled fine, till, under the influence of passion, they are almost transparent like a shell—is a quick ally in giving point and meaning to the subtlest ideas of the ever-active brain; apt in its keen-like expression, alike of the withering sarcasm, the delicate irony, or the overwhelming burst of sincere and passionate vehemence. The features generally are small, but, under the influence of ennobling emotion, they seem to expand, until, at times, they look grand, almost heroic. Yet when the baser passions obtain the mastery over this child of impulse—as they will sometimes over the best in the heat of party warfare—these features, so capable of giving expression to all that elevates our moral and intellectual nature, become contracted, the paleness of concentrated passion overspreads them. Instead of the eloquent earnestness of high-wrought feeling, you see (but this is rare, indeed) the gloating hue of suppressed rage, the tremulous restraint of cautious spite. In place of the dilated eye, and features flushed with noble elevation of soul, or conscious pride of intellectual power, you have a keen, piercing, adder-like glance, withering, fascinating, but no longer beautiful. Yet the intellect, though for a time the slave of passion, is the intellect still."

His peculiar style of eloquence, his rapidity of utterance, variety and impressiveness of action, and harmonious tones of voice, now deep and richly melodious in the expression of solemn emotion, now loud and piercing in the excitement of passion, almost defy description. Imagine all the beauties of Kean's performance of Othello crowded into half an hour's highly sustained eloquence, and you have some tangible idea of what is the effect. While the impulse is upon him he seems as if possessed, his nature is stirred to its very depths, the fountains of his soul pour forth unceasingly the living waters. His head glows like a ball of fire, the soul struggles through every outlet of expression. His arms, now raised aloft, as if in imprecation, are, in a moment, extended downwards, as if in supplication, the clenched fingers clasped like those of one in strong agony. Anon, and the small, thin, delicate wiry hand is stretched forth, the face assumes an expression the very ideal of the sarcastic, and the finger of scorn is pointed towards the object of attack. A thousand varying expressions, each powerful and all beautiful, are crowded into the brief time during which his excitement (which, like that of actors, though prepared, is genuine

while it lasts) hurries him on to pour forth his whole soul in language of such elegance and force.

Mr. Sheil occupies a position different from that of most of his countrymen in parliament. The Irish member who most approaches him in intellectual qualities, though not in actual eloquence, is Mr. Wyse. Like Mr. Wyse, he has associated himself with the whig party, who chose him to be one of their ministers when they desired to fraternize with the Irish Catholics, because he was at once talented, moderate, and respectable. For joining them, he has been made the subject of virulent abuse by the extreme party in Ireland: but he has too much steadiness of purpose and good sense to be much affected by it. His position in the house is well earned, not merely by his eloquence, but also by the general amenity of his disposition, whether as a politician or a private individual. Were all the Irish members like Mr. Sheil, the Irish question might be speedily and satisfactorily settled.

From the Spectator.

MEMOIRS OF A CHURCH OF ENGLAND MISSIONARY IN THE NORTH AMERICAN COLONIES.

MR. MUSGRAVE, whose colonial life as a clergyman is narrated in this volume, was, by dint of books on geography, early smitten with "romantic ideas concerning America;" and it was his boyish determination to settle in what he then thought an earthly Paradise. This idea passed away; but in very early manhood "a circumstance occurred, involving in its consequences so much of sorrow and misery as led him to form a more true and correct estimate of the comparative value of the things of heaven and earth than he had ever done before." He studied for the church; took orders; passed some time as a hard-working curate in a large town; and in the year 18— was appointed a missionary for a township in one of our North American Colonies, (which seems to have been Canada,) by the Society for the Propagation of the Gospel in Foreign Parts.

The Memoirs contain an account of his life and experiences, from his first arrival in the colony, full of the hope and buoyancy of youth, till he has reached mature age, somewhat broken by toil, narrowed circumstances, and domestic afflictions. The topics of his pen are—the character of his parish duties and of his parishioners; the troubles he had in raising money to build churches, and in contending with sectarians; various incidents of a singular, or, as Mr. Musgrave is inclined to think, of a "providential" kind, occurring among the rough and simple people by whom a district is first broken up; with accounts of occasional conversions among his flock. The more biographical subjects involve his own adventures on various occasions when travelling about the country, the personal difficulties he experienced in household affairs, from the peculiar position of a clergyman and the backward state of the district; together with some domestic incidents—his marriage, the deaths of children, &c.; and a sketch of the campaign against the rebels, when he turned out, unarmed, at the head of his armed parishioners, who rose en masse.

With a slight touch of provincial fine writing, the narrative of Mr. Musgrave is very real, but

slightly literal and feeble. His composition has a singular mixture of the simplicity of the old divines with the peculiarity of the modern Methodist tract, and something of that original unkempt character which people acquire in solitude, and which gave such individual raciness to the men of the middle ages, and even to our grandfathers. His weakness and peculiarities, however, impart interest to the book, as they present a truer view of the common life of the country, and of course homelier information, than if a more judging eye had selected the subjects and a more skilful pen presented them. They are also full of suggestions and intimations. In the superstitions of the people respecting haunted houses, supernatural warnings, unearthly horsemen riding by night, and other sounds as mysterious, we have a picture of "old England" such as it was before rapid locomotion had banished the belief of the invisible world, or at least the avowal of it, save in those out-of-the-way places which modern improvements have not reached. More striking still is the manner in which it enables us to read and realize many things in the olden time: we transport ourselves "beyond the ignorant present." Mechanical and material facilities have induced in this country a division of labor and a fastidious refinement which attach fully enough if not too much to conventional and external forms. We are so accustomed to a "professional gentleman," much more a clergyman, not soiling his hands by doing anything useful, that when we read of ancient enactments against divines frequenting public-houses or keeping them, or pursuing any secular occupation for gain, no effort of the mind can reconcile us to the idea; and much the same might be said of the farming parson, not yet entirely extinct. In the Memoirs before us, we are led to see the absolute necessity of many of these things in the outset (however improper or corrupt they might finally become;) and that in a poor country, where money is scarce and population thin and scattered, the clergyman cannot receive a money salary, but must derive his subsistence to a great extent from his own exertions. Where tradesmen of any kind are rare and there are no capitalists, he must work himself, or overlook the workmen he hires; ride like a post-boy or a jockey, and indeed harder, in the mere fulfilment of his duties; and put up with any accommodation that may offer. No doubt, the forms of things are different. In Canada there are no tithes, which the Romish Church in Europe managed to exact at a very early period; on the other hand, a money salary, though insufficient, is paid to the missionaries; and the knowledge even of the most ignorant settler is very different from popular opinion in the dark ages. The picture of a clergyman's life in Canada also suggests the advantage of celibacy to a missionary; as his labors indicate that monasteries in the first case had a real utility. Independently of the obvious advantage of dividing labor according to the aptitude of men's natures, transferring the coarser business to the coarser mind, and reserving the religious duties and the scholarly pursuits to the better and more refined character, one man was really insufficient for the duties of a large district. In the Protestant church this separation cannot well take place; and in new or poor countries a divine must become something like a jack-of-all-trades—with no great advantage, we suspect, to his intellect or his delicacy.

These opinions will be best tested by a perusal

of the book : the proper extracts to support them fully would occupy more space than we can spare ; but here is one.

A CLERGYMAN'S DUTY IN A COLONY.

" On one occasion I was called upon one Saturday morning, I well remember it yet, to marry a couple at a settlement fifteen miles off. I started very early, and got back about five o'clock in the evening, weary and almost worn out, more by the excessive heat than by the length of the journey ; and was very thankful to return to my comfortable home. But on giving my horse, which was about as tired as myself, to my servant, I was informed that a man was waiting for me, and had been for several hours, to go with him twenty-five miles to see his wife, who was thought to be at the very point of death. I directed my servant to give the man his dinner, and got my own ; and then immediately set off with him on a fresh horse, and arrived at my journey's end about ten o'clock at night. I found the poor woman very ill, worse indeed than she had been represented to be. I sat up and talked and prayed with her, or read to her, till four o'clock in the morning ; when her happy spirit ascended to Him who gave it.

" I then threw myself on a sofa, which I found in an adjoining room, for an hour or two ; and starting again for home, got there in time to take a hasty breakfast, and to dress for church, at eleven.

" Morning service over, I rode nine miles to one of my outposts, for evening service ; and then home once more.

" I was up early the next morning, in order to be off in time for the poor woman's funeral, which was to be at ten o'clock, by my own appointment. As I mounted my horse, my servant, a raw but well-meaning Irish lad, said to me—' An is 't off agin ye are ! Sure an the horses 'll be kilt, if the maister hisself is n't.'

" ' I cannot help it, John,' I replied ; ' I must go.'

" ' Well, well !' he rejoined ; ' I never seen the likes o' this afore ! But there's no rest for the wicked, I see.'

" I cast upon him a searching look, to ascertain whether his remark was to be imputed to impertinence : but the simple expression of commiseration on his countenance at once convinced me that he meant no harm.

" I pushed on, for fear of being too late, to meet the funeral at the burial-ground, about three miles from the house of mourning. I was there far too soon, and had to wait several hours. There is an unwillingness on such occasions to be punctual ; arising, I am inclined to believe, from the fear of being guilty of an undue and disrespectful haste ' to bury their dead out of their sight.'

" It was late in the evening when I got home ; and, what with the fatigue and the heat of the weather, and the want of rest, I was fairly worn out, and so ill as to be obliged to keep my room for three days."

CURIOSITY AND GOOD COMPANY.

" I had for fellow passengers a country judge of the Court of Requests, a magistrate, and a colonel and major of militia, all belonging to and residing in my intended mission. Through the indefatigable exertions of some or all of these titled gentry, in examining the partially-defaced direc-

tions on my trunks, and questioning not only my servant but myself also, my name and purpose had been successfully made out before I had been an hour in their company. I was far from being sorry for this, as I received from them the most marked and flattering attentions.

" I thought at first, that, as far as good society was concerned, I had ' fallen on my feet :' but, alas ! my judge turned out to be a petty sheep-keeper, a doler out of drams to the drunken ruffians ; the magistrate, an old rebel soldier of the United States, living upon a pension of 20*l.* a year from that government as the reward of his treason, and at the same time holding a commission of the peace under the one against which he had successfully fought. The colonel, the most respectable of my dignified companions, had been a sergeant in the ——— regiment, and was now living upon his pension of 2 shilling a day ; and to complete my catalogue, the major was the jolly landlord of a paltry village-tavern."

COLONIAL POVERTY.

" The people belonging to the church, although more numerous than those of any other single denomination, were still very few : and the first time I administered the holy sacrament of the Lord's Supper, I had only nine communicants. They were also very poor, as new settlers generally are ; and this was comparatively, with the exception of the small village, a new settlement ; and yet, strange as it may appear to a dweller in the old country, they were all well off in the world. They had all the necessities and comforts of life at their command, and even some of the luxuries : still they were poor, as far as the ability to pay money was concerned ; they had it not, neither could they obtain it without great exertions, and still greater sacrifices ; and nothing else would build the church. Some of the work, it is true, could be done by themselves ; and they willingly and freely did it."

THE Annual Meeting of the members of the London Library took place, some days since, at their new mansion in St. James' square,—the Earl of Clarendon in the chair. It appeared, from the report, that this institution is fast progressing in public favor. The plan (which includes the lending of the best books in every language at the homes of the subscribers, and some of these the most rare editions of standard works and books of the highest price, for the small annual subscription of 2*l.* with an entrance fee of 6*l.*.) has obtained such success, that, independently of the presents made by his royal highness Prince Albert and others, there have been expended upwards of 7500*l.* in the purchase of books. The library already contains upwards of 10,000 volumes.

AMONG the public works in Ireland about to be immediately commenced, for the purpose of furnishing labor to the poor, we observe that preparations are making for the erection of the new college in Galway, on the site selected, and approved by the Board of Works. The design is described as being that of a splendid edifice—of the architectural style of Henry the Eighth's time—well adapted to the accidental resources of the locality, which abounds in limestone of the very best quality.

From Chambers' Journal.

JENNER AND VACCINATION.

No more fatal or formidable disease has ever scourged the human race than one—now happily becoming the subject for history—the small-pox. Authoritative evidence has of late years been adduced to show that it existed in the Mosaic period, and in China it has been known from the earliest ages. Most of the fearful plagues which from time to time, on various portions of the earth's surface, have swept myriads into untimely graves, were no other than devastating visitations of this dreaded disease; and even pursuing its ordinary course, it carried off one in fourteen of all that were born. In Ceylon, whenever it broke out, entire villages were abandoned; and in Thibet, on one occasion, the capital was deserted for three whole years. In the Russian empire, two millions of human beings died of small-pox in twelve months. Bernouilli calculated that fifteen millions fell victims to it every twenty-five years, taking the whole world, or six hundred thousand annually, of which number not less than two hundred and ten thousand were estimated for Europe alone. And to come down to more recent times, the readers of Mr. Catlin's work on the Indians of North America will remember the terrible accounts of the destruction of whole tribes by this deadly malady. Regarded as inevitable, it came also to be considered as irremediable, and the world submitted to its ravages as a calamity of fate. In 1714, Dr. Timoni of Constantinople published a work on the subject; and to the good sense, courage, and influence of Lady M. W. Montagu, who caused her son to be inoculated in the Turkish capital by Mr. Maitland, surgeon to the embassy, England is indebted for the counteracting practice. In 1722, her daughter was inoculated in this country by the same gentleman; and the method was generally adopted until 1740, when it had fallen nearly into disuse; but favorable accounts coming from abroad, it was again revived; and, to propagate the salutary modification, the then Princess of Wales caused two of her daughters to be inoculated. The new remedy, however, met with great opposition. Some denounced it as an attempt, "at once impious and unavailing, to counteract the visitations of an all-wise Providence;" asserting that, in the case of adults who voluntarily submitted themselves to it, the crime was that of suicide; but in respect to children, "it was horrid murder of the little unoffending innocents." It was anathematized from the pulpits as an invention of Satan, and its "abettors" as sorcerers and atheists. A clergyman of London, named Massey, declared that it was no new art, as Job had been inoculated by the devil.

Owing to the careless practice of the time, there was some show of right in the opposition. The infected were not kept separate from others; and as inoculation always produced the true disease in its usual infectious form, it became more widely disseminated, and the mortality frightfully increased. In the year 1800, it broke out no less than twenty times in the Channel fleet alone; and the records of the Asylum for the Indigent Blind showed that three fourths of those relieved lost their sight from small-pox. Its victims in Great Britain amounted to forty-five thousand annually; and the celebrated La Condamine, pleading for the adoption of a remedy in France, said, "*La petite vérole nous décime*"—"The small-pox decimates

us." Such were the fatal effects of a disease described by Sir Matthew Hale, even in those who recovered, as "the very next degree to absolute rottenness, putrefaction, and death itself."

The world was in this distressing condition when a remedy at once mild, harmless, and effectual, first attracted the attention of Jenner, then a young man pursuing his studies under a practitioner at Sodbury, in Gloucestershire; where the subject of small-pox being in the presence of a country girl who came for advice, she exclaimed, "I cannot take that disease, for I have had cow-pox." "This incident rivetted the attention of Jenner. It was the first time that the popular notion, which was not at all uncommon in the district, had been brought home to him with force and influence. Most happily, the impression then made was never effaced. Young as he was, and insufficiently acquainted with any of the laws of physiology or pathology, he dwelt with deep interest on the communication which had been casually made to him by a peasant, and partly foresaw the vast consequences involved in so remarkable a phenomenon."* Possessing much patience and firmness of purpose, Jenner was willing to wait the fruition of his ideas; and contented himself at first with speaking of the prophylactic virtues of the cow-pox among his friends, which he recommended them to investigate. But they treated it as an idle notion; and as he persisted in bringing it before them, they threatened to expel him from their society, "if he continued to harass them with so unprofitable a subject." His firmness of purpose came to his aid; he persevered in his inquiries. It was continually urged, in reply to his assertions, "The evidence is altogether so inconclusive and unsatisfactory, that we put no value on it, and cannot think that it will lead to anything but uncertainty and disappointment." His opinions, in many instances, met with abhorrence and contempt, and were treated with general indifference.

Jenner was fortunate in possessing the friendship of the celebrated John Hunter, under whom he had studied in London, and to whom he communicated his views. The reply of the great anatomist supported and stimulated his courage—"Don't think, but *try*; be patient, be accurate." He knew how to wait. In 1775, his ideas and prospects began to assume a definite form: he foresaw something of the great work before him. To one of his friends, to whom he had explained his theory, he said, "I have intrusted a most important matter to you, which I firmly believe will prove of essential benefit to the human race." He vaccinated his own son on three different occasions. Many years, however, elapsed before he had an opportunity of completing his experiments, in the course of which a formidable obstacle was encountered: he found that cow-pox was not, in every case, an effectual preventative of the small-pox. This led him to discover the true from the spurious vaccine matter; of which the former alone produces any specific action on the constitution. Though this disappointed, it did not discourage him. He investigated the facts, and arrived at last at the true explanation. He talked of it;

* In after-life, Jenner was accustomed to relate an anecdote of the days of Charles II. Some one telling the beautiful Duchess of Cleveland that she would soon deplore the loss of her beauty from the effects of the small-pox, then raging in London, she replied there was no ground for fear, as in her own country she had undergone an attack of the cow-pox, which was a preservative.

wrote of it to his friends; and it was mentioned in London in 1788 by medical professors in their lectures.

In 1798, he published the result of his observations in a quarto of about seventy pages,* in which he gave details of twenty-three cases of successful vaccination on individuals, to whom it was afterwards found to be impossible to communicate the small-pox either by contagion or inoculation. After weighing every sentence with the greatest care, it was submitted to the judgment of his friends. The work is interspersed with remarks on the identity of the matter in the cow, and in the heels of the horse, when suffering from the disease known as "grease"† and concludes, "Thus far have I proceeded in an inquiry founded, as it must appear, on the basis of an experiment in which, however, conjecture has been occasionally admitted, in order to present to persons well situated for such discussions objects for a more minute investigation. In the mean time, I shall myself continue to prosecute this inquiry, encouraged by the hope of its becoming essentially beneficial to mankind."

The publication of this work, so modestly and temperately written, immediately excited the greatest attention. In the same year the author had occasion to visit London, where, during his stay of nearly three months, he could not meet with a single person willing to come forward to test the experiment. Mr. Cline, however, afterwards tried the vaccine matter, and proved that, when it had gone through the system, it was impossible to communicate small-pox to the same person. Two ladies, whose names are deserving of record—Lady Ducie, and the Countess of Berkeley—broke through the prejudices of the day, and caused their children to be vaccinated. The countenance and coöperation of the higher classes of London were in great part secured by the instrumentality of Mr. Knight, inspector-general of military hospitals; and it appeared that females were most conspicuous in the good work; arising, probably, from their natural anxiety as mothers for the safety of their offspring. Lady Peyton urged the professional men in her neighborhood to adopt the practice. In the following year the children of the Duke of Clarence, then residing at Bushy, were vaccinated; and a feeling began to spread in favor of the protective remedy.

Jenner watched for the realization of his hopes. The happiness appeared to be his "of removing, from among the list of human diseases, one of the most mortal that ever scourged our race." But the opposition was brewing; and first, after the publication of his "Inquiry," came that of Dr. Ingenhousz—a name celebrated in medical and scientific history. He was on a visit to Lord Lansdowne at his seat in Wiltshire, when, hearing of a case of small-pox in a man who had previously caught the cow-pox while milking at a dairy, he wrote to Jenner, pointing out the mischief his doctrine would cause, "should it prove erroneous." Jenner replied temperately and conclusively; but his opponent, who signed himself "physician to

the emperor and king," became "rude, and truly imperious," in proportion as his arguments were confuted. We are informed that "he knew no more of the real nature of cow-pox than Master Selwin did of Greek." But, said Jenner, writing to a friend, "'Tis no use to shoot straws at an eagle. * * My friends must not desert me now: brick-bats and hostile weapons of every sort are flying thick around me. * * My experiments move on, but I have all to do single-handed." In a subsequent letter to Ingenhousz, he explains, "Ere I proceed, let me be permitted to observe that truth in this and every other physiological inquiry that has occupied my attention, has ever been the first object of my pursuit; and should it appear, in the present instance, that I have been led into error, fond as I may appear of the offspring of my labors, I had rather see it perish at once, than exist and do a public injury."

Many eminent professional men now appeared to favor his views, while others received them with derision and distrust. Some doubted all the facts and reasons adduced in his "Inquiry;" a second party denied the merit of bringing forward a fact which had been long known in obscure places in the country; a third affirmed that everything relating to it had yet to be discovered; and a fourth, that the discoverer's opinions were worth nothing—that he had originally obtained the vaccine virus from another practitioner; and, even admitting his reasons, the protective powers of the new remedy would be lost after the lapse of four years. The declared enemies to the practice were less fatal to its success than its pretended friends: the latter had a professional status, which lent authority to their statements, that imposed on the unthinking part of the community. Experiments were made at the Small-pox Hospital in London, which proved most disastrous to the infant cause; as, from want of care, the true variolous matter, as Jenner expressed it, was "contaminated" with small-pox, and differed in effect but very slightly from the real disease. This drew upon him the indignation of the metropolitan practitioners: who, however, as it was afterwards established, had been actually disseminating the tainted matter over many parts of England and the continent.

In 1799, Dr. Woodville, a physician of London, published a report throwing doubts on the real efficacy of vaccination, which tended to check the high expectations that had been formed of it. Another member of the medical profession, Dr. Pearson, lectured on the subject, and issued circulars, offering to distribute the matter to all who applied; thus constituting himself the chief promoter of the new method, to the prejudice of the discoverer, to whom his nephew wrote, "All your friends agree that now is your time to establish your fame and fortune: but if you delay taking a personal active part any longer, the opportunity will be lost forever." It had been intimated to Jenner, that if he would settle in London, he might command a practice of £10,000 per annum. He observes, in his reply, "Shall I, who, even in the morning of my days, sought the lowly and sequestered paths of life—the valley, and not the mountain—shall I, now my evening is fast approaching, hold myself up as an object for fortune and for fame!"

But the good cause continued to make progress. Its author, in a letter written to the Princess Louisa at Berlin, in December of the same year, states that 5000 persons had then been vaccinated, and afterwards exposed to the contagion of small-pox;

* An Inquiry into the Causes and Effects of the Variolæ Vaccinæ; a disease discovered in some of the western counties of England, particularly Gloucestershire, and known by the name of the Cow-pox.

† It is now known "that there are at least four animals—namely, the horse, the cow, the sheep, and the goat—which are affected with a disorder communicable to man, and capable of securing him from what appears to be a malignant form of the same disease."

but without any ill effect. Lord Egremont took great pains, in a correspondence with Jenner, to clear up the anomaly arising from impure vaccination at Petworth, where he took all the patients, fourteen in number, into his mansion, to prevent the spread of the disease. This nobleman subsequently became one of the most zealous promoters of the new method.

Notwithstanding the violent and unscrupulous opposition manifested in many quarters, the new cause made progress. In this same year attempts were made to form vaccine institutions for gratuitous vaccination, in which Bath took the lead, followed soon after by London. At the head of the latter was Dr. Pearson, of whom mention has been already made. He arrogated to himself all the honors and advantages as head of the establishment; and, following his "rule of doing justice," as he stated in a letter to Jenner, had reserved for him the honor of "extra-corresponding physician." Jenner declined the offered dignity, and wrote to Lord Egremont his objections to the plan proposed by Dr. Pearson—the man who had denied and distorted his experiments—and declared firmly against any compromise or contradiction of his own views. Although a fierce war was then raging, the fance of the new remedy found its way to the continent. Drs. Odier and Peschin of Geneva wrote and lectured on the subject: and in the two following years 1500 persons were vaccinated in that city. It was known in America before it had been heard of in Paris. Dr. Waterhouse of Massachusetts first made the American public acquainted with it, through the medium of the newspapers, as "*Something Curious in the Medical Line.*" The president Jefferson, with his sons-in-law, vaccinated nearly two hundred persons among their own connexions. At the same time it reached our colony of Newfoundland.

Soon after, a vaccine institution was opened in Paris, superintended by committees appointed to obtain precise information, through whose labors the salutary remedy was made known throughout France. The Spanish government, in 1800, took up the question with extraordinary zeal, and fitted out an expedition to convey vaccination to their South American colonies. In 1801, a mission was sent to carry it to Gibraltar and Malta; and in the same year Dr. Walker accompanied Sir Ralph Abercromby's forces to Egypt, and vaccinated great numbers of the troops. It was also introduced at Palermo, where, in the preceding year, 8000 persons had died of small-pox; and into our vessels of war by Dr. Trotter, physician to the fleet, who said, in one of his letters, "The Jennerian inoculation will be deservedly recorded as one of the greatest blessings to the navy of Great Britain that was ever extended to it." It was eagerly welcomed in Germany: and the successful vaccination of Princess Louisa caused its effective introduction into Prussia, the result of which was, the foundation of a Royal Inoculation Institute at Berlin. In Vienna, the use of the new remedy was at first forbidden, having been confounded with small-pox inoculation: the restrictions were, however, soon removed, and some of the most successful experiments performed in that city. At Brunn, in Moravia, a philanthropic nobleman, Count Hugh de Salm, exerted himself, by the distributing of rewards and treatises, to disseminate the practice in that part of the empire. A temple was erected and dedicated to Jenner, in which his birthday is still annually celebrated.

In 1801, the vaccine was sent from Breslau to Moscow, where the empress-dowager "zealously promoted the new practice," and desired that the name of *Vaccinoff* should be given to the first infant—a female—submitted to it. She sent a diamond ring to Jenner, with a letter signed by her own hand, expressive of "her gratitude to him who rendered this signal service to humanity." Jenner replied, that the imperial favor was not for him alone; "it will be felt by the whole world; for sanctions like these will materially tend to extinguish prejudice." In Denmark and Sweden, so effectual were the measures taken for the propagation of the antidote, that the small-pox was extirpated, and did not return for twenty years; and in Wirtemberg, penalties were exacted from all those who neglected vaccination.

Jenner himself offered one thousand guineas towards fitting out a ship to convey the vaccine to Asia, when it had been delayed by the parsimony of the government. It reached the East Indies in 1801; and the physicians at Bombay corresponded with the discoverer on the subject. The coöperation of the Brahmins, and the favor of the natives, were secured by a trick. A short poem was written in Sanscrit, on old paper, purporting to be of great antiquity, and to have been early known in the country, in which the remedy was recommended; and appealed directly to the religious feelings of the natives, as the "wonderful preventive" was said to have been originally derived from a cow. It was carried to Africa by way of the Mediterranean; and in 1803, Lord and Lady Elgin, being then on a tour, successfully introduced it into Turkey, Greece, and the Ionian Islands. The matter was sent overland to Bagdad, on lint secured between glass closely sealed, and dipped in melted wax until it became covered by a solid ball, then packed in a box with paper shavings. It arrived safe, and succeeded at the first trial. In other instances, the matter was found to be efficacious after twice crossing the Atlantic, and retained its virtues during a tedious mission through the remotest provinces of the Russian empire to the borders of China.

The progress of the "extirpator" was such, that in 1803 it was stated, in evidence before a committee of the house of commons, that 2,000,000 of persons had then been vaccinated, of whom not one had died of the affection. These numbers were, however, but a small proportion of what they might have been, had the practice of vaccination been allowed to have free course—unopposed by ignorance, prejudice, or selfishness. Though there were many to do justice to the immortal discovery, yet a host of others, on very slender grounds, raised a fierce and clamorous opposition. Few even of its friends took the pains to make themselves well acquainted with the principles of the new method. A "faction" of physicians got up a spirited opposition in the papal states, and reported that vaccination had been forbidden and abandoned in England. The most ridiculous and absurd reports were published. A lady complained that, since her daughter was vaccinated, "she coughs like a cow, and has grown hairy all over her body;" and in one part of the country the practice was discontinued, because those who "had been inoculated in that manner bellowed like bulls." A Mr. Gooch of Suffolk had, with his wife, vaccinated 611 patients, of which he observes—"In spite of all ignorant prejudice, and wilful misrepresentations, this wonderful discovery is

spreading far and wide in this county. The first people we inoculated in Hadleigh were absolutely pelted, and driven into their houses if they appeared out."

The same arguments that had been used nearly a century earlier against small-pox inoculation, were directed against vaccination; while, in Switzerland, pastors were recommending it from their pulpits, the most uncompromising hostility was shown in other places. Ehrmann of Frankfort undertook to prove from Scripture, and the writings of the fathers, that "vaccine was nothing less than Antichrist." Sermons, abounding in invective, were preached against it. The leading physician of Philadelphia pronounced it to be "too beastly and indelicate for polished society." In later years, the celebrated Cobbett also denounced it, in his sledge-hammer style, as "beastly," and unfit for adoption.

Dr. Rowley, a physician of London, was perhaps more violent in his attacks than any other opponent; and his work is so far useful, as it gives us the sum of the arguments used against vaccination, and shows at the same time to what extreme lengths individuals may be carried by passion and prejudice. The doctor set himself up as the hero of anti-vaccination; for which he formed a society to examine all cases of failures, and of small-pox after vaccination, which he condemned as a "greasy, horse-heeled project. The sooner cow-pox infatuation is abandoned *in toto*, so much the better for society. * * The world has been viper-broth mad—tar water mad—magnetism mad—cow-pox mad. * * Cow-pox devastation—all supported by ignorance, knavery, folly, and false faith. * * Those will be considered the greatest enemies to society who longest persist in spreading the criminal and murderous evil. * * Chase from their houses all who propose vaccination. * * Glaring tyranny, to force vaccination on the poor. * * The world did not require cow-pox; the cow-pox was forced into the world. * * Earth trembled! and Heaven profusely shed tears. * * The most excellent physicians are always modest, candid, and unassuming;" whilst vaccinators are "infatuated visionists," who pursue an "irrational and destructive practice. Wild, light-headed adherents, who have distinguished themselves by ignorance." The doctor appears to have exhausted the vocabulary to find terms for the expression of his abuse, which was not unproductive of evil. It was proved that, although vaccination was performed gratuitously at the Bloomsbury dispensary, yet not a single person applied during several months of the year 1806. An able reply was published by a surgeon named Blair, who turned the doctor's weapons upon himself, in a pamphlet whose title was quoted from one of his learned opponent's fiery paragraphs: it was entitled "The Vaccination Contest; or Mild Humanity, Reason, Religion, and Truth, against fierce, unfeeling Ferocity, overbearing Insolence, mortified Pride, and Desperation."

The attacks on the invaluable discovery were, at the same time, vigorously carried on in other quarters. We should be at a loss to understand the motives of so much hostility, did we not see something of the kind in our own day, in the sneers occasionally bestowed on novel matters of science. The cause, however, triumphed. Ribaldry, scorns, and abuse have dwindled down to a mere echo, and are scarcely or never heard. The glory of a great man is ever attended by envy. The

nations of antiquity would have raised altars to Jenner's memory, or stamped his effigy on their coins—as was the case in some of the states of Greece, and was done by the citizens of Cos in honor of their countryman Hippocrates. Cuvier said, "If vaccine were the only discovery of the epoch, it would serve to render it illustrious forever."

Part of Jenner's reward was in the letters he received from all quarters of the world, filled with expressions of grateful reverence, and anticipations of the benefits of his discovery. His case was brought before parliament, and, not without opposition, the sum of 30,000*l.* was voted to him in two grants. It was proved that, had he kept vaccination a secret, he might have made 20,000*l.* a year; but he worked not for himself. The chancellor of the exchequer said of it, during the debate, that it was "the greatest, or one of the most important, discoveries to human society that was made since the creation of man."

But far greater the reward, in the consciousness that he had saved to the world millions of lives, and secured humanity from its deadliest destroyer. It is not what we undertake, but what we accomplish and confirm, that constitutes glory. Jenner died with the title of benefactor to his kind. In the words of his friend Dr. Lettsom, "His claim is that of having multiplied the human race, and happily invoked the goddess of health to arrest the arm that scatters pestilence and death over the creation." His is one of those English names with which intelligent foreigners are, as might be expected, most familiar. Often have such persons, taken to Westminster Abbey, and told that it is devoted to the names of our great men, asked for the monument of Jenner. Strange to say, while much military prowess, now of little account, is there recorded, this truly great and memorable man is without his stone, and likely long to remain so.

Amongst French gossip, we may mention, that the Minister of Public Instruction has sent M. Alexandre, one of the Inspectors-General of the University, to Greece, to examine into the best means for facilitating the study of Modern Greek in the royal colleges of France. It is intended, too, to found an establishment at Athens, to which a certain number of pupils of the normal schools are to be sent, with a view to the same acquisition.

We find it stated, in a French scientific paper, that Siberia contains gold in such abundance, that its discovery is likely to produce a financial revolution in Europe similar to that which took place on the discovery of Peru. In the period of the last fourteen years, the produce of the gold mines in that country is said to have doubled. Eleven thousand persons are daily employed in washing the mineral; and three times the number could be so occupied if the hands could be found. Nothing but this want of laborers, adds our authority, prevents the markets of Europe from being filled with the gold of this rich deposit.—*Athenæum*.

TO BE SOLD, (a great bargain, in consequence of the Corn Law Bill passing,) THE BRITISH LION, the proprietors having no further use for him. He would stuff well as a curiosity. His tail would be invaluable to a young member who wishes to come out in the comic line, à la Sibthorpe or D'Israeli, on account of its waggish propensities. For terms, apply at the Agricultural Protection Office, New Bond Street.—*Punch*.

SIR ROBERT PEELE'S MINISTRY.

ALL the world is interested in the probable change of ministry in England. The weakness, incapacity, and insincerity of the whigs has been so often demonstrated, that our only hope of good from them, is as instruments in the hands of Sir Robert Peel. Whether in office or out, this eminent English reformer will probably control, if he do not even direct, the course of public affairs. It were desirable that he should direct, with full power, the progress of the necessary changes. His vast sense, and eminent ability, amount to greatness. We copy from the *Spectator* of 13 June.

The Corn-bill is Sir Robert Peel's special mission; to carry that he returned to office; to that he gave precedence in the work of the session; that bill the protectionists obstructed by every expedient; and thus they delayed the Coercion-bill which stood behind. They would have had Sir Robert prove his "earnestness" by pushing forward the Irish measure, no doubt, because that would have effected their object of stopping the Corn-bill. The Corn-bill, however, is urged forward; and so they take their revenge on the other bill—and on Peel.

The revenge only seems to succeed. Peel will not be beaten. Throughout this trying struggle, but most especially in the latter stages, his command of temper has been wonderful. It is a wise self-control. It not only saves those exasperations of which one of his best colleagues is so recklessly lavish, but is a severe test of his capacity for commanding circumstances. It lays in a stock of popularity proportionate to the intensity of the present annoyance; attests his personal sacrifices, and the sincerity with which he obeys the dictates of conscience and patriotic policy; and it proves his power to conquer obstacles—even the obstacles that he might suffer from his own naturally imperious temper.

The Coercion-bill cannot pass. Why then should the minister persevere? There may be several reasons, but one is evident enough: to give it up would be to relinquish the government of Ireland, before the fulness of time for resigning the official seals. Other ministers, who have not been recently placed in a state of antagonism with Irish agitators, may abstain from urging such a measure; but Sir Robert Peel cannot abandon it now.

Nor do those who are to succeed him altogether relish the task before them of governing Ireland. They begin to anticipate reproaches, by affecting that Peel hands over the country in a worse state than he found it. Nonsense: he found sedition, and sedition is quelled. The existing social disorder is the old perpetual disease. They say that he has "no policy" for Ireland. Who has one? what policy has yet been enunciated by any? It is indeed the first time that a bill for the coercion of Ireland will have been refused by the British parliament; which is an important fact, and may prove to be the first premonitory sign of some better policy to be yet evolved. We hope so. The bill is part of the old repertoire of Irish legislation, and means very little: had it been enacted, it would have made no substantial difference in the state of the country—it is but a shadow of the past; but its omission is an innovation, and means much as the sign of a new spirit. Those, however, who refuse

coercion bills are bound to be prepared with something better for good government—a matured policy, practical and efficient measures. Pretences that Sir Robert Peel leaves Ireland in some extraordinary condition will not serve as excuse for whig inaction.

Some have accounted for Sir Robert Peel's pertinacity by the presumption that he "chooses the Coercion-bill as the measure upon which to go out of office." We cannot see a shadow of probability in such a conjecture—not a motive for such a "choice" on the part of Peel, but many against it. It would be palpably impolitic for him to retire with even the appearance of attempting a measure hostile to Ireland. His Coercion-bill was only part, and we think the bad part, of a scheme for the improvement of that country; and it is the part to which he would be the least desirous of giving disproportionate prominence. Others reproach him with inviting the whigs in consenting to retain office on sufferance. All these persons forget his explicit declaration, that he would remain in office until the fate of the Corn-bill should be settled, and that being placed in a minority on another measure should not make him abandon his main enterprise. It is nearly achieved. Respecting his intentions we know nothing; but our belief is, that when his peculiar mission is accomplished he will lay down the power which he retains solely for the accomplishment of that mission; and will then leave the government of Ireland, with the rest, to that better management which the whigs seem to think they can extemporize.

PEEL OUT OF OFFICE.

TRIUMPHANT revenge for the country party! still more triumph for the place-hunters expectant, and all the enemies whatsoever of Robert Peel! The Corn Bill is safe—even the venerable John Gladstone declares it to be virtually carried—but its author is sacrificed. The corn-laws are abolished, but so is Peel. No doubt, some of the more politic Tories look beyond, and, not withdrawing all their trust in the ablest man on their side of the house, hope better things of him in opposition than in office: they think that he will return to the old position which he sustained in the decade ending with 1841, controlling the whigs—when he revised all that they did, exercised a veto, frustrated so many of their projects, and allowed a minimum to be done upon sufferance. In that way a "Reform Ministry" was converted into a great obstruction to reform; and the Tories would gladly see a return of that day. Liberals used to prescribe continued endurance of the whigs to keep out the Tories: the Tories have learned that the whigs may serve the purpose of keeping out Peel; while they expect that Peel, out of office, will revert to his old policy of nullifying whig measures. "Don't you wish you may get it!" The phrase is not classical, but the question is apt. If you are squeamish you may take it in the poetic form—"The wish was father to the thought." The speculators make a grievous omission; they forget what has happened since Sir Robert Peel was last in opposition.

Once in office, the whigs can only hold it on the tenure of reform—they must be a reforming ministry. They can only exist on the strength of outdoing the minister who has outdone them. Many things which were not expected of the neophyte will be demanded of the professing veterans,

as arrears long over due. They, therefore, cannot repeat the old passive policy of mere occupancy for fear of worse.

Nor can Sir Robert Peel take up his old ground. It was, perhaps, a sense of this which made him hint, two or three months back, that in going out of office he should not necessarily go into "opposition." His position as a statesman is quite altered. Before, he was the ablest man of a party—the party resisting that advancement which the whigs professed to desire. It was the administrative and legislative *incapacity* of the whigs which provoked his chief hostility: to the *principles* of their policy he at more than one remarkable juncture signified his adhesion. But he was the principal antagonist of the whigs, and out of all measure the ablest; as such, their enemies chose him for leader. In office, with matured intellect and experience, he has seen the necessity of carrying out in deeds that policy which before lurked in parenthetical admissions; and he has passed the severest commentary on his predecessors by doing more in their policy than they did themselves. From being the leader of a clique he has become the leader of a nation. He has undertaken the function of representing the national mind; and thus reflecting the popular disposition, he is as popular as the looking-glass. Were there a national poll for the office of prime minister, the man returned would be Robert Peel. There must be something rotten in the thing called Party which can force from office the very man whom the country would choose, at the very height of his popularity and power. But though ejected from office, he will not be ejected from power. His own abilities are as great as ever. His inherent strength was never so free, never so perfectly at his own command; since he is quite emancipated from party trammels. In that respect his position is without precedent. His alliances are broken; he takes up new ground, without obligations, without restraints, except the necessities involved in his newly-acquired popularity.

He goes out of office attended by his chosen band of conservatives, properly so called—the picked men of the party which he formed, which has been dissolved, and which has now deposited its essential element around the nucleus that he furnishes in his own person. Those men are not mere servile followers, swearing by Peel as an idol: they are, like himself, men brought up among tories, who have undergone the same process of deliberate conversion that has altered him: they are so many lesser Peels—a class of whom he is the type, and therefore the leader. These men include among their number the most able, intelligent, and influential of those who now sit on the right hand of the speaker: nor are their mere numbers contemptible.

There is sometimes a talk of "an appeal to the people." By what channel? how do you reach "the people" in order to make the appeal? Not through the constituencies, surely; for they represent the people imperfectly. But even that limited appeal, and even too if made by the whigs, would not seem likely to alter the classification of parties very materially. There would now be three parties joining issue in the appeal—the whigs, the tories, and the proper conservatives; the two latter being separated into distinct parties by the tory desertion of Peel. The election might perhaps somewhat increase the numbers of the whigs, being in office. Spite against Peel would oust some few of his adherents in favor of tories. But on the whole, toryism is manifestly declining; it

is growing old-fashioned; and—most fatal characteristic of all!—unsuccessful. It is unlikely that the tories should gain at the next general election, or even hold their ground. On the contrary, we incline to think that in many places, liberals and Peel-conservatives will coalesce to return their respective candidates in pairs; a kind of vote-splitting which will, for the first time, not neutralize but strengthen the representation of many places for all questions of present importance. So far, then, as Sir Robert Peel's section of the house is concerned, the next election, however brought about, is likely to augment his strength.

Under these totally new circumstances, his policy out of office must be totally new. He will again perhaps exercise a controlling power over the whigs in office; but a control in the sense of compelling them to advance real measures, not shams "for rejection," and of making those measures practical—good—real steps forward. And that he will be well able to do. He will in all likelihood be the leader of a party sufficiently numerous and influential to hold the balance between whigs and tories; sufficiently tried in practical reforms to assay those put forth by the whigs; and sufficiently in earnest, should the whigs falter, to take the work out of their hands.

DISTINGUISHED PUFFERS.—People are very naturally surprised at the zeal and amiability manifested by several nobles of the land in coming forward to testify to the merits of quacks, chemists, and corn-cutters. Old Warren, of blacking celebrity, used to avow that he kept a poet. George Robins is believed to have for some time retained the services of a novelist, who, by his magic descriptions, turned patches of grass into paddocks. But in the present day it would seem that puffing has become more ambitious; and no advertising establishment can be considered complete without a nobleman. As to the corn-cutters, they have on their side so many members of the peerage, that they could carry the corn question of themselves, while the proprietor of some pill or ointment has got so completely into the good graces of the Earl of Aldborough, that his lordship seems to pass his time in taking pills, and writing puffs about them for the newspapers.

As the aristocracy have latterly devoted themselves a good deal to this branch of utility, we think an advertisement like the following would be productive of much good to the proprietors of quack medicines:—

WANTED, by the proprietor of a new pill, an earl who is willing to be cured of every disease, and to notify the fact of his restoration to health in the public newspapers. A gouty marquis will be liberally treated with; and dukes with corns or bunions may enter into an arrangement, either by the week, month, or season. There is a vacancy for a consumptive countess; or any lady of title having three or four daughters who are willing to take pulmonic wafers, and sign testimonials, may hear of a desirable offer. Persons signing the testimonials without taking the wafers, will be allowed the price of the latter in soap, or any other fancy article of perfumery.

N. B.—No Irish earl need apply, as no person on this description will on any account be treated with. A few barristers wanted for the new voice lozenges, and an engagement is open to any magistrate who is willing to recommend the portable luncheon in his official capacity.—*Punch*.

ALGERIA.

[Mr. Walsh's Letter to the National Intelligencer.]

PARIS, June 12, 1846.

As Ireland is "the great difficulty" of the British government, the enterprise in Africa is that of the French, and of all the French political parties. But Hibernia is an integral portion of the British home empire; cannot be abandoned; may not be conquered; will not quail or crouch. The difficulty must prove in the end less manageable, more dangerous, for England, than the case of Algeria for France. Of the latter, let me write in some detail. It has deeply occupied and sorely puzzled the chambers since the beginning of the month. The legitimists cry for perseverance, because the reduction of Algiers was affected under the Bourbons; the radicals, relishing war and conquest wheresoever, do the same; the other divisions of the opposition would not—with the exception of a few bold, frank, and independent members—absolutely recoil, but they entertain a variety and contrariety of plans of occupation, warfare, and internal administration of affairs; the king has his family field and his personal policy in Algeria; the cabinet subscribe to his feelings and views; and, besides, the French stake in that region has become so considerable that it seems necessary or inevitable to play the game out desperately on the broadest scale. No one can define Algeria; not yet conquest—not colony—not an organized community; the government is supposed to wish for a viceroyalty; on the other hand, it is said, "there must not be a viceroyalty; only a second France, organized, governed, administered like the first, our own." In the chamber of peers, on the 3d instant, the massacre of the three hundred French prisoners (not yet ascertained) was the subject of a call on the minister of foreign affairs. It had transpired that Abd-el-Kader had offered to negotiate for an exchange, there being a multitude of Arab prisoners in France. Mr. Guizot answered:

"If the government did not accept these overtures it was because they concealed a snare, as the Emir wanted to have proposals made to him by France for the purpose of having the advantage of rejecting them. Such had been the firm conviction of Marshal Bugeaud, and such was the recommendation he had transmitted to government. 'This is not serious,' said he, 'the intention is to deceive the Arab tribes.' The government would have been altogether unreasonable to desire to impose its wishes on M. Bugeaud, and all the principal officers, on the spot. But the noble peer was quite wrong in supposing that therefore nothing was done. The government did in fact employ all the means in its power to come to their aid. An attempt was made to surprise the deira, but it failed; and a negotiation was opened with the Emperor of Morocco on the subject. The government said to him, 'French prisoners are in your territory; this cannot be permitted; get them given back to us.' Once before prisoners had been restored in that way. The negotiations were going on actively of late, and other means of a secret character were employed."

The deira is the head-quarters—the personal camp—of the Emir. The camp conceived alarm when it learned that the emperor might act against it; it resolved, from necessity, to break up and disperse; and Mr. Guizot, without adverting to French precedents, added:

"It was at the moment of this critical resolution that the deplorable catastrophe took place. The deira did not feel itself strong enough to guard the prisoners, and was unwilling to set them at liberty; it therefore put them to death."

Count Pelet de la Lozère, a moderate, sensible peer, severely blamed the government for refusing to pursue a negotiation with Abd-el-Kader. Mr. Guizot contended that there was "as much generosity and humanity practised by Marshal Bugeaud and the army as was compatible with the nature of the war and its objects." He continued thus: "Marshal Bugeaud says what he thinks with a truly military roughness—*avec une rudesse vraiment militaire*; but he is always patriotic, humane, equitable, generous; he has rendered great services by his perseverance, skill, and courage; I acknowledge again that he sometimes expresses his sentiments and the core of his ideas rather crudely, blurtily." This eulogium resembled that which Mr. Guizot pronounced in the other chamber on Narvaez, the Spanish hero of the sabre. Some peers intimated that Bugeaud's bulletins and razzias seemed to be forgotten; and they went back to the excesses of the French troops in Spain as one of the causes of the miscarriage of Napoleon's invasion.

In the chamber of deputies, yesterday afternoon, the minister was summoned anew to explain why he had not entertained the Emir's proposition for an exchange: he gave an explanation of identical purport: "he believed that Marshal Bugeaud was convinced of the inutility of listening to the overtures, and he, Mr. Guizot, implicitly adopted that opinion." This adoption he proclaimed, because he had been charged with the design of casting the blame of the catastrophe on Bugeaud. The organ of Mr. Thiers repeats the accusation of perfidy to the marshal. But it is not easy to admit that either believed the Arab overture a feint—a scheme merely to impress the tribes with the notion that their chief was treating on equal terms with the French Sultan. It was natural, every way politic, for Abd-el-Kader to wish to release some hundreds of his old followers, by ridding himself of the French soldiers, whom he foresaw it would be impossible for him to guard—whom he had little interest to destroy. The conclusion of an exchange would have been the best manifestation, for the Arabs, of that equality, the appearance of which, according to the French, he mainly sought. It is plausibly suggested that the marshal himself was not sincere with the cabinet; that he either expected the deliverance of the prisoners, without equivalent, on the dispersion of the deira, or was willing to risk the massacre, because it might excite a spirit in France suspicious for his ideas and habits in regard to unlimited havoc and conquest. The *National*, on the 3d instant, says: "In our soul and conscience, we pronounce the ministers guilty of the massacre of the prisoners." This language belongs to party-violence; but the ministers must regret that they deferred to the marshal.

Some of the Paris journals have not hesitated to inquire whether there be not extenuation or, indeed, warrant, for the assumed orders of Abd-el-Kader, in the French razzias and butcheries; and they have even translated the articles in the affirmative of several of the London organs. The following paragraph of the *Chronicle* is of the number: "We do not wish to be considered as for one moment justifying or even palliating the conduct of

Abd-el-Kader; but it may well be asked if the French themselves are not in some measure to blame? Were they not the first to begin a war of extermination? Does Abd-el-Kader do anything now but follow the example which he received from his Christian conquerors? It is impossible not to recur on such an occasion to the dreadful tragedy acted in the same country last year. The conduct of Colonel Pelissier, who smothered the eight hundred wretched Arabs in the caves of Dahra, was probably not more justified by necessity than that of Abd-el-Kader is now. Indeed, it is possible that a stronger case of urgent necessity could be made out in favor of the Arab chief than in that of the French colonel; for it appears Abd-el-Kader was under the necessity of breaking up his deira, and, as he could not carry his prisoners along with him, he was obliged either to destroy them or set them at liberty; whereas Colonel Pelissier, who was pressed by no immediate danger, could have forced the whole of his victims to surrender by two days' blockade. We, however, can do nothing but condemn the conduct of both parties; but, as the French government has, with the approbation of the nation, rewarded Colonel Pelissier by advancing him to the rank of general, we cannot see how they can now attach such blame to the Emir, or consider the affair as anything but the natural consequence of the system of war in which they are engaged."

A nondescript Paris paper, the *Courrier Francaise*, of no ordinary shrewdness and candor in most of its editorial columns, cited the strictures of the London Globe, which fall heavily on the French, and then said:

"It is painful to us to have to quote such a judgment, but is there not some truth in the remarks of the English journalist? Are we not guilty of having over excited, by the abominable affair of the grotto of the Dahra, the ferocious instincts of our savage adversaries? Have not we, a civilized people, given to our barbarian adversaries the example of barbarism? We suffocated an entire tribe, composed of one thousand individuals, and, in return, three hundred of our prisoners are butchered. When will cease this odious system, which produces such reprisals? When will the chiefs of our army of Africa comprehend that their mission is to subdue the population of that country, and not to sweep it from the face of the earth? We know that these systematic butcheries are deeply repugnant to our army. It is repugnant to our soldiers to have to perform the functions of executioners. This sanguinary system is the system of one man. Are we wrong, then, in demanding his recall? Are we wrong in demanding that the command of our army in Africa shall be taken from a man who is a dishonor to our civilization? France has lost men enough and millions enough in Africa by the fault of M. Bugeaud, without risking there the loss of her reputation for generosity and humanity."

In his speech of yesterday afternoon Mr. Guizot observed: "I have seen, I think, in the newspapers somewhere, that one of our generals in Africa had asked for forces (to attack the deira) which were refused him. That is not true. We examined, I repeat, whether it were not possible to deliver the unfortunate prisoners by force." The *Courrier* this morning mentions that Mr. Guizot saw the statement in its page; that General Lamoriciere had asked four hundred horse to enable him to make the attempt; this could be proved,

and that the *lie* was reported confidently on the minister. In the chamber of deputies, on the 8th instant, the question of Algeria—for which thirteen or fourteen speakers were inscribed at the desk of the secretaries—was regularly and solemnly undertaken. The minister of war opened it in an elaborate exposition, *couleur de rose*, for the present and the future, though differently tinged in the past. He argued that there could be no limitation to the enterprise of conquest; results sanctioned the system of war hitherto practised. The Emir could not now fix himself anywhere; he could only appear in some place or other, and then vanish. The tribes saw that he was a fugitive; those of the west, who had emigrated, were returning submissively. "If," continued the minister, "you intimate surprise that he still exists, I can answer that it is very easy for an intelligent, dauntless chief, who has a part of the population on his side, to elude or outstrip all pursuit for a certain period. I took part, for six years, in our war in Spain with Mina, and in a province not larger than one of our departments. Never were we able, with twenty or twenty-five thousand troops, the best of Europe, I do not say to seize and hold him, but even to overtake and fight him; and what may seem more extraordinary, he had infantry alone, and constantly moved in the plains. Ere long Abd-el-Kader will cease to be a formidable enemy; he cannot finally prevail or escape."

A new deputy, a conservative, Mr. Abraham Dubois, entered, with abundant oratorical and party preparation, into a vindication of the scheme of the most comprehensive dominion and destructive hostilities. He essayed to exculpate entirely the stifling and combustion of the Arabs in the grottoes. "When, at Austerlitz, Napoleon caused, by a storm of bullets, the ice of the lake to give way, on which twelve thousand Russians were flying after defeat, all of whom were quickly drowned, what voice, what philanthropic cry was then raised? What history has taxed the conqueror of Austerlitz with barbarity? The French column in Algeria could not leave the Arabs behind them in the grottoes; their rear would have been harassed; the sick and the laggards would have been out off; thirty or forty of our soldiers might have perished. For my part, however respectful and sincere my sympathies with philanthropy, viewed in the highest and broadest aspect, the love of human kind, the love of the greatest number, I still say, I frankly acknowledge that the lives of thirty or forty French soldiers will always be for me more precious than that of the enemies of France, were they five hundred—were they even Arabs."

This strain did not seem acceptable to the Chamber, though, yesterday afternoon, Mr. Mauguin, of the opposition held this language: "Gentlemen, an English sailor, when mutilated by Spanish cruisers, exclaimed, 'I leave my soul to God, and my revenge to my country.' No time was lost for vengeance: war followed—a war profoundly politic and judicious, if you look to its remote results. Well, in our case, here, it is not one soul—one revenge—we have to deal with; three hundred souls have been bequeathed to God—three hundred revenges are bequeathed to the country." The memory of the ears of Captain Jenkins had no better effect on the Chamber. Mr. Abraham Dubois was rebuked by his successor in the tribune; the latter cited as an instance of kindred obduracy the language of a recent disserta-

tion or inquiry. "By what signs do we discover that a particular race is doomed to destruction by a decree of Providence?" The author's theory is, that there is a constant substitution of races, with constant improvement. All the inferior were disappearing before the superior; the Mexicans, Caribs, Red Skins; so the Arabs and Moors, like the American Indians, had their sentence of gradual supplantation and extinction; *this was the true harmony and progress of the rational creation*. Real philanthropy would teach the extermination of savage or irreclaimable races; the stagnant waters must be drawn off the marsh, to introduce the living and the productive.

Mr. de Tocqueville followed with a comprehensive and able discourse in favor of colonization and civil government, and against the Bugeaud dictatorship and devastation. This strikes me as, on the whole, his best parliamentary effort. It seems the most poignant, practical, and complete; abounding in material facts and cogent in all forms of reasoning. He especially exposed the arbitrary and anarchical character of the domestic government of the entire territory, the ignorance of the home administration respecting the real transactions there, and the constant discordance between the Algerian authorities and functionaries, civil and military, and the cabinet and the department of war in Paris. During the five years Marshal Bugeaud had passed in Algeria, he spent only two in the capital, Algiers: in his absence, confusion, speculation, oppression reigned without obstacle or stint. The marshal wanted no civil administration, no merely civil settlements; he acted according to his own views, indifferent to those of the ministry or chambers. It was computed that the European colonists were a hundred thousand. In fact, there was no *agricultural* population. Of the few villages erected, half the inhabitants were dead, the other half in extreme wretchedness. About the one hundred thousand soldiers, "with their wants and passions," you found, of course, all sorts of adventurers, traffickers, and settlers. These made no settlement—proved nothing. He (Mr. de T.) felt shame for his country when he read the publications of the Swiss colonization societies, warning their people against emigration to Algeria, where they would find only misery or death. "Go rather to the wildest parts of North America, to the almost barbarous communities of the south." For the truth of these statements he could vouch from personal observation; he appealed to the like knowledge and candor of several deputies, recent observers of the same scenes. The idea of a juxtaposition of European settlers and Arab tribes under the common sway and legislation of France, was utterly chimerical; the more they became acquainted with the aborigines or natives the clearer this truth. The race was distinct from all on whom the British and the Dutch had and were acting in the east; a hundred thousand perfect troops as pioneers of European civilization—an unprecedented case—might seem a decisive advantage; but for that even, the essential inextinguishable traits of the Arab would prove more than a match. In France, a certain number of rich and powerful families regarded Algeria as the Bastille was viewed by the noblesse and court before the revolution; they contrived to get their intractable or dissolute young men sent to Algeria with public functions. He desired a special department or ministry for that region; there was no institution whatever, with such inherent efficacy, as to be

able to dispense with daily human exertion: without real *government*, there was nothing good; Algeria was the weightiest of French concerns; yet it was surrendered to chance. The ministerial press in Paris assailed Bugeaud and his plans; the marshal's press in Algeria retaliated on the cabinet; personal interests had on both sides supreme and constant sway. He could not help inferring that Marshal Bugeaud was kept abroad to save the ministry from the mischief he might do them at home; hence the panegyrics in the chambers, and the fanciful pictures of Algerian prosperity exhibited by the head of the war department.

M. de Givré, a master of his subject, illustrating the rapacity and improvidence of the civil administration in Algeria, related these circumstances. There existed a great number of religious (Moslem) foundations with considerable endowments of domain; the proceeds of which, by the express direction of the donors, were to be applied to works of piety or charity. The French authorities took possession and diverted the whole to their personal expenses. This was shocking enough to Arab religious sentiment. Later, all the property of the foundations—the whole of the establishments—was confiscated, and roundly, unceremoniously merged in the French public domain. The natives, whether friendly or hostile, were alike the prey of all sorts of knavery, design, and spoliation, in which the public functionaries and agents shared. A mighty *African Company* was organized in Paris, and expected to contract for Algeria, by means of influence in the chambers and ministerial bureaux. It was a scheme of jobbing and rapine. Mr. de Givré deemed the main question entirely maritime and Mediterranean; he rejoiced in the enlargement and defences of the port of Algiers; in the event of a war with Great Britain he would not fear for the African coast; steam and the multiplication of secondary foreign navies in the Mediterranean would place France in equal circumstances. "If England should go to Algiers, why, we can go to London; there is now a bridge between Calais and Dover; we can command two hundred and fifty leagues of African coast. The British maintain their consul-general at Algiers, and without your *exequatur*, he is a diplomatic as well as a commercial functionary; you are not recognized; in the British official almanacs the old denomination of the *Barbary Powers* is retained. Algeria is not designated under the head 'France,' as are the dependencies of all the other powers under that of each. We understand, and we must be prepared. Algeria is our only field: Asia is divided between England and Russia; America shuts us out; you may protest, but you cannot prevail; conquest in Europe is out of the question. Providence has allotted to us Africa on the Mediterranean."

One of the manliest and strongest addresses I have in memory is that of M. de Tracy, son of the celebrated political metaphysician. He laid bare, in all its deformity and hopelessness, the Algerian enterprise. He had been connected, from the outset, with the question in the chamber and the committees. After him, and Lamartine, the next day, every Frenchman might have exclaimed, "Now we have only to examine how we can extricate ourselves from this awful scrape." M. de Tracy would not admit the sort of fatality which some pleaded—as the British do for the extension of their empire in India—that necessitated acquiescence in the constantly progressive sacrifices

in Algeria. Napoleon paraded destiny, and, therefore, certitude of success in his decrees of conquest; he would plant his eagles on the rock of Cadiz and the towers of Lisbon: three years afterwards the peninsula was evacuated by the French. *Perseverance* was the text and the argument of the government and the zealots in the affair of Algeria. At first Gen. Clausel pledged himself to subject the whole regency and maintain peace with *twelve* thousand men; two years afterwards Gen. Bugeaud would be satisfied with *forty* thousand. In 1841, when the effective force in Algeria was notoriously seventy thousand, only thirty-eight thousand was the *cipher* of the budget, he (M. de Tracy) remonstrated, and observed: "Do not be frightened at the truth: ere long you will reach a hundred thousand." The next day the journals denounced him as a visionary alarmist. At the present time the force exceeded his prediction, not including the ten thousand native combatants in French pay. He would predict equally a war with Morocco. That would be an inevitable incident of the neighborhood, and the Mahometan sympathies and common interests. The treaty of Tangiers was gladly concluded, because to invade Morocco would have required another hundred thousand men. The French grotto atrocity was cited by the Druses when they butchered the Maronites: whosoever, in the world, the Moslems were free to act, they would endeavor to avenge that affair. "I must (he exclaimed) protest, with all my soul and breath, against the odious theories by which it has been attempted, in this tribune, to justify the Dahra executions by fire and smoke. In my early youth I embraced the military career: I followed it with gladness and pride; I quitted it with regret; but I would not have remained in it a single day, a single instant, if any one had proved to me that it imposed *duties* as horrible as those acts."

A number of voices in the chamber cheered this thrilling passage. Algeria, he proceeded, was the modern *Minotaur* that devoured, every year, the finest part of the French youth and the most precious part of French treasures. He maintained that, for fifteen years, there had not been a cabinet of which the majority did not think as he did in the whole matter. *War* was the cause of the persistency; the ministry feared *above*, and feared the chambers; the chambers, the electoral colleges, and so on. Finally the press frightened ministers, chambers, and voters. Mr. Ferdinand Barrot, who lately obtained a large grant in Algeria, then argued that the conquest was one of civilization over barbarism. That several hundred square leagues were secure; that the Arabs were manageable; that both civil and military colonies could be made to prosper, though he must confess that the settlements he inspected were in a dismal plight. Bodies of emigrants had repaired to the region with formal grants of land from the department of war; when arrived no one would tell them the location, or what to do. A letter to him said: "We are here, in Algeria, now six months; about a hundred families in all: the authorities cannot or will not give us possession of the grants. Most of us are perishing in hovels and hospitals."

M. Desjobert, an old, unwearied, unflinching enemy to all Algerian plans and illusions, reopened the debate, on the 10th instant, with what Lamartine called his implacable figures. "The government (he began) never has told the truth about Africa—never. M. Thiers deceived us like his predecessors and successors. Algeria has devoured

at least one hundred thousand of our soldiers; twenty thousand youth are annually wrested for it from their families, of whom six thousand die on an average. The minister of finance confessed lately, here, that the war has cost, besides, more than a thousand millions of francs. Of your one hundred thousand of Europeans not seven thousand cultivate the soil, and about two thirds of these merely raise vegetables and fruit near the gates of the towns. All the European population, army included, subsists by imports from the continent. The importation of grain has constantly and greatly increased. To raise wheat and cattle is impossible in competition with the prices of what is brought from the Black Sea, and Spain and Italy. You depend entirely on foreign supplies and the cattle of the Arabs, which you now obtain chiefly by pillage. Two generals, who have served many years in Algeria, have issued pamphlets, in which they admit or proclaim that, in the event of a maritime war, you must renounce your whole game—your sacrifices will have been all in vain. I do not hesitate to term your enterprise *barbarous*; it can succeed by *extermination* alone; and it is baleful for France, whose armies it decimates, whose treasury it ruins, whose external might and influence it paralyzes."

This is but a meagre abstract of Desjobert's array of figures and considerations. I must pass to the oration of Lamartine—nearly three hours in the delivery—and a masterpiece of rhetoric, reasoning, and manly frankness. "You may extort a bill of indemnity, a bill of silence you shall not have for your abominations and fallacies—never." The first orators of England, the Burkes, Foxes, and Sheridans, branded the crimes, extortions, and ravages of the Clives and the Hastings; her Indian empire became the larger and safer. The world, or Europe at least, is in a *crisis*; France must be ready to meet any one of or all the four great powers; Europe distrusts France and remembers bitterly the excesses of the Revolution and the Empire; there is now a latent coalition against you more formidable than that of Pilitz; if you did not think so why your ramparts and fortresses about your capital? If you have faith in peace, then you contradict and combat, with them, the Revolution of July. Do not understand me as wishing war; France has shed enough of blood; has reaped enough of blood-stained laurels; let us not revert to the Imperial era; notwithstanding the glory won by Napoleon for the nation, would that we could extirpate his memory from the too war-loving hearts of my countrymen! You harp on chance and fatality and Providence keeping the *incognito* for you; you would commit yourselves to mystic auguries and popular instincts; Providence means, on the contrary, that enlightened and reflecting minds—the wisdom of true statesmen and the circumspection of true patriots, should correct and overrule vulgar illusions and blind propensities. Charles X. and his councils never designed more than the extinction of Algerine piracy and the establishment of French influence and naval supremacy in the Mediterranean. The first general who set his foot in Algeria issued a proclamation to the Arabs, in which he assured them that the French came, not to occupy their soil, to drive them away; not to conquer them; but to deliver them from their Turkish tyrants and protect and defend them. Marshal Valle was too moderate in his views of warfare and conquest; too much of a founder and

a statesman; he was recalled to afford scope to the aspirations and energies of a Bugeaud, and the consequence was an accumulation of difficulties and impossibilities baffling all the heads and withering all the hearts of the chambers. The Arabs were *impermeable* to European civilization; they could never be *seated* by the side of European communities in one body, politic and social; the *fusion of the races*—a fine phrase—happened to be beyond human ability; he knew the Arabs well: he could understand the reply of a Sheik, to whom the *fusion* was propounded: "There is a *race* between us; if you were to put your head and mine in the same boiling pot, they would separate from one another." When Bugeaud won the victory of Isly, what did he conquer? The Moorish sands on which he fought. The mortality of the French troops was not chiefly by arms; but by fatigue, fever, climate, pestilence; it was a war of *luxury*, speculation, prospect; therefore the less prodigal should they be of their thousands of lives and their *billions* of francs, for so had the computation ripened, so would it expand, to judge from the past. The more the Arabs were instructed, sharpened, advanced, by their contact or collision with the Christians, the stronger their will and capacity to resist and expel the intruders. The Christian missionaries had never converted *Islamism*; the Turks, with fifteen thousand troops, could keep the Arabs in a sort of subjection; all estimates of number might be defied in the French attempt. In instructions given in 1837 by the commission of the French government to generals going to investigate the African question on the spot, you mark this paragraph: "As to the extermination of the natives—as to the complete driving back (*refoulement*) of the population, you will have to examine whether this mode of *pacification* may be at any time practicable." Lamartine proceeded to demonstrate by official and other authentic reports that this was the system preferred and unlimitedly pursued. His quotations begot the liveliest agitation and wincing impatience throughout the chamber. *Pudet*, &c. He was not to be stopped. "You shall hear much, and you shall shudder. I will brave all your denials, your murmurs, your inattention, real or feigned. You shall know what are your *razzias*, what rapine, ravage, and massacre you threatened in proclamations, and how you fulfilled your threats." The details are in the superlative of ferocity and destruction. They lost nothing in the recitation and commentary of the indignant poet. What if we had the particulars of devastation and homicide, the scenes of woe and horror—those which are not *bulletined*—from the natives themselves? The chamber betrayed emotions of disgust and shame; the orator asked an interval of repose. In a quarter of an hour, he entered the tribune again, to denounce and explode all the plans and devices of colonization, and to show how impotent such a style and scale of war in Africa rendered France in regard to hostile or rival Europe. He was afraid—nay he believed—that it was thus carried on to disable and avert France from any conflict in Europe. He reasoned against the idea of a viceroyalty, which he described as insensate for a country so near to their own kingdom. He ascribed the refusal to accept the crown and incorporation of Belgium; the recreant proceedings of the government in 1840; the humbling recall of the French fleet from the Levant; the submission to Lord Palmerston's treaty of July 15, which was a grand defiance of French power, nationality, and

dignity; the famous note of 8th October; all the self-denial and submission to the stake in Algeria; or rather this immense risk, afford the government a pretext for whatever genuflection. Mr. Guizot claimed the privilege of reply. The opposition journals were angry with Lamartine for his opinions and disclosures; the ministerial naturally sided with Mr. Guizot. The former admired some passages and sallies of Lamartine's speech; they would allow no weight or general excellence to the whole. All logic, sense, and success was discovered in Mr. Guizot's survey of the subject by his *vôtaries*. It strikes me that the minister was feeble and empirical. He stated that he could cite from the history of the wars on natives in India and America, anecdotes, mishaps, and cruelties akin to those which Mr. Lamartine had culled from the French documents. The general cast of the war in Algeria was one of moderation, humanity, self-restraint! To be sure, there might be some energy of defence—some roughness in dealing with a people who massacred French prisoners in their hands; more violent means were necessary in contending with semi-barbarous foes than in civilized warfare. The case of Algeria had become this: If you now abandon that region, it is not the Turks or Arabs who would regain it; some other European power must have dominion. That consideration was quite sufficient to decide him; Algeria must be kept, ruled, and turned to account. Marshal Valé was, indeed, an honorable and capable commander; but it seemed to the government in 1840, as the condition of the enterprise then loomed, that Marshal Bugeaud suited it better. The latter had proved a little restive and refractory; so was Marshal Turenne with Louis XIV. The essential object was to achieve a complete effective domination in Algeria. Assimilation and fusion of races was in sooth a philanthropic dream; but the Arabs might be brought to the relation and state in which the Hindoos are to the British in India and the natives of Java to the Dutch. [A voice from the floor: Neither British nor Dutch colonize, as you pretend to do.] The Arabs, the native tribes, were better disposed to French connection and law than the preceding speakers imagined; he could cite a number of powerful tribes who lived in amity, who fought in alliance with the French; immense progress was visible; very probably there would be more insurrections, more struggles, more efforts; still the accomplishment of all ends was certain and near. Other nations had their difficulties in similar enterprises: see the instance of New Zealand for England. It was intended to found a great *civil* society in Algeria with a *civil* government; when, precisely, could not be affirmed. European colonization was held all-important—the necessary final guaranty of possession; as for the measures, the modes, the questions of annexation, special ministry, modifications of administrative and belligerent systems, the period for their solution had not arrived; the present course of things could not be immediately altered; the government required time, and awaited opportunity.

You have now the substance of the ministerial defence and policy. Nothing was gained in the way of reform or comfort by the many able harangues. The debate reflects credit on the chamber; and, as Algeria is indeed the supreme present concern and perplexing problem for France, I have ventured to bring more of it in my own language, within the compass of a letter, than you or your readers will readily accept or pardon.

VARIETY.

From the Athenæum.

PARIS ACADEMY OF SCIENCES.

May 23.—M. Velpéau presented to the Academy a boy who has a third, but deformed, leg at the posterior part of the other legs, which are perfectly formed. It appears that the boy has been to London; where the surgeons were divided in opinion as to the possibility of amputating it without danger. Some of them considered this to be quite practicable; others that the operation would be followed by almost instant death. M. Serres mentioned in this sitting a similar case, in which the superfluous mass was removed with perfect safety.—A communication was received from M. Roque, on a project of manufacturing paper from the fibres of the banana tree. It appears that experiments have been made under the eyes of a committee appointed by the minister of commerce, and that some very white and good paper was produced. It is proposed by M. Roque to carry on this operation in Algeria, not merely as regards the banana tree, but also the Alives and other textile plants; and it is said that a large grant of land has been made to him in the colony for that purpose.

June 4.—Several astronomical and mathematical papers were read—the most remarkable by M. Leverrier. The object of it is to prove that there exists in our solar system a large planet, which nobody yet has seen, but the orbit of which M. Leverrier has calculated, and which, he says, may be seen on the 1st of January next year. He states that he was led to his discovery by the observations collected since 1690 on the course of Uranus. The insurmountable difficulty experienced by geometers, says M. Leverrier, in representing the real course of Uranus by analytical formulæ might arise from various causes. Either the theory was not sufficiently precise, and they had neglected in their calculations some of the influence due to the perturbatory action of the neighboring planets, Jupiter and Saturn; or the theory had not been compared with the observations with sufficient correctness in the construction of the tables of the planet; or, finally, some unknown cause, acting upon Uranus, added other influences to those which result from the action of the sun, of Jupiter, and of Saturn. To get out of this alternative, it was necessary to resume the whole theory of Uranus—recalculate, discuss the observations, and compare them with each other; and this hard task he undertook. The result is, the positive conclusion, that the irregularity of the movement of Uranus is to be attributed to a special cause, independent of all analytical error, and deduced from the constitution of the planetary system itself. The fact of the existence of this cause being established, it was necessary to determine its nature—and, therefore, a new career opened upon M. Leverrier. Was it admissible, as some astronomers had proposed, to modify the law of gravity for the distant regions in which Uranus moves; or did it suffice to assume the resistance of the ether or the influence of an obscure satellite moving round Uranus, or the accidental shock of a comet? Or was he to admit of a still unknown planet whose existence was shown by the anomalous movement of Uranus? M. Leverrier adopted the latter hypothesis; and, proceeding upon that basis, has come to a conclusion, from all his calculations and observations, that no other is possible. This planet, he says, is situated beyond Uranus, at a distance double that

which separates Uranus from the sun, and in a slightly inclined orbit.—A paper by M. Dumas, on the component parts of blood, was read. It is known that blood contains fibrine, albumen, and globulous matter. The analysis of the two former parts is exceedingly simple; but hitherto that of the globules has been difficult, for they consist of living matter. It was necessary to keep them in a state of life. This M. Dumas does by agitating the liquid, giving it air, and keeping up the natural temperature of the person from whom the blood is drawn.

I was not a little surprised, on reading your excellent journal of last week, to find, near the conclusion of the article "Foreign Correspondence," "a question adverted to which" your correspondent "had heard agitated to-day"—that the origin of the disease Pellagra, which is well known to prevail in Lombardy, is attributed to the general consumption of polenta, or Indian corn. He says, "certain it is that the disease exists in no other part of Italy; and that in no other part of Italy is polenta the staff of life." Now, it is very well known that, in Modena and other parts of northern Italy, Indian corn is very much used as food; and, even at Rome, I have often seen and partaken of a very good Modenese dish, called there polenta, and never heard that pellagra was rife in that city, or in any other part of Italy, except in the Milanese—the plains of which lie low, and are very swampy at some seasons; and from that and other causes, abound in malaria, (*"Paria cattiva,"*) which is much more likely to produce a cachectic habit of body and cutaneous and other diseases of debility, than the use of a wholesome, nutritious article of diet, abounding as much in farinaceous matter (azote) as most of the other cerealia. To ascribe the disease to such a cause appears as rational as the vulgar notion that the use of rice produces blindness in Hindostan and other countries, where it forms almost exclusively the diet of the whole population—or that the great consumption of oatmeal in the Highlands of Scotland occasions scabies! In the United States of America, maize, or Indian corn, is, as is well known, consumed in great quantity—as well the new grain roasted, and eaten with fresh butter, as the flour in a great variety of preparations:—and, who ever heard of pellagra, or any similar disease, being ever suspected to be produced in those extensive regions? For the French Academy of Sciences or of Medicine to send a commissioner into Italy to investigate whether the disease pellagra is produced by eating Indian corn, would appear to be as rational and useful as to send one to India or Scotland to examine if blindness is produced by eating rice, or the itch by the use of oatmeal. The French *savants* are fond of such commissions—"Mons parturit, nascitur ridiculus mus!" It would sometimes be well to recollect the good old Latin maxim, "*Post hoc, non semper propter hoc*"—and to apply it in such instances. MEDICUS.

In the *Annuaire* for the present year, presented to the King of the French by the Bureau of Longitudes, M. Arago takes occasion, once for all, to dispose of those weather-predictions which annually make the circuit of Europe falsely stamped with his authority. "Engaged," he says, "both by taste and by duty, in meteorological studies, I have frequently been led to consider whether it will ever be possible, by means of astronomical cal-

culations, to determine, a year in advance, what, in any given place, will be the annual temperature, that of each month, the quantity of rain, or the prevailing winds. I have already presented to the readers of the *Annuaire* the results of the inquiries of the natural philosophers and astronomers concerning the influence of the moon and comets on the changes of the weather. These results demonstrate peremptorily that the lunar and cometary influences are scarcely sensible; and therefore that weather-prophecy can never be a branch of *astronomy properly so called*. For, in fact, our satellite and the comets have been at all times considered in meteorology as the preponderating stars.—Since those former publications, I have examined the subject in another point of view. I have been inquiring if the labors of men, and events which must always escape our prevision, may not have the effect of accidentally and very sensibly modifying climate—as regards temperature in particular. Already, I see that facts will yield me an affirmative answer. I should greatly have preferred to delay the announcement of that result until after the completion of my work; but let me candidly avow that I have sought to make an occasion for protesting aloud against those predictions which are yearly laid in my name at home and abroad. No word has ever issued from my mouth, either in the intimacy of private communication or in my courses delivered during thirty years—no line has ever been published with my assent—which could authorize the attribution to me of any opinion that it is possible, in the present state of our knowledge, to foretell with certainty what the weather will be, a year, a month, a week—nay, I will say, a single day, in advance. I trust only that the annoyance which I have experienced at seeing a host of ridiculous predictions published in my name, may not have led me, by a sort of reaction, to give exaggerated importance to the causes of disturbance which I have enumerated. At present, I feel entitled to deduce from the sum of my investigations this capital consequence:—*Never—whatever may be the progress of the sciences—will the savant, who is conscientious and careful of his reputation, speculate on a prediction of the weather.*”

We find the following curious details in the *Moniteur des Arts*:—“There exist at Rome secret work-rooms of sculpture, where the works manufactured are broken arms, heads of the gods, feet of satyrs, and broken *torsi*—of nobody. By means of a liquid there used, a color of the finest antiquity is communicated to the marble. Scattered about the country are goat-herds, who feed their flocks in the vicinity of ruins, and look out for foreigners. To these they speak incidentally of the treasures found by digging a few feet deep in such neighborhoods. The English, in particular, are the victims of such mystification; and freely yield their money to the shepherds, who are agents to the *General Artificial Ruin Association*, and know well where to apply the pick-axe. They are careful, however, to spend much time and labor in fruitless search, before they come finally upon the treasure—for which the foreigner willingly pays. England is full of these antiquities of six months’ age. Nor do the amateur numismatists leave Rome with empty hands; for in that city are daily coined, without fear of the law, the money of Cæsar, Hadrian, Titus, Heliogabalus, and all the Antonines—filed, pinched and corroded, to give the look of age. Paris may be said to have hitherto, by com-

parison with London, escaped this epidemic for the youthful antiquities of bronze and marble—but she is devoured by the forgers of middle-age antiques. It is notorious with what skill and impudence certain cabinet-makers manufacture chairs, tables and footstools of the fifteenth century, and how readily they find dupes. A young antiquarian showed, lately, with great pride, to an artist, a friend of his, a very fine article of Gothic furniture, which he had just bought at great cost. ‘It is very fine,’ said his friend, after examination, ‘and it will last you long—for it is quite new.’

THE CENSORSHIP.—“There appeared recently a work on Austrian finance—written by one well instructed in the matter, and whom the government shrewdly suspected to reside in Prague. As the revelations were very offensive, the government ordered Herr Muhdt, the head of the police at Prague, to discover, if possible, the author. All search was vain. He then received instructions to set out himself for Hamburg—where the work was published—and endeavor to wheedle the secret from Campe, the publisher. Muhdt set off: but some one had been before him, and had warned Campe of his purpose. Campe, who is a very knowing fellow, played his part to perfection; suffered himself to be cajoled, and at last invited Muhdt to tea—half promising to tell him the author’s name, under a condition of secrecy. At tea, Muhdt was very pressing; and Campe, at length, begging him to make no use of his knowledge, confidentially whispered, ‘The author is Herr Muhdt, the head of the police in Prague.’ Conceive the start and the changing color of Herr Muhdt! Alarmed lest, perhaps, the author of the work might have maliciously taken his name—for he had no suspicions of Campe—he earnestly declared himself to be the head of the police. Campe affected astonishment. Muhdt then asked him if he had many copies of the work on hand; and on being told there were still two hundred and fifty, he bought them all. The next day, Campe called at his hotel, to ask him whether he would like any more copies of the work.—‘More!’ exclaimed the astonished Muhdt, ‘more! why I thought you told me I had got them all!’ ‘Sehr richtig!’ replied Campe, ‘all of the *first edition*; but a second is in the press—of which I can let you have as many copies as you please.’”—*For. Quar. Rev.*

MINERAL WEALTH OF SOUTH AFRICA.—The mineral wealth of this vast region is yet to be discovered. Indications of metallic ores are known to abound. Iron is everywhere abundant. Manganese is a common article. Copper of the richest description is to be found at a short distance beyond the Orange River; and there is little doubt that, if scientific persons were sent out, resources of a most important kind would be found in this great field of investigation. Lead of a superior kind has long been known to exist near the mouth of the Van Staden’s river, in the district of Uitenhage. A recent immigrant, Mr. Bevan—a gentleman said to be familiar with mining operations—has visited the spot. Satisfied with the indications, he has been induced to purchase the farm for £1,650; and has already a party employed to collect the ore. It is said, that he has since discovered a lode of native lead—one of the rarest productions of nature, and which hitherto, it has been believed, is only to be procured from the island of Madeira and at Alston in Cumberland.—*Graham’s Town Journal.*

MR. BURFORD'S PANORAMA—THE BATTLE OF SOBRAON.—Mr. Burford's indefatigable search after new objects of interest, for the exercise of his peculiar art, has here hit upon a subject which, treated as he has treated it, is likely to become one of the most attractive of the popular exhibitions of this season. The point of view is well chosen; because the spectator, admitted as it were, into the intrenchments of the Sikhs, becomes, thereby, from an elevated point, a near witness of each of the turning accidents of the battle—the mustering of the irregulars—the capture of the guns—the hand-to-hand combats—and that final source of damage to the hordes of the discomfited host, the British artillery. Through the distance the Sullej winds along—inclosing with its bright line the masses of belligerents; and beyond that, the country of the Punjab stretches away into a long and slightly broken horizon. The first group that strikes the eye of the visitor is one composed of the chiefs of the enemy; whose brilliant costume, energetic action, and high-mettled horses are delineated with great spirit. Another passage of interest is the rush of the British infantry into the lines of the intrenched ground; where the combat assumes a fierce character—the bayonet on the one side, and the spear and sabre on the other, making fearful destruction. The charge of the dragoons is given with great effect; and leads us on to a more distant view—where the whole disorganized army of the Punjab is rushing pell-mell towards the river. This part, embracing the firing of the bridge and the fording of the stream, presents a vivid picture of the desolating slaughter attending that confused rout. The art of the painter, too, here obtains a conspicuous success. On one side, the dark figures of our artillery-men tell powerfully against the volumes of rolling smoke that intercept the distance:—on the other, the charge of the horse gives rise to individual combats, executed with much judgment and skill;—and these salient objects again frame in, as it were, the break into the middle ground of the picture, where the forces of the Sikhs, routed, despairing, rallying, and flying, offer the pictorial finale. The execution of this panorama is highly creditable to the conjoined efforts of the artists, Messrs. Burford and Selous. The horses, we understand, were entirely designed by the latter gentleman—and they are worthy of especial note. When we take into account, as we reasonably should, the very short space of time that has been employed in the completion of so extended an oil-painting, we are led the more freely to express our commendation of the art with which the various points are combined into an effective whole. The details of the battle—on which we have dwelt little, because every one has eagerly perused the despatches—and because the visitor receives a hand-book containing a well drawn account—are worked out in every direction; all that could with reasonable license be pressed into a moment of time being seized on to present a fitting *résumé* of the “crowning victory.”

SIR STRATFORD CANNING, to whose personal influence with the Porte we are indebted for the possession of the marbles of the Mausoleum of Halicarnassus, has also, by the same influence, obtained permission to send to England the splendid discoveries which are now being made by Mr. Austen Layard at Nimroud. Of these treasures, a correspondent of the *Times* furnishes the following particulars:—“The discoveries of M. Botta,

at Horsaabad, are well known to the learned world. Those in which Mr. Layard is now engaged at Nimroud promise to be much more interesting and extensive. The mound is eight or ten times larger than that which was excavated by the French. It contains the remains of a palace, a part of which, like that at Horsaabad, appears to have been burnt. There is a vast series of chambers, all built with marble, and covered with sculptures and inscriptions. The inscriptions are in the cuneiform character, of the class usually termed Babylonian. It is possible that this edifice was built at an epoch prior to the overthrow of the Assyrian empire by the Medes and Babylonians under Cyaxares—but whether under the first or second Assyrian dynasty is doubtful. Many of the sculptures discovered by Mr. Layard are, even in the smallest details, as sharp and fresh as though they had been chiselled yesterday. Amongst them is a pair of winged lions with human heads, which are about twelve feet high. They form the entrance to a temple. The execution of these two figures is admirable, and gives the highest idea of the knowledge and civilization of the Assyrians. There are many monsters of this kind, lions and bulls. The other reliefs consist of various divinities; some with eagles' heads—others entirely human but winged,—with battle-pieces and sieges, as at Horsaabad.”

We are able to state, on unquestionable authority, that a treaty for the international protection of copyright has just been signed, at Berlin, between Prussia and England; in which it is confidently expected that, before the ratification, Saxony will join. The consequence will be a reduction of the duty to 15s. per cwt. on at least half the German books imported into England.

FROM ROME, it is stated that a society of private individuals has presented to the government a plan, by which they undertake to render the Tiber navigable to large vessels as far as Ponte Felice. The proposal further contemplates the construction of a port at Fiumicino; and the establishment of a service of steam-boats, on the one side to Leghorn, and on the other to Naples, without touching at Civita Vecchia. The answer of the government has not been given; but, if another piece of gossip be true which reaches us from the same headquarters of exclusion, viz., that the Pope has consented to let a company light the city with gas, there certainly are hopes for the Company of the Tiber. The government that has overcome its fear of light may be expected finally to conquer its objection to locomotion.

A SWEDISH botanist, who assumes to himself the discovery of the means of preserving flowering trees and shrubs in all their beauty, lately sent to the Academy of Sciences at Stockholm a tea-rose, which he affirms that he embalmed in the year 1844—and the flowers of which, as well as the leaves and stems, are in perfect preservation. If this discovery shall be confirmed, it will be of incalculable value; as, by it, the plants of all climates may be preserved, and transplanted to any distance, bearing all their natural appearances.

IN consequence of the death of the Pope, the oldest sovereign in Europe is now Ernest Augustus, King of Hanover, born June 5, 1771. The next in age is the King of the French, born October 5, 1773.

From Mr. Walsh's Letter of 16th June.

THE demise of Pope Gregory occasioned some sensation, because unexpected, for he was represented a day or two before the intelligence as in promising health. Some American gentlemen, who arrived in this capital a fortnight ago, from Rome, have mentioned to me that, in their interviews with His Holiness, they found him easy, communicative, and even facetious at the expense of recent scenes in the streets. The following extract from an English letter from Rome bears date only two days before his dissolution, and its testimony to his character is not from a partial source :

"The demise of Gregory XVI. was the period originally fixed for a new organization of this country ; but it is pleasant to learn that the venerable old pontiff is yet likely to last a year or two ; a swelling in the legs has been announced in our last Roman advices ; his general health is, however, wonderful for his age. With all his political mistakes (and what could a poor monk have learnt in his cell of this wicked world's ways !) the Roman bishop is a genuine honest character. When he dies, you may fairly reproduce the words of Lord Bacon, concerning his namesake and predecessor : ' Gregory XIII. fulfilled the age of eighty-three years, an absolute good man, sound in mind and in body, temperate, full of good works, and an almsgiver.'—(*Novum Organum*. Chapter of Life and Death.)"

A few days ago, a traveller, devoted to internal improvements, observed to me, referring to Gregory's exit, "Now the Roman states will have railroads." The maxim of the defunct was, *stare super vias antiquas*, in every concern. He replied to the applicants, "You will have *your ways* after I have quitted the stage." The world expects other innovations, political concessions to popular or liberal discontents. The *Journal des Debats* of yesterday signifies that it desires an Italian Pope, that is, one who will look to opinions and exigencies in Italy ; who will reform abuses and redeem promises in the political and administrative spheres ; who, in short, will contrive to be independent of Austria. This point will be the more difficult now that the revolutionary billows in the legations and elsewhere have begun to heave. If the disaffected allow a new Pope, of the old heaven, to be fully seated, without extorting stipulations, they will lose their season, their opportunity, during the continuance of peace in Europe. The *Debats* designates six cardinals whom it believes to have the first chances of the succession ; all are above or near seventy years of age, except *Mattei*, who is fifty-four. *Fransoni* stands at the head. In some London sheets, Cardinal *Adon* (English) is mentioned as not without prospects. His elevation would, we may presume, absolutely dismay the Bishop of Exeter.

The Thames, you will see, is to be thoroughly fortified against French or American steam fleets : but how to repel an *English Pope's* bulls !

Mehemet, *on dit*, is about visiting Constantinople, where he will be the most odious, but, at the same time, the most distinguished of all possible guests. It is added that he had set apart a sum of seven millions of francs for the expedition, which may fascinate even Reschid Pacha, the incorruptible. The correspondent at Constantinople of the *Morning Chronicle* says :

"The Sultan has, I am assured, sent an invita-

tion to the Viceroy of Egypt, at his own request, by Jellalapein Bey, to pass some time in Constantinople. He is not expected till Ibrahim Pacha returns from France, to preside over the government of Egypt during the absence of his father. A messenger, it is said, has been dispatched from Alexandria to Paris, to recall Ibrahim for this purpose."

"The meaning of the meditated visit of Mehemet Ali to the Sultan, it is not easy to conjecture. It may arise merely from the caprice of the old man, or from a feeling of religious homage which all Ottomans feel they owe to the successor of the Caliphs. It may have good effects, though it is more likely to have bad ones. A real cordial understanding between the Porte and Egypt may be thereby brought about ; or old Mehemet Ali may inspire the Sultan with a taste for his own most despotic and cruel mode of government, which would be very injurious if not destructive to the reform policy he is at present pursuing. The meeting between him and Khosref, the two most veteran Turks alive, and formerly bitter rivals and enemies, would be a fine study for a painter—though to every eye but the parties, Mehemet Ali would be degraded by the association."

We are informed by the *Epoque* of yesterday (cabinet paper) that England has become, like Russia, jealous of French influence at Constantinople as well as at Athens, and is im providently promoting Russian designs in both capitals. It is a long circumstantial complaint. France would reinstate in the Lebanon the superannuated Emir Beschir, and stickles for the *Chaab* family at all events.

A French dignitary of the new school replied lately to Prince Metternich—who had said to him, "The world is quite sick"—"No, Prince, only the absolute governments."

NEW BOOKS AND REPRINTS.

Harper & Brothers continue to issue in beautiful style their PICTORIAL HISTORY OF ENGLAND. We do not know of a book of which the size of the type, and the proportions of the page please us better. Their ILLUMINATED AND ILLUSTRATED SHAKSPEARE has reached the 92d No. Their DICTIONARY OF PRACTICAL MEDICINE has reached O. MRS. SOMERVILLE'S CONNEXION OF THE PHYSICAL SCIENCES, is the 14th Volume of Harper's Miscellany, a collection honorable to the taste and judgment of the publishers. Dr. Anthon's edition of Dr. Smith's SCHOOL DICTIONARY OF GREEK AND ROMAN ANTIQUITIES, will be a useful addition to libraries.

CHRONICLES OF THE FIRST PLANTERS OF THE COLONY OF MASSACHUSETTS BAY, from 1623 to 1636. Now first collected from original records and contemporaneous manuscripts, and illustrated with notes. By Alexander Young. Just published in Boston.

THE LIFE OF THE RT. HON. GEORGE CANNING, by ROBERT BELL, is the 16th vol. of Harpers' New Miscellany. FRENCH DOMESTIC COOKERY, combining Elegance with Economy : some beautiful passages may be found in this book. It is really less difficult to buy meat, than to get it cooked.—We commend this volume to the suffering public. CAPTAIN O'SULLIVAN, is the 86th No. of their library of select novels.

From the Quarterly Review.

Life and Correspondence of David Hume, from the Papers bequeathed by his Nephew to the Royal Society of Edinburgh and other original Sources.
By JOHN HILL BURTON, Esq. Edinburgh. 2 vols. 8vo. 1846.

WHEN in a recent number (Quart. Rev., March, 1844)* we adverted to the light that might be derived from the literary character of Hume from the collection of his correspondence in the hands of the Edinburgh Royal Society, and to the difficulty which would probably be found in making sufficient extracts without offending public feeling, we were not aware that the work was then actually in progress, and that an editor had been courageous enough to set himself to the task of compiling a Life of Hume from these authentic materials. It would have been satisfactory for those who want to have the whole truth, if the editor could have said that all the correspondence was placed at his disposal; but as the matter stands, we must be contented with Mr. Burton's assurance that "there is no passage which he felt any inclination to print as being likely to afford interest to the reader, of which the use has been denied him." (*Advertisement*, p. 11.) We cannot attribute any but good intentions to the Royal Society, or its committee, but we doubt the expediency of such half trust. If they were satisfied of Mr. Burton's sense and delicacy, and that he was quite above converting the relics of the dead into instruments for serving unfair purposes of any sort, there should have been no "denial of the use" of any materials which might tend to illustrate his subject. By acting as they have done, these gentlemen have not only made themselves responsible for the perfect propriety of everything which is here printed, but they have left a suspicion of something remaining behind which appeared to them objectionable, but which might throw light on questions that have been mooted and are still interesting. We will not dwell on this matter. After all, the suppressions may be trifling—of coarse expressions or personalities—which, however, might have been safely trusted to the discretion of an editor. But, in reference to a report formerly noticed in this Review, on which Lord Brougham commented in his sketch of Hume, and to which Mr. Burton also alludes in his preface, we cannot but remark that Hume's letters to Dr. Robertson, which were partially used by Dugald Stewart in his life of Robertson, and which must at that time have formed part of the correspondence in the possession of Baron Hume, are not now in the collection submitted to Mr. Burton's examination; nor has this editor found there or elsewhere a single scrap of Robertson's letters to Hume (vol. ii., p. 48.)

We have said that the editor of a life of Hume had a difficult task—difficult in what was to be brought forward, and doubly difficult in what was to be passed over. To reconcile the natural partiality of a biographer for his subject, with the honesty of a true and faithful historian; to avoid all con-

cealment or palliation of errors and false doctrines, while the public eye must not be insulted by their defence; these were the difficulties and dangers that must have been apparent to any one contemplating the task. On the other hand, we can fancy few things more likely to excite the ambition of a young man of letters living in Edinburgh, than the offer of access to a large and hitherto unused store of materials for the biography of David Hume. His life has many points of interest, from the society in which he mixed as well as the peculiarities of his personal character; and his writings are in themselves too remarkable, and have exercised too great an influence on the opinions of mankind, not to be worthy of the most careful and critical study.

On the whole Mr. Burton has, we think, acquitted himself very creditably. We do not always agree with him in his views of moral, social, and political questions; his local prejudices must now and then provoke a smile; his diction, though in general unaffected, and occasionally vigorous, is blemished not seldom by verbosity and clumsiness; but he has the merit of diligence, and carries conviction of his honesty and candor, and we must say, he has performed the most delicate part of his task with a more complete avoidance of offence than we could have thought possible.

As a collection of Hume's papers this book is extremely valuable. It is true that they do not tell us much more of his life, that is, of the events of his life, than we knew before. Yet a biographical sketch written even by the subject of it himself, and penned with all the simplicity and grace which Hume has thrown into his "own life," affords but meagre food for study and reflection, when compared with a collection like this of his letters and journals, and scrap-books, setting forth the dreams and aspirations of the boy, the opinions and feelings, the loves and hatreds, the views of life, the successes and disappointments of the man, all in the fresh colors and of the size and importance that nearness gives.

"David Hume was born at Edinburgh on the 26th of April, 1711." He was the second son of a good gentleman's family, though much too poor to afford anything like a provision for a second son. He perhaps had in him to the last something of the usual pedigree-vanity of the northern *gentil-lâtre*; but he inherited also the best patrimony of Scotch younger children, careful frugality and a proud determination of independence. Whether mainly from the circumstances of the country at that time, which opened few channels for enterprise and the occupation of youth, or from his natural disposition, his talents were not devoted to any active pursuit or profession. In the multitude of his letters and recollections Hume never mentions a school or a teacher of his youth, nor dwells at all upon the time which most men love to look back upon as that which gives a color to their after-life. He gives us to understand only that he was a grave, bookish boy, and that when he had run through the paltry course of academical education which Edinburgh then afforded, he took to philosophize and build castles after his own

* Living Age, No. 3.

device. At sixteen, he writes to a friend a letter which his biographer thinks a very remarkable one :—

"Just now I am entirely confined to myself and library for diversion. Since we parted—

— ea sola voluptas,
Solamenque mali—

And indeed to me they are not a small one : for I take no more of them than I please ; for I hate task-reading, and I diversify them at pleasure—sometimes a philosopher, sometimes a poet— which change is not unpleasant nor disserviceable neither ; for what will more surely engrave upon my mind a Tusculan disputation of Cicero's *De Aegritudine Lenienda*, than an Eclogue or Georgick of Virgil's ! The philosopher's wise man and the poet's husbandman agree in peace of mind, in a liberty and independency on fortune, and contempt of riches, power, and glory. Everything is placid and quiet in both : nothing perturbed or disordered.

*At secura quies, et nescia fallere vita—
Speluncæ, vivique læci ; at frigida Tempe,
Mugitusque boum, mollesque sub arbore somnos
Non abint.*

"These lines will, in my opinion, come nothing short of the instruction of the finest sentence in Cicero : and is more to me, as Virgil's life is more the subject of my ambition, being what I can apprehend to be more within my power. For the perfectly wise man, that outbraves fortune, is surely greater than the husbandman who slips by her ; and, indeed, this pastoral and Saturnian happiness I have in a great measure come at just now. I live like a king, pretty much by myself, neither full of action nor perturbation—*molles somnos*. This state, however, I can foresee is not to be relied on. My peace of mind is not sufficiently confirmed by philosophy to withstand the blows of fortune. This greatness and elevation of soul is to be found only in study and contemplation—this can alone teach us to look down on human accidents."—vol. i., p. 14.

Now we do not say that this is a piece of mere affectation, though its being found in draft savors somewhat of a school exercise ; for what boy keeps copies of his real confidential letters to his schoolfellows ! We allow it may have been a good deal what at the time was passing in the lad's mind ; and those day-dreams of poetry and even early attempts at stoicism are not so rare among youths of secluded habits and misdirected education as Mr. Burton supposes. Undoubtedly they are not for good ; and with a less vigorous nature of mind or of body, the indulgence would have produced upon Hume its accustomed penalty. But he wanted some of the stuff that goes to the composition of a visionary. From his youth upwards he was devoid alike of passion and imagination, and it needed little effort to give him that control of himself which it was his first object to obtain. His biographer, with all his pains, cannot satisfy himself that he ever felt the least access of love, and all the perturbations of his mind seem to have been never much removed from that equability which he perhaps fancied he had by laudable efforts schooled himself into. He seems to have had no sympathy with rural pursuits and pleasures. His Arcadian longings never passed beyond the study of the Eclogues. "It does not appear from any incident in his life or allusion in his letters that

he had ever really admired a picture or a statue." (vol. ii., p. 134.)

Hume himself tells us he "was seized very early with a passion for literature, which was the ruling passion of his life and a great source of his enjoyments ;" but it was not a mere taste for literature in the abstract. He very early set his affections on literary distinction ; his craving was—

"What shall I do to be forever known,
And make the age to come mine own ?"

Like a mightier spirit, he assuredly felt "that inward prompting that by labor and intense study, joined with the strong propensity of nature, he might perhaps leave something so written to after-times as they should not willingly let it die." He devoted himself very seriously to study, and at an age when other men are just girding themselves to the fight of life, he was meditating lucubrations in philosophy with which he should one day found a school, and astonish the world. With such a settled scheme in prospect, he successively threw aside the study of the law, to which no doubt his relations had destined him, and the mercantile profession, with a view to which he spent a few months of 1734 (ann. ætat. 23) at Bristol.

His visit to Bristol marks the era of an undated letter to a physician, whom the editor conjectures to have been the eccentric Dr. Cheyne ; and it is to the draft of this letter preserved by Hume that we owe the very curious proof that, with all his natural coolness of temperament and acquired composure of mind, the young skeptic had by no means escaped utterly the maladies which overworking the brain usually inflicts on the general physical system :—

"You must know then that, from my earliest infancy, I found always a strong inclination to books and letters. As our college education in Scotland, extending little further than the languages, ends commonly when we are about fourteen or fifteen years of age, I was after that left to my own choice in my reading, and found it incline me almost equally to books of reasoning and philosophy, and to poetry and the polite authors. Every one who is acquainted either with the philosophers or critics, knows that there is nothing yet established in either of these two sciences, and that they contain little more than endless disputes, even in the most fundamental articles. Upon examination of these, I found a certain boldness of temper growing in me, which was not inclined to submit to any authority in these subjects, but led me to seek out some new medium, by which truth might be established. After much study and reflection on this, at last, when I was about eighteen years of age, there seemed to be opened up to me a new scene of thought, which transported me beyond measure, and made me, with an ardor natural to young men, throw up every other pleasure or business to apply entirely to it. The law, which was the business I designed to follow, appeared nauseous to me, and I could think of no other way of pushing my fortune in the world, but that of a scholar and philosopher. I was infinitely happy in this course of life for some months ; till at last, about the beginning of September, 1739, all my ardor seemed in a moment to be extinguished, and I could no longer raise my mind to that pitch, which formerly gave me such excessive pleasure. I felt no uneasiness or want of spirits, when I laid aside my book ; and therefore never imagined there was any bodily distemper in the case, but

that my coldness proceeded from a laziness of temper, which must be overcome by redoubling my application. In this condition I remained for nine months, very uneasy to myself, as you may well imagine, but without growing any worse, which was a miracle. There was another particular, which contributed, more than anything, to waste my spirits and bring on me this distemper, which was, that having read many books of morality, such as Cicero, Seneca, and Plutarch, and being smit with their beautiful representations of virtue and philosophy, I undertook the improvement of my temper and will, along with my reason and understanding. I was continually fortifying myself with reflections against death, and poverty, and shame, and pain, and all the other calamities of life. These no doubt are exceeding useful, when joined with an active life, because the occasion being presented along with the reflection, works it into the soul, and makes it take a deep impression; but in solitude they serve to little other purpose than to waste the spirits, the force of the mind meeting with no resistance, but wasting itself in the air, like our arm when it misses its aim. This, however, I did not learn but by experience, and till I had already ruined my health, though I was not sensible of it. * * * *

"I now began to take some indulgence to myself; studied moderately, and only when I found my spirits at their highest pitch, leaving off before I was weary, and trifling away the rest of my time in the best manner I could. In this way, I lived with satisfaction enough; and on my return to town next winter found my spirits very much recruited, so that, though they sank under me in the higher flights of genius, yet I was able to make considerable progress in my former designs. I was very regular in my diet and way of life from the beginning, and all that winter made it a constant rule to ride twice, or thrice a week, and walk every day. For these reasons, I expected, when I returned to the country, and could renew my exercise with less interruption, that I would perfectly recover. But in this I was much mistaken; for next summer, about May, 1731, there grew upon me a very ravenous appetite, and as quick a digestion, which I at first took for a good symptom, and was very much surprised to find it bring back a palpitation of heart, which I had felt very little of before. This appetite, however, had an effect very unusual, which was to nourish me extremely; so that in six weeks' time, I passed from the one extreme to the other; and being before tall, lean, and raw-boned, became on a sudden the most sturdy, robust, healthful-like fellow you have seen, with a ruddy complexion and a cheerful countenance. In excuse for my riding, and care of my health, I always said that I was afraid of consumption, which was readily believed by my looks, but now everybody congratulated me upon my thorough recovery. * * * *

"Thus I have given you a full account of the condition of my body; and without staying to ask pardon, as I ought to do, for so tedious a story, shall explain to you how my mind stood all this time, which on every occasion, especially in this distemper, have a very near connexion together. Having now time and leisure to cool my inflamed imagination, I began to consider seriously how I should proceed in my philosophical inquiries. I found that the moral philosophy transmitted to us by antiquity labored under the same inconvenience that has been found in their natural philosophy, of

being entirely hypothetical, and depending more upon invention than experience; every one consulted his fancy in erecting schemes of virtue and of happiness, without regarding human nature, upon which every moral conclusion must depend. This, therefore, I resolved to make my principal study, and the source from which I would derive every truth in criticism as well as morality. I believe it is a certain fact, that most of the philosophers who have gone before us have been overthrown by the greatness of their genius, and that little more is required to make a man succeed in this study, than to throw off all prejudices either for his own opinions or for those of others. At least this is all I have to depend on for the truth of my reasonings, which I have multiplied to such a degree, that within these three years, I find I have scribbled many a quire of paper, in which there is nothing contained but my own inventions. This, with the reading most of the celebrated books in Latin, French, and English, and acquiring the Italian, you may think a sufficient business for one in perfect health, and so it would, had it been done to any purpose; but my disease was a cruel encumbrance on me. I found that I was not able to follow out any train of thought, by one continued stretch of view, but by repeated interruptions, and by refreshing my eye from time to time upon other objects. Yet with this inconvenience I have collected the rude materials for many volumes; but in reducing these to words, when one must bring the idea he comprehended in gross, nearer to him, so as to contemplate its minutest parts, and keep it steadily in his eye, so as to copy these parts in order—this I found impracticable for me, nor were my spirits equal to so severe an employment. Here lay my greatest calamity. I had no hopes of delivering my opinions with such elegance and neatness as to draw to me the attention of the world, and I would rather live and die in obscurity than produce them maimed and imperfect.

"Such a miserable disappointment I scarce ever remember to have heard of. The small distance betwixt me and perfect health makes me the more uneasy in my present situation. It is a weakness rather than a lowness of spirits which troubles me, and there seems to be as great a difference betwixt my distemper and common vapors, as betwixt vapors and madness. I have noticed in the writings of the French mystics, and in those of our fanatics here, that when they give a history of the situation of their souls, they mention a coldness and desertion of the spirit, which frequently returns; and some of them, at the beginning, have been tormented with it many years. As this kind of devotion depends entirely on the force of passion, and consequently of the animal spirits, I have often thought that their case and mine were pretty parallel, and that their rapturous admirations might discompose the fabric of the nerves and brain, as much as profound reflections, and that warmth or enthusiasm which is inseparable from them.

"However this may be, I have not come out of the cloud so well as they commonly tell us they have done, or rather began to despair of ever recovering. To keep myself from being melancholy on so dismal a prospect, my only security was in peevish reflections on the vanity of the world and of all human glory; which, however just sentiments they may be esteemed, I have found can never be sincere, except in those who

are possessed of them. Being sensible that all my philosophy would never make me contented in my present situation, I began to rouse up myself; and being encouraged by instances of recovery from worse degrees of this distemper, as well as by the assurances of my physicians, I began to think of something more effectual than I had hitherto tried. I found, that as there are two things very bad for this distemper, study and idleness, so there are two things very good, business and diversion; and that my whole time was spent betwixt the bad, with little or no share of the good. For this reason I resolved to seek out a more active life; and though I could not quit my pretensions in learning but with my last breath, to lay them aside for some time, in order the more effectually to resume them. Upon examination, I found my choice confined to two kinds of life, that of a travelling governor, and that of a merchant. The first, besides that it is in some respects an idle life, was, I found, unfit for me; and that because from a sedentary and retired way of living, from a bashful temper, and from a narrow fortune, I had been little accustomed to general companies, and had not confidence and knowledge enough of the world to push my fortune, or to be serviceable in that way. I therefore fixed my choice upon a merchant; and having got recommendation to a considerable trader in Bristol, I am just now hastening thither, with a resolution to forget myself, and everything that is past—to engage myself, as far as is possible, in that course of life—and to toss about the world, from one pole to the other, till I leave this distemper behind me.

"As I am come to London in my way to Bristol, I have resolved, if possible to get your advice, though I should take this absurd method of procuring it. All the physicians I have consulted, though very able, could never enter into my distemper; because not being persons of great learning beyond their own profession, they were unacquainted with these motions of the mind. Your fame pointed you out as the properest person to resolve my doubts, and I was determined to have somebody's opinion, which I could rest upon in all the varieties of fears and hopes incident to so lingering a distemper."—p. 31.

What the answer to this letter was, we do not learn, nor even whether it was ever sent. Hume soon fled from Bristol and its ledgers. He had recovered his health—and then spent three years in France, acquiring the language, conversing with the Jesuits of La Flèche, studying the miracles of the Abbé Paris, and composing his "Treatise of Human Nature." "After passing three years very agreeably in that country, I came over to London in 1737."

His first transaction with a bookseller is characteristic. Among the MSS. to which Mr. Burton has had access is one bearing the following title: "Articles of agreement, made, concluded, and agreed upon the 26th day of September, in the year of our Lord one thousand seven hundred and thirty-eight, and in the twelfth year of the reign of our sovereign lord King George the Second,—between David Hume of Lancaster Court of the one part, and John Noone of Cheapside, London, bookseller, of the other part."

"By this very precise document, it is provided that 'the said David Hume shall and will permit and suffer the said John Noone to have, hold, and enjoy, the sole property, benefit, and advantage of printing and publishing the first edition of the

said book, not exceeding one thousand copies thereof.' The author, in return, receives 50*l.*, and twelve bound copies of the book. The transaction is on the whole creditable to the discernment and liberality of Mr. Noone. It may be questioned, whether, in this age, when knowledge has spread so much wider, and money is so much less valuable, it would be easy to find a bookseller, who, on the ground of its internal merits, would give 50*l.* for an edition of a new metaphysical work, by an unknown and young author, born and brought up in a remote part of the empire. These articles refer to the first and second of the three volumes of the 'Treatise of Human Nature;' and they were accordingly published in January, 1730. They include 'Book I. Of the Understanding,' and 'Book II. Of the Passions.'"—Vol. i., p. 65.

Hume was twenty-seven—self-educated, or educated by books alone; brought up in solitude; reasoning much with himself; careless of the prejudices of others; full of courage; confident of his powers; with the whole feelings of his nature concentrated in a passion for literary fame. He felt no compunctious visitings at the thought of abolishing a creed and establishing a paradox, but received his fifty pounds, and hoped to startle the world and to become a man of mark. We do not say he wrote contrary to his opinions; but to throw upon the world a book of crude unweighed philosophy, tampering in such perilous matter, is but little less criminal. Hume lived to see something of this, and to regret his juvenile performance. He was anxious that it should be forgotten, and complained of the injustice of judging him by its contents (p. 98.) At the time, however, he was only disappointed that it produced so little sensation. "It fell," he says, "still-born from the press;" but yet he published an additional volume three years afterwards, and was soon called upon for a second edition. It was an unreasonable philosopher who could hope for more success.

Upon this book, which contains the whole essence of Hume's philosophy, announced with the rashness of youth, and all the dogmatism with which he afterwards reproached others, we shall not dwell. We think his biographer is mistaken in calling it "the solitary labor of one mind." It may be so as regards its elaboration and style; but Hume has himself told us of his previous reading, and it would not be difficult to trace his system to its source in those studies. With regard to the principles evolved in the "Treatise," the book is now found only on the shelf of the metaphysician and scholar; and we shall not, we hope, be misunderstood when we venture to regard it as a mere metaphysical exercitation, a speculation probably not intended and certainly not at all calculated to affect human life or conduct. It is in truth a pretty, philosophical puzzle—a clever, dexterous argumentation for what every one feels to be untrue, and the completest proof of which could never alter the conduct upon any cognate or dependant subject. He essays to prove by an examination of the mind that nothing is known, and in a curious circle to demonstrate that nothing has been or can be demonstrated. Such an universal skepticism scarcely can merit serious discussion. However dangerous for shallow dogmatists who took the first propositions, and would not work out the necessary corollary, it is not very apt to mislead sane thinkers, when the facts of revelation and the

doctrines of religion are placed on the same foundation of belief with the knowledge we obtain from the highest human testimony or our own experience, and with the conclusions of mathematical science. The idealist, when he has most successfully argued that we have no proof of the existence of matter, does not the less trust his house on the solid foundation of the earth. The wildest Humeist did not really doubt that Cæsar once lived in Rome—that the sun will rise to-morrow—that the square of the hypothenuse is equal to the sum of the squares of the opposite sides. In all these matters man is satisfied to act upon the knowledge arising from testimony, experience, and mathematical demonstration; and he need not wonder or complain that he has no higher or clearer knowledge of the truths of religion than the highest that his mind is capable of.

The criticism of Hume's "Treatise" in the Review called "The History of the Works of the Learned," is such a mixture of censure and sarcasm, with a prognostication of future fame, that it has been thought to be the joint contribution of two authors. The anecdote of Hume's violent rage on occasion of it, and his attacking the unlucky publisher sword in hand, was not printed till after his death ("London Rev.," v., p. 200.) Mr. Burton disbelieves it, and has brought sufficient reasons for his discredit of so improbable a story. —(p. 111.)

The "Essays, Moral and Political," were published in 1742. "The work," says Hume, "was favorably received, and soon made me entirely forget my former disappointment. I continued with my mother and brother in the country, and in that time recovered the knowledge of the Greek language, which I had too much neglected in my early youth." He soon, however, removed to Edinburgh, and among his first appearances is an endeavor to obtain the professorship of moral philosophy in that university, about Christmas in 1744. His friends had some influence with the town council, who by a strange arrangement are the patrons, (how would the "heads of houses" like to sit under the direction and patronage of the mayor and aldermen of Oxford!) but the bailies bethought them of the "avisementum" of the Presbytery of Edinburgh, and in April, 1745, appointed another to the vacant chair of Ethics.

Passing over Hume's attendance on Lord Annandale, an unhappy nobleman who, among more serious frenzies, had a rage for literature and fancied a literary "keeper"—a chapter in the philosopher's life which we think has been unnecessarily dwelt upon—and turning with some slight disgust from the bickerings of interested connections and Hume's pertinacious claim of 75*l.* instead of 37*l.* 10*s.*, which he pressed first by the influence of his friends, and then by threats of law;—we come to an event that had much influence on his future life. In 1746 (ann. ætat. 35) he was invited to act as secretary to General St. Clair, who was going in command of an expedition intended for Canada, but ultimately sent "to seek adventures" on the coast of France, and which resulted in the unhappy and ill-managed attempt at Quiberon Bay. "Such a romantic adventure and such a hurry I have not heard of before. The office is very genteel—ten shillings a day, perquisites, and no expenses."—(p. 208.) The general upon whom Hume attended is not known for any feats of arms, but has a distinction of a different kind, and one of which Scotland, with all its caution and alleged coldness, has

furnished other instances. "He was the second son of Henry Lord St. Clair. His elder brother, being engaged in the rebellion of 1715, was attainted by act of parliament. The father left the family estates to General St. Clair, who with a generous devotion to the hereditary principle, conveyed them to his elder brother, on that gentleman obtaining a pardon and a statutory removal of the disabilities of the attainer."—(p. 210.)

On his return from this expedition, of which he left an account or defence in MS., now printed, Hume returned for a time to Ninewells—the ancient seat of his family—in Berwickshire; and his biographer, seeing no traces of his occupation there, fills the gap with a few scraps from his memorandum book, both of prose and verse. A "character," which, not in his hand, but "corrected here and there by him," is suggested to be his own, has the following touches:—

"1. A very good man, the constant purpose of whose life is to do mischief.

"2. Fancies he is disinterested because he substitutes vanity in place of all other passions.

"4. Licentious in his pen, cautious in his words, still more so in his actions.

"7. Exempt from vulgar prejudices, full of his own.

"13. An enthusiast without religion, a philosopher who despairs to attain truth."—(p. 226.)

If this, with other parts of the same exercise, could really be established as at any time Hume's estimate of himself, it would indeed be very curious—and no doubt the article about *vanity* tallies well with an anecdote quoted in our last number from the "Lives of the Lindsays;" but we confess that we cannot but think, if intended for a character of him, it is the work of another; if drawn by himself, it is his estimate of another. The verses we may pass by, with still more unconcern. Most of them are apocryphal, and none of them worth fathering.

In 1748 he was again secretary with General St. Clair, in the mission of espionage to Vienna and Turin. He writes to Oswald:—

"I have got an invitation from General St. Clair, to attend him in his new employment at the court of Turin, which I hope will prove an agreeable, if not a profitable jaunt for me. I shall have an opportunity of seeing courts and camps; and if I can afterwards be so happy as to attain leisure and other opportunities, this knowledge may even turn to account to me, as a man of letters, which, I confess, has always been the sole object of my ambition. I have long had an intention, in my riper years, of composing some history; and I question not but some greater experience in the operations of the field, and the intrigues of the cabinet, will be requisite, in order to enable me to speak with judgment upon these subjects. But, notwithstanding of these flattering ideas of futurity, as well as the present charms of variety, I must confess that I left home with infinite regret, where I had treasured up stores of study and plans of thinking for many years. I am sure I shall not be so happy as I should have been had I prosecuted these. But, in certain situations, a man dares not follow his own judgment or refuse such offers as these."—(p. 236.)

He wrote a journal of his tour, in letters to his brother, which are chiefly remarkable for the absence of all taste for the beauty of nature or pleasure in the associations of romance. The Rhine was to him no more than any other river. "I

think," he says, "it is as broad as from the foot of your house to the opposite banks of the river." A castle in ruins—Drachenfels or Rolandseck—was not worthy even of notice; a Gothic church was a barbarism; and he has left a letter descriptive of Cologne, in which the cathedral is not named. To be sure, he kissed (figuratively) the native earth of Virgil at Mantua; but Virgil was part of his creed. He is delighted by no charms of scenery, excited by no recollections older than the battle of Dettingen; and yet he travelled up the Rhine and down the Danube; through Styria, Carinthia, and the Tyrol; by the Lago di Garda to Mantua; through Lombardy to Turin. But from Dan to Beersheba he found all barren.

On his return to Britain in 1749, his mother was dead; but he continued to live at Ninewells till his brother's marriage, two years later, when he turned in his mind various plans for an independent establishment, counting the cost with his accustomed caution. He was now forty. His happy, cheerful nature, and his manly spirit of independence are brought out strikingly in the following letter (June, 1751) to the same friend to whom he confided his earliest dreams of pastoral happiness and philosophy.

"I might perhaps pretend, as well as others, to complain of fortune; but I do not, and should condemn myself as unreasonable if I did. While interest remains as at present, I have 50*l.* a year, a hundred pounds worth of books, great store of linens and fine clothes, and near 100*l.* in my pocket; along with order, frugality, a strong spirit of independence, good health, a contented humor, and an unabating love of study. In these circumstances I must esteem myself one of the happy and fortunate; and so far from being willing to draw my ticket over again in the lottery of life, there are very few prizes with which I would make an exchange. After some deliberation, I am resolved to settle in Edinburgh, and hope I shall be able with these revenues to say with Horace—

Eat bona librorum et provissæ frugis in annum
Copia.

Besides other reasons which determine me to this resolution, I would not go too far away from my sister, who thinks she will soon follow me; and in that case, we shall probably take up house either in Edinburgh, or the neighborhood. And as she (my sister) can join 30*l.* a year to my stock, and brings an equal love of order and frugality, we doubt not to make our revenues answer. Dr. Clephane, who has taken up house, is so kind as to offer me a room in it; and two friends in Edinburgh have made me the same offer. But having nothing to ask or solicit at London, I would not remove to so expensive a place: and am resolved to keep clear of all obligations and dependencies, even on those I love the most.

"In fulfilment of the design thus announced, he tells us in his 'own life,' 'In 1751, I removed from the country to the town, the true scene for a man of letters.'"—Vol. i., p. 342.

While he was abroad, in 1748, there had issued from the London press Hume's "Inquiry concerning Human Understanding," a re-cooked dish of the old "Treatise of Human Nature,"—with the addition of his "Essay on Miracles" (which, in the opinion of Mr. Burton, would have been less offensive with a different title;) and during his residence at Ninewells he had amused himself with composing a few personal and political squibs with

which he was mightily pleased—very laborious endeavors at drollery, most dull joking they are! (pp. 308, 317.) In 1751 he published the "Inquiry concerning the Principles of Morals," which Mr. Burton styles "the full development of his utilitarian system;" and which, says Hume, "in my own opinion (who ought not to judge on that subject) is of all my writings, historical, philosophical, or literary, incomparably the best. It came unnoticed and unobserved into the world."

We wish Mr. Burton had used another word than *Utilitarian* for Hume's ethical system. It smacks too strong of the school which seeks to prove its originality by deforming our language. The "Inquiry" is anything but a complete system—but it is a very pleasing book. We are not so often roused to question the author's positions, perhaps because there is less to prove, and it is more animated in style than his earlier work. It is not in its main doctrine new, though the mode of treatment gives it that appearance; it would be indeed a reproach to philosophy to admit, that now for the first time it taught that all the kind affections and feelings, all the benevolent acts, all the better parts of our nature, are useful to society.

If Hume could complain that the "Inquiry" came unnoticed into the world, it was not so with the next production of his brain, his "Political Discourses," "the only work of mine that was successful on the first publication. It was well received abroad and at home." Of these *Essays* Lord Brougham has said, that "they combine almost every excellence which can belong to such a performance;" they exhibit certainly clear reasoning, learning, happy choice of subjects, elegance, precision, and vigor of language; nor can the writer's originality be denied, or that here we have the introduction of a new and widely influential system of politics and political economy. They were successful in Britain, and immediately and repeatedly translated into French; and indeed acquired in that country for themselves and for their author much more popularity than he enjoyed at home.

An unsuccessful attempt of Hume to obtain the moral philosophy chair in the University of Glasgow—where Edmund Burke is said also to have been a defeated candidate—and a successful struggle for the office of librarian to the Faculty of Advocates in Edinburgh, are both crowded into this eventful year of Hume's life. His triumph as to the librarianship produced a letter to his friend Dr. Clephane, which we wish we had room to give entire, for it affords curious glimpses into the then state of opinion and feeling in the northern metropolis.

"Nothing since the rebellion has ever so much engaged the attention of this town, except Provost Stewart's trial; and there scarce is a man whose friendship or acquaintance I would desire, who has not given me undoubted proofs of his concern and regard.

"What is more extraordinary, the cry of religion could not hinder the ladies from being violently my partisans, and I owe my success in a great measure to their solicitations. One has broke off all commerce with her lover, because he voted against me! and W. Lockhart, in a speech to the faculty, said that there was no walking the streets, nor even enjoying one's own fireside, on account of their importunate zeal. The town says, that even his bed was not safe for him, though his wife was cousin-german to my antagonist. * * * *

"The whole body of cadies* brought flambeaux, and made illuminations to mark their pleasure at my success; and next morning I had the drums and town music at my door, to express their joy, as they said, of my being made a great man. They could not imagine that so great a fray could be raised about so mere a trifle.

"About a fortnight before, I had published a Discourse of the Protestant Succession, wherein I had very liberally abused both whigs and Tories: yet I enjoyed the favor of both parties.

"Such, dear Doctor, is the triumph of your friend; yet, amidst all this greatness and glory, even though master of 30,000 volumes, and possessing the smiles of a hundred fair ones, in this very pinnacle of human grandeur and felicity, I cast a favorable regard on you, and earnestly desire your friendship and good-will: a little flattery, too, from so eminent a hand, would be very acceptable to me. You know you are somewhat in my debt in that particular. The present I made you of my Inquiry was calculated both as a mark of my regard, and as a snare to catch a little incense from you. Why do you put me to the necessity of giving it to myself?"—p. 371.

Another letter to the same person (January, 1753) has the following charming picture of a cheerful and contented mind:—

"I shall exult and triumph to you a little, that I have now at last—being turned of forty, to my own honor, to that of learning, and to that of the present age—arrived at the dignity of being a householder. About seven months ago I got a house of my own, and completed a regular family; consisting of a head, viz., myself, and two inferior members, a maid and a cat. My sister has since joined me, and keeps me company. With frugality I can reach, I find, cleanliness, warmth, light, plenty, and contentment. What would you have more? Independence? I have it in a supreme degree. Honor? that is not altogether wanting. Grace? that will come in time. A wife? that is none of the indispensable requisites of life. Books? that is one of them; and I have more than I can use. In short, I cannot find any blessing of consequence which I am not possessed of, in a greater or less degree; and without any great effort of philosophy, I may be easy and satisfied.

"As there is no happiness without occupation, I have begun a work which will employ me several years, and which yields me much satisfaction. 'Tis a History of Britain, from the Union of the Crowns to the present time. I have already finished the reign of King James. My friends flatter me (by this I mean that they don't flatter me) that I have succeeded. You know that there is no post of honor in the English Parnassus more vacant than that of history. Style, judgment, impartiality, care—everything is wanting to our historians; and even Rapin, during this latter period, is extremely deficient. I make my work very concise, after the manner of the ancients. It divides into three very moderate volumes: the one to end with the death of Charles the First; the second at the Revolution: the third at the Accession, for I dare come no nearer the present times. The work will neither please the Duke of Bedford nor James Fraser: but I hope it will please you and posterity. *Κτήμας τις ἔστι.*

"So, dear Doctor, after having mended my pen,

* A privileged body of street porters—amusingly described in "Humphry Clinker."

and bit my nails, I return to the narration of parliamentary factions, or court intrigues, or civil wars, and bid you heartily adieu."—p. 377.

This is the first intimation of his great undertaking; but before adverting further to it we willingly turn to glance at Hume's correspondents, and the society among which he was now living.

Hume's early friends (several of whom were, we believe, his relations) the St. Clairs, Baron Mure, Oswald, Lord Glasgow, all of them men of great intelligence—Sir Gilbert Elliot, whose letters confirm all our previous impressions of his admirable sense and accomplishment—were of such rank and connections as would have secured his admission to the highest circles of the metropolis of Scotland, so far as his fortune enabled him to live in them. One of his intimates, and, as we have understood, a very frequent correspondent, was Patrick Lord Elibank—commonly known as "the clever Lord:" but of letters to that remarkable person the R.S.E. collection has afforded no valuable specimen—and we see but one from his lordship to Hume—a noticeable blank. His military expedition had thrown him into the intimacy of several other persons of a different class, but with whom the philosopher assimilated with perfect ease, and continued to live on terms of even greater familiarity than with the civilians of his early correspondence. Abercrombie, Edmonstone, and Erskine were all soldiers of good birth, and of sufficient standing in their profession to secure their position in the best society.

Another correspondent with whom he seems to have become acquainted in the Quiberon expedition, was Dr. John Clephane, to whom some of the most entertaining letters in this work are addressed. Clephane was, like Hume himself, a Scotchman of family but no fortune, who had turned an unusually good education to account, first as a travelling tutor to several young English noblemen, and latterly as a practising physician in London. He was a very accomplished person, the friend and adviser of Dr. Mead in forming his collections of ancient and foreign art. But he never neglected his profession, and bid fair to rise high in it if he had not been prevailed upon to accept of a medical appointment in the expeditions against the coast of France in 1758, where he died. Fortunately he had the habit of preserving his papers; and it is from a mass of varied correspondence with Italian virtuosi and eminent persons of Paris, that these letters of Hume are selected.

Though the town of Edinburgh was so different, the composition and tone of its society, in the middle of last century, was not unlike what it is known to be at the present day. There was the same body of the country squirearchy, with however a much larger sprinkling of the nobility, who had not then got inured to London life. There were the same literary lawyers and scientific doctors. There was perhaps more claret drunk, certainly more drunk in clubs and taverns—for the general narrowness of domestic accommodation as well as of fortune prescribed a very moderate indulgence of social domestic intercourse. The ladies were not, perhaps, in general so well educated as their great-grand-daughters; but there was much easy, unexpensive, and yet refined society up those high "common stairs," in the "closets," and "wynds," where a modern lawyer's fine lady would find it impossible to breathe.

One element there was which is now, we be-

have, quite wanting—a considerable admixture of the most eminent clergy of the national church, who then found it not inconsistent with their duties to give some part of their time to general society. The beneficial influence they exercised upon it may be readily understood; but it was by no means greater than the good effects produced upon their own body by mixing on terms of equality and freedom with laymen at least as intelligent as themselves.

The Presbyterian establishment is in not a few respects singular among the churches of Christendom. The incitements of their clergy to study, and its rewards, have, from a very early period at least, been few and mean; and the people, interdicting to the clergy, as they do to women, all scholastic learning, seem to have had a prejudice against any accomplishments in their ministers except those of the pulpit. This brought it about that the establishment, which has in all periods produced as exemplary working pastors and as effective preachers as any, had before Hume's day become remarkable through Europe as "the unlearned church." While this *υπαρματοφοβία*, as Warburton called it, prevailed, the only learning of churchmen was a lay learning; and the only prizes in the lottery were the city churches—which benefices were additionally coveted for the chance of holding at the same time a professor's chair in the university. Such combination of ecclesiastical and academical emoluments has within our own time been condemned as interfering with the due discharge of the sacred function: and we believe the practice has been wholly abolished. The results of this *reform* are not yet of course developed. But it so happened, under the old system, that at the time we are speaking of, the clergy of Edinburgh numbered among them some men as eminent as Scotland has produced, in various branches of intellectual exertion. Among these, Principal Robertson the historian, the leader of the dominant (or *Moderate*) party in the Kirk, and Dr. Blair, whose lectures on rhetoric and belles lettres were once much esteemed, though he is now chiefly remembered by his sermons, were favorite, but by no means preëminent members of the society into which Hume was now admitted. It excited some surprise in various quarters then, and continues to do so, that such clergymen should have consented to live on terms of familiar intercourse with one who held and published doctrines like those of Hume. We do not wish to enter into that question on this occasion: if Mr. Burton's work may be relied on as a complete authority, and we know of little in opposition to it on this head, it must be our conclusion that the open and avowed friendship which existed between them, did not at the time and on the spot affect injuriously the professional reputation and influence of those clergymen, who yet were sufficiently exposed to criticism from the conspicuous place they filled, and the violence of church parties at the period.* There

* Robertson had for his coadjutor in his cure the leader of the opposite (or *Highflying*) party of the Kirk. This was Dr. John Erskine, the preacher whom Pleydell took Colonel Mannering to hear on his first visit to Edinburgh—who "had seldom heard so much learning, metaphysical acuteness, and energy of argument brought into the service of Christianity." Dr. Erskine was a divine of the most rigid and severe Calvinistic school; and he was also a nobly descended gentleman of the purest truth and honor. Robertson and he were, through life, opposed on all questions of church government and politics; yet they spent their days in the common duties of their ministry

are two letters which throw light upon the forbearance exercised by those men of opposite principles, and with them we will leave the matter, merely observing that Bishop Butler not only exchanged the common civilities of life with Hume after having received his treatise, "but everywhere recommended his moral and political essays." It was not to such men that Hume's metaphysical inquiries could prove dangerous; while the purity of his life commanded respect, and his benevolent and kindly nature (for which we need not appeal to the imagination of Henry Mackenzie and the beautiful story of *La Roche*) recommended him to their affection. The first of the following extracts is from a letter of Hume (in 1761) to Dr. Blair:—

"Permit me the freedom of saying a word to yourself. Whenever I have had the pleasure to be in your company, if the discourse turned upon any common subject of literature or reasoning, I always parted from you both entertained and instructed. But when the conversation was diverted by you from this channel towards the subject of your profession, though I doubt not but your intentions were very friendly towards me, I own I never received the same satisfaction: I was apt to be tired, and you to be angry. I would therefore wish, for the future, whenever my good fortune throws me in your way, that these topics should be forborne between us. I have long since done with all inquiries on such subjects, and am become incapable of instruction; though I own no one is more capable of conveying it than yourself."—Vol. ii., p. 117.

The next is part of a letter to Hume from Dr. Campbell, the author of a well received and able answer to his "Essay on Miracles:"—

"25th June, 1762.

"The testimony you are pleased to give in favor of my performance, is an honor of which I should be entirely unworthy, were I not sensible of the uncommon generosity you have shown in giving it. Ever since I was acquainted with your works, your talents as a writer have, notwithstanding some differences in abstract principles, extorted from me the highest veneration. But I could scarce have thought that, in spite of differences of a more interesting nature, even such as regards morals and religion, you could ever force me to love and honor you as a man. Yet no religious prejudices (as you would probably term them) can hinder me from doing justice to that goodness and candor which appear in every line of your letter.

"There is in all controversy a struggle for victory, which I may say compels one to take every fair advantage that either the sentiments or the words of an antagonist present him with. But the appearances of asperity or raillery, which one will be thereby necessarily drawn into, ought not to be construed as in the least affecting the habitual good opinion, or even the high esteem, which the writer may nevertheless entertain of his adversary."—p. 119.

It is more pleasing to look on this society in another light. Hume's success in letters was the beginning of the brilliant period of Edinburgh literature. Before him no Scotchman had done anything to redeem his country from the provincialism into which the union had cast it. He had set his ambition on two roads of literary distinction, and

with mutual respect, and Erskine lived to preach a funeral sermon bearing testimony to the high merit of his friend, colleague, and rival.

he was eminently successful in both. He was followed in his philosophical career by his friend Adam Ferguson; and, with greater influence and fame, by their common friend Adam Smith. Robertson for a season divided the opinions of the world with Hume in the field of history; and a swarm of lesser aspirants were cherished into life by their success. To all these ardent sons of letters Hume was the kind and generous encourager. There was no petty jealousy in his nature. He not only supported Blacklock, the poor blind poet, and John Home, the author of "Douglas," but he took pleasure and gloried in each new success of friends whom he felt to be no mean rivals in his own walk; and he lived on terms of entire confidence and the most playful intimacy with men whose names and works will live as long as his. When Robertson was preferred for the office of Historiographer, with a salary which then would have fulfilled Hume's utmost ambition, he gave way to no envious complainings. We learn from a note of Dr. Carlyle,* that "Honest David Hume, with a heart of all others that rejoices most at the prosperity of his friends, was certainly a little hurt with this last honor conferred on Robertson," (vol. ii., p. 164.) There are too few instances of such society to pass this over without notice. Hume writes to Robertson (1758) on the publication of his "History of Scotland:"—

"I am diverting myself with the notion how much you will profit by the applause of my enemies in Scotland. Had you and I been such fools as to have given way to jealousy, to have entertained animosity and malignity against each other, and to have rent all our acquaintance into parties, what a noble amusement we should have exhibited to the blockheads, which now they are likely to be disappointed of! All the people whose friendship or judgment either of us value, are friends to both, and will be pleased with the success of both, as we will be with that of each other."—Vol. ii., p. 49.

We heartily agree with our author—"There is no passage in literary history, perhaps, more truly dignified than the perfect cordiality and sincere interchange of services between two men whose claims on the admiration of the world came in so close competition with each other." (Vol. ii., p. 42.)

Even the philosophical party most opposed to Hume were won by his placid and courteous reception of their works. Reid, their leader, (a clergyman also, by the way,) acknowledges his "candor and generosity towards an antagonist;" and concludes a remarkable letter, in which he avows himself Hume's "disciple in metaphysics," with the following words:—

"When you have seen the whole of my performance, I shall take it as a very great favor to have your opinion upon it, from which I make no doubt of receiving light, whether I receive conviction or no. Your friendly adversaries, Drs. Camp-

bell and Gerard, as well as Dr. Gregory, return their compliments to you respectfully. A little philosophical society here, [Aberdeen,] of which all the three are members, is much indebted to you for its entertainment. Your company would, although we are all good Christians, be more acceptable than that of St. Athanasius; and since we cannot have you upon the bench, you are brought oftener than any other man to the bar, accused and defended with great zeal, but without bitterness. If you write no more in morals, politics, or metaphysics, I am afraid we shall be at a loss for subjects."—p. 155.

Hume was now installed in the Advocates' Library, writing, *currente calamo*, his great work. We have noticed the first announcement of the undertaking in a letter of January, 1753—by which time he had done the reign of James I.; and we have the author chanting *jamque opus exegi*, on the 1st of September, 1754, (p. 397.) In so short a space was composed the first volume, and the most important one, of that history which, as he himself pleasantly said—"only displeased all the whigs—and all the Tories—and all the Christians," and which has continued to be read ever since by all the three classes, and by all the world.

Of the merits and faults of Hume's "History of England," of the reasons of its short coming, the causes of its success, and the extent of its influence, perhaps enough has been written; but the subject is interesting, and one or two points, we think, have not been rightly considered.

The earliest of Hume's writings, in his biographer's opinion, is an "Essay on Chivalry," (p. 19,) which is remarkable chiefly for the choice of the subject by a writer who cannot sympathize with or even allow for any of the peculiar feelings on which the whole fabric of chivalry was founded. He could never read Froissart; he despised him; everything of romance was only so much of barbarism. Gothic architecture, the churches and castles of an early time, were monuments of dark superstition and brutal tyranny, in whose history he took no delight. He contemned the people of mediæval Europe, and all their institutions. The clergy were ruthless bigots, or brazen impostors, domineering intriguers, or lazy voluptuaries—the laity fierce and ignorant savages. He saw nothing admirable in man but high-dressed civilization, and he could not even condescend to trace its history and progress to a ruder age. He was, though but a slender classical scholar, a classicist beyond reason and all modern belief. Though he tried to "recover his Greek," he had no idea of any poetry beyond the smooth and high-polished *Æneid*. It is fortunate that Burns came too late to disturb his equanimity. Scott would have driven the philosopher mad. Wilkie's "Epigoniad" (which of our readers has tried to read it?) he considered "full of sublimity and genius," (ii., p. 25.) Writing of Home's first tragedy before he had seen it, he says, "It is very likely to meet with success, and not to deserve it; for the author tells me he is a great admirer of Shakspeare, and never read Racine," (p. 316.) But he found he was mistaken, and he praises "Douglas."—"The author I thought had corrupted his taste by the imitation of Shakspeare, whom he ought only to have admired. But he has composed a new tragedy on the subject of invention, and here he appears a true disciple of Sophocles and Racine. I hope in time he will vindicate the English stage from the reproach

* Our readers will find some information about this gentleman, the once celebrated minister of Musselburgh, and most of the other friends of Hume's Edinburgh circle, in the article on "Mackenzie's Life of John Home," contributed by Sir W. Scott to this Review, (Q. R., vol. xxxvi.), and now included in his "Miscellaneous Prose Works." Mr. Burton seems to think that Dr. Carlyle's Diary, which Henry Mackenzie had before him when he wrote his account of John Home, has now perished. Much entertainment might have been expected from it—and we hope Mr. Burton is mistaken; but Baron Hume's example may have influenced the witty Doctor's representations.

of barbarism." (p. 392.) It is in this insensibility to the feelings and motives of a rude though vigorous age we can trace one principal cause of the failure of Hume's "History," especially of the early period. Mr. Burton gives us his own "character of a complete history," (vol. ii., pp. 183-7,) not the best part of the editor's lucubrations. He rests much on the incompatibility of minute antiquarian research with the higher duty of an historian. We think him mistaken; but if all the necessary materials had been collected to his hand, and he had used them all, Hume could not have written a satisfactory history of the earlier times of England. He might have emptied the whole Saxon Chronicle and Domesday into his volumes, and crowded his margins with Palgrave and Thorpe; he could never have produced a fitting history of old England. The man who looked upon the introduction of Christianity as a monkish juggle, who could trace nothing of the sturdy English character to the Anglo-Saxon institutions, to whose eyes all bishops and priests were but fat encumberers of the soil, and knights and heralds brought up no image but of violence and rapine, could never have handled well the old "History of England," under whatever rule, be it Saxon, Norman, or Plantagenet. He could not sympathize with the past—he did not think it worth while even to try to understand it.

But now comes the more difficult question of the cause of so much misrepresentation in the "History of the Stuarts." Here was a time of sufficient civilization—a war of fine principles for choice. Royalty and loyalty on the one hand—freedom and the commons on the other. Then why has Hume in some respects failed? Why was the first philosophical historian of modern times a partial one? It appears to us there are several concurring causes. In the middle of last century, when Hume wrote, criticism was in its infancy—historical criticism unknown. The weighing of evidence of fact, or calm and dispassionate balancing of party principles, was not yet dreamt of. Historians everywhere were still undisguised partisans. For some time, too, whig or revolution politics, as they were called, had been in the ascendant, and were supported with intemperance and unfairness. The most candid man, applying his mind to history at such a time, might feel inclined to throw his weight into the opposite scale, and consider himself as on the whole serving the cause of justice in furnishing a refined pleading for the depressed party. In painting the royalists, in the great struggle of principles, in their own colors; in giving to loyalty, to love of order, to disgust at fanaticism, that prominence which they really had in the minds of the saner portion of the Cavalier party, Hume was setting forth a part of the truth—contributing something which was then as necessary to the just appreciation of the spirit of the age as if he had applied himself to sifting proofs and examining documents. That in thus writing, however, he neglected the greatest and highest duty of his office—that he left the seat of judgment for the pleader's bar—will not now be denied. He wrote as an advocate, and the opposition his history met with only stimulated his advocacy.

"In this new edition," he writes to Elliot in June, 1763, "I have corrected several mistakes and oversights, which had chiefly proceeded from the plaguy prejudices of whiggism, with which I was too much infected when I began this work."

I corrected some of these mistakes in a former edition: but being resolved to add to this edition the quotations of authorities for the reigns of James I. and Charles I., I was obliged to run over again the most considerable authors who had treated of these reigns; and I happily discovered some more mistakes, which I have now corrected. As I began the History with these two reigns, I now find that they, above all the rest, have been corrupted with whig rancor, and that I really deserved the name of a party writer, and boasted without any foundation of my impartiality; but if you now do me the honor to give this part of my work a second perusal, I am persuaded that you will no longer throw on me this reproachful epithet, and will acquit me of all propensity to whiggism. If you still continue to upbraid me, I shall be obliged to retaliate on you, and cry, *Whig vous-même*.

"In page 33, vol. v., you will find a full justification of the impositions laid on by James I. without authority of parliament; in pages 113, 114, 389, a justification of persecuting the Puritans; in page 180, a justification of Charles I. for levying tonnage and poundage without consent of parliament. * * *"

"I now justify James II. more explicitly in his exercise of the dispensing power, which was intimately interwoven with the constitution and monarchy."—Vol. ii., pp. 144, 145.

We must admit that Hume only felt half the force of the words he quotes of his Greek master, when he professed to write his History as a *possession forever*.

Another reason remains behind. We believe Hume sat down to plan his History partly as a charming exertion of his metaphysical mind. He wrote the "History of the Stuarts" with no more sifting of evidence than he bestowed on his "Essay on the Authenticity of Ossian," (vol. ii., p. 36.) It did not enter into his plan to grub out received errors, and establish facts by proof. He chose an interesting hero, as he admonished Robertson to do, (vol. ii., p. 84.) The leading incidents were notorious and popular, as fits the groundwork of a drama, and he went on in a temper and spirit with which his idol Racine might sit down to pen a tragedy. Of minor matters he did not regard so much what was actually fact as what was poetically true. He had a wide canvass, and the outline of a fine subject—

"Presenting Thebes or Pelops' line;"

and if he did not group his figures in the best composition, and throw his lights *secundum artem*, he had himself to blame. There are many who think it is a pity to shake our confidence in Livy's History, when all our school philosophy is founded on his facts. Hume might defend himself so; and had no objection that his History, in like manner, might be considered as "philosophy teaching by examples," though the examples were often ideal. But he says of himself, "a passion for literature was the ruling passion of my life;" and the first point was to achieve a great literary triumph—to produce a finished and perfect historical tragedy that might rival in plot, in *denouement*, in high-wrought interest, as well as in grace and beauty of diction, one of the great works of ancient art. Taking this object as paramount, there cannot be a doubt that the Royalist was the poetical and proper tragic version to adopt; and Hume for the time threw aside his whiggism, which he had not

yet got rid of in real life, as well as his skeptical weighing and examination of principles, and in the idealizing process kept only the figures, and names, and dates, and landmarks of actual events, and threw over them the coloring of the artist, the mist of the magician, where "all was delusion, nought was truth." With these views, taking Charles as the centre of his composition, Hume gave him all the interest he could heap upon him, according to his notions. To have represented him as strict and rigid even to austerity, in religious tenets and observances, as he in later life certainly was, would have lowered him in the philosopher's eye: moreover, it would have interfered with the artistic simplicity of effect, which required the dark side of rebellion to be made darker with unrelieved fanaticism. The oppressions of the law, the illegal extortion of money on the king's side, which every one now admits, are not passed over, nor denied, nor palliated; but by a single dash of the brush, the shadow of the picture is made to cover them so that the eye never rests on them. The iron severity of Strafford, the bigotry and oppression of Laud, the tergiversation of Charles—a deep blemish in a noble nature—all are there, but huddled into the background; while the artist brings into the full blaze of his sunshine the amiable and heroic qualities of the king, the courage and genius of his great minister, and even the prime's zeal and genuine piety, to increase the tragic effect of their sufferings and death. It is done with admirable skill; and the spectator, enchanted with the picture, rejects all criticism against the truth of its facts. The story flows on so sweetly, it is impossible to stop it to ask the impertinent question, "Is it true?"

In this artist skill the historian of the House of Stuart is unrivalled. You can find few false statements or mistakes on matters of any real importance—not many suppressions of fact. You can rarely detect any ingenious sophistry. Praise and blame are duly awarded where merited. But all is made subservient to the "effect" which the great picture must produce to be perfect as a work of art.

It is here that Hume shows his mastery, more than in any perfection of mere style and language; and yet the easy, equal, sustained style of the historian was well suited to his object, and, indolent as he certainly was in many points, this achievement was the result of much study and labor well concealed. It never falls below the dignity and interest of the narrative, and shuns all flights that might distract the attention from the great scene spread before us.

In Hume's time and for long after, (and perhaps it is so still,) no Scotchman wrote English without fear of blunders; and Hume was peculiarly sensitive in this matter. Even when success might have given confidence, his correspondence shows us how careful he was to have the assistance of his English friends for purifying his language of its northern spots and turns. By what discipline could one thus suffering under the irksome dread of provincialism school himself into the easy seeming language of Hume? He has furnished us with no key to this himself. In the dearth of other information, we have looked over the index of his philosophical works to find the authors quoted or referred to. At the same time we know how fallacious it is to rest on such foundations. It is one thing to cite an author and another to have studied his style; and perhaps the man who

is most imbued with the spirit and language of a great writer is least likely to make actual quotations from his page. There are evidently other causes which derange the calculation. The authorities produced must of course often depend more upon the subject in hand than on the familiar reading of the writer; and the author of the essay "On the Populousness of Ancient Nations" was necessarily led by his subject to consult books that might be foreign to his general studies and taste. Still the point is not without interest, and something may be found from such an inquiry. We give it for no more than it is worth.

The index of a common edition of the collected Essays, professing to notice all the authors quoted or remarked upon, gives the names of forty Greek writers, thirty-eight Latin, twenty-eight French, nineteen English, nine Italian. Of the Greek authors, Diodorus Siculus and Plutarch are each cited about thirty times:—Polybius, Xenophon, and Strabo, about half as often:—Herodotus, Thucydides, Demosthenes, and Lucian, each about twelve times;—Plato and Aristotle, each nine times;—Hesiod, Lysias, seven times each; Homer five times; and no other Greek authors so often as these. Of Latin writers, Tacitus is quoted twenty-four times; the elder Pliny, fifteen; Cicero, nineteen; Horace, fourteen; Livy, twelve; Columella, seven; Quintilian and Cæsar, each six; Martial, four; Petronius and Virgil, each three; Terence, twice. Of French writers, he cites Fontenelle four times; the Abbé Dubos as often; Racine three; Rochefoucault twice; Voltaire and Boileau, each once. Among the Italians, Machiavelli is quoted seven times; Ariosto and Guicciardini, each twice; Boccaccio, once. His English authorities are still more curious. He quotes Bacon and Locke, each seven times; Pope, five times; Swift, three; Shakspeare, twice; Bolingbroke, twice; Berkeley, Hutchinson, Addison, Prior, Parnell, each once. He quotes three or four early fathers; two modern theologians; the Bible, the Koran, and Cervantes, each once.

Now undoubtedly, such a list shows extensive research and study; and it would be hard to find an instance where a great array of authorities is used to better account than in the "inquiry regarding the populousness of ancient nations." His correspondence also is full of classical quotations and allusions. There is, however, something in the manner of the references which frequently suggests the idea, that the author consulted his Greek authors in the Latin translations; and there is a small slip of *αιμος*, meaning "blood," in one of his last letters, (ii. p. 504,) which is scarcely consistent with any habitual reading of Greek. He had evidently no familiar acquaintance with the Greek dramatists, probably not more than the French books of belles-lettres supplied. Homer he undoubtedly read in the original, and he loves to quote him even in his familiar letters, but too correctly, and as if he had the book open to make the quotation. Thucydides he must have studied; and he knew how to value the great historian when he pronounces "the first page of his work the commencement of real history." (*Essay on Eloquence*.) He appreciated the clearness and truth of Xenophon and Cæsar; but his admiration was reserved for the mixed historical and romantic biographies of Plutarch, which he recommended to Robertson as a model, and of which he himself at one time meditated a translation, (vol. ii., p. 84.) Hume knew Cicero well. Horace, and still more

Virgil, he often quoted from memory in his letters, supplying or altering as he best could. He probably read Latin with sufficient ease—but it is evident that he had never studied the language with any sort of care.* As for English, it would seem that Hume scarcely studied in that language, except when the subject on which he was engaged compelled him, or read its authors for his pleasure. He certainly drew none of his language from the “pure well of English undefiled.” The Bible, the best book for the study of the present English tongue, he was not likely to dwell upon. Shakespeare and Jonson, Beaumont and Fletcher, were barbarous, neglecting the unities and so forth; Milton, though learned in all the learning of the classics, was no classicist, and, moreover, was fanatical; the band of writers who first wielded English prose as masters were mostly churchmen, and were indeed in his time generally disregarded or unknown. Bacon he had read, but only for his philosophy. Johnson had not yet directed the student of English composition to give his days and nights to Addison; and though Robertson was never weary of poring over Swift, it may be doubted if Hume could appreciate the most idiomatic of modern English styles. He chose his models and his rules elsewhere. He studied the Parisian writers on criticism and belles-lettres; followed Boileau and his school; affected to rave of Sophocles and Racine as near of kin; and, without an intimate knowledge of the languages of the classics, or a heartfelt appreciation of their spirit, still set them up as the ideal objects of his imitation both in form and essence.

It was undoubtedly on those models that he formed his style: but he bestowed upon it no common labor, and brought to the study no common qualifications. Clear good sense, an admirable precision of thought and reasoning, gave a similar precision and transparency of diction: a remarkable simplicity of mind, joined to a quick sense of the ridiculous, guarded him against attempting too high a flight. These qualities of his nature, with a never-ceasing watchfulness of his words,† enabled him to produce a narrative which, without the gracefulness of native and racy English, has the great merit of expressing his sense clearly and simply, and, by a wonderful art, leading us to forget the writer and the language under the fascination of his story. There is no greater triumph in this department, but it is the victory of thinking rather than of writing.

Much as we should wish to keep company with Hume in the society of his Edinburgh friends, we should be unreasonable to expect it. The resi-

*One specimen of verse, when Hume was forty-five, may suffice. It must have been a strange ear that allowed this mangling of an Ovidian hexameter.

Nam simul ac mea caluerant pectora musæ.—(ii, p. 20.)

The grammar is worthy of the quantity. He plainly intended *caluerant* to mean *heated*, and to govern *pectora*.

†The care of his style appears even in his letters, many of which are preserved in the first draft, and show constant correction where another word or phrase seemed nearer than that first chosen. The same practice is met with even in the letters actually sent to his familiars, and—what is not always the case with others—his alterations were always for the better. His style of letter-writing became much easier as he advanced in life, and in his later correspondence he gave up a practice which offends the reader of his (collected) early letters,—repeating the same story, or thought, or play of words—sometimes almost in the same phrase, in several letters, to different friends.

dence at Grignan stops the correspondence of the queen of letter-writers. When Hume is quietly placed among his dearest friends, and busy with his great work, he cannot have much time or occasion for letter-writing. The incident of his quarrel with the learned body of lawyers, whose officer he was, for polluting the shelves of a great public library, in fact the national depository of literature, with the works of Lafontaine and Crébillon, (p. 395,) is ridiculous enough, unless it was a mere pretext for attacking him, when it becomes something worse. But he was able now to stand alone. His works were rising in popularity and print. We find notices of several visits to London in connexion with new editions. He had moved in 1762 from his “tenement” in Riddell’s Land to a more spacious house which he bought in St. James’ Court—the same *flat*, as Mr. Burton proves by a legal document, in which Boswell afterwards received Johnson—though Boszy of course did not tell his guest the name of his landlord. In 1763 he wrote to Adam Smith:—“I set up a chaise in May next: and you may be sure a journey to Glasgow will be one of the first I shall undertake.” (Vol. ii., p. 148.) In short, he was advancing in the steady progress of an industrious and prudent and most successful literary man, surrounded by friends and all comforts, now playing the bountiful host in his own house to a band of guests such as will never meet again, now enjoying the freedom of the “Poker” club—when the quiet tenor of his days was interrupted by his visit to Paris as secretary to Lord Hertford, the English ambassador.

Hume’s reception and success in Paris (1764–5–6) were enough to turn almost any head; and they had some effect upon his. His skeptical philosophy, distasteful even then to the general mind of England, was received with universal applause in the circle of encyclopædists. His history had already drawn upon him the volunteered correspondence of the Comtesse de Boufflers, and he was assured of a general welcome. To prepare him the more to enjoy it, he had to contrast it with a decided want of success in London society. He never loved the English; and, in the time of Hume and Lord Bute, North Britons were not popular in the south. He wrote thus bitterly to Elliot:—

“I believe, taking the continent of Europe from Petersburg to Lisbon, and from Bergen to Naples, there is not one who ever heard my name who has not heard of it with advantage, both in point of morals and genius. I do not believe there is one Englishman in fifty who, if he heard I had broke my neck to-night, would be sorry; some, because I am not a whig; some, because I am not a Christian; and all, because I am a Scotsman. Can you seriously talk of my continuing an Englishman? Am I or you an Englishman? Do they not treat with derision our pretensions to that name, and with hatred our *just pretensions to surpass and govern them?*”—Vol. ii., p. 238.

And again, to Dr. Blair:—

“There is a very remarkable difference between London and Paris; of which I gave warning to Helvetius, when he went over lately to England, and of which he told me, on his return, he was fully sensible. If a man have the misfortune, in the former place, to attach himself to letters, even if he succeeds, I know not with whom he is to live, nor how he is to pass his time in a suitable society. The little company there that is worth

conversing with, are cold and unsocial; or are warmed only by faction and cabal; so that a man who plays no part in public affairs becomes altogether insignificant; and, if he is not rich, he becomes even contemptible. Hence that nation are relapsing fast into the deepest stupidity and ignorance."—Vol. ii., p. 268.

Thus wrote David Hume of London in 1765—exactly in the most flourishing æra of Boswell's immortal cycle—exactly when Burke, Johnson, Beauclerk, Goldsmith, Reynolds, Garrick—not to mention Warburton, and Chesterfield, and Walpole—were in the topmost blaze of their social enjoyment and renown! The "History of the Stuarts" had appeared nine years before.

With these feelings of fierce resentment against English society, it is no wonder that Hume rejoiced in the reception he met with in France. We have seen his early aspirations after literary fame. But he might have attained the highest reputation by his writings, and yet not have satisfied so fully his craving, and come far short of the intoxicating pleasure he now enjoyed. In other times and countries, his works might have given him a passport into the society of authors and reading men. But literature just then was the rage in Paris—above all, the literature of infidelity; and Hume, with his broad face, wide mouth, and expression of imbecility, awkward in manner, speaking English like a Scotchman, and French imperfectly, (p. 270, &c.) found himself instantly courted by all the great as well as the learned, by the leaders of literature and the leaders of fashion alike, by philosophers and peers and princes; above all, caressed and idolized by the most fascinating women in the world, the top of courtly aristocracy of France, and the centre of an aristocracy of letters almost as exclusive.

All this was not the less valued that he knew how rare were such attentions to a stranger. Writing to Blair, (to excuse his not introducing a young Scotchman of rank whom his friend had recommended to him,) he says:—

"It is almost out of the memory of man that any British has been here on a footing of familiarity with the good company except my Lord Holderness, who had a good stock of acquaintance to begin with, speaks the language like a native, has very insinuating manners, was presented under the character of an old secretary of state, and spent, as is said, £10,000 this winter, to obtain that object of vanity. Him, indeed, I met everywhere in the best company: but as to others—lords, earls, marquises, and dukes—they went about to plays, operas, and —. Nobody minded them; they kept company with one another; and it would have been ridiculous to think of bringing them into French company."—Vol. ii., p. 194.

We learn somewhat of Hume's brilliant success and of the feelings it caused in the philosophic breast, from his own letters; and in quoting these we shall avoid as much as we can those previously known. He writes to Blair:—

"The men of letters here are really very agreeable: all of them men of the world, living in entire, or almost entire, harmony among themselves, and quite irreproachable in their morals. It would give you, and Jardine, and Robertson, great satisfaction to find that there is not a single deist among them. Those whose persons and conversation I like best, are D'Alembert, Buffon, Marmontel, Diderot, Duclos, Helvetius, and old President Hénault, who, though now decaying,

retains that amiable character which made him once the delight of all France. He had always the best cook and the best company in Paris. But though I know you will laugh at me, as they do, I must confess that I am more carried away from their society than I should be by the great ladies with whom I became acquainted at my first introduction to court, and whom my connections with the English ambassador will not allow me entirely to drop."—Vol. ii., p. 181.

To this letter there is no date. Was David mystifying the reverend doctor? Or had he really been in Paris for more than a few weeks without discovering anything either of infidelity or of lax morality in the circles stereotyped by Grimm?

To Colonel Edmondstone he says, in January, 1764:—

"The good reception I have met with at Paris renders my present course of life, though somewhat too hurried and dissipated, as amusing as I could wish. * * The material point is, (*if anything can be material*;) that I keep my health and humor as entire as I possessed them at five-and-twenty."—Vol. ii., p. 183.

To Blair again he says, in the same month:—

"It is very silly to form distant schemes: but I am fixed at Paris for some time, and, to judge by probabilities, for life. My income would suffice me to live at ease, and a younger brother of the best family would not think himself ill provided for, if he had such a revenue. Lodgings, a coach, and clothes, are all I need; and though I have entered late into this scene of life, I am almost as much at my ease as if I had been educated in it from my infancy.

"I shall indulge myself in a folly which I hope you will make a discreet use of: it is the telling you of an incident which may appear silly, but which gave more pleasure than perhaps any other I had ever met with. I was carried, about six weeks ago, to a masquerade, by Lord Hertford. We went both unmasked; and we had scarce entered the room when a lady in a mask came up to me and exclaimed: '*Ha! Mons. Hume, vous faites bien de venir ici à visage découvert. Que vous serez bien comblé ce soir d'honnêtetés et de politesses! Vous verrez, par des preuves peu équivoques, jusqu'à quel point vous êtes chéri en France.*' This prologue was not a little encouraging; but, as we advanced through the hall, it is difficult to imagine the caresses, civilities, and panegyrics which poured on me from all sides. You would have thought that every one had taken advantage of his mask to speak his mind with impunity. I could observe that the ladies were rather the most liberal on this occasion. But what gave me chief pleasure was to find that most of the eulogiums bestowed on me turned on my personal character, my *naïveté*, and simplicity of manners, the candor and mildness of my disposition, &c.—*Non sunt mihi cornua fibra*. I shall not deny that my heart felt a sensible satisfaction from this general effusion of good will; and Lord Hertford was much pleased, and even surprised, though he said he thought that he had known before upon what footing I stood with the good company of Paris.

"I allow you to communicate this story to Dr. Jardine. I hope it will refute all his idle notions that I have no turn for gallantry and gaiety—that I am on a bad footing with the ladies—that my turn of conversations can never be agreeable to them—that I never can have any pretensions to their favors, &c., &c., &c. A man in vogue will

always have something to pretend to with the fair sex.

"Do you not think it happy for me to retain such a taste for idleness and follies at my years; especially since I have come into a country where the follies are so much more agreeable than elsewhere? I could only wish that some of my old friends were to participate with me of these amusements; though I know none of them that can, on occasion, be so thoroughly idle as myself."—Vol. ii., p. 196.

After the lapse of more than a twelvemonth, he writes thus to Blair:—

"In Paris a man that distinguishes himself in letters meets immediately with regard and attention. I found, immediately on my landing here, the effects of this disposition. Lord Beauchamp told me that I must go instantly with him to the Duchesse de la Vallière. When I excused myself, on account of dress, he told me that he had her orders, though I were in boots. I accordingly went with him in a travelling frock, where I saw a very fine lady reclining on a sofa, who made me speeches and compliments without bounds. The style of panegyric was then taken up by a fat gentleman, whom I cast my eyes upon, and observed him to wear a star of the richest diamonds;—it was the Duke of Orleans. The duchess told me she was engaged to sup in President Hénault's, but that she would not part with me;—I must go along with her. The good president received me with open arms; and told me, among other fine things, that, a few days before, the dauphin said to him, &c., &c., &c. Such instances of attention I found very frequent, and even daily. You ask me, if they were not very agreeable? I answer—no; neither in expectation, possession, nor recollection. I left that fire-side, where you probably sit at present, with the greatest reluctance. After I came to London, my uneasiness, as I heard more of the prepossessions of the French nation in my favor, increased; and nothing would have given me greater joy than any accident that would have broke off my engagements. When I came to Paris, I repented heartily of having entered, at my years, on such a scene; and, as I found that Lord Hertford had entertained a good opinion and good will for Andrew Stuart, I spoke to Wedderburn, in order to contrive expedients for substituting him in my place. Lord Hertford thought for some time that I would lose all patience and would run away from him. But the faculty of speaking French returned gradually to me. I formed many acquaintance and some friendships. All the learned seemed to conspire in showing me instances of regard. The great ladies were not wanting to a man so highly in fashion: and, having now contracted the circle of my acquaintance, I live tolerably at my ease. I have even thoughts of settling at Paris for the rest of my life; but I am sometimes frightened with the idea that it is not a scene suited to the languor of old age. I then think of retiring to a provincial town, or returning to Edinburgh, or — but it is not worth while to form projects about the matter. D'Alembert and I talk very seriously of taking a journey to Italy together; and, if Lord Hertford leave France soon, this journey may probably have place."—Vol. ii., p. 268.

He has plainly schooled himself into moderation, and we might trust his own report as not overstated. But we have his success recorded by other pens not liable to exaggeration; spoken to

by witnesses who laugh at the triumphing here while they affirm the triumph. Mr. Burton has collected a few passages from contemporaries, of which the following are to our purpose:—

"Ce qu'il y a encore de plaisant, c'est que toutes les jolies femmes se le sont arraché, et que le gros philosophe Ecossais s'est plu dans leur société. C'est un excellent homme, que David Hume; il est naturellement serein, il entend finement, il dit quelquefois avec sel, quoiqu'il parle peu; mais il est lourd—il n'a ni chaleur, ni grâce, ni agrément dans l'esprit, ni rien qui soit propre à s'allier au ramage de ces charmantes petites machines qu'on appelle jolies femmes. O que nous sommes un drôle de peuple!"—*Correspondance Littéraire de Grimm*, vol. v., p. 125.

Madame d'Epinaï gives us the picture of the fat historian in some charades of the day, cajoled into enacting the part of a sultan, who was to make violent love to two beauties of the seraglio, (the two prettiest women in Paris.) He is on a sofa between them, gazing steadfastly at them—

"Il se frappe le ventre et les genoux à plusieurs reprises, et ne trouve jamais autre chose à leur dire que—'Eh bien! mes demoiselles . . . Eh bien! vous voilà donc . . . Eh bien! vous voilà . . . vous voilà ici.' Cette phrase dura un quart d'heure sans qu'il pût en sortir."

He was not pressed to play any more; but, says the lady,

"Il n'en est pas moins fêté et cajolé. C'est en vérité une chose plaisante que le rôle qu'il joue ici. Malheureusement pour lui, ou plutôt pour la dignité philosophique, (car, pour lui, il paraît s'accommoder fort de ce train de vie,) il n'y avait aucune manie dominante dans ce pays lorsqu'il y est arrivé: on l'a regardé comme une trouvaille dans cette circonstance, et l'effervescence de nos jeunes têtes s'est tournée de son côté. Toutes les jolies femmes s'en sont emparées; il est de tous les soupers fins, et il n'est point de fête sans lui."—*Mém. de Mde. d'Epinaï*, vol. iii., p. 284.

Horace Walpole writes from Paris:—"Hume is treated here with perfect veneration. His history, so falsified in many parts, so partial in as many, so very unequal in its parts, is thought the standard of writing," (vol. ii., p. 225.) * * * "For Lord Lyttleton, if he would come hither and turn free thinker once more, he would be reckoned the most agreeable man in France—next to Mr. Hume, who is the only thing that they believe implicitly, which they must do, for I defy them to understand any language that he speaks."—(Vol. ii., p. 226.)

This great and firm success in the most difficult society in the world is not to be accounted for, either by the literary merits of Hume, or in the manner Madame d'Epinaï explains it. There might be something in the present want of a "lion." There was much in the admiration of the metaphysician and historian. His skepticism was better still, and, of course, the more valued as coming from benighted England. But, after all, we can well believe that these only gave the needful standing-place. His success subsequently is at all events very much to be attributed to the same qualities that made him the favorite of his little society at home. The "Honest David Hume" of Dr. Carlyle and the Edinburgh club, was the "bon David" of the French salons. His unselfish, kindly nature, the sincerity of his friendships, the goodness of his temper, were the qualities that won him love and esteem everywhere, and in that over-refined society there was a charm in the unaffected

simplicity, and perhaps a little amusement from the very awkwardness of person, manner, and language, of the "*gros et grand philosophe*."

Hume, however, enjoyed his Parisian triumph for two years of unabated brilliancy, and departed amidst the regrets and solicitations to return, of all that was distinguished in French society. He brought with him to England one still greater "lion" than himself.

Rousseau, not so much by reason of his great genius as by dint of a diseased and monstrous vanity, a little persecution, which he courted, an affectation of eccentric simplicity and shunning the public gaze, was in truth at that moment the most famous "lion" in Europe. Hume writes to Blair from Paris:—

"It is impossible to express or imagine the enthusiasm of this nation in his favor. As I am supposed to have him in my custody, all the world, especially the great ladies, tease me to be introduced to him. I have had rouleaus thrust into my hand, with earnest applications that I would prevail on him to accept of them. I am persuaded that, were I to open here a subscription with his consent, I should receive £50,000 in a fortnight. The second day after his arrival, he slipped out early in the morning to take a walk in the Luxembourg gardens. The thing was known soon after. I am strongly solicited to prevail on him to take another walk, and then to give warning to my friends. Were the public to be informed, he could not fail to have many thousand spectators. People may talk of ancient Greece as they please; but no nation was ever so fond of genius as this, and no person ever so much engaged their attention as Rousseau. Voltaire and everybody else are quite eclipsed by him.

"I am sensible that my connexions with him add to my importance at present. Even his maid La Vasseur, who is very homely and very awkward, is more talked of than the Princess of Morocco or the Countess of Egmont, on account of her fidelity and attachment towards him. His very dog, who is no better than a collie, has a name and reputation in the world."—Vol. ii., p. 299.

In a letter from London he tells Blair, "the philosophers of Paris foretold to me that I could not conduct him to Calais without a quarrel; but I think I could live with him all my life in mutual friendship and esteem." (Vol. ii., p. 310.) One of "the philosophers" who foresaw the event was the Baron d'Holbach, who told Hume, as he was leaving Paris, "Vous ne connaissez pas l'homme. Je vous le dis franchement, vous allez réchauffer un serpent dans votre sein." Morellet, to whom we owe the anecdote, adds that, when news of the quarrel arrived three weeks afterwards, none of the party at d'Holbach's table, Grimm, Diderot, Saint Lambert, Helvetius, &c., were at all surprised. (*Morellet, Mém.*, chap. v.)

Mr. Burton has passed rapidly over the Rousseau adventures, and though we do not praise him therefore, and think the subject deserved more prominence in a life of Hume, we are compelled to imitate his example. The letters written at the time establish beyond dispute the zealous and delicate sympathy felt by Hume for his unfortunate companion; though they prove also a somewhat excessive resentment at Rousseau's ingratitude. Hume himself has described him as "like a man who was stript not only of his clothes but of his skin, and turned out in that situation to combat

with the rude and boisterous elements, such as perpetually disturb this lower world." (Vol. ii., p. 314.) In that morbid sensibility of his nature, lay an abundant punishment for the evils inflicted upon others by the most engrossing and exclusive selfishness and a vanity already nearly approaching to madness.

After Hume's arrival in London he acted for a year as under secretary of state to Mr. Conway, and then retired finally to Edinburgh. "I returned," he says, "in 1769, very opulent, (for I possessed a revenue of £1000 a year,) healthy, and though somewhat stricken in years, with the prospect of enjoying long my ease and of seeing the increase of my reputation." How easily he fell back into his old haunts and habits, we learn from a letter to Sir Gilbert Elliot, 16th October, 1769:—

"I have been settled here two months, and am here body and soul, without casting the least thought of regret to London, or even to Paris. I think it improbable that I shall ever in my life cross the Tweed, except perhaps a jaunt to the north of England for health or amusement. I live still, and must for a twelvemonth, in my old house in James' Court, which is very cheerful, and even elegant, but too small to display my great talent for cookery, the science to which I intend to addict the remaining years of my life. I have just now lying on the table before me, a receipt for making *soupe à la reine*, copied with my own hand: for beef and cabbage, (a charming dish,) and old mutton and old claret, nobody excels me. I make also sheep-head broth, in a manner that Mr. Keith speaks of it for eight days after; and the Duc de Nivernois would bind himself apprentice to my lass to learn it. I have already sent a challenge to David Moncreif: you will see that in a twelvemonth he will take to the writing of history, the field I have deserted; for as to giving of dinners, he can now have no further pretensions. I should have made a very bad use of my abode in Paris, if I could not get the better of a mere provincial like him. All my friends encourage me in this ambition; as thinking it will redound very much to my honor."—Vol. ii., p. 431.

Of the last part of Hume's life there is not much to notice. He found occupation in building a house;—and *St. David's Street*, in the oldest part of the New Town of Edinburgh, is understood to have derived its name as well as its beginning from "le bon David."* He took some interest in public affairs, but much more in the education of his nephews, and the affairs of all his friends. He wrote a friendly review of Henry's praiseworthy attempt at a new fashion of history, and welcomed Gibbon's first volume as likely to redeem the character of the "declining literature of England." He enjoyed life; but made no more efforts. He had run the race and won the prize of his ambition. Like the wedding in the last act of a comedy, the return to Edinburgh with a fortune of £1000 a year and a sufficiency of reputation is the termination of the action. His life had been successful in all its objects beyond his highest expectation, and he could now afford to withdraw. He was "somewhat stricken in years;" fat and addicted to fat living; but he might have taken his mutton and claret for many years, had he not been as

* It appears from Mr. Chambers' "Traditions of Edinburgh," (1825,) that Hume's house was that at the south-west angle of St. Andrew's Square, with the entrance in St. David's Street.

sailed by an insidious, hereditary disease. In his autobiography he tells us, "In spring, 1775, I was struck with a disorder in my bowels which at first gave me no alarm, but has since, as I apprehend it, become mortal and incurable. I now reckon upon a speedy dissolution." He ate his last dinner at "the Poker," on the 8th of December, 1775; made his will on the 4th of January; hailed the publication of the "Wealth of Nations" on the 1st of April; on the 18th he put the last hand to "My Own Life;" towards the end of that month he performed his journey to London and Bath in company with his attached friend John Home; marked the burning down of the taper as accurately as his physicians; continued to write friendly and lively letters; and lived to return to Edinburgh. After his return, on the 20th of August, he wrote to Madame de Boufflers condoling with her on the death of her old lover, the Prince de Conti, and concluding with these words—"I see death approach gradually without any anxiety or regret. I salute you with great affection and regard for the last time." He wrote to Adam Smith on the 23d of August: "I go very fast to decline; and last night had a small fever, which I hoped might put a quicker period to this tedious illness; but unluckily it has in a great measure gone off:" on the same day he told Dr. Cullen, "I am going fast enough to please my enemies, and as easily as my friends could desire;" and on the 25th of August, 1776, he died. Dr. Black writes to Smith the following day, "He never dropped the smallest expression of impatience; but when he had occasion to speak to the people about him, always did it with affection and tenderness." Dr. Cullen says to Dr. Hunter, "He was indeed one 'des grands hommes qui sont morts en plaisantant.'" (p. 516.)

Multitudes of all ranks flocked to witness his funeral, though it took place amid heavy rain. According to a former biographer, "The crowd gazed as if they had expected the hearse to have been consumed in livid flames, or encircled with a ray of glory." People bribed the sexton to be admitted to visit his grave, and his brother found it necessary to have it railed in, to protect it from their curiosity. (p. 517.) A circular structure of considerable pretensions was subsequently erected over the spot, on the Calton Hill.

We do not know why Mr. Burton has omitted Adam Smith's evidently unstudied letter, written the day following his friend's death. Its being already well known is no sufficient reason of exclusion in a Life of Hume.

"His temper seemed to be more happily balanced, if I may be allowed such an expression, than that perhaps of any other man I have ever known. Even in the lowest state of his fortune, his great and necessary frugality never hindered him from exercising upon proper occasions acts both of charity and generosity. It was a frugality founded not upon avarice, but upon the love of independence. The extreme gentleness of his nature never weakened either the firmness of his mind or the steadiness of his resolutions. His constant pleasantries was the genuine effusion of good nature and good humor, tempered with delicacy and modesty, and without even the slightest tincture of malignity, so frequently the disagreeable source of what is called wit in other men. It never was the meaning of his raillery to mortify; and therefore, far from offending, it seldom failed to please and delight even those who were the objects of it. To

his friends who were frequently the objects of it, there was not perhaps any one of all his great and amiable qualities which contributed more to endear his conversation. And that gaiety of temper, so agreeable in society, but which is so often accompanied with frivolous and superficial qualities, was in him certainly attended with the most severe application, the most extensive learning, the greatest depth of thought, and a capacity in every respect the most comprehensive. Upon the whole, I have always considered him, both in his lifetime and since his death, as approaching as nearly to the idea of a perfectly wise and virtuous man as perhaps the nature of human frailty will permit."

In Boswell's *Hebridean Journal* (Croker's edition, vol. ii., p. 267) will be found some very just remarks on part of this effusion. At the same time the circumstances and date should be in candor and charity remembered; and surely, even now, looking from the cool distance of almost a century, we can recognize the truth of much of the flattering picture of the devoted and grateful friend. Hume's is one of those characters in which we need not hesitate to trace the effects produced by Christianity upon a mind that did not recognize its divine origin and operation. There were in him many of the gentler virtues which must be fostered by the gracious influence of religion pervading all society, from the training of childhood to the grave. He was free from the errors of conduct which sometimes drive men in desperation to renounce the Deity, as their great opposite. In his general conduct and government of his faculties there was no arrogance nor want of candor. Allowing much for the intoxication of fame, and the seduction of paradox, and the bewitchment of prohibited opinions, we still find it most hard to account for one so clear in intelligence, so blameless in manners, refusing the hope of a world beyond the present—"that he who revered benevolence should, without apparent regret, cease to see it on the throne of the universe."

In perusing these volumes of Mr. Burton's we have not detected many errors of fact, and none that we should have thought it necessary to point out, if the author had not in a few instances gone somewhat out of his way to find them.

We believe there never were two families of Murray styled of Broughton, as Mr. Burton has thought it necessary to inform us in a note, (p. 167.) The only family so designated was seated in Galloway—that of the chevalier's renegade secretary, which we think did not survive him in the legitimate line.

A mistake, proceeding from the same over-anxiety for correctness, occurs in volunteering a correction of a date of Hume's, *Ragley*, which Mr. Burton thinks should be *Hagley*, the seat of Lord Lyttleton, (vol. ii., p. 419.) It does not appear that Hume ever visited Lyttleton; but this letter was written in 1768, when Hume was under-secretary to Lord Hertford's brother, Mr. Conway; and *Ragley*, in Warwickshire, was then, as now, a principal mansion of the Hertford family.

When Millar wanted to engrave a portrait for the History, Hume offered to sit to "Ferguson," (ii., p. 409;) whereupon the editor again goes out of his way to remark that this artist has not been handed down to posterity by the critics and biographers. The critics may have spared him, but James Ferguson was his own biographer. The self-taught mechanician and astronomer has recorded in his delightful autobiography (prefixed to his

Select Mechanical Exercises,) that he supported himself for several years by painting portraits. They are generally in Indian ink on vellum. We have some of them now before us, mostly Edinburgh professors, very pleasing miniature sketches.

We hope in a second edition Mr. Burton will print entire and by itself Hume's sketch of his own life; and add his account of the Rousseau adventure; also Adam Smith's letter on his death, and some quotations from Bishop Horne and Boswell in connection with it.

We have already expressed our opinion of the manner in which the editor has executed in general his difficult task. If we had room we should like to call attention to some passages of his own writing. There is in particular a manly, cheerful tone in some remarks on the improved condition of literary laborers, which is to us very pleasing (vol. i., pp. 199, 200.) The fact of the general improvement on which he dwells cannot be doubted; though when he selects Fielding, Goldsmith, and Johnson as types and evidences of the comparative infelicity of literary merit in a former age, we cannot compliment him on the choice of two at least of those instances: for in them surely illustrious talents and most amiable moral qualities too were combined with weaknesses and irregularities of conduct which, in any age, would be found incompatible with the attainment of solid independence by mere literary means.

Mr. Burton has, as might be expected, his share of the doctrines of the modern Edinburgh school, political and economical—but we are not thereby tempted to controversy; and conclude with sincerely thanking him for the enjoyment which his zeal, industry, and ability have afforded us.

From the Quarterly Review.

Voyages of Discovery and Research in the Arctic Regions, from the year 1818 to the Present Time.
By SIR JOHN BARROW, Bart., F.R.S. London.
8vo. 1846.*

We learn from our veteran author's preface to his summary of arctic discovery, that his labors have been directed to two unexceptionable objects: the first, the gratification of the gallant and enduring men whose fame his book is intended to popularize; the second, the instruction of a class of readers who want leisure to digest or means to purchase the costly and voluminous records of the recent achievements of their countrymen in the field of arctic exploration. Although the pages of this journal have followed the successive steps of that discovery with a fidelity which may be considered to have exhausted the subject for such purposes as ours, we cannot refuse ourselves the pleasure of a brief notice of our *quondam* colleague's summary. We know, from the testimony of those concerned, that it has given the pleasure it was intended to convey; and, from our own experience, that the quintessence of so many quartos has no ungrateful flavor for those who have in their time devoured and digested the materials from which it has been distilled. With one solitary exception, the officers and men concerned in these successive expeditions will feel grateful to the venerable baronet for his simple and compendious abstract of their services. Those perhaps who stand most eminent on the list will most be disposed to a generous feel-

ing of regret that the exception in question could not have been altogether omitted, or at least dismissed with less particular notice. It must, however, be remembered that Sir John Barrow, with respect to Sir John Ross, is in the situation not of a rival or a comrade, but of a parent who has witnessed two attempts at the murder of a favorite child: once like Hercules in the cradle, and afterwards when it had attained a vigorous adolescence. It is clear that if the log of Captain John Ross' first voyage had received on his return a lenient scrutiny on the part of a utilitarian and economical board of admiralty, the western coast of Baffin's Bay would have figured on our charts as a continuous barrier, unless some whaler had discovered and penetrated the Sound from which Captain Ross retreated so abruptly. That retreat and its attempted vindication were hard to put up with in 1818; but it was harder still to hear it maintained in 1834, that no North-West passage could exist, on grounds such as those alleged in the evidence of Sir J. Ross. Sir J. Barrow has had ample revenge. Where, according to Sir J. Ross, "the broad ocean leans against the land" of Bothia Felix, Messrs Dease and Simpson have navigated a continuous sea—without leaping the imagined isthmus—or looking down the descent of fifteen feet measured by Sir J. Ross' theodolite.

For those who wish, at small expense of time or money, to obtain a comprehensive view of the progress and results of our repeated attempts at the two main objects of northern exploration—the attainment of the Pole itself, and the performance of the North-West passage—the present volume leaves little to be desired. To those who, like ourselves, have studied the published accounts, it may still serve, like the index map of an ordnance survey, to facilitate recurrence to particular passages; but to such the portions of most interest will probably be those which convey the ultimate notions of the writer as to the possibilities and probabilities which, after all that has been achieved, still remain subjects for conflicting opinion and discussion. It may seem strange that any civilian should venture to maintain an opinion on a point of arctic navigation adverse to that of Sir Edward Parry. Even the octogenarian ex-secretary of the admiralty, and founder of the Royal Geographical Society, may appear *impar congressus* with the experienced commander of four expeditions—yet, both with reference to the North-West passage and the attainment of the Pole, the civilian stoutly maintains his convictions against the navigator. On the former of these subjects we should be compelled, on a division, to vote with Sir J. Barrow. We are humbly, at least, of opinion with him that the principle of arctic exploration by sea should be all practicable avoidance of the land, instead of navigating between the ice and some continuous line of coast, as suggested by Captain Parry, and illustrated by his advocacy of Prince Regent's Inlet as the best channel for future attempts (see page 269.) We have the benefit of Captain Beaufort's accordance on this subject; and if we were making a book, in the Newmarket sense of the word, we would hazard a bet that if Sir J. Franklin makes his way through Davis' Straits he will have passed either through Wellington Channel or by Melville Island, and not through Regent's Inlet. The discoveries, indeed, of Franklin, Back, Dease, and Simpson, have, since Sir E. Parry conceived the opinion to which he adheres, proved the existence of continuous sea in

* Reprinted as vol. 13 of Harpers' New Miscellany.

this direction; but they all concur in describing the coast as almost without a harbor, and the depth of water along it is only sufficient for boat navigation. The best mode of attempting the Pole itself is another and a distinct question. After the failure of Sir E. Parry's last attempt over the ice, it is scarcely probable that any board of admiralty will so far share that officer's persevering enthusiasm as to renew the attempt in the manner he proposes by directing an expedition to winter at Spitzbergen, and prosecute its further proceedings in April, in the hope of finding fixed and smooth ice, instead of the hummocky and drifting masses which foiled the attempt of 1827. We think, however, that such a plan promises rather better than Sir J. Barrow's vision of a summer sail through his assumed Polar basin, even assisted by the screw propeller.

We dare not indulge in speculation, still less in prophecy, as to the fate and fortunes of those brave men who have again, under Sir J. Franklin, disappeared through Lancaster Sound. Till October at soonest we may be content to know that no tidings of their success can by possibility reach us. After that date our feelings must begin to be those of the king and princess who watched the third disappearance of Schiller's diver. God grant the result may be different! Be it what it may, a more enviable position on the record of human achievement we can hardly conceive than that which will be enjoyed by the leaders in these various expeditions by sea and land. The solitary instance of bloodshed which occurs is one which, so far from defacing the record, positively adorns it by the exhibition of stern resolution coupled with the strictest justice and the purest humanity. The contributions which these voyages afford to our knowledge of the human race, though necessarily limited, have their value. It is satisfactory to know that the better ingredients of man's mingled nature are ubiquitous, and independent of climate and geographical position; that while atmosphere and diet may influence physical conformation, the irrepressible fire of the intellect, the milder glow of the social charities, and the intenser flame of parental affection are frost-proof. To descend a step lower in the scale of creation, even the brute tenants of these icy but not unpeopled wastes present examples of the latter qualities which man cannot contemplate without emotion. If in more genial latitudes he has "learned of the little nautilus to sail," he may also learn of the polar bear and the uncouth walrus not only to shield his offspring from danger, but to stand by his friend in the hour of trouble, and carry off his wounded comrade from the press of battle.

With regard to the heroes themselves of this long and varied Saga of northern adventure, nothing is more remarkable than that wonderful pertinacity in enterprise which maritime pursuits seem to have some peculiar power to generate. Sea-sickness is not so soon forgotten by a young traveller on his first tour, when ordering dinner at Desain's, as shipwreck, nipping, mosquitoes, the digestion of *tripe de roche* and old shoes, and all the other sad incidents of arctic exploration, by such men as Franklin, Back, and Richardson. In the collection of the college of surgeons may be seen the fragment of a studding-sail boom, the iron end of which, blunt and cylindrical, once pinned to the deck an unfortunate sailor youth, entering somewhere near the pit of the stomach, making a

sort of north-west passage between the heart and the lungs, and issuing at the back into an oak plank below. He was cured, and the interest of the case induced the member of the college who attended it to give him, when convalescent, employment as a servant. Ease and comfort were of no avail, and as little the reminiscence of his accident. He returned to the sea, has since swum ashore from shipwreck, and is, we doubt not, if alive, still a sailor. It required something of the elastic temperament, of which the above is an instance in humble life, to call from Italy Sir George Back, who had shared the horrors of Franklin's expedition of 1819, to resume his snow-shoes for another land expedition. What shall we say of Sir John Franklin himself—of that spirit so buoyant still, though youth had fled! We can but pray for this most amiable and excellent man's safe return from the expedition in which he is now engaged.

THE *Constitutionnel* gives the following relative to the mission confided to Mr. Hood at La Plata: "Mr. Hood has received from the French and English governments a special mission and full powers to arrange the affairs of La Plata. At first M. Guizot refused to consent to the power demanded for Mr. Hood; but, after a long correspondence, he at last yielded. From the plan adopted, it is much to be feared that the only persons who will derive any benefit from this mission will be Rosas, Oribe, and Mr. Hood himself. Mr. Hood remained at Montevideo, first as consul of England, and afterwards as consul-general. He was obliged to withdraw immediately after the treaty of October 29, 1840. He went to England, where he did not cease intriguing for six years in favor of his *protégé*. His incessant endeavors in favor of a man who has become the right arm of Rosas, and, like him, sullied with crimes and blood, ought to have opened the eyes of the cabinet of St. James. Let any one who can explain the sympathy of M. Guizot for this bitter enemy of our country. Will M. Guizot deny the facts imputed to Mr. Hood? If necessary, all the city of Montevideo could bear witness to them. M. de Mareuil, whose conduct we have pointed out, has received orders to proceed to Buenos Ayres to assist Mr. Hood. It is even said that the two governments have authorized Mr. Hood, if necessary for the accomplishment of his mission, to disavow the acts of their present agents, particularly in what concerns the navigation of the Parana."

A NOTE FROM THE SHADES.—"Mr. Gray, poet, and author of a little thing entitled, *An Elegy written in a Country Churchyard*, presents his compliments to Mr. Punch, and wishes to know if the subjoined four lines might not be appropriately inscribed on the pedestal of a statue (in biscuit) erected in the matter of the Corn-Laws, to Sir Robert Peel:—

'The applause of listening senates to command,
The threats of pain and ruin to despise;
To scatter plenty o'er a smiling land,
And read his history in a nation's eyes?'"

Punch, in answer, begs to inform Mr. Gray that he (*Punch*) has submitted the verse to the opinion of Mr. Disraeli, and that crystal-headed legislator pronounces its fitness to be admirable.

From the Athenæum.

Historical Pictures of the Middle Ages in Black and White. Made on the spot by a Wandering Artist. 2 vols. Longman and Co.

THE design of this book is not a bad one. You come to some grim-looking castle, some half-ruined monastery, or some grey-turreted church, the great antiquity of which strikes you at once. You next inquire what historical associations, whether in ancient chronicle or tradition, relate to one of these time-honored relics; and in almost every country, and especially in Switzerland, you are sure to light on characters and events likely to interest the present age. If history be strictly adhered to, you may instruct as well as amuse.

The fair author commences her picturesque historical sketches with Basle. The cathedral was the burial-place of the Empress Anne, (1282,) consort of Rudolph I., the founder of Austrian greatness. The corpse was brought from Vienna; and the ceremonial of interment was as splendid as any lover of fine sights could wish to behold. Yet the exposure of the imperial corpse—not in the coffin, but on a magnificent throne—would seem an odd, and not very agreeable, spectacle in our days. The Bishop of Basle and his clergy thought otherwise; and it cannot be denied that they had precedents enough for the ceremony, which, in some parts of the continent, is not unknown even at this day:—

“All the clergy of his diocese received invitations to be present at this august solemnity; and on Thursday, the 19th of March, 1282, he issued from the gates of the episcopal palace at the head of twelve hundred ecclesiastics, (of whom six were abbots,) priests conventual and secular, each bearing a lighted waxen torch, to meet the funeral cavalcade at some distance from the city gates. The imperial corpse was received at the door of the cathedral, with all the state and ceremony peculiar to papal pomp, by three other bishops awaiting its arrival with a minor host of dignitaries; and from thence (amid the chanting of litanies and the chiming of bells) conveyed into the choir, where the coffin was opened, and the deceased empress was placed upon a magnificent throne, which had been erected on a raised platform, surmounted by a *dais* or canopy of crimson velvet fringed with gold. Her ladies and the distinguished personages who took a prominent part in the procession, dressed in deep mourning, ranged themselves on either side; whilst the four bishops performed a solemn mass before the awe-stricken multitude, assembled in thousands to witness so strange and appalling a sight. Sumptuous robes of rich silk and velvet enveloped the inanimate form of departed majesty. A veil of white silk floated from her head, and a small but elegant crown of silver gilt rested on her forehead. A collar of gold curiously wrought, containing a rich sapphire and other precious stones, was round her neck; and on the pale fingers of her lifeless hands, crossed over her bosom, glittered many costly gems. When the solemn service for the dead was finished, the body was again re-committed to the coffin, and entombed, amid the weeping of her attendants, in the choir close to that of the young prince Charles.”

But the remains of the empress were not to await the sound of the archangel's trump at Basle. Wounded by the reflection that, as the cathedral was no longer Catholic, the bones of her ancestors

were reposing in ground not quite so holy as she could wish, Maria Theresa, in 1771, removed them (there were twelve other coffins besides that of Rudolph's consort) to the Abbey of St. Blaise, in the Black Forest.

“When the tomb of the empress was opened at Basle, the coffin, or rather coffer, being found in too decayed a state to encounter a second journey, the padlocks were removed, and the body carefully transferred to one of solid mahogany, in the presence of the German commissioners and Swiss authorities, to whom a very extraordinary and awful spectacle was then exposed. The whole person of the empress was found in a perfect state, changed only to a deep black—her diadem still rested on her brows, and her golden collar encircled her throat—her royal habiliments preserved their graceful contour—but every hue, every shade of color, had fled.”

The imperial ornaments were given to the city of Basle, and were carefully preserved until 1830; when, at the close of the unhappy war between the municipality and the neighboring country, they fell into the hands of parties insensible to their value, who sold them for less than their intrinsic weight in bullion. The necklace was purchased by a jeweller; and an Israelitish pedler rejoiced in possessing the crown. But, alas! the bodies themselves had not yet reached a final resting-place—though dirge and anthem and pomp imperial had celebrated their recommitment to the dust, and a stately monument had arisen to commemorate the piety of Maria Theresa. The revolutionary armies of France approached the abbey; and, to save them from profanation, the late Emperor Francis once more removed them to the vault of the Hapsburg family, in the Capuchin convent at Vienna.

But there is something at Basle deserving of more attention than even the cathedral:—

“The traveller, however brief his sojourn at Basle, cannot fail to remark the solid battlements which crown the opposite shore of the Rhine, and the mass of buildings within, surmounted by a dilapidated church of extremely beautiful architecture: should his curiosity tempt him to cross the fine old bridge which spans the wide and rapid Rhine, and then turn up a dark narrow street to the left, he will find at its extremity the mouldering, but most extensive remains of a religious house, now in part converted into a hospital for invalid soldiers. Mullioned windows, from which hang files of shirts and stockings; Gothic doorways, half blocked up by bricks, and turf, and fagots; fragments of stone, of exquisite workmanship, on which the skilful sculptor had lavished long days of painful labor, profusely scattered over the well-trodden dirty court-yards, tell a lesson of fallen grandeur, and present a picture of bygone splendor not to be mistaken. Reader, that desolate dwelling was once the home of the noblest ladies of Europe! The silent aisles of that deserted church, converted into stables and granaries, yet enclose the dust of princes, nobles, prelates, abbesses, and titled damsels, whose well authenticated gentle blood could alone have procured them the honor of reposing within its hallowed precincts. A society of Dominican nuns were the possessors of this once sacred edifice—here for many centuries their superior reigned in sovereign power, independent of all control but that of the supreme head of the Romish church. What a lesson on the mutability of life—on the

evanescent nature of earthly pomp and worldly grandeur—may be learned from these crumbling ruins! Of all the noble ladies who lived and died within their holy enclosure, not a name, not a trace exists in their seat of empire."

It is the monastery of Klingenthal to which our attention is directed; and the ruins so well described furnish occasion for the historical sketch of "The Nuns' War." This religious house was founded in 1273, by the Baron of Clingen, under the auspices of the Emperor Rodolph; and its property was greatly augmented by the bequests of nobles in the surrounding provinces, and still more by the money and lands derived from the high-born ladies who assumed the veil in this aristocratic community. For some generations the holy recluses went on as well as other communities. Matins and mass, vespers and even-song, were chanted without interruption; and some portion, no doubt, of the superfluities arising from their ample revenues went to the relief of the poor who appeared at the convent gate. But about the year 1430, the monotony of their existence was agreeably broken by a quarrel with the prior and brotherhood of a Dominican establishment in the same city. The superior of that establishment had always exercised the right of protecting and of visiting the sister community—a right not unaccompanied by substantial advantages. But at the period in question—whether the visitatorial functions were more rigidly exercised, or "the sisters of Klingenthal," confiding in their noble connexions, had become too proud for such a surveillance—a stand was made against the authority of the grey-bearded fathers. When these grumbled at this petticoat rebellion, the gates of the convent were shut against them; and they had the additional mortification of seeing their jurisdiction transferred to the Bishop of Constance, who openly espoused the cause of the nuns. This event proved that the holy ladies were not without spirit. They had vowed to be their own mistresses, and they were so to their hearts' content;—for as to the authority of the distant bishop, it was just none at all. But even had he been near at hand and vigilant, he would scarcely have been equal to the quelling of such high spirits. "Curse these nuns!" cried one testy old visitor (the Abbot of Wettingen,—whose anathema, however, did not apply to the sisters of Klingenthal—"Curse these nuns! I dare not even mention the charges which are brought against them! Why are they not sober and chaste? They have chosen me for their guide because they know that I am a simple, credulous man, and easily deceived!") For some years, however, after the conquest over the Dominican friars, the sisters in question were outwardly decorous; and that they were also internally strict may be assumed from a tragedy which happened in 1466. A young nun, tired of her lot, and seeing no hope of escape save in a *coup-de-main*, set fire to the convent, expecting, amid the confusion of the scene, to slip unperceived away. But, though she had the pleasure of seeing the dormitories, and one at least of the cloisters, in a blaze, attended with as great a hubbub as could well be desired, she was at once suspected by the prioress, and safely guarded in the church until the fire was extinguished. Her guilt soon appeared, and her doom was "a vaulted cell underground, with bread and water for life." Never again was her name mentioned, or the period known when death terminated her sufferings. Her noble birth and

powerful connexions probably saved her from the still more dreadful doom of "*Vade in pace!*" But this austerity, whether real or affected, at length gave way to the natural course of things. Uninterrupted prosperity, with a surveillance merely nominal, was not the best soil for the growth of asceticism. There was first a suspicion; suspicion led to vigilant observation—this to whisper—and whisper to the bold report that the sisters of Klingenthal were "holy no longer." The progress of deterioration is well described by our anonymous author:—

"By one of those singular mysteries in the human heart inexplicable to reason, the nuns seemed to grow strangely more lenient to themselves after they had condemned their hapless sister to so fearful a doom, for seeking to escape from the thralldom of her vows; unless indeed the remembrance of the crime into which her detestation of a cloisteral life led her, determined them to abate its rigors in their own instance. They first ceased to chant their matin and vesper services, and this relaxation from their ancient discipline was gradually followed by many others yet more striking; till at length the sober citizens of Basle were astounded by the open and ostentatious display of their luxury, worldliness, and disregard of the established decorums of a religious calling. The large, heavy, dismal, rumbling vehicle, in which the prioress was wont at Easter, and on other high days and holidays, to move with slow solemn pace from one church or chapel to another, to pay her annual tribute of worship to some particular saint, with two or three subdued-looking sisters, like herself veiled and muffled from head to foot, now rolled briskly through the streets seemingly bent on a very different errand. Their spacious garden, stretching to a considerable extent along the left bank of the Rhine, where each had, in former days, been thankful to cultivate as her sole amusement a little narrow plot, scarcely larger than that sole inheritance which Earth bestows on all her children at their birth, no longer sufficing for air and exercise, they made frequent visits to their conventual lands in the adjacent country. Their repasts in the refectory, if not equal to those served up to the noble ladies of the convent of St. Hildgarde at Zurich, one of whose dainty abbesses was said to have loved so much the roe of the delicate lotte, that after having extinguished the breed in her own lake she was forced to send to Constance and Zug for supplies of this favorite fish; or to the luxurious feasts of the Benedictine monks in Lombardy, whose table so amazed Martin Luther, fresh from German *sour kraut* and black barley bread, that he deemed it his duty to warn them of his intention, on reaching Rome, to report their scandalous gluttony and extravagance to the pope, (for which the good man was within an inch of losing his life, so little did they relish his sincerity or appreciate his concern for their souls;) still they were most *recherché* and abundant, as the loads of fish and fowl, and game and legs of mutton, and buttocks of beef, seen daily entering the side door leading to the ample kitchen amply testified. Then their dress—alas! alas! that even the history of a convent should add its testimony to this besetting sin of woman-kind! The thick white woollen tunics of the Dominican order, with heavy black mantles and coarse linen, were replaced by habiliments made in the same form, but of the finest materials. A narrow braid of glossy hair peeping under the

snowy cambric which descended with symmetrical precision on each side of the face; attested either the forgetfulness or contempt of the fair wearers for the invariable monastic ordinance which prescribes that the hair, solemnly cut off at the ceremony of the profession, shall never more be allowed to grow. Their veils and pelerins were of the most costly cambric—they decorated their fair slender fingers with jewelled rings,

And crosses on their bosom wore,
Which Jews might worship and infidels adore.

Their chaplets of gold or silver, enriched with precious stones often curiously carved, would have vied with those of Louis Quatorze or Anne of Austria; and the quaint and sad apparel of their rule, thus modified by the hand of taste, became rather dignified, imposing, and becoming, than awful or repulsive. But these were minor points of offence—dust in the balance when weighed against other deviations from their vows. The privacy of the cloister was no longer respected—young and noble chevaliers, under the plea of consanguinity or friendship, were to be seen at almost all hours entering the great gates of the monastery, or lounging in the magnificent parlor appropriated to the reception of guests and strangers. Strong suspicion also existed that they had followed the example of Anne of Höwen, late abbess of the noble ladies at Zurich, who, availing herself of an ancient custom which consecrated a sombre season of the year to the enjoyment of the carnival, went disguised through the city with her younger brother Frederick. And as Henry of Höwen, the indulgent Bishop of Constance, under whose pastoral care they had placed themselves in 1431, was the brother of the noble offenders at Zurich, far too mighty for punishment, it is not altogether impossible that the accusation might have some foundation."

If such reports gave scandal to the public at large, they were heard with pleasure by the Dominican fathers of Basle. Now was the time to be revenged on the pert ladies who had openly and scornfully defied them. The reigning pontiff, Sixtus IV., was soon made acquainted with the amours of the nuns; and though he was not exactly the man to throw the first stone at criminals of this class, he directed Jacob of Stubach, provincial of the Dominican order in Alsace, to declare at an end the visitorial power of the Bishop of Constance, to replace the nuns under their former overseers, the vindictive friars, with an authority greatly augmented, and to carry the necessary reform to the utmost extent. With him was associated a stern man, William of Rappolstein, landvogt of Alsace. Attended by a numerous array, the provincial, early in January, 1480, hastened to the convent, and demanded admission in the formidable name of the pope. Of course, the gates were opened; and the dignified visitors admitted to the presence of the prioress, seated in her chair of state, and her twenty-three nuns standing on each side of her. The latter were not prepared for the decisive measures commanded by the holy father of Christendom. They expected, indeed, a reprimand, and perhaps a transference of the visitorial power from the Bishop of Constance to his lordship of Basle. They were soon undeceived, when the venerable provincial commenced the reading of the papal bull. So long as it related merely to the charges against them—

that they, the spouses of Christ, had for many years led a luxurious, dissipated, and ungodly life—they listened with contempt, their eyes speaking defiance to the intruders. But then came a scene:—

"Ere the apostolic letter was half concluded, astonishment and indignation burst in muttered exclamations of resentment so loud as to render the sonorous voice of the provincial almost inaudible; and when he at length reached that part which delivered them unconditionally into the absolute power of the brother preachers, whose partial yoke had been found so galling to the community fifty years before, rage and amazement, overleaping all the boundaries of prudence and propriety, rendered every attempt to conclude it impossible. Whilst the prioress, who had started from her throne in a paroxysm of fury, stood stiff and erect from agonized emotion with some of the elder sisters in the midst of the commissioners, hurling at the brother preachers and senators of Basle threats of vengeance through the instrumentality of the several counts, and barons, and knights with whom they claimed kindred or acquaintance—now taunting them, especially the Dominicans, with divers insulting epithets and insinuations very derogatory to the honor of that reverend body, then declaring that if, as menaced, any attempt should be made to remove them from the convent, they would set fire to it ere their expulsion—the juvenile and more active nuns, aided by youthful limbs and ardent spirits, rushed from the parlor to the vast kitchen, from whence they quickly returned to the scene of action, armed with brushes, spits, tongs, choppers, cleavers—every domestic utensil, in fine, which presented itself to their flashing eyes and eager hands. The provincial of Alsace and his dignified associates, who had probably listened to the injurious reproaches of the prioress and her companions with manly indifference, anticipating perhaps something of the sort, mingled with the sighs, tears, and swoons said to be usual with the fair sex on great occasions of woe or wrong or wrath, were overwhelmed by this sudden and most energetic display of feminine valor: personal safety absorbed all other considerations, with one accord they hastily retreated to the door; made good, not without some difficulty, their way unscathed through the narrow passages and outer courts, till they reached the grand portal, whence they bolted into the street, leaving the papal bull behind them, in company with sundry broad bands, and deep plaited white frills, and ruffles, torn from their necks and hands in the scuffle; some destitute of cloaks, others denuded of hats, and all in a state of the most grievous alarm, shame, and confusion."

Into the details which followed, and which are richly worthy perusal, we cannot enter. We can but glance at the grand results. Spiritual, aided by secular, authority was too much for the nuns; and, with the exception of some half-dozen of the more advanced in years, they chose to quit the convent, and return to the bosom of their noble families, rather than submit to their hated visitors. A new community was brought to supply their places, and their ample possessions seemed lost to them forever. But it was not so. Whatever might have been their faults, they had, at least, been excellent customers to the shopkeepers of Basle: this their successors were not. The friars were parsimonious, and therefore unpopular; and

in a short time the exiled condition of the sisters attracted the sympathy of the citizens. That the successors in question should fail to be liberal, need not to be wondered at—for, in truth, they had not the power. As the title-deeds of many manors—probably most of them—had been cunningly abstracted, and the tenants secretly encouraged to pay no rent, the revenues were fearfully diminished. This stroke of policy was followed by others equally able; until the noble relatives of the exiled recluses openly armed in their behalf, and Basle was invested by formidable armed bands. This demonstration was as fatal to the citizens, whose commerce it destroyed, as it was favorable to the nuns, whose letters and intrigues at length enlisted in their favor the mighty of the earth, whether ecclesiastic or secular. The end may be easily foreseen. In 1483, they were restored to their convent, allowed to choose their own advocates, and indemnified for their losses.

By way of episode—and a romantic though true episode it is—to this history of “The Nuns’ War,” we are presented with the fortunes of one sister; which well deserve our attention, as another proof that truth is often stranger than fiction. We allude to Adelaide, Baroness of Wartz; whose husband was implicated in the murder of the emperor, Albert I., in 1308. He seems to have been unjustly implicated; having, though present at the catastrophe, had no knowledge of the design, and being merely a spectator of the act. That, however, was no justification in the eyes of Albert’s daughter, the implacable Agnes of Hungary. “This princess,” says Pfeffel, (whom our authoress does not cite,) “acquired a melancholy celebrity by her cruel vengeance, not only on her father’s assassins, who all escaped her pursuit, and who ended their days in exile and obscurity, but on their families, friends, and allies, whom she pitilessly sacrificed to the shade of Albert, though they were innocent of complicity in the crime which laid him in the tomb.” The head of the conspirators, Albert’s own nephew, John of Swabia, (whom our author, we know not why, calls *Don John*,) died in misery, at the early age of twenty-five.

“There is also a tradition so popular that it has attained a place in many Swiss annals, that during his wanderings in the wild mountains of the country to which he was born heir, the wretched prince was supported by a young female peasant, to whose industry and ingenuity he owed his preservation for so long a period.—Seventy years afterwards, an aged, poverty-stricken man, of majestic mien, whose silver hair shaded features of great beauty, might be seen in the streets of Vienna: though almost blind, he seldom begged—but at intervals, when he fancied he recognized a face of uncommon benevolence, he would approach, and say in a low voice, ‘Pity the miserable son of the miserable Don John of Swabia.’”

After victims so illustrious, the Baron de Wartz could not hope for favor. He was betrayed by a nobleman, and his fate brings before us the extraordinary attachment of his wife. The following graphic description is painfully interesting:—

“The miserable man was extended on the scaffold, on the point of receiving the first blow, when the horror-stricken crowd, assembled to witness this fearful sight, made way for a female in deep mourning, whose wan pale face, and eager efforts to approach the scene of suffering, overcame all obstacles to her desire. She walked steadily for-

ward, and dropping on her knees implored the executioner to permit her to remain. She was the wife of the victim! Naturally of a gentle retiring nature, the Baroness of Wartz had mingled but little in the haughty court of the Emperor Albert; and after she became a mother she withdrew yet more from its gaieties, though her youth and beauty, high rank, and amiable qualities had ever insured her a distinguished place in its patrician circle. She was residing at the Castle of Balm, a little hamlet in the parish of Gunsperg in Argovia, unconscious of impending evil, when the emperor met his death; and she first learnt the fatal news by seeing her castle invested by armed troops, in search of her husband and brother. Her baby, an infant of twelve months old, asleep in its cradle at her foot, was murdered in her presence by the express order of Agnes, Queen of Hungary. Albert’s daughter, as the child of a regicide; and she was commanded, under penalty of instant death, to declare where her husband had found a shelter. Her paroxysms of fright, astonishment, and grief answered for her ignorance of the dreadful catastrophe; and after leaving a strong escort in the castle, and planting another around it to prevent all possibility of his escape if there concealed, the officer sent on this expedition departed. Adelaide of Wartz had ceased to be a mother, and her affections as a wife nestled yet more strongly in her heart: she had no link to bind her to life but that of wife, none to love but her husband. She deceived the vigilance of her guards, at the risk of her life made her way to the royal château, and, penetrating into the presence of the widowed Empress Elizabeth and her daughter Agnes, threw herself at their feet imploring the life of her husband. Her prayer was sternly refused; she then begged a mitigation of his sufferings—that also was denied; to share his prison—each petition was fiercely rejected; and she was repulsed from the castle to wander around the dungeon which would so soon open to deliver that husband to an ignominious and frightful death. She was present during all the sickening details of his horrible sentence, supporting him through his agonies by the assurance of her unabated attachment, and belief in his innocence; and when the executioner had finished his fatal office, and one by one the silent multitude withdrew as night closed in, she crept under the wheel where he was left to die in lingering torments; the *coup de grace*, or final blow of mercy, by which the sufferings of the victim were usually finished when each limb was broken, having been expressly forbidden. Morning dawned on the miserable pair—Wartz was in the prime of life, of noble athletic form, and though each member was doubly fractured, his vital energy remained. Three nights and three days, without food, without sleep, she watched ‘in the valley of the shadow of death,’ suffering neither ‘the birds of the air to rest on him by day, nor the beasts of the field by night;’ wiping from his dying brow the big drops of anguish that burst from every pore. Nature wrestled long with death; on the third evening he grew too faint to thank her for her love, and as the morning of the fourth day dawned, he died. Her earthly task was accomplished: she rose from her knees, and directed her tottering steps to Klingenthal, whose prioress was the baron’s sister. How she got there she could not tell: she fainted at the portal, and was carried in as an object of charity, so emaciated by famine, so changed by woe, that the

prioress for some time had no recollection of her person."

We have devoted so much space to the nuns of Klingenthal, that we have none left for the other chief historic sketches—"The War of the Two Abbots," and "Bertha, Queen of Transjurane Burgundy." Yet they are well worth perusal. They are graphic, animated, interesting; and, though sometimes over-charged by the author's fertile imagination, generally true. She has drunk largely at the springs of chivalric romance; springs which, though fair at a distance, are often muddy enough when nearly examined. She delights in the romantic—sometimes at the sacrifice of probability. At the risk of being charged with skepticism, we must reject the following story of the Countess Ida of Toggenburg, with the ring:—

"The story of the ring is singular. She had placed her jewel case on the deep window-sill of the castle, to dry the outside leather, which had contracted damp. It was open, and a favorite hawk or raven, darting down, seized the ring. Fearful of communicating her loss to so stern a lord, she kept it a secret to all but a few chosen domestics, who were authorized to reward any one who might find it. The young page, unhappily not of the confidential party, picked it up at a great distance from the castle, and, showing it to another page, boasted that it was the gift of a lady. The baron heard the vain boast, desired to see the ring, recognized it for the one presented by himself to his wife on their betrothal, rushed into her room, where he found her at the same open window from whence she had lost the ring; and, without a word, threw her down into the woody dell, six hundred feet below! The tardy truth availed not the unhappy youth, whose falsehood caused the ruin of both his lady and himself. Three days afterwards, the innocence of both was made known by the visit of a pedlar, who had seen him pick it up, and had bid a price which the other refused: he came to offer the sum originally demanded. Every search was then made for the countess; but she had, though much bruised, escaped as by a miracle, and withdrawn into a hollow cavern. There she lived four years on wild fruits, birds' eggs, and a little food, from time to time conveyed to her by an aged woman, to whom she communicated her preservation, and whose bounty she repaid by spinning for her in the night. A favorite dog at length discovered her retreat, and the baron went in great pomp to remove her to his castle; but Ida refused to return; and as an atonement for her sufferings, and the death of the page, he allowed her to build a convent, of which she became abbess. The story is well authenticated, and has perhaps served for the basis of many others, founded on the same idea, in after ages."

Amidst the fountains and rivers, the rocks and caves, the ruined castles and monasteries of Helvetia, our author may yet calculate on riches inexhaustible. Whether the two volumes before us are to be followed by others of a kindred nature, we are not informed—but this, we suspect, if her first, will not prove her last effort. She has a pen formed for popularity. Her book will be read with the interest inseparable from truth—however strangely that truth may be sometimes shaded by the creations, or, at any rate, the embellishments, of fancy. No romance was ever more agreeable than these records of personages who once lived, and once influenced the destinies of Swiss society.

OLD FURNITURE FOR SALE.—AUCTION.

Lot 1. The Seat of War (in India).—This seat has been very much knocked about, and has scarcely a leg to stand upon. With a little money, however, judiciously laid out, it could be put into immediate repair. It has been carried about for half a century all over India, and is now to be disposed of, as the owners have no further use for it. It is offered to the French government as a seat the best adapted for the standing army in Algiers. With a little French polish, and turning the seat into Morocco, it is an article which will last for years.

Lot 2. The Glass of Fashion.—This glass has lost its brilliancy, from having been so frequently looked into. It is best calculated for those persons whose evening's amusements will bear the morning's reflection, as every object viewed through it is seen in a new light. Old beaux and young ladies, residing on the shady side of forty, will find their silver well laid out on this Glass of Fashion.

Lot 3 will be the identical *Tapis* upon which have come all the marriages in high life for the last fifty years.

Lot 4. There is some hope of the Pipe of Peace, which France and England have lately been smoking, being put up for sale, but this depends entirely upon Lord Palmerston being made minister for foreign affairs.

Lot 5. Several Autographs of F.M. the Duke of Wellington, written during the march of intellect, will be also submitted to the amateurs of rare things.

Lot 6. A few Flowers of Rhetoric, and several Figures of Speech, will be handed round the room for the inspection of parliamentary and pot-house orators. The flowers are beautifully cut and dried, and have been preserved in the leaves of Hansard. The figures are well stuffed, and clothed in the strongest language.

Lot 7. The Laurels of Field-Marshal Prince Albert, as reared by him in the gardens of Buckingham Palace, will be shown for the inspection of all military persons who produce their Waterloo medals, and small sprigs will be sold to country gentlemen who hold commissions in Her Majesty's Militia.

Lot 8. The Silver Spoon which Mr. Hudson had in his mouth when he was born, will be put up for competition among railway chairmen.

The Clothes which the tories ran away with when the whigs were bathing, will be hung round the room, but will not be sold, as they form part of a collection of unredeemed pledges.

In addition to the above attractions, the celebrated Rod of Iron, which was formerly used in England, has been sent over from Ireland expressly for this sale, and the Rule which Britannia uses in ruling the waves, will be kindly lent by Lord Ellenborough for this exhibition only.—*Punch*.

The Tribunal of Amsterdam recently declared that the law of January, 1805, which declares that the State shall bring up, at its own charges, the seventh child of every family in which there are already six still living, remains in force in Holland, and condemned the State to pay to a citizen, named Hooglandt, 250 florins (522*f.*) a year until his seventh child shall have attained its 18th year, or during the same period provide for its maintenance and education. This judgment has been confirmed, on appeal, by the Royal Court at the Hague.

THE DYING MOTHER TO HER INFANT.

My baby! my poor little one! thou hast come a
wintry flower,
A pale and tender blossom, in a cold, unkindly
hour;
Thou comest with the snow-drop, and, like that
pretty thing,
The power that called my bud to life, will shield
its blossoming.

The snow-drop hath no guardian leaves, to fold
her safe and warm,
Yet well she bides the blast, and weathers out the
storm;
I shall not long enfold thee thus, not long, but well
I know,
The Everlasting arms, my child, will never let
thee go.

The snow-drop—how it haunts me still, hangs
down her fair young head,
So thine may droop in days to come, when I have
long been dead;
And yet the little snow-drop's safe; from her in-
struction seek,
For who would crush the motherless, the lowly,
and the meek!

Yet motherless thou 'lt not be long, not long in
name, my life,
Thy father soon will bring him home, another
fairer wife;
Be loving, dutiful to her, find favor in her sight;
But never, oh my child! forget thine own poor
mother quite!

But who will speak to thee, of her! The grave-
stone at her head
Will only tell the name and age, and lineage of
the dead!
But not a word of all the love, the mighty love for
thee,
That crowded years into an hour of brief eternity!

They'll put my picture from its place, to fix
another there,
That picture, that was thought so like, and yet so
passing fair!
Some chamber in thy father's house, they'll let
thee call thy own,
Oh! take it there! to look upon, when thou art
all alone!

To breathe thine early griefs unto, if such assail
my child,
To turn to, from less loving looks, from faces not
so mild;
Alas! unconscious little one! thou 'lt never know
that best,
That holiest home on all the earth, a living
mother's breast!

I do repent me now, too late, of each impatient
thought,
That would not let me tarry out, God's leisure as
I ought;
I have been too hasty, peevish, proud, I longed to
go away,
And now I'd fain live on for thee, God will not
let me stay!

Oh! when I think of what I was, and what I
might have been,

A bride last year, and now to die! and I am scarce
nineteen;
And just, just opening in my heart, a fount of
love, so new,
So deep, could that have run to waste, could that
have failed me too?

The bliss it would have been to see, my daughter
at my side!

My prime of life scarce overblown, and here, in
all its pride!

To deck her with my finest things, with all I've
rich and rare,
To hear it said, how beautiful, and good, as she
is fair!

And then to place the marriage crown upon that
bright young brow,

Oh no! not that! 't is full of thorns! alas! I'm
wandering now,

This weak, weak head, this foolish heart! they'll
cheat me to the last!

I've been a dreamer all my life, and now, that life
is past.

Thou 'lt have thy father's eyes, my child! oh!
once, how kind they were!

His long black lashes, his own smile, and just
such raven hair!

But here 's a mark, poor innocent, he'll love thee
for it less,

Like that upon thy mother's cheek, he once was
used to press!

And yet, perhaps, I do him wrong, perhaps, when
all's forgot,

But our young love, in memory's mood, he'll kiss
this very spot!

Oh! then! my dearest, clasp thine arms about his
neck full fast,

And whisper that I blessed his name, and loved
him to the last!

I have heard that little infants, converse by smiles
and signs,

With the guardian band of angels, that round
about them shine!

Unseen by grosser scenes, beloved one! dost
thou

Smile so upon thy heavenly friends, and commune
with them now?

And hast thou not one look for me, those little
restless eyes,

Are wandering, wandering everywhere, the while
thy mother dies!

And yet, perhaps, thou art seeking me! expecting
me, my own!

Come, death! and make me to my child, at least,
in spirit known!

SONG OF THE MANNA-GATHERERS.

"This is the bread which the Lord hath given you to eat."

COMRADES, haste! the tent's tall shading
Lies along the level sand
Far and faint: the stars are fading
O'er the gleaming western strand.
Airs of morning
Freshen the bleak burning land.

Haste, or ere the third hour glowing
With its eager thirst prevail

O'er the moist pearls, now bestowing
Thymy slope and rushy vale—
Dews celestial,
Left when earthly dews exhale.

Ere the bright good hour be wasted,
Glean, not ravening, or in sloth :
To your tent bring all untasted ;—
To thy Father, nothing loth,
Bring thy treasure :
Trust thy God, and keep thy troth.

Trust Him : care not for the morrow ;
Should thine omer overflow,
And some poorer seek to borrow,
Be thy gift nor scant nor slow.
Wouldst thou store it ?
Ope thine hand, and let it go.

Trust His daily work of wonder,
Wrought in all His people's sight ;
Think on yon high place of thunder,
Think upon the earthly light
Brought from Sinai,
When the prophet's face grew bright.

Think, the glory yet is nigh thee,
Power unfelt arrest thine arm,
Love aye watching, to deny thee
Stores abounding to thy harm.
Rich and needy
All are levelled by love's charm.

Sing we thus our songs of labor
At our harvest in the wild,
For our God and for our neighbor,
Till six times the morn have smiled,
And our vessels
Are with two-fold treasure piled.

For that one, that heavenly morrow,
We may care and toil to-day :
Other thrift is loss and sorrow,
Savings are but thrown away.
Hoarded manna !—
Moths and worms shall on it prey.

While the faithless and unstable
Mars with work the season blest,
We around Thy heaven-sent table
Praise Thee, Lord, with all our best.
Signs prophetic
Fill our week, both toil and rest.

Comrades, what our sires have told us—
Watch and wait, for it will come :
Smiling vale shall soon unfold us
In a new and vernal home :
Earth will feed us
From her own benignant womb.

We beside the wondrous river
In the appointed hour shall stand,
Following, as from Egypt ever,
Thy bright cloud and outstretched hand :
In thy shadow
We shall rest, on Abraham's land.

Not by manna showers at morning
Shall our board be then supplied,
But a strange pale gold, adorning

Many a tufted mountain's side,
Yearly feed us,
Year by year our murmurings chide.

There, no prophet's touch awaiting,
From each cool deep cavern start
Rills, that since their first creating
Ne'er have ceased to sing their part.
Oft we hear them
In our dreams, with thirsty heart.

Oh, when travel-toils are over,
When above our tranquil nest
All our guardian angels hover,
Will our hearts be quite at rest !
Nay, fair Canaan
Is not heavenly mercy's best.

Know ye not, our glorious Leader
Salem may but see, and die ?
Israel's guide and nurse and feeder
Israel's hope from far must eye,
Then departing
Find a worthier throne on high.

Dimly shall fond fancy trace him,
Dim though sweet her dreams shall prove,
Wondering what high powers embrace him,
Where in light he walks above,
Where in silence
Sleeping, hallows heath or grove.

Deep of blessing are before us :
Only, while the desert sky
And the sheltering cloud hang o'er us,
Morn by morn, obediently,
Glean we manna,
And the song of Moses try.

TELEGRAPHIC COMMUNICATION BETWEEN FRANCE AND ENGLAND.—It was stated some time ago that a submarine telegraph was to be laid down across the English channel, by which an instantaneous communication could be made from coast to coast. The lords of the admiralty, with a view of testing the practicability of this undertaking, have been pleased to approve of the projectors laying down a submarine telegraph across the harbor of Portsmouth, from the house of the admiral, in the dock-yard, to the railway terminus at Gosport. By these means there will be a direct communication from London to the official residence of the port admiral, at Portsmouth, whereas at present the telegraph does not extend beyond the terminus at Gosport, the crossing of the harbor having been hitherto deemed an insurmountable obstacle. The submarine telegraph is to be laid down in the course of the ensuing week, and, if the working of the plan is found to be successful, this mode of telegraphic communication will be adopted in preference to the more exposed one. The telegraph will be conveyed from the terminus to the water-side underground, and, after crossing the harbor, will again be conveyed in a similar manner to the admiralty-house, it being subterranean as well as a submarine telegraph. In a few days after the experiment has been successfully tested at Portsmouth, the submarine telegraph will be laid down across the Straits of Dover, under the sanction of both the English and French governments.—*London Herald.*

A COMING CHANGE IN EUROPE.

THE political grievances of Italy, which have so long arrested the progress of that renowned country, and exposed her to the evils of a discontented population and a suspicious government, may be divided into two classes. The first and greatest is the reluctance or the incapacity of most of the Italian governments to promote the welfare of their dominions. The abuses which are known to exist in the Papal States, in several of the minor principalities, and to some extent in the kingdom of the two Sicilies, are a sufficient cause of the contempt and hatred by which those governments are held by a large portion of their subjects. The courts of Florence and of Turin have indeed already endeavored to distinguish themselves by a less vicious administration and a less illiberal policy. Tuscany and Piedmont, in their present comparatively flourishing condition, are, however, but faint indications of what the Italian states might readily become under the direction of vigorous and enlightened governments. But the weakness and the inefficiency of the national governments of Italy have tended not only to cramp their own resources, and to sacrifice the welfare of their states to the prejudices and fears of an obsolete system of policy, but they have also established and perpetuated the second great grievance of which the Italian patriots complain—namely, the ascendancy of a foreign power south of the Alps, and the domination of an Austrian viceroy, not only in Lombardy, but less directly in every part of the Peninsula. But whatever may be said of the anomaly of an Austrian government in Milan, the results of that government give us no just reason to regret the arrangement made at the Congress of Vienna; and, in comparison with the condition of the southern states of Italy, that of the Milanese territory is highly creditable to the Austrian administration. Milan is now the most stirring and prosperous city in all Italy. Venice has, within the last few years, regained much of that activity which seemed to have quitted her forever; railroads have been commenced on a large and liberal scale; public instruction has been promoted, and the order of the Jesuits has not been reinstated in its colleges. As long as the Austrian administration is one of the best in Italy, the mere passion of political independence will never excite the people to make a serious effort to throw off that form of government.

But we by no means contend that this state of things is to last forever, or that events may not occur and men arise well calculated to promote the regeneration of Italy by very different means from those which have been suggested by the revolutionary party. If, instead of taking their cue from Austria, and holding their dominions almost as fiefs of the empire, the reigning princes of Italy had the spirit and the sagacity to follow a line of national policy of their own, they would have as little to fear from insurrection at home as from foreign invasion. The natural relation in which they might be supposed to stand towards a state like Austria, which occupies so formidable and preponderating a position in their own country, would appear to be, not one of servility and subjection, but of free rivalry. And if this rivalry were directed by able statesmen, not into the channels of political intrigue or military hostility, but into the broad tract of public improvement, the importance of the Italian states would be immeasurably

increased in Europe, and their prosperity and security no less augmented at home. Good government, in one word, on the part of the Italian cabinets, would at once redress the national grievances of the population, and it would tend, more than any other course of policy, to prepare the whole country for an independent administration of its affairs, into which more liberal institutions of state might hereafter be gradually introduced.

It is no longer a secret that these views have for some time past been entertained by two or three of the Italian sovereigns, but by none more than by the illustrious head of the House of Savoy. This ambition of extending its ascendancy by the most legitimate means in the north of Italy has excited the jealousy and the fears of Austria, but it deserves to command the applause of Europe; for the means which the court of Turin appears to be disposed to take in the prosecution of its independent policy are identified with the real interest of the people and of Italy. The governments of Naples and of Piedmont have been amongst the earliest European converts to new principles of mercantile policy. Nor have the sovereigns and princes of these countries, as well as the Grand Duke of Tuscany, been slow to follow in the same track. The Austrian government, on the contrary, provoked by these manifestations of independence, has just imposed a prohibitive duty on the introduction of the wines of Piedmont into Lombardy, and has done all it can to prevent the extension of the Piedmontese railroads.

The immediate effect of these modifications of the policy of the court of Piedmont which appears most to have surprised and displeased the cabinet of Vienna, has been the marked improvement of the relations between that state and the French government. It is one of the chief proofs of the skill and sagacity of M. Guizot's administration of the foreign affairs of France, that he has everywhere succeeded in reviving the most essential portions of the traditional policy of his country, even where it had been in abeyance since the revolution of 1789, or revived, only to be annihilated again by the violence of Napoleon. M. Guizot has labored with great success to restore what may be regarded as the ancient position of France upon the continent of Europe, not by crushing or invading Spain, or by annexing Belgium or Savoy and Piedmont, but by steadily endeavoring to connect those countries by their interests and their policy with the modern policy of the crown of France. In Italy, nothing is more consonant to these historical principles than the foundation of a good understanding between the French government and the House of Savoy. That alliance is connected with the most glorious recollections of the family which reigns in Turin; and without doubt, in the present condition of the Italian states, nothing is better calculated than the support of France, to emancipate them from the tutelage of Austria.

If we were to scrutinize with a searching and a prophetic eye the present condition and the future destinies of that great empire which extends from Semlin to Milan, we should be filled with unwonted and melancholy forebodings as to the trials it may have at no distant period to undergo. A childish emperor, a decaying minister, a bigoted family council, an aristocracy ill-acquainted with its duties and its rights, a peasantry which is in some provinces imbued with the most anti-social doctrines, an unformed middle class, an embarrassed

treasury, and a dissected territory, are things which surround with sinister presages the House of Austria. Her foreign rivals, to the east, to the north, and to the south, are incited to press on in their respective lines of policy by the evident embarrassment and alarm of the cabinet of Vienna. Russia has her designs, more than commenced, upon the Slavonian populations; Prussia has affected to take the lead in the affairs of Germany; and in northern Italy the national competitor for power is to be found in the House of Savoy. With each of these states Austria has formed close alliances, for the purpose of crushing popular movements and checking the advancement of the time; but each of them will prove her formidable rival and opponent whenever it is discovered that the true basis of their power is the national development of their respective dominions.—*Times*.

From the New Orleans Tropic.

SCENES IN THE SUBURBS OF MATAMOROS.

AFTER you get over the ferry, you have an open and picturesque road before you of nearly half a mile to the city of Matamoros. Much to interest presents itself, for everything, to American eyes, is unlike "the familiar road side." The hedge of a small cotton field, now broken down in places, is worthy of attention, for it is characteristic of the fences of the country. There being no timber to split into "rails" the Mexican cannot disfigure the landscape with those awful "worm fences" that so mar our own fields; on the contrary, he plants with some care the thorn bushes and the delicate brush that everywhere grow spontaneously; strengthening them with the trunks of the palm tree.

A thousand vines and wild flowers soon tressel over this "breastwork," binding it together in a solid mass; tropical birds, with gay plumage, bury themselves in its interstices. A Mexican hedge, therefore, soon becomes a formidable defence against a foe, defies the most viciously disposed cattle, offers a shade at noon, and is the place of resort for all the gay, the musical, and the beautiful of the feathered tribe. A large species of black-bird will much attract attention. It seems very tame and familiar; a pair would generally be seen together mounted on some high limb, and performing a series of bowings and contortions truly wonderful to behold, throwing their heads into the air, burying them under their wings, then turning their feathers up with all imaginable roughness, and giving utterance to the strangest varied scream ever heard, the conclusion of which is like the whizzing, crashing sounds made by the breaking off and falling of a heavy limb of a tree. Birds with a pale ashy plumage, and tails resembling those denominated "of Paradise," flitted about, and a miniature dove, not larger in its body than a robin, pecked modestly in the dust—the most beautiful and loveable bird we ever saw.

This hedge led to a poor Mexican farmer's cottage, facing close upon the road, and as it represents its class it is worth examination. The walls of it are made of reed, about three or four inches thick, and ingeniously held together by others running crosswise, not unlike rude basket work. The rafters of the house are made of gigantic reed, thatched securely from admitting the rain, by long salt marsh grass, cut about the mouth of the Rio Grande. There were no windows—two doors, situated on either side, admit all the light and air

the inhabitants indulge in. It was a mere lodging room after all, in rainy weather, for the Mexicans of the poorer classes *live out of doors*, sleep under the shade of their stunted trees, or upon the door steps of their rude houses.

The house is "a mere form," equally enjoyed by hens and chickens, pigs, goats, fleas, and other domestic animals. The "kitchen garden" seemed inviting, though in waste; figs were ripening upon a wilderness of luxuriant trees, pomegranates, with their russet sides, met the eye—tall green corn, of the best quality, waved in the constant breeze, and on the ground, there ripened in modest obscurity squashes that in size seemed to show a near relationship to the succulent pumpkin. In front of the house I noticed a large hole, occasioned by a shot thrown in the bombardment; in the inside of it one of our own troops was sitting very comfortably on a bench, eating hot corn, evidently set before him by a Mexican woman, who, though she did no credit to her sex in the way of personal beauty, seemed to honor it by her hospitality.

Just beyond this thatched house, you are turned off the road by the "Sand-bag-fort battery," a rough work, that afforded protection to three or four pieces of artillery in the bombardment of Fort Brown. The rain had already washed down some parts of the walls, and two or three big-headed mules seemed to hold it in full possession.

The road everywhere is pleasant, and cottages were filling up with "cake and beer shops;" the Americans, like their progenitors "across the waters," must be well fed to fight well, and this characteristic is taken advantage of to the great profit of innumerable hangers-on of the camp. In one of these little shops I found the stock to consist of an empty claret box, a jug of whisky, two tin cups, a few pounds of maple sugar, a pail of Rio Grande water, and a Mexican saddle worth one hundred and fifty dollars.

You now get out of the fields and come into the suburbs of the city; the road takes a sudden turn to the right, and gives you an extended view down one of the streets that leads "way back toward Monterey."—On your left you perceive the tortuous winding of the river, and upon the rolling land are the thousand tents belonging to our army. The tents stretch out before you for miles, until they grow into seeming white spots, like snow balls resting on the bluish sward. Nearer to you is an unfinished powder magazine; the workmen have abandoned it after raising its thick square walls—the ruins of houses are hidden away among the long weeds—a *ranchero* wends his way across the broken field, and two or three soldiers off duty stop him, to hold a long conversation in Irish and English, and Spanish, and although they are entirely unacquainted with each other's language, they seem very familiar and agreeable companions.

A very thick-set, rimmer looking old gentleman, in a linen roundabout, and remarkable for short legs and long body, mounted on a snow-white charger, followed by a mounted dragoon, most perpendicular in his saddle, and covered with trappings, passes by. If you inquire who that is, you will be laughed at, for it's the commander-in-chief of the army of occupation, and he is going over "to consult with several officers," about something he made up his mind should be done "*no lens volens*," a month ago.

Turning up the road into the city, you pass over a very handsomely constructed bridge laid in waterproof cement; it was a public work of the better

days of the Mexican republic; on the other side rise tall trees for the country, giving to it a picturesque and rural appearance; cleverly over it, and you are in the city. On your right is a large brick house of a wealthy citizen, who was a colonel of militia on the 8th and 9th; you are struck with its desolate front; it has not a window or door that is made for comfort or ornament, and those that present themselves are protected by thick heavy batten doors and blinds.

Up high in one corner of the front is something that looks much like a large cage. The cage is the balcony whereon at eve steal forth the females of the family to enjoy the evening air; they are out of the reach of stolen kisses, or letters of love, and Mexican jealousy is somewhat appeased by this arrangement, while the lower part of the house, presenting a bare wall, protects both male and female from the assaults of sudden revolution, of lawless robbers, of plundering soldiery, and thefts of hungry officials; that house speaks a volume of melancholy detail of the social and political condition of Mexico.

"*Hare is de Republica de Rio Grande y amiga de los pueblo*, neu papier, one beet." A newspaper boy for the first time in the Republic of Mexico. He was looked upon by the inhabitants in favor of the old dynasty, as Indians look upon the appearance of bees; it showed that *the white man was coming*. He was an old boy, though young in newspapers, being full sixty years of age, but he does bravely. "*Hare is de Republica*." "Hold on there," cries a "volunteer," "let us have a number." All sad reflections upon the condition of Mexico, suggested by the prison-like appearance of the Mexican colonel's house, pass away, for intelligence had found wings, and those even in Mexico *who run*, can in future read; a new order of things had commenced, and sudden and singular improvements for the better were bound to follow in Matamoros.

From the Spectator.

GENERAL WADDY THOMPSON'S RECOLLECTIONS OF MEXICO.*

GENERAL THOMPSON was sent to Mexico in 1842, as "Envoy Extraordinary and Minister Plenipotentiary," to effect the release of such citizens of the United States as had joined that Texan overland expedition, for purposes of territorial robbery, of whose well-deserved failure and sufferings Mr. Kendall published an account. The general sailed from New Orleans, and reached Vera Cruz without incident; thence he proceeded to Mexico by diligence, himself on the box, without further incident than daunting some robbers by the display of the arms of the corps diplomatique. On his arrival at the capital, he effected his business in excellent style, as he gives us to understand; and made a good arrangement in reference to some claims on behalf of his government, though the senate disallowed one of his principal items: he also made a single excursion in the vicinity to examine Tezcuco and the pyramids in its neighborhood. In this summary is comprised the story of his journey.

The substance of the book consists of the narrative, expanded by reflections and disquisitions. Sometimes these are spontaneous, and spring naturally from the circumstances—such as remarks

on the cultivation of the country, the laziness of the inhabitants, the manners of the various classes, and the superstitious forms of the Romish church; together with some sketches of public men, and some statistical accounts, useful if correct. At other times they are less akin to the theme, though with an interest from their indications of American character; involving speculations as to what Mexico would be made in the hands of the "free and enlightened"—discussions on the interests of Great Britain to preserve peace between Mexico and the States, lest the export of the precious metals should be suspended—on the inferiority of the Mexican cavalry, and the incapacity of the Mexican army to wage war. Some of the others are remote, and rather dry; with notices and extracts touching Cortes and the early state of Mexico. In fact, the book seems to have been got up with some view to the interest attached to Mexico, and to have been written *currente calamo* from memory. This mode of composition has its advantages; it prevents, as General Thompson remarks, excess of detail: but the subjects should have been observed with reference to future publication, or the observer should have had a more vigorous and racy mind than this writer. General Thompson seems an excellent person, who really wishes to have a higher state of morality than his countrymen; but the chains of "a tyrant majority" are too strong for him. He is ever halting between two opinions; and though professing himself averse to the annexation of Texas and the seizure of California, he does not put his opinions upon any rule of right, but he thinks the United States territory quite large enough.

This national peculiarity is indeed a distinctive feature of the book, and almost the only one it possesses. In Europe, writers vary with their class. The lawyer-author is shrewd, sensible, and worldly, in his observations, and clear if not close in his style: *ceteris paribus*, the medical man is as sensible and penetrating, but not perhaps so tangible, and more professional in his choice of topics: the private gentleman has his distinctive traits in an agreeable but somewhat superficial observation, a less direct tone in his criticisms, and a nice discrimination where anything like personal charge or personal feelings are involved: the diplomatist or other public man has a larger view, a more business-like precision, and a still more guarded style, (with the exception of Lord Londonderry;) and so on through every other kind of writer, whether amateur or professional. The manner, or rather, as Walter Scott said, the no manners, of an American, are always of the same cast. Of course, individual qualities will have their play. The man of vigorous mind will write in a more vigorous style than the feeble-minded person; the rattling go-ahead speculator will strike off a more rapid narrative than the sedate and elderly individual; a man with imagination will display a more florid manner than he who has none; and some traits of vocation will probably peep out, especially in the divine. But there will throughout be a family likeness. We recognize the "free and enlightened," who is less distinguished by having no superiors than by having everybody for an equal—except indeed the blacks; though General Thompson struggles hard for an exception as regards private service.

"The President has a very splendid barouche drawn by four American horses, and I am ashamed to say driven by an American. I can never be-

* Published by Wiley & Putnam.

come reconciled to seeing a Native American performing the offices of a menial servant; but I felt this the more on seeing a foreigner and in a foreign land thus waited on by one of my countrymen. I was more than ever thankful that I lived in that portion of our country where no man is theoretically called a freeman who is not so in fact, in feelings, and in sentiments; no decent Southern American could be induced to drive anybody's coach or clean his shoes. I have no doubt that if the liberties of this country are ever destroyed that they will perish at the ballot-box; men whose menial occupations degrade them in their own self-esteem, and deprive them of the proud consciousness of equality, have no right to vote."

From the general character of our author's reminiscences, coupled with the fact that all he saw, and a good deal more, has been described with greater freshness and vivacity by other writers, they do not furnish much matter for interesting quotation. We will rather address ourselves to the more political parts of the lucubration. Here, in surveying the inside of the Cathedral at Mexico, is a feeling analogous to that which Blücher is said to have more tersely expressed when taken to the top of St. Paul's.

"As you walk through the building, on either side there are different apartments, all filled, from the floor to the ceiling, with paintings, statues, vases, huge candlesticks, waiters, and a thousand other articles, made of gold or silver. This, too, is only the every-day display of articles of least value; the more costly are stored away in chests and closets. What must it be when all these are brought out, with the immense quantities of precious stones which the church is known to possess? And this is only one of the churches of the city of Mexico, where there are between sixty and eighty others, and some of them possessing little less wealth than the cathedral; and it must also be remembered, that all the other large cities, such as Puebla, Guadalajara, Guanajuato, Zacatecas, Durango, San Luis, Potosi, have each a proportionate number of equally gorgeous establishments. It would be the wildest and most random conjecture to attempt an estimate of the amount of the precious metals thus withdrawn from the useful purposes of the currency of the world, and wasted in these barbaric ornaments, as incompatible with good taste as they are with the humility which was the most striking feature in the character of the founder of our religion, whose chosen instruments were the lowly and humble, and who himself regarded as the highest evidence of his divine mission, the fact that 'to the poor the Gospel was preached.' I do not doubt but there is enough of the precious metals in the different churches of Mexico to relieve sensibly the pressure upon the currency of the world, which has resulted from the diminished production of the mines, and the increased quantity which has been appropriated to purposes of luxury."

We believe this estimate of the wealth of the church in Mexico to be much exaggerated; but the fact does not alter the view, although in another place the general thinks no enemy would rob the churches.

The following account of the Mexican cavalry and things in general is from a discussion about their military establishment and its discipline. The lasso, though doubtless absurd in such a battle as Waterloo, might not be altogether so ridiculous in an irregular contest on the prairies or swamps with small bodies of inexperienced infantry.

"I should regard it, [the cavalry,] from the diminutive size of their horses, and the equally diminutive stature and feebleness of their riders, as utterly inefficient against any common infantry. I said so in conversation with Colonel B——, an officer who had seen some service, and had some reputation. I was not a little amused at his reply. He admitted that squares of infantry were generally impregnable to cavalry, but said it was not so with the Mexican cavalry, that they had one resource by which they never had any difficulty in breaking the square. I was curious to know what this new and important discovery in the art of war was, and waited impatiently the 'push of his one thing,' when to my infinite amusement he replied—the lasso; that the cavalry armed with lassos rode up and threw them over the men forming the squares, and pulled them out, and thus made the breach. I remembered that my old nurse had often got me to sleep when a child by promising to catch me some birds the next day, by putting salt on their tails, which I thought was about as easy an operation as this new discovery of the Mexican colonel. I had read of 'kneeling ranks and charging squadrons,' but this idea of lassoing squadrons was altogether new to me. Bonaparte fought and gained the battle of the Pyramids against the best cavalry in the world, the Mamelukes, entirely in squares. He lost the battle of Waterloo because the British squares were impenetrable to the next best, the French cavalry, during all that long and awful conflict. The idea, however, of the lasso did not occur to the Mamelukes in Egypt, nor to Bonaparte at Waterloo. I was reminded of the equally novel attack of the Chinese upon the English, when they were all formed in battle array, and the Chinese threw somersets at them instead of cannon-balls and shells.

"The Mexican army, and more particularly their cavalry, may do very well to fight each other; but in any conflict with our own or European troops, it would not be a battle but a massacre."

From the Spectator.

DEATH OF MR. HAYDON.

MR. HAYDON, the painter, died by his own hand on Monday, at his house in Borwood Place, Edgware Road. The unfortunate gentleman had suffered from pecuniary difficulties for many years, and recently they had become very pressing. He had expected relief in his present emergency from a source that failed him; and this disappointment preyed upon Mr. Haydon's mind. On Monday morning he rose at an early hour, and went out; but returned at nine o'clock, apparently fatigued with walking. He then wrote a good deal. About ten he entered his painting-room, where he was in the habit of locking himself in when earnestly engaged. He afterwards saw his wife, who was dressing to visit a friend at Brixton, by her husband's special desire; he embraced her fervently, and then returned to his studio. About a quarter to eleven, Mrs. Haydon and her daughter heard the report of a pistol; but as the troops were exercising in the park, they took little notice of it. Mrs. Haydon went out. About an hour after, Miss Haydon entered the studio, and beheld her father crouched upon the floor, dead. The inquest that followed disclosed one of the saddest tales ever unfolded before a coroner.

The Jury, under Mr. Wakley's direction, assembled on Wednesday morning, at a tavern near

the residence of the deceased. After they had been sworn they proceeded to view the body. On entering the principal apartment on the first floor, (which was used as a painting-room,) a dreadful sight presented itself. Stretched on the floor immediately in front of a colossal picture, ("Alfred the Great and the First British Jury,") on which the unhappy artist appears to have been engaged up to his death, lay the corpse of an aged man, his white hairs saturated with blood, in a pool of which the whole upper portion of the body was lying. The head partially rested upon his right arm; near to which were lying two razors, the one in a case, and the other smeared with blood, half open, by its side. There was also near the same spot a small pocket-pistol, which appeared to have been recently discharged, though it was on half-cock when discovered. The deceased appeared to have fallen in the exact position in which he was seen by the jury. He was dressed with great neatness, in the ordinary attire which he wore while engaged in painting. His throat had a frightful wound extending to nearly seven inches in length; and there was also a perforated bullet-wound in the upper part of the skull over the parietal bone. Everything in the room had been the subject of extraordinary and careful arrangement. Mr. Haydon had placed a portrait of his wife on a small easel immediately facing his large picture. On an adjoining table he had placed his diary, which he kept with much care for many years past. It was open at the concluding page; and the last words he had entered were "God forgive me; Amen!" Packets of letters addressed to several persons, and another document, headed "The last thoughts of Haydon, at half-past ten o'clock, *a. m.*, June 22, 1846," were also placed upon the same table; with a watch, and a prayer-book, open at that portion of the gospel service appropriated to the sixth Sunday after the Epiphany.

The jury returned to the tavern. The first witness examined was Miss Mary Haydon, the daughter of the deceased; aged sixteen. Her father was sixty years of age in January last. She described the finding of his body on Monday morning, on her entering his studio. She had then just returned from accompanying her mother a short distance on her way to Brixton. She last saw her father alive at ten o'clock on Monday morning. He then looked agitated—more so than usual. She had never known him to make any attempt upon his life before. He was not under medical treatment. Mr. Coroner Wakley asked if he had complained of his head in any way of late? Witness—"Yes; it was very unusual for him to do so, but on Sunday night last he did complain; and during the last two or three days I recollect to have seen him frequently put his hand up to his head." He had not slept well for the last three months. He did not seek medical advice; he did not seem to think it necessary. He was always in the habit of taking his own medicines. The coroner (to the jury)—"Bless me! how extraordinary it is that persons will so neglect themselves. The number of lives annually sacrificed through a neglect of symptoms of this sort is perfectly monstrous." Miss Haydon continued—Mr. Haydon was a man of very temperate habits. "I have noticed that he had a very different expression of countenance during the last three days.—He was very silent during the whole of that period, and apparently absent in his mind. I cannot say that

he tried to avoid meeting the members of his family more than usual." She did not know he possessed a pistol, and thought he might have purchased it when he went out on Monday morning.

Two female servants were examined; but their evidence was only confirmatory of that given by Miss Haydon.

The Reverend Orlando Hyman said he was a stepson of deceased. He observed a great alteration in Mr. Haydon's countenance on Saturday. He was eccentric from his youth; and had latterly become more so. He kept a diary of the principal occurrences of his life. The coroner here produced a large folio manuscript volume, the last diary of the deceased; and he requested Mr. Hyman to mark such passages as might throw any light upon the state of deceased's mind recently—taking care not to disclose any family secrets; these passages Mr. Hyman would read to the jury. After a short interval, Mr. Hyman said he was prepared for the task. He had thought it better to go back to the month of April; at which period the failure of the exhibition of his picture of the "Banishment of Aristides" had affected deceased very much. He had built his hopes on that, and considered it the last thing he could do to extricate himself from his difficulties. He was much attached to his diary, and this was the twenty-sixth volume which he had filled. Mr. Hyman proceeded to read from the diary. The first entry selected ran as follows—

"March 27.—I had my little misgivings to-day on my way to the Egyptian Hall. The horse attached to the cab in which I rode fell. Would any man believe this annoyed me! Yet the same accident occurred before the Cartoon contest."

This entry is succeeded by the following quotation from Canning, in reference to Napoleon—

"All is still but folly: his final destruction can neither be averted nor delayed, and his unseasonable mummeries will but serve to take away all dignity from the drama and render his fall at once terrible and ridiculous."

The next entries read were—

"March 31.—April fool day to-morrow. In putting my letters of invitation to a private view into the post, I let 300 of them fall to the ground. Now for the truth of omens."

"April 4.—The first day of my exhibition being opened, it rained all day; and no one came, Jerrold, Bowring, Fox, Maule, and Hobhouse, excepted. How different would it have been twenty-six years ago—the rain would not have kept them away then."

"Receipts, 1st day,
"Christ entering Jerusalem," 1820.

19l. 16s.

"Receipts, 1st day,
"Banishment of Aristides,"
1l. 1s. 6d.

"In God I trust: Amen."

"April 13.—1l. 3s. 6d. An advertisement of a finer description could not have been written to catch the public; but not a shilling more was added to the receipts. They rush by thousands to see 'Tom Thumb.' They push—they fight—they scream—they faint—they cry 'Help!' and 'Murder!' They see my bills and caravans, but do not read them: their eyes are on them, but their sense is gone. It is an insanity—a *rabies furor*—a dream—of which I would not have believed Englishmen could be guilty. My situation

is now one of peril, more so than when I began 'Solomon' thirty-three years ago. Involved in debt—mortified by the little sympathy which the public displayed towards my best pictures—with several private engagements yet to fulfil, I awoke, as usual, at four o'clock this morning. My mind was immediately filled with the next picture of my series. I felt immediately, 'Is it the whispering of an evil or good spirit?' but believing it to be for good, I called on my Creator, who has led me through the wilderness during forty years, not to desert me at the eleventh hour."

Mr. Hyman explained that the series of pictures which the writer referred to were six large paintings which he intended for the Parliament Palace. Mr. Hyman further stated, in reference to the religious expressions interspersing the diary, that the deceased was a very pious man; and in making his daily entries, generally commenced them with the following prayer—"Oh, God, bless me through the evils of this day!" or a somewhat similar aspiration.

A medical gentleman was now examined as to the cause of death. He said it was loss of blood from the wound in the throat; which must have been inflicted by deceased himself.

Mr. Hyman resumed his extracts from the diary: commencing with an entry made on the 21st of April, in which the unfortunate man had noted down the number of visitors to his own exhibition during one week as 1334, while Tom Thumb's levee during the same period had been attended by 12,000 persons. The coroner inquired whether the deceased had not left a letter addressed to Mrs. Haydon? Mr. Hyman replied that he had, and also one to each of his children. He handed to the coroner a packet containing the letters in question. It was addressed, "To Mrs. Haydon, my dearest love," and sealed in red wax, with his own coat of arms. The coroner desired Mr. Mills, his deputy, to read the letters severally. The first read was addressed to Mrs. Haydon, as follows—

"London, Painting-room, June 22.

"God bless thee, dearest love! Pardon this last pang! Many thou hast suffered from me! God bless thee in dear widowhood: I hope Sir Robert Peel will consider that I have earned a pension for thee. A thousand kisses.

"Thy dear husband and love to the last,

"B. R. HAYDON.

"Give dear Mary 10*l.*, and dear Frank 10*l.*; the rest for your dear self of the balance from Sir Robert's 50*l.*

"Mrs. Haydon."

The next letter was addressed to his son Frederick—

"God bless thee, Frederick, and render thee an honor to this country.

"Thy affectionate father, B. R. HAYDON.
"To Mr. Frederick Haydon, R. N."

The next was to his son Frank—

"God bless thee, dear Frank; continue in virtue and honest doing.

"God bless thee. Thy affectionate father,
"B. R. HAYDON.

"To Mr. Frank Haydon."

This was to his daughter—

"God bless thee, my dearest daughter Mary; continue the dear good innocent girl thou hast

ever been, and love thy dear mother forever. Be pious, and trust in God.

"Thy affectionate father, B. R. HAYDON.

"To Miss Mary Haydon."

Mr. Hyman returned to the diary, and read the following extracts—

"May 4.—I have just received a lawyer's letter, the first for a long time. I have called on the writer, who is an amiable man, and has promised to give me time. I came home under mingled feelings of sorrow, delight, anxiety, and anticipation, and sat down to my palette under an irritable influence. My brain became confused, as I foresaw ruin, misery, and a prison before me. I went on with my picture, and rejoiced inwardly at its effects; but my brain harassed and confused. Fell into a deep slumber, from which I did not awake for an hour: I awoke cold—the fire out—and went again to my picture."

"May 14.—This day forty-two years I left my native Plymouth for London. I have closed my exhibition with a loss of 111*l.* No one can accuse me of showing less talent or energy than twenty years ago.

"May 21.—Worked hard at my picture, and advanced immensely. Felt uneasy because I could not give my dear son money to go and see his college-friends."

"June 3.—Called on my dear friend Kemp, who advanced me some cash to get over my difficulties. By the time my pictures are finished they will be all mortgaged; but never mind, so that I get them done."

"June 13.—Picture much advanced; but my necessities are dreadful, owing to the failure of my exhibition at the hall. In God I trust. It is hard—this struggle of forty-two years' duration; but Thy will and not mine be done."

"June 14.—O God! let it not be presumption in me to call for Thy blessing on my six works. Let no difficulty on earth stay their progress. Grant this week Thy divine aid. From sources invisible raise me up friends to save me from the embarrassments which want of money must bring upon me; and grant that this day week I may be able to thank Thee for my extrication."

"June 15.—Passed in great anxiety, after harassing about for several hours in the heat of the sun."

"June 16.—Sat from two to five o'clock staring at my picture like an idiot; my brain pressed down by anxiety and the anxious looks of my family, whom I have been compelled to inform of my condition. We have raised money on all our silver to keep us from want in case of accident. I have written to Sir Robert Peel, to —, and to —, stating that I have a heavy sum to pay. I have offered 'The Duke's Study' to —. Who answered first? Tormented by Disraeli, harassed by public business, up came the following letter.

"Whitehall, June 16.

"SIR—I am sorry to hear of your continued embarrassments. From a limited fund which I have at my disposal, I send, as a contribution for your relief from these embarrassments, the sum of £50. I remain, sir, your obedient servant,

"ROBERT PEELE.

"Be so good as to sign and return the accompanying receipt."

"That's Peel. Will —, —, or —, answer!"

June 17.—My dearest wife wishes me to stop the whole thing, and close payment: but I will not! I will finish my six pictures, by the blessing of God!"

June 18.—This morning, fearing I should be involved, I returned to a young bookseller some books for which I had not paid him. No reply from —, or —! And this Peel is the man who has no heart!"

June 21.—Slept horribly, prayed in sorrow, and got up in agitation."

The next was the last entry made, immediately before the world closed upon the unhappy man—

"June 22.—God forgive me: Amen.

"Finis. B. R. HAYDON.

"Stretch me no longer on this rough world."
Lear.

"The end of the twenty-sixth volume."

In summing up, Mr. Wakley said in leaving the case in the hands of the jury, he could not fail to remark on the munificent act of Sir Robert Peel towards the unfortunate deceased. He thought it must speak to the heart of a great many thousand persons, that whilst others were, so to speak, attempting to destroy his own mind, amidst a pressure of public business almost unparalleled, Sir Robert Peel had not forgotten the sufferings of others.

The Reverend Mr. Hyman here begged permission to state, that he had not yet said all that he could in reference to the generosity of the right honorable baronet. Subsequently to the deceased's death, Sir Robert, addressing one of the executors, had enclosed a check for £200 from the royal bounty fund, in order, as he stated in his letter, that the family might not be molested before a public appeal could be made in their behalf: Sir Robert added, that when that was done, of course he should be most ready to come forward so far as his private purse and personal influence were concerned.

The coroner, after having again remarked on the munificence of the premier, inquired whether the jury were unanimous in their verdict?

The foreman replied in the affirmative. It was this—"We find that the deceased, Benjamin Robert Haydon, died from the effect of wounds inflicted by himself; and that the said Benjamin Robert Haydon was in an unsound state of mind when he committed the act."

WHAT CAN BE DONE FOR LITERARY MEN AND ARTISTS?

The tragic close of Haydon's career is of a nature to command attention even amidst the intense contemporaneous public excitement. The long and terrible struggle of an individual mind that has terminated so shockingly, domineers over the imagination almost with more power than the gregarious enthusiasm evolved in the suicidal death-struggle of shattered factions. In May, 1804, Haydon came to London for the first time, a sanguine, aspiring boy, bent upon reaching the loftiest height of art. In May, 1846, he closed his last losing exhibition, visited by a few cold spectators, while eager crowds were squeezing into the same building to wonder at a dwarf. The conviction was irresistible that his career as an artist had been a failure. Though wanting the faculty of the creative artist, his intuitive recognition of the value of the Elgin marbles, and the missionary

spirit with which he preached the faith in them, were revelations of genius. His long blind struggle, in which he too often mistook waywardness for independence and strange blindness to the defects of his own works, was nevertheless characterized by unflagging energy, and illumined by coruscations of intellect and imagination. There is poetry in his life; he lays hold on our sympathies. His death is felt to be an event even at the crisis of a nation's history; and the active sympathy for him evinced by Sir Robert Peel, while engrossed by fierce personal attacks and the direction of great political combinations, is the most pleasing episode in the minister's existence.

Haydon's life was one of unrelaxing industry. He might not be averse to luxuries—no artist or poet can be, from the temperament which is necessary to the development of his tastes and powers; but his tastes were simple and his indulgence not immoderate. Even his fierce controversial spirit when roused cannot be regarded as the source of his misfortunes. It is against men of taste and intellect, conscious of similar if less glaring weaknesses in their own minds, and irretentive of mere personal dislikes, that such escapades precipitate a man. In time they are sure to be forgotten and forgiven. It is among the mere drudges of life, absorbed in daily household trifles, that undying enmities are to be sought. The poverty and embarrassments of men like Haydon are caused partly by themselves, it is true, but partly also by incomplete social arrangements. They who think the rugged incomppliance of Haydon's nature sufficient to account for his misfortunes, must be puzzled to account for those of Laman Blanchard, in whom unwearying industry and regular habits, combined with unoffending, attractive, unvarying gentleness, were proved equally incompetent to the task of providing for a family. Sir Walter Scott had his full share of the national taste for acquisition; yet, wanting the talent, his "fairy gold" turned into withered leaves long before his death.

The Titian Haydon and his gentler fellows in misfortune were caught in the same toils. The artist and the thinker are not money-making or money-keeping animals. It is not the luxurious alone who are spendthrifts: easy natures—and such the whole artistical tribe are—can waste money without any apparent means or result. It is in vain that we seek to bend the laws of nature to our will: we must seek to adapt ourselves to these laws. It is of the utmost consequence to society that the race of thinkers and imaginative constructors be kept alive and vigorous. Pensions for poor poets and philosophers do more harm than good. They must be given according to the judgment of those intrusted with their distribution for the time being, and that is as likely to be wrong as right. To award literary pensions to every littérateur or artist in bad circumstances through no fault of his own, were to bring around the bestower a crowd of idle sturdy beggars: literature as well as religion will be overstocked by false monks. Find work for them that they can do, and wages. Men of business are averse to employ men of a literary turn; as many a one, who in despair has sought to escape from the muse's bowers to the working-day world, has experienced. There is something of prejudice in this, but at the same time an instinctively correct sense. It is partly felt that the man of intellectual tastes might be more usefully employed some other way, partly

that these applicants are interlopers who would take bread out of the mouths of regularly-trained devotees of unimaginative toil. Every country in Europe has found useful, remunerative, and congenial employment for the literary and artistical class, except our own. It is in the organization and direction of national record-offices, public libraries, museums, and galleries of art—in professorships of art, science, and literature—in the construction and ornament of buildings for such institutions, and other public purposes—in effecting voyages of discovery, conducting scientific experiments on a scale too great for private finances, and preparing their results for publication—that men who have cultivated in preference the faculties of reason and imagination are to find the means of earning a not precarious subsistence by really serving society. With a timid, hesitating hand—desultorily and at intervals—experiments in this way have been made of late years. To be successful, the work should be undertaken at once, on a comprehensive scale, by the annually renewed vote of a liberal sum to supply the intellectual wants of society, placed at the disposal of a responsible minister for education, and the promotion of art, science, and literature. This is the expiation our legislature owes for leaving so much of English intellect and imagination to perish miserably in past years.

From the Spectator.

A CORN-LAW BALLAD :

ADDRESSED TO SIR ROBERT PEEL, BY AN ADMIRER.

"He that withholdeth corn, the people shall curse him ; but blessing shall be upon the head of him that selleth it."—*Prov. xi. 26.*

THE bigoted aristocrat,
The puppy, and the fool,
Who maunder o'er the crude conceits
Of an exploded school,

May taunt thee with apostasy,
And make a monstrous noise
About your cool abstraction
Of a bath's corduroys :

But like the bark of poodle dog
Or a parrot's empty cry,
Or thunderings theatrical,
Their slanders pass thee by ;

While from the crowded city,
And from the lonely moor,
Come the blessings of the millions,
The blessings of the poor.

For e'en amid the thoughtlessness,
The sorrow, and the toil,
Which dog the pale mechanic
And the tiller of the soil,

A father's arm is strengthened,
And a mother dries her tear,
When they think that in the time to come
Bread will not be so dear.

And so at morn and eventide,
And every scanty meal,
They pray that God may bless the heart
And nerve the hand of Peel.

But not to minds gigantic,
To men who comprehend

CXVII. LIVING AGE. VOL. X. 18

The wants of empires, and who look
Far onwards to the end,

Can the herd of common intellects,
The children of to-day,
Or grant a fitting recompence,
Or slander it away.

No, He the Hero of an age,
The mighty one like thee,
Receives the guerdon of his deeds
From far posterity.

Then in the after ages,
When Albion is no more,
And London lies a desert waste
Upon a lonely shore,

Long as the kindly accents
Of the English tongue are known,
Or by the Mississippi,
Or in the torrid zone,

High o'er the Celtic warrior,
The carnage-loving Dane,
O'er the haughty Norman victor,
And the sturdy Saxon Thane,

The might of virtuous eloquence
Shall consecrate thy name,
Foremost upon the banner roll
Of everlasting fame :

And thus by statesmen and by bards
Thy glory shall be spread—

"He braved the mighty and the rich,
To give the starving bread."

King's College, Cambridge.

E.

"LORD BROUGHAM," by Mr. A. E. Chalon, R.A.
We have never seen a more successful attempt at representing the face of this extraordinary man :—the restlessness, the sleeplessness, the aggressiveness, and the conscience of power, are all depicted, without derogation from that peculiarity of eye which makes the original appear at once the most inquisitive and the most apathetic of men.

RELICS FOR THE SHAKSPERIAN LIBRARY.

7. Sheath of the dagger which *Macbeth* thought he saw before him.
8. Hair from the tail of the ass that *Dogberry* wished himself to be written down.—*Punch*.

AN EVIL OMEN.—It is stated to be a sign of the expected resignation of the present ministry, that Sir James Graham is about to be raised to the peerage, by the title of Lord Preston. We presume that the elevation of a cabinet minister is considered a sign of its being all up with the government. We know that throwing up an insignificant object will frequently show which way the wind blows.
Punch.

CHAPTER XXIX.

Does it live in the memory of the reader that Snipeton, only a chapter since, spoke of a hand-maid on her way from Kent to make acquaintance with his fire-side divinities? That human flower, with a freshness of soul like the dews of Paradise upon her is, reader, at this very moment in Fleet-street. Her face is beaming with happiness—her half-opened mouth is swallowing wonders—and her eyes twinkle, as though the London pavement she at length treads upon was really and truly the very best of gold, and dazzled her with its glorifying brightness. She looks upon the beauty and wealth about her gaily, innocently, as a little child would look upon a state coffin; the velvet is so rich, and the plates and nails so glittering. She has not the wit to read the true meaning of the splendor; cannot, for a moment, dream of what it covers. Indeed, she is so delighted, dazzled by what she sees, that she scarcely hears the praises of the exceeding beauty of her features, the wondrous symmetry of her form; praises vehemently, industriously uttered by a youthful swain who walks at her side, glancing at her fairness with the libertine's felonious look. He eyes her innocence, as any minor thief would eye a brooch or chain; or, to give the youth his due, he now and then ventures a bolder stare; for he has the fine intelligence to know that he may rob that country wench of herself, and no Bridewell—no Newgate will punish the larceny. Now, even the bow of sixpenny riband on her bonnet is protected by a statute. Besides, Master Ralph Gum knows the privileges of certain people in a certain condition of life. Young gentlemen born and bred in London, and serving the nobility, are born and educated the allowed protectors of fustic girls. The pretty country things—it was the bigoted belief of the young footman—might be worn, like bouquets on a birth-day.—And the wench at his side is a nosegay expressly sent by fortune from the country for his passing felicity and adornment. True it is, that Master Ralph Gum is scarcely looming out of boyhood; but there is a sort of genius that soars far beyond the parish register. Ralph's age is not to be counted by the common counters, years; but by the rarer marks of precocious intelligence. He is a liveried prodigy; one of those terribly clever animals that, knowing everything, too often confound simple people with their fatal knowledge. Therefore was it specially unfortunate for the damsel that of all the crowd that streamed through Fleet street, she should have asked Ralph Gum to indicate her way to St. Mary Axe. At the time, she was setting due eastward; when the faithless vassal assured her that she was going clean wrong; and, as happily he himself had particular business towards her destination, it would give him a pleasure he could never have hoped for, to guide her virgin steps to St. Mary Axe. And she—poor maid!—believed and turned her all-unconscious face towards Temple Bar. The young man, though a little dark, had such bright black eyes—and such very large, and very white teeth—and wore so very fine a livery, that it would have been flying in the face of truth to doubt him. Often at the rustic fire-side had she listened to the narrated wickedness of London; again and again had she pre-armed her soul with sagacious strength to meet and confound the deception that in so many guises prowled the city streets, for the robbery and destruction of the Arca-

dian stranger. She felt herself invincible until the very moment that Ralph gave smiling, courteous answer to her; and then, as at the look and voice of a charmer, the Amazonian breast-plate (forged over many teas) she had buckled on, melted like frost-work at the sun, and left her an unprotected, because believing woman.

"Why, and what 's them?" cried the girl, suddenly fixed before St. Dunstan's church. At the moment the sun reached the meridian, and the two wooden giants, mechanically punctual, striking their clubs upon the bell, gave warning note of noon. Those giants have passed away; those two great ligneous heroes of the good old times have been displaced and banished; and we have submitted to learn the hour from an ordinary dial. There was a grim dignity in their bearing—a might in their action—that enhanced the value of the time they noted: their clubs fell upon the senses of the parishioners and way-farers, with a power and impressiveness not compassable by a round, pale-faced clock. It was, we say, to give a worth and solemnity to time, to have time counted by such grave tellers. If the parishioners of St. Dunstan and the frequent passengers of Fleet street have, of late years, contributed more than their fair quota to the stock of national wickedness, may not the evil be philosophically traced to the deposition of their wooden monitors? This very valuable surmise of ours ought to be quoted in parliament—that is, if lawmakers properly prepared themselves for their solemn tasks, by duly conning histories like the present—quoted in opposition to the revolutionary movement of the time. For we have little doubt that a motion for the return of the number of felonies and misdemeanors—to say nothing of the social offences that may be the more grave because not named in the statutes—committed in the parish of St. Dunstan's, would show an alarming increase since the departure of St. Dunstan's wooden genii. A triumphant argument this—we modestly conceive—for the conservation of wooden things in high places. "La! and what 's them?" again cried the girl, twelve o'clock being told by the strikers.

"Why, my tulip, them 's a couple of cruel churchwardens turned into wood hundreds of years ago, for their sins to the poor. But you *are* a beauty, that you are!" added Ralph, with burning gallantry.

"It can't be; and you never mean it," said the maiden, really forgetting her own loveliness in her wonder of the giants. "Turned into wood! Impossible! Who did it?"

"Why, Providence—or, something of the kind, you know," replied the audacious footman. "You've heard of Wittington, I should think, my marigold, eh? He made a fortin in the Indies, where he let out his cat to kill all the vermin in all the courts—and a nice job I should think puss must have had of it. Well, them giants was churchwardens in his time: men with flesh and blood in their hearts, though now they'd bleed nothing but saw-dust."

"You don't say so! Poor souls! And what did they do?" asked the innocent damsel.

Mr. Ralph Gum scratched his head for inspiration; and then made answer: "You see, there was a poor woman—a sailor's wife—with three twins in her arms. And she went to one churchwarden, and said as how she was a starving; and that her very babbies could n't cry for weakness. And he told her to come to-morrow, for it was n't

the time to relieve paupers: and then she went to the other churchwarden, and he sent out word that she must come again in two days, and not afore."

"Two days!" cried the maiden. "The cruel creturs! did n't they know what time was to the starving!"

"Why, no; they did n't; and for that reason, both the churchwardens fell sick, all their limbs every day a turning into wood. And then they died; and they was going to bury 'em, when next morning their coffins was found empty; and they was seen were they now stand. And there was a act of parliament made that their relations should n't touch 'em, but let 'em stand to strike the clock, as a warning to all wicked churchwardens to know what hours are to folks with hungry bellies."

"Wonderful!" exclaimed the girl, innocent as a bleating lamb. "And now, young man, you're sure this is the way to Mary Axe!"

"Did n't I tell you, my sunflower, I was born there! I would carry your bundle for you, only you see, his lordship, the nobleman I serve, is very particular. Livery's livery;—he'd discharge any of us that demeaned himself to carry a bundle. Bless you: there are young fellows in our square—only I'm not proud—that would n't speak to you with such a thing as a bundle; they would n't, my wild rose. But then, you're such a beauty!"

"No; I am not. I know what I am, young man. I'm not of the worst, but a good way from the best. Besides, beauty, as they say, is only skin-deep; is it?" asked the maiden, not unwilling to dwell upon the theme.

"Well, you're deep enough for me anyhow," replied the footboy, and he fixed his eyes as though he thought them burning-glasses, on the guileless stranger. "And now, here you are, right afore Temple Bar."

"Mercy! what a big gate! and what's it for, young man!" cried the wondering girl.

"Why, I once heard it said in our hall that Temple Bar was built on purpose to keep the scum of the city from running over into the West End. Now, this I don't believe," averred Ralph.

"Nor I, neither," cried the ingenuous wench, "else, does n't it stand to reason they'd keep the gate shut?"

"My 'pinion is what I once heard—that Temple Bar was really built at the time of the great plague of London, to keep the disease from the king and queen, the rest of the royal family, with all the nobility, spirital and temperal." And Ralph coughed.

"Well, if you don't talk like a prayer-book!" exclaimed the maiden, full of admiration.

"I ought by this time; I was born to it, my dear. Bless your heart, when I was no higher nor that, I was in our house. I learnt my letters from the plate; yes, real gold and silver; none of your horn-hooks. And as for pictures, I didn't go to books for them neither; no, I used to study the coach-panels. There was n't a griffin, nor a cockatrice, nor a tiger, nor a viper of any sort upon town I was n't acquainted with. That's knowing life, I think. It is n't for me to talk, my bed of violets; but you would n't think the Latin I know; and all from coaches."

"Wonderful! But are you sure this is the way to Mary Axe?" and with the question the

maiden crossed the city's barrier, and with her lettered deceiver trod the Strand.

"If you ask me that again," answered the slightly wounded Ralph, "I don't know that I'll answer you.—Come along. As the carriage says, '*Hora et semper*.'"

"Now, if you go on in that way, I won't believe a word you say. English for me; acanse then I can give you as good as you send. No; wholesome English, or I won't step another step;" and it was plain that the timid rustic felt some slight alarm—was a little oppressed by the mysterious knowledge of her first London acquaintance. She thought there was some *hocus pocus* associated with Latin: it was to her the natural utterance of a conjuror. With some emphasis she added, "All I want to know is—how far is it to Mary Axe!"

"Why, my carnation, next to nothing now. Step out; and you'll be there afore you know it. As I say, I only wish I could carry your bundle—I do, my daisy." Mr. Gum might have spared his regrets. Had his gracious majesty pulled up in his carriage, and offered to be the bearer of that bundle, its owner would have refused him the enjoyment; convinced that it was not the king of England who proposed the courtesy, but the father of all wickedness, disguised as royal Brunswick, and driving about in a carriage of shadows, for the especial purpose of robbing rustic maids. As we have intimated, the damsel had, in the fastnesses of Kent, learned prudence against the iniquities of London. And so, believing that St. Mary Axe was close at hand, she hopefully jogged on.

"What a many churches!" she said, looking at St. Clement's. "Well, the folks in London ought to be good."

"And so they are, my wallflower," rejoined the footman. "The best in the world; take 'em in the lump. And there, you see, is another church. And besides what we have, we're a-going to have I don't know how many hundred more built, that everybody, as is at all anybody, may have a comfortable pew to his whole self, and not be mixed up—like people in the gallery of a playhouse—along of the lower orders. I dare say, now, your grandmother in the country?"

"Ain't got no grandmother," said the girl.

"Well, it's all the same: the old women where you come from—I daresay they talked to you about the wickedness of London, did n't they? And how all the handsome young men you'd meet was nothing more than roaring lions, rolling their eyes about, and licking their mouths, to eat up anybody as come fresh from the daisies! Did n't they tell you this, eh, beauty?" cried Ralph.

"A little on it," said the girl, now pouting, now giggling.

"And you've seen nothing of the sort? Upon your word and honor now, have you?" and the footman tried to look winningly in the girl's eyes, and held forth, appealingly, his right hand.

"Nothing yet; that is, nothing that I knows on," was the guarded answer of the damsel.

"To be sure not. Now my opinion is, there's more downright wickedness—more roguery and sin of all sorts in an acre of the country than in any five miles of London streets: only, we don't kick up a noise about our virtue and all that sort of stuff. Whilst quite to the contrary, the folks in the country do nothing but talk about their innocence, and all such gammon, eh?"

"I caa't hear innocence called gammon afore

me," said the girl. "Innocence is innocence, and nothing else; and them as would alter it ought to blush for themselves."

"To be sure they ought," answered Gum. "But the truth is, because lambs don't run about London streets—and birds don't hop on the pavement—and hawthornes and honeysuckles don't grow in the gutters—London's a place of wickedness. Now, you know, my lily of the valley—folks arn't a bit more like lambs for living among 'em, are they?"

"Is this the way to Mary Axe?" asked the girl, with growing impatience.

"Tell you, 'tis n't no distance whatever, only first"—and the deceiver turned with his victim out of the Strand—"first you must pass Drury-lane playhouse."

"The playhouse—really the playhouse!" exclaimed the wench, with an interest in the institution that in these times would have sufficiently attested her vulgarity. "I should like to see the playhouse."

"Well then, my double heartsease, here it is," and Ralph with his finger pointed to the tremendous temple. With curious, yet reverential looks, did the girl gaze upon the mysterious fabric. It was delicious to behold even the outside of that brick and mortar rareeshow. And staring, the girl's heart was stirred with the thought of the wonders, the mysteries, acted therein. She had seen plays. Three times at least she had sat in a wattle-built fane, and seen the dramatic priesthood in their hours of sacrifice. Pleasant, though confused, was her remembrance of the strange harmonies that filled her heart to overflowing—that took her away into another world—that brought sweet tears into her eyes—and made her think (she had never thought so before) that there was really something besides the drudgery of work in life; that men and women were made to have some holiday thoughts—thoughts that breathed strange, comforting music, even to creatures poor and low as she. Then recollections flowed afresh as she looked upon that mighty London mystery—that charmed place that in day-dreams she had thought of—that had revealed its glorious, fantastic wonders in her sleep. The London playhouse! She saw it—she could touch its walls. One great hope of her rustic life was consummated; and the greater would be accomplished. Yes: sure as her life, she would sit aloft in the gallery, would hear the music, and see the London players' spangles.

"And this is Drury-lane!" cried the wench, softened by the thought—"well! I never!"

"You like plays, do you? So do I. Well, when we know one another a little better—for I would n't be so bold as to ask it now—in course not—won't we go together?" said Ralph; and the girl was silent. She did not inquire about St. Mary Axe; but trustingly followed her companion, her heart dancing to the fiddles of Drury-lane: the fiddles that she would hear. "And this is Bow-street my jessamy," said Ralph.

"What's Bow-street?" inquired the maiden. How happy in the ignorance of the question!

"Where they take up the thieves, and examine 'em, afore they send 'em to Newgate to be hanged." The wench shivered. "Never saw nobody hanged, I suppose? Oh, it's nothing, after two or three times. We'll have a day of it, my sweet marjoram, some Monday. We'll go to the Old Bailey in the morning, and to the play at night:

that's what I call seeing life—eh, you precious pink! But, I say arn't you tired?"

"Well, I just am. Where is Mary Axe?" And the girl stared about her.

"Why, if I have n't taken the wrong turning, I'm blest, and that's lost us half a mile and more. I tell you what we'll do. This is a nice comfortable house." Ralph spoke of the Brown Bear; at that day, the house of ease to felons, on their transit from the opposite police office to Newgate. "A quiet respectable place. We'll just go in and rest ourselves, and have atween us half-a-pint of ale."

"Not a drop; not for the blessed world," cried the girl.

"And then, I'll tell you all about the playhouse and the players. Bless you! some of 'em come to our house, when the servants give a party. And we make 'em sing songs and tell stories, and when they go away, why, perhaps, we put a bottle of wine in their pockets—for, poor things! they can't afford such stuff at home—and then they send us orders, and we go into the pit for nothing. And so, we'll just sit down and have half-a-pint of ale, won't we?"

Silently the girl suffered herself to be led into the Brown Bear. The voice of the charmer had entered her heart, and melted it. To hear about plays and players was to hear sweet music: to listen to one who knew—who had spoken to the glorious London actors—who, perhaps, with his own hand had put wine-bottles in their pockets—was to gain a stride in the world. The gossip would not delay her above half an hour from St. Mary Axe; and what wonders would repay her for the lingering! Besides, she was tired—and the young man was very kind—very respectful—nothing at all like what she had heard of London young men—and, after all, what was half-an-hour, sooner or later!

Mr. Ralph Gum intoned his orders like a lord. The ale was brought, and Ralph drank to the maiden with both eyes and lips. Liquor made him musical: and with a delicate compliment to the rustic taste of his fair companion, he warbled of birds and flowers. One couplet he trolled over again and again. "Like what they call sentiment, don't you?" said Ralph.

"How can I tell?" answered the girl: "it's some of your fine London stuff, I suppose."

"Not a bit on it; sentiment's sentiment all over the world. Don't you know what sentiment is? Well, sentiment's words that's put together to sound nicely as it were—to make you feel inclined to clap your hands, you know. And that's a sentiment that I've been singing"—and he repeated the burden, bawling:

"Oh the cuckoo's a fine bird as ever you did hear,
And he sucks little birds' eggs, to make his voice clear."

"There! don't you see the sentiment now?" The maiden shook her head. "Why, sucking the little birds' eggs—that's the sentiment. Precious clever birds, them cuckoos, eh? They're what I call birds of quality. They've no trouble of hatching, they have n't; no trouble of going about in the fields, picking up worms and grubs for their nestlings: they places 'em out to wet nurse; makes other birds bring 'em up; while they do nothing themselves but sit in a tree,

and cry cuckoo all day long. Now, that 's what I call being a bird of quality. How should you like to be a cuckoo, my buttercup?"

"There, now, I don't want to hear your nonsense. What 's a cuckoo to do with a Christian?"—asked the damsel.

"Nothing, my passion-flower—to be sure not; just wait a minute," said Ralph—"I only want to speak to my aunt that lives a little way off; and I'll be back in a minute. I've got a message for the old woman: and she 's such a dear creetur—so fond of me. And atween ourselves, whenever

she should be made an angel of—and when a angel 's wanted, I hope she'll not be forgotten—shan't I have a lot of money! Not that I care for money; no, give me the girl of my heart, and all the gold in the world, as I once heard a parson say, is nothing but yellow dirt. And now I won't be a minute, my precious periwinkle."

And with this, Mr. Ralph Gum quitted the room, leaving the fair stranger, as he thought, in profoundest admiration of the disinterestedness of footmen.

IBRAHIM PACHA'S OPINION OF PEEL.

A FAST express was despatched by the Philo-Egyptians of London to Ibrahim Pacha at Belfast, bidding his highness leave the Irish to themselves for the moment, and hasten back to London, to enjoy the rare sport of being in at a ministerial death. Ibrahim is the most docile of lions, and took return steam forthwith, with all his dragomans and his secretaries, with whom he transacts business to the doors of St. Stephen's. Sir Charles Napier was in attendance, and took his seat in the peer's gallery, by the pacha's side, whilst a succession of political cicerones occupied the bench immediately before him, and responded most courteously and fully to all the questions of the Egyptian. Sir Robert Peel, Lord Monteagle, Mr. Cobden, *et tu Brute*, Lord Palmerston, all came to contribute their mite of intelligence and explanation; and never did a poor Mussulman appear more perplexed with abundance of knowledge than Ibrahim.

The vizier, he was told, was going to fall, because half of his corps of janizaries had rebelled and turned against him. From time out of mind these household troops had levied a handful of piastres on each barrel of corn, which money they put into their own pockets. The vizier would abolish this privilege of the janizaries putting their hands into every man's corn-sack, and abstracting a piece of the poor man's loaf, when the janizaries, as usual, hoisted their camp-kettles on their lances to show that their cookery, the most servile part about them, was too sorely menaced, and that they would resist. Hereupon the people, whose stomachs were equally concerned, hoisted their soup-cauldrons, which so eclipsed the camp-kettles of the janizaries that they gave in.

Lord Monteagle, who learned the science of apologue from poor Sydney Smith, expounded this one into the ear of the Pacha, who was greatly struck by it. Still he asked, how is it, that, although the party of the camp-kettles are beaten, still they can slay the vizier. This is owing, expounded his lordship, to an unfortunate habit that the vizier has of continually changing his armor and his uniform, and running between contending parties, so as to have the honor of reconciling and managing compromises between both. He has thus been unavoidably struck by the missiles of both. Nor, indeed, would there be any possibility of letting him escape unharmed, except by a general cessation of hostility and activity, both parties consenting to abandon the field, and leave it to the vizier all alone.

Yet one of your chiefs of the people, said the pacha, the man of the great popular soup-cauldron, Cobden, Eff'ndi, he has been to me, lamenting over the untimely fate of Peel, saying the

country might spare a better man. I thought Mr. Cobden a wiser man, said the pacha's interlocutor, than to lament over the fall of the vizier. For it is the nature, and the fortune of that statesman to gather far more strength out of office, than in. In office he is domineering, churlish, envious, incommunicative, yet capricious and changeable withal, made, in fact, to lose friends, and let influence escape through his fingers. Out of office, he is the star that attracts all hopes, and rallies all disappointments and eclipses all rivals—that is, the man who has done so much, and in so many contrary senses, for so many diverse parties, that there is no man who may not hope in him, even the Irishman, who believes in an independent millennium. Better is it far, for the vizier to go out; to touch mother-earth, in order to rise refreshed and strengthened like the Titan, and to return to power with the confidence of half a dozen combined, yet jarring and gulled parties, in order to achieve some other great act of reform, destructive to his own friends, suicidal to himself.

Much of this was "caviare" to the pacha, who merely said that he considered the English vizier as a good Turkish politician, anxious to fill the people's bellies, and at the same time belabor their backs, which were the two great means of preserving popular tranquillity. I have caught a glimpse of your Irish, and do think that more feeding and more beating would greatly improve them. And this I learn is the policy of the vizier.

Yes, your highness, but the Irish kick against the beating, and we are obliged to send soldiers to support the cudgellers, so that the country costs more in money, than it affords, and adds more to the weakness than the strength of the empire.

That I can conceive, said the pacha; when you cannot extirpate a tribe, you must conciliate it. We tried the plan with the Nubians, who are our Irish, and it did not succeed.

We hope this faithful report of Ibrahim Pacha's conversation may not be deemed impertinent.

Examiner.

THREE years ago the tribunals of the Austrian empire were desired by the government to give their opinion as to whether it would be advisable to substitute, in cases of capital punishment, the French plan of the guillotine for hanging. The reply was against decapitation, as habituating the people to the sight of blood. A year ago a surgeon of Padua submitted to the government a new mode of strangulation by means of a gibbet, so contrived as to occasion the luxation of the spine and immediate death. This mode of execution, after several experiments, has been adopted for the whole of Venetian Lombardy, and the inventor is charged with the direction of the executions.

From Fraser's Magazine.

THE TWO GRAVES.

THE church itself was almost entirely overgrown with ivy, and its low square tower was even overtopped by the vigorous parasite by which it was embraced. As I had been ciceronised over every foreign country that I had visited, and was now resolved to follow a totally different course, I asked no questions, and trusted to my own talent for exploration to discover all the lions into whose dens I might penetrate. I did not, consequently, seek for the key of the church and a catalogue of the monuments, a demand which, in this instance, I should, moreover, have considered as somewhat more than supererogatory; but with Snap at my heels, I turned towards the spot where the modest temple stood in a shady niche between two of the hills which framed in the hamlet.

As I approached I was struck by the extreme beauty and antiquity of half-a-dozen stately yews, which kept their funereal watch over the narrow space where

"The rude forefathers of the hamlet sleep;"

they were, in truth, magnificent; and as soon as I had passed the little wicket, I was no less attracted by the extreme order and neatness of the whole enclosure. Somewhat to my surprise, for I had discovered no habitation in the village which could lead me to expect it, I saw upon my right hand, in the full blaze of the southern sun, a raised tomb of stone, surrounded by an iron railing, and evidently covering a vault. I was about to turn my steps that way, when, chancing to glance in the opposite direction, my eye fell upon a grave, made immediately under the north wall, and crushed into the extreme angle of the corner, as though he who dug it had grudgingly yielded the space which it must necessarily occupy: while near it, as if to contradict this soul-chilling suspicion, two white rose-trees had been planted, one at the head and the other at the foot of this nameless mound; and they were both in bloom, but not kindly: the aspect was unpropitious, and the soil evidently ungenial, and thus the stems were too fragile even to support the dwarfed and languid blossoms which they had borne, and which hung their heads, and suffered their sickly petals to be scattered by the light breeze that should only have extracted their perfume. I advanced slowly and reverently towards that isolated grave, and I stood long beside it. It was, as I felt at once, that of an outcast; but, assuredly, not of one who had been totally unloved. There had, perchance, been error, even sin, hidden beneath that grassy tumulus, but human affection had as clearly outlived the fault; and those white blossoms were, like the wings of the dove of Noah, the harbingers of a brighter hope. I had a strange desire to learn the history of the silent heart now mouldering into dust beneath my feet, but there was not a letter, not a clue to guide me to such knowledge; and at last I turned away and walked across the church-yard to the tall square tomb. There I read that beneath that stone lay the bodies of I know not how many esquires and dames of the name of Darcourt, and they were all of old date save one; that of Richard Darcourt, Esq., who died in August, 1812, and in whose person the family became extinct.

Who was Richard Darcourt, Esq.? And how came he and his ancestors to be buried here, in this secluded spot of earth, where their proud

monument was out of keeping with everything about it? There were scarcely half-a-dozen headstones throughout the whole extent of the church-yard; one of these identified the remains of a former curate, who died at the patriarchal age of eighty-nine; another recorded the death of a fair girl, just advancing into womanhood: the last, as the inscription said,—and how mournful was the reflection!—the last surviving child of that same widowed old man. She had gone before him, and he had borne up for five long months after his bereavement before he "fell asleep" in his turn.

I was still meditating upon this melancholy record when I heard, at no great distance, a dull, measured, monotonous sound, which I could not mistake. I was not alone in the death-garden. It was the opening of a grave, and the work was going forward behind the church, where I had not yet penetrated. I turned in that direction and found that I had not deceived myself; a half-dug grave was before me, and in the pit stood an old man, so old that it was clear some one must soon render the same christian service to himself. He had thrown off his coat, which lay upon the grass, his head was bare, and his long hair, which glittered in the light like silver, fell over his shoulders. I watched him as he worked. His sun-burnt and muscular hands grasped the spade with a strength which seemed incompatible with his years, and he pursued his task steadily, and with a precision evidently the result of long habit. After a time he raised his head, and seeing me observing him, lifted his hand as if to withdraw his cap, which being already thrown aside, he was compelled to substitute a grasp of some of the white hair which had elicited my admiration.

"You have a hard task there, my friend," I said, as I advanced to the edge of the grave.

"Not so hard as you think, belike, sir," was the quiet reply; "the soil's kindly, and I've been at it all my life."

"And that life has been a long one," I rejoined; "you must have stretched many to rest in their last home since you dug your first grave."

"You are right, sir," said the old man, ceasing from his labor, and leaning lightly upon his spade, more as it seemed from habit than from necessity; "old and young, rich and poor, happy and heart-broken; some who were loth to die, and some who were thankful to be beyond further trial. There's no stranger book, sir, than a church-yard. Take every one of these graves, and if you could read what's written on the hearts that are rotting in them, you'd know more of life, mayhap, than you'll ever learn from the living."

"I am sure of it," I answered, astonished both at the words and manner of the old sexton; "and as you must know all this, perhaps you will be kind enough to answer me a question?"

"You need n't ask it, sir,—you need n't ask it," was the somewhat impatient reply. "You want to know the history of Squire Darcourt, who lies yonder in the big tomb. He is on the south, you see—matter of course, sir, matter of course—the gentlefolks have had the sunshine all their lives, and they claim it after they're dead. They could n't lie quiet yonder in the shade, where the soil's damp and the sky dark—no, no, they could n't lie quiet there." And he resumed his task with a vigor which had in it more of bitterness than zeal.

"You mistake me, my good friend," I said soothingly; "I care nothing for either that for-

mal tomb or its tenant; my interest leans to the very spot of gloom which you have just denounced. I want to learn the history of a solitary grave planted with rose-trees. I would pledge five years of my life that it contains the most fertile page in that book of which you just now spoke."

The old man raised his head, and looked at me steadily.

"You are a stranger, sir," he said, in a subdued and altered tone, utterly unlike his late irritation, "and the tale is a long one, and a sad one; and I might n't tell it altogether after a fashion to please your ears, for you are a gentleman—I have seen enough of 'em to know one at first sight; and, perhaps, you may be, too, like the squire yonder was for a time, a parliament man. But I hope not, sir—I hope not; for if they're all alike they'll have a deal to answer for in the next world, though their tombs may be of stone and iron in this, while the poor must be content with grass and osiers."

I cannot tell why, but I would not have admitted the fact at that moment for all the condensed wisdom of St. Stephen's.

"Do me more justice," I said, "and tell the tale in your own way; I should not like it so well in any other. And, first, who lies yonder in that narrow grave?"

"My only sister," answered the sexton, without raising his eyes.

I began to regret my curiosity. I had evidently given the old man a pang, and I could devise no better method of at once terminating the conversation than by saying—

"Pray forgive me: I was misled by the freshness of the grave, and thought that it had been that of a young person."

"And so it is, sir,—young, and beautiful, and—loving, with a smile or a tear for every one, friends and foes alike. And the grave is fresh, sir—the grave is fresh, as you say—and it would be hard if it were n't: as if old John Saunders, who has spent his life in throwing up the soil for every one that would pay him for his labor, could n't keep one little mound clean and tidy, out of love for the poor thing that lies under it!"

I bent my head affirmatively, but did not utter a word; the old man's mood was evidently softening.

"But it was n't always as it is now, shame be with me who am obliged to own it! If you had come here three-and-thirty years ago, sir, you'd have seen that damp corner smothered in nettles, that grew tall and strong, as if they tried to hide the grave that had been dug there. And it did my heart good to see 'em, and I would have watered and weeded 'em, had they needed it, to make 'em taller and stronger still. But I learnt to feel better and softer afterwards," pursued the sexton, in a lower voice, as he raised his eyes reverently to heaven; "and I began to understand that I had grudged her enough, and that, surely, I might let her lie like a Christian in the cold corner where I had thrust her away, without making her grave a marvel to the village. Ah, sir! I might have laid her down here, under one of these yew trees, and cut her name, and her age, and the day she died, upon the trunk, for our parson was too good a man to have hindered me. He thought that I had suffered enough, but I had n't, sir, I had n't—I had n't got my pride under, and my grief was choked with it. I had more to learn yet; so I refused to dig her a grave, as I should have done,

where she might have laid among the friends of her youth, and the old people that she had seen seated about her father's hearth; and I put her there, as if, even after death, she was to be a mark and a stare."

"What was her name?" I asked, almost in a whisper, for I began to suspect that I could read her history.

"Amy, sir—Amy Saunders: and that's a name that has n't passed my lips for many a long year. And Amy Saunders—it seems to do my heart good any how to name it now—Amy Saunders was only another way of talking of the prettiest and the merriest—ay, sir, and for all that's come and gone—the modestest girl in Thornhol-low, till the trial came, and then it was who could say first, that they had seen how 't would be months before; and that people was always pulled down that set themselves up for proper and better than their neighbors; and that if John Saunders had n't been a fool, he'd have seen that he might just as well have sent his sister to London to live, as up to the great house."

"The great house?" I repeated, interrogatively.

"What! you have n't seen it yet, sir!" said the old man. "It lies beyond, at the back of the hill yonder, and they do say that it's a wonderful bit of building, for it's stood I don't know how many centuries; and I can remember it a grand place in my time, with gardens, and groves, and terraces, and a park of deer, and an avenue of beeches up to the fore-court, that looked in the autumn like two long lines of gold, and livery servants lounging about the hall, and music and laughing ringing out through the open windows, and making the yeoman's heart lighter as it came sweeping along the wind to the lone field where he was at work. The curse of a broken heart, wrung out of its shame, had n't lightened on it then."

"And now, my friend?" I asked, with all my sympathies awakened by the stern eloquence of the old man.

"Now, sir," he answered, bitterly, as he leant back and supported himself against the wall of earth behind him, "the plough has passed over the trim park where ladies used to walk about in satin shoes without hurting their tender feet, and the beeches have been cut down to raise money to spend in foreign parts, and the gardens have run to waste and are choked up with weeds, and the fishponds, that used to look like bits of clear glass, and were full of gold and silver fish, are mudholes, where the frogs and tadpoles breed at their ease. The shutters are close shut, and the house empty. I wandered through it once, unbeknown to any one, for I knew a way in, and I wanted to see the end of the wicked. All was dark—dark: ay, as dark as that lone grave yonder, or the big tomb that looks down upon it; and the grand chambers echoed"—and here the old man almost gave way to a burst of cruel merriment—"as if they knew that the same feet that used to tread 'em would never tread 'em again. They would have ploughed up to the very doors, sir, for land like ours about here is too good to waste, but they could n't; for the fore-court is shut in with tall iron rails and wide gates, with a bit of gilding on the spikes, and the place is what they call in Chancery, and must n't be touched; for the law is that it should be left to fall into ruin quietly, and no mischief done. So there the big house stands, in the middle of corn and potato-fields, as if it had dropped down

ready made from the skies, and had no business there. I suppose at the end of two more lives as long as mine, if it holds out, they'll say it's haunted, and it's sure that many a one has been so for less."

"But was there no lawful heir," I inquired, "to save so fine a property as you describe from such a fate?"

"There were two of them, sir—there were two of them, and that they say was the evil. When the squire yonder," and he jerked his head in the direction of the vault of the Darcourts, "went mad and died, his sister was left, and she had married some great lord from foreign parts who took her away to where he came from; I don't rightly remember now where it was, to France, or to the Ameriky's, or somewhere about there, and as she was n't here to take care of herself, up starts a cousin that she had never seen or heard of, from t'other side of England, a long way off, and says as he is heir-at-law; so poor Miss Emily is advised to 'throw it into Chancery,' I think they call it, which means that nobody is to have it, for the good of them both, and there it is."

"It was a melancholy death for the last of an old family to die," I observed.

"You would have said so, sir, if you had seen and heard it as I did. I did n't envy him his down bed and his satin curtains that night, for I had seen my father and mother die in our little cottage, in a room with a brick floor and whitewashed walls, the same room that I and she were born in, and where I hope to die myself; there were tears and sighs there, sir, I own, and many of them, but neither howls, nor screams, nor terror. I never knew before how little money or luxury could help at such a time, but I learnt it then."

"Was there insanity in the family?"

"No, sir, never before. The old squire and madam lived to a good old age in peace and charity with all men, and for the last ten years they never stirred from the hall, which folks said was all the worse for their son, for London seems to be but a queer place for young men, when they've no one to look after 'em. They thought he spent a mint o' money—they owned that; but when he paid some thousands of pounds to get to be a parliament man, that seemed to set all right at the hall; and madam used to look so very eager-like at the parson on a Sunday when he prayed for the 'high court,' a-thinking, as she was, of the young squire; and all the village was so glad to do her pleasure, that the 'amen' to that prayer was always the loudest; but it would n't all do, for it was n't likely that a gay young blade that could n't rule himself could be a better hand at ruling the nation."

"Did he succeed in making any figure?" I asked, with a smile.

"I should think he did, sir," replied the sexton, with all the gravity of a profound conviction, which he was too modest to put into words, "for before long he got turned adrift again, and he never could get in after that. He said when he came down home that they was all alike, for that there was a 'dissolution;' but you know, sir, ignorant as we are about here, we could n't quite believe that; for it was n't likely or natural that they should all die off at once, so we just took it for what it was good for, and saw clear enough that the king and the parliament had had enough of him."

"And was he unpopular at that time?"

"Not a bit, sir; for though he was wild, and

proud, and passionate, he had a warm heart and a ready hand, and, above all, a way with him that won strangely upon the women. He ought never to have come to such a place as this: he was too clever for us, sir, in all the London ways. But all was joy up at the hall. Master Richard was so handsome, and the friends that he brought down with him to fish and shoot were so fashionable and elegant, that poor Miss Emily was delighted; and that's the way that she came to marry her outlandish husband, poor dear young lady! Do you know, sir, I've often wondered," pursued the sexton, leaning his chin upon the clasped hands that rested on the handle of his spade, "I've very often wondered if that was n't a sin that marrying of foreigners; for as they are all the natural-born enemies of old England, it seems to me that it never could be intended that they should come together with husbands from beyond seas."

"Why, you forget, my good friend, that our fair and gracious sovereign gave her royal hand to a German prince."

"That's the very thing that makes me doubt, sir, for I felt quite sure of it before, but when I heard of that I was staggered; and now I'm glad to know that I was wrong, for I loved Miss Emily like a child of my own. Though still I shall think, as long as I live, that our young ladies could find better, and fonder, and handsomer husbands at home than ever they'll do across the water."

"You and I, at least, are bound to believe so, Master Saunders."

"You are, sir—you are," retorted the old man; "as for me, I never thought of a wife but once, and I felt it my duty not to marry her; I had another duty to perform, sir, that I could n't ask her to share, though she'd have done it, as I well know, for my sake; and so from that time I made up my mind to stay as I was, and to live and die alone."

"You were, then, an orphan?"

"There were two of us, sir. My father went first, when he was still a fine hale man of fifty, from a fall he had; and my mother broke her heart six months afterwards, when Amy was only two years old. I dug both their graves with my own hands, and there they lie, side by side, as they lived. No, not that way, sir," he continued, following the direction of my glance, "but out away yonder. I put her as far from 'em as I could, for I thought she was n't worthy to be near 'em; and so, from my own wicked pride, I've brought the same misfortune on myself, for I shall lie by her, and she won't be alone much longer, that's one comfort."

"I understand her melancholy story," I said, with all the pity that I felt; "your poor young sister was tempted, and she fell."

The old man nodded his head, and wiped his hand across his eyes.

"And yet I ought n't quite to say so," he pursued, after a pause; "for you see, sir, here's the whole truth. Amy was not only the prettiest girl in the hamlet, but she was the best. On her death-bed my mother put her into my arms, and bade me remember that she would soon have no one to take care of her and watch over her but me, and as I was almost old enough then to be her father, she told me that I must act as such, and keep her from all evil ways, and make her happy; and I promised it all on my knees. And while she was a child she was seldom out of my sight, but played

in the fields while I was at work, with the hedge-flowers and the butterflies, searching for blackberries and wild roses, and making my heart glad and my arm strong. And when I was called here to dig a grave, she sat beside me on the grass, making necklaces of the daisies, and reminding me of the duties that were before me, and making me feel less lonely when I happened to look towards the place where I had laid our parents. But she could n't always be a child, and so she grew up to be a tall girl, wanting more learning than I could give her; and though the cottage was lonely enough when she was out of it, I sent her to the village school till she had learned all they could teach her; and I thought that was enough for one of her station, and was happy again to have her with me, singing about the house, and doing all that her poor mother had done before her, and, as I fancied, doing it even better. This was n't to last, however; for she was so pretty and so modest that Madam Darcourt noticed her for a time at church, and spoke to the parson about her, and then had her up to the hall and talked to her. I can't tell you how proud I was, sir, for I knew that she deserved it all; and I began to hope that belike they would do something more for her than I could. And so they did, sir—and so they did; and it was all well meant and kindly, though they had better left her in the old cottage to live with her brother and to work at her wheel. When Miss Emily saw her she took a great fancy to her, for they were nearly of an age; and so it was settled that I should be sent for, and my heart was in my mouth while I was putting on my Sunday suit to go up in my turn; and when I got there what should I see in the grand old oak room but Madam Darcourt, sitting in her big crimson chair by the fireside, watching the two girls, who were on their knees before a sofa, turning over a book of pictures, and the squire on the window-seat reading one of the London papers. I guessed how it would be directly, for Amy had taken off her bonnet and shawl, and Miss Emily's arm was round her neck, that was as red as a peony; and while Amy's eyes were cast down upon the pictures, Miss Emily was whispering in her ear and almost laughing in her joy. Well, sir, when I took my hat off at the door, the squire nodded his head, and madam smiled and told me to come in; but I knew myself better, and stood fast. It was just as I thought. First I was asked what relations I had about the place, and I said none at all but Amy; for my father came from a far shire when he was a boy to seek for work; and poor people, when they're once parted from their uncles and cousins, don't know much about 'em a few years after; and my mother was an orphan brought up by her grandmother, who died many years before of grief that her only son had been lost at sea: so that we were all alone. The lady said that she was glad of it, and then inquired what friends Amy had made in the village. I told her what was the truth, that every soul in the village was her friend, from the parson downwards, but that she had no playfellow but me, and had never asked for one. Madam looked more pleased than ever; and saying that she knew she could trust to my word, she began to tell me that Miss Emily was in want of a companion, both in her play and her learning, and that if I would consent to part with Amy, she should live at the hall so long as she continued to be a good girl, and learn of Miss Emily's governess and be treated like one of the family.

"I thought, sir, that the floor was sliding away from under my feet; and before I could get my voice again, up sprang Amy, threw off Miss Emily's arm, let the beautiful book fall upon the floor, and, without even waiting to pick it up, rushed to my neck and began to cry bitterly, saying that she could n't and would n't leave me forever.

"Ah, sir! why did n't I listen to that voice of nature that rung a warning in my ears? But I was young and hopeful then, and was full of wild and ambitious dreams for the baby-sister that I had reared. At least, I never thought of myself; I could n't afford to do that. The solitary cottage frightened me, and the long, long days and nights that I must pass without seeing Amy, or feeling her kisses on my lips, or hearing her clear voice carolling through the narrow rooms. And so it was me that persuaded her, and soothed her, and bid her go and kiss madam's hand, and thank her for all her kindness. And she obeyed me," pursued the poor old man, dashing away the tears which were now pouring down his furrowed cheeks—"she obeyed me, sir; for Amy had never till that day had any will but mine, and she could n't hold out long against it. And madam, who had kindly shed a tear herself, told me to take my little sister home, and to bring her back on the morrow: but I could n't venture that, and so I made bold to tell her. Amy was at the hall now; and, thankful as I was for all her goodness, I might n't, belike, have courage to take her back if once I had her at the cottage again. Miss Emily, too, was crying and clinging to her new friend; and the squire looked up from his paper and said that I was quite right, and that, as the worst was now over, it had better not be begun again; so the lady agreed with him, telling me that I need n't trouble about Amy's things, for that they would give her all she wanted at the hall, and that I might come and see her the next Sunday, and have my dinner there. I got away at last I hardly know how, and found myself in the great avenue.

"It was a Monday, sir—a Monday, in the afternoon—and I was n't to see Amy till the next Sunday. When I remembered that, I felt as if some one had clutched me by the throat—I could n't breathe; and if I had been a boy instead of a man I should have thought that I was sobbing. So I sat down under one of the trees and took off my hat, that the wind might blow in my face, and that did me good; and, after a time, I began to think, and, somehow, from one thing to another, I got on till I verily believed that I had made a fortune for Amy. I saw her riding in her own coach; and then I felt so merry that I tried to sing, but I could n't do that—I might as well have tried to pull up one of the old beeches by the roots. So, when I found it would n't do, I jumped up again and walked on to the village.

"I passed the wicket of my little garden, lifted the door-latch, and went into the cottage. I kept telling myself that I ought to be very glad; but somehow, when I found myself there alone, I felt just as I did the day that I came from my mother's funeral. I had ate nothing since breakfast, for Amy had been sent for just as she put our bit of bacon in the pot; and when I went I was in too great a hurry to follow her to think about my meal. When I got home the fire had gone out under the saucepan, and there was no cloth laid, though it was nearly supper time; but I did n't heed these things then, I only remembered them afterwards. I threw myself into an old high-backed wooden

chair, that had been my father's, and sat there, thinking of nothing, but quite lost, until the morning.

"The fresh air did me good when I went to my work, and I began to be angry at my own folly. It was hard enough, to be sure, to be parted from Amy, and to be left alone for the first time; but then it was for Amy's good, and I had promised to be a father to her; and all the while that pride was swelling at my heart, I kept telling myself that I had only done my duty, and that I must n't be thinking of my own pleasure and convenience. I never shed a tear, sir, through it all; perhaps I should have got over it better if I had, for the women seem to get rid of a deal of grief through their eyes! But I hoarded up all my sorrow, and even hid it from my neighbors when they inquired into the truth, and told me that Amy's fortune was made and that she would be a lady. And so Sunday came at last, and it rained hard and the family did n't come to church; but the rain was nothing to me, and, when the parson had gone home, I started for the hall.

"I thought Amy would have ate me up; but that hardly satisfied me. I should n't have known her again, for she had got lace on her frock, and a sash like Miss Emily's; and although I was proud to see her so fine, yet somehow she did n't seem to belong to me as she used to do. And I was n't a minute alone with her. I was asked into the schoolroom, where the governess never left us, and called me *Mister Saunders*, and told me that I ought to pray for madam every night of my life, and suchlike, as if she could feel what I did. And Amy smiled and cried at the same time, and inquired after her poultry and the donkey that she used to gallop over the hills upon, till she was reminded that she must leave off thinking of such things, and think of her learning; and then she hung her head and kissed me over and over again, but asked no more questions. This was bad enough, but when dinner came it was worse. I had n't had time yet to forget that Amy was my sister; but she dined in the parlor with the squire and madam, and Miss Emily and the governess, as the rule was every Sunday, and I in the servants' hall. It was n't for pride that I minded it, for the servants there were all ladies and gentlemen, and thought themselves very obliging to accept of my company; but I could n't bear to be parted from Amy, nor to have her taught to look down upon me; and I really believe that I should have carried her back again that night to the cottage if she had n't had on a parcel of fine clothes that did n't belong to her.

"Next thing, sir, I was asked up once a fortnight, and then once a month; but, for a time, Amy persisted in sitting by me at church on a Sunday, and reading out of the same book, and she used to wear her old bonnet and shawl that she had on when she left home, though I soon saw myself that they did n't look rational over muslin and silk frocks, for she had soon outgrown her own. At last, one Sunday, when I was dining at the hall, madam sent for me to the big room, and told me that she was quite satisfied with my behavior, and was sorry to say anything that might hurt me, but that if Amy was to be Miss Emily's friend, it was n't becoming that she should leave the squire's pew, or wear the Sunday-school dress that likened her to the rest of the village girls. I think I felt that saying more than all the rest, sir, for I had been glad to believe that we were equal

there at least; and now I saw that I should be obliged to sit alone, and only see her a long way off, when I caught a sight of her bright young face between the crimson curtains of the pew. But there was no help for it, and so I promised Madam Darcourt that I would forbid her to come to me. And I did it—I did it, sir; but I don't know how I had the heart, for I began to see that they wanted to shake me off, and that it was only Amy's innocent love that prevented it. However, I never saw that Sunday-school bonnet again, and we never more sat side by side upon that narrow bench.

"Well, sir, they grew up, those two beautiful young girls; but Amy was the handsomest of the two and the cleverest, for Miss Emily was n't fond of learning and was a spoiled child, while the poor cottager's daughter gave all her mind to her books, and, not content with learning what they bid her, learned a power of other things that they never meant her to know. And she had such an air, sir! Many times I've put my hand to my hat to pull it off when she spoke to me, if she had n't hindered it with a smile and a kiss. And so as I found she was getting beyond me, and would never be fit for the cottage again, I began to think that I got on badly enough with the old woman that looked after me, and that I'd better search about for a wife. There were plenty of girls in the village, and good girls too; but Amy had spoiled me, so I was in no hurry to make up my mind, for I would n't give her a sister that she might be ashamed of, and I was too poor to look for anything grand. However, I kept my eyes about me; and just then the young squire came home, after what he called the dissolution. I shall never forget him at church the next Sunday; how polite he was, looking out the places in her prayer-book, and putting on her shawl when they were going home. All the village was up in arms; but I did n't like it—it did n't seem to me to be natural. And when Amy wished me good-by at the porch, and got into the coach with madam, and Miss Emily, and the governess, to go home, altogether it did n't seem to me to be right, and I began to be uneasy about her. But Master Richard was soon off again, and I forgot all about it, till the old squire was taken ill and had two physicians from the county town. But all would n't do, and at the end of four months he died.

"That was the first time the vault had been opened since I took up my father's trade, and I need n't tell you, sir, how heavy my heart was when I set about it. It seemed to me to be only the beginning of evil, and so it was; for madam began to pine when he was gone, and the young squire, who had come down for the funeral with the lawyers and suchlike, would n't leave her, but stayed on for a whole year at the hall; and at the end of it he buried her. Then Miss Emily refused to leave the place; and so he came and went between London and the hall, that was now his own, and a few months afterwards the house was full. The governess stayed on as housekeeper, and Miss Emily and Amy loved one another more than ever.

"Before very long news came to the village that Miss Emily was about to be married; and then my heart was full, for I did n't know what would become of my sister. Madam had left her five hundred pounds in her will, and she was a match for the best farmer in the country. But I began to be afraid that she'd never settle to work

after the life she 'd led and the learning she 'd got ; and so I took upon myself one day when, for a wonder, we were left alone, to talk to her about these matters. I could make nothing of it, however ; she only blushed and smiled, and told me to keep myself easy, for she 'd been luckier than she deserved, and she 'd tell me all, only that she must n't until after Miss Emily's marriage. I thought this hard ; I felt as though she ought n't to have a secret from her only brother, and one who had brought her up from a baby. But she had a way with her that always upset me ; and so I kissed her and told her that she knew best, as, of course, she must, and tried to think that all would come right in time.

"I shall never forget Miss Emily's marriage, sir. The squire was like one beside himself. Gold flew about on all sides, as had never been seen before in Thornhollow ; and we were all glad of it for the parson's sake, for he wanted it had enough. There was a fair on the common, and a dinner for all the village in the park. But the grandest sight was the wedding. Two of the bridegroom's sisters had come over, and there were they and Amy all dressed alike, like princesses, and Miss Emily, like a queen as she was, and a great lady as she was going to be. But I thought that Amy looked very pale, and sad, and ill ; and once or twice I caught her eye turned upon me, as if to see whether I was watching her ; and when our eyes met she smiled, but it was n't a smile of joy, and it made my heart ache.

"I went up to dine at the Hall, but I did n't see Amy. Miss Emily was to start at six o'clock in the evening, in a carriage-and-four, with her new husband, and Amy had promised not to leave until the governess was ready to follow ; but, for all that, I was startled to hear from the lady's-maid that she had n't made any preparation for a move. I could n't understand it ; and I laid awake all night, tired as I was, thinking over what she was going to do. I heard it soon enough.

"A fortnight afterwards I had a message from the Hall, and in five minutes I was on the road there. Instead of taking me to the housekeeper's room, as they 'd done since the young squire had been master there, I was walked up to the breakfast parlor, and there I found Amy."

The old man paused and gasped for breath, then glanced towards the little northern grave, shook his head mournfully and continued,—

"She was n't dressed out in her silks, sir, but in a sort of white wrapping-gown ; and I saw the minute I looked at her what I ought to have discovered long before. My head failed, I reeled, and hung on to a chair for support.

"I'm an old man, sir ; but if I was to live for another century I should never forget that day, nor the night that followed it. Amy sprang across the floor and threw herself on her knees before me : but I had no mercy. It was more than I could bear. She had been my first thought in the morning and my last at night ; my heart was bound up in her. I'd watched over her when she was an infant in the cradle, cherished her when she 'd no other parent, given up everything for her when I needed her sorely in my own poor home, and all because I loved her better than myself, and wanted to make her happy, come what might of all else. And now my heart was wrung asunder, and my pride flew into my face and hissed in my ears ; and the months and years of loneliness that I'd passed in my thatched and

whitewashed cottage came back upon me as if they mocked my folly. And as she still knelt there—for I had n't stretched out a finger to lift her up, though she seemed to be sinking into the dust—as she knelt there, I thought of the young wife who was to come to my home as soon as I knew that she was happy and settled, as she had told me she should soon be : the virtuous girl that had heard me boast so often of my sister Amy that she almost trembled when she thought of seeing her. And when I remembered that I should n't dare to look her in the face again, with such a shame as this come upon me, as she knelt there, sir, I could have driven her from me with a blow. She had thought so little of me, when I had been thinking of little else but her ! I only waited till I had got my legs again, and that I knew I should n't stagger and fall before I got clear of that accursed roof ; and then giving her one long look that reproached her more than all I could have said, I wrenched my knees from her grasp and turned to leave her.

"Oh, sir, a death-groan is very horrible ; but it's music to the wild shriek that she gave as she started from the floor, and with white and shaking lips, and eyes that seemed as if they were burning in their sockets, thrust her hand into her bosom and pulled out a paper that she held before my eyes. But my time was n't come ; and telling her that I had n't learning like her to mend a sin and to wipe away a shame with a bit of writing, I flung from the room."

The old man paused ; the sweat was trickling down his forehead, and his chest heaved with emotion. It was terrible to see such vividness of feeling outlive the wasted frame within which it labored ; but he soon rallied.

"Well, sir," he pursued, after a time, "the poor thing wrote to me a number of times ; but the very look of her letters, that seemed as if they were only fit for gentlefolks to read, angered me, and I would n't open one of 'em. She hoped on for all that, poor lamb ! And so she came to live in the village ; not upon the money that madam had left her—no, no ! if she had done that I should n't have forgiven her to my last day, long as I might have lived—but upon what she earned with her needle, working birds and flowers upon bits of satin, that they sent to London for her to be sold. And she was at it late and early, as they told me, till her hour was near ; and then she had n't strength, but used to sit all day at her window, where she could see my wicket, and watch me as I went in and out to my work. I don't know which was worst off in those days, for I had broke with my sweetheart, for all she promised that my sister's shame should never alter her love for me, and I well knew that she 'd keep her word ; but though her mother said the same, she did n't say it in the same tone, and I saw she was pleased to have it over ; and, disgraced as I was, I had my pride still, and stood firm. So I was glad when Mary took service in the market-town, and went away.

"Well, sir, the time came, and Amy had a son ; but she never looked up again, and in three months she died. They came to tell me just at dusk, when I had come home from work, worn out body and soul, and I had n't even strength to be thankful. The next day the baby was gone too, and then I felt happier than I had been for a long while. It had been a poor sickly infant from its birth, for the mother had fretted, and they 'd

pined away together. I put on my hat and turned into the churchyard. I walked first to those two graves yonder, and pulled out a weed or two that had come with the last rains; and then I looked carefully about me. I did n't search long for what I wanted; and when I got to that corner where she lies, I paced the ground carefully, as close to the wall as I could with safety, till I found in how little space I could bury her; and then, when the day of her funeral came, I got up at daybreak and began my task. Nobody came near me; they knew that I could n't bear it then. And so I worked on alone, with the drizzling rain mixing with the cold sweat upon my forehead and chest, till I had dug a grave of ten foot deep. I wanted to bury her shame in the very bowels of the earth. Here is the deepest grave in the whole churchyard except *his*. And, squire as he was," pursued the old man, with another of those savage smiles which formed so frightful a contrast with his usually placid expression, "I had my way there, too, when he came here in his turn.

"The people she had lived with followed her funeral, and I stood a good way off and looked on, (for I had got a friend to do my duty for me,) till the crowd left the churchyard; and then he followed 'em as I'd asked him, and I was left alone beside her grave. I could see the coffin plainly, for they'd only thrown a couple of spits of soil upon it. It was a pauper's coffin, sir, without a name or a date, but with the pauper brand instead, for she would have it so, and I had n't cared to interfere. But now, when I looked down at it, I thought my very heart would break. There was only that coarse plank between me and the thin, pale girl that lay there with her baby in her arms, and I could n't bear to lose sight of it; so I sat beside her till near sunset, thinking of all that was past, and how things had come to this after all my hopes and prayers. But at last I took up my spade, and an hour before nightfall I had filled in the grave, and buried my own heart with her.

"Don't fancy that I fretted though it was so. I loved her dearly, even when I would n't see her in her agony nor on her deathbed; but she'd deceived and disgraced me, and I felt as if I'd buried the little Amy who'd grown up beside me till she found a prouder home; and that the Miss Saunders—for they called her so, sir, through the whole country side to the very day of her death—that the Miss Saunders, who'd gone wrong, and been the shame of the village where she was born, and where her parents lay buried, was living yet to blight an honest name, and cheat a true heart that had trusted to her. So, sir, when, on going home, I found that she'd left another thick letter for me, I put it away with the rest in a box where I had locked up my poor mother's wedding-ring, meaning to give it to Amy when she should marry in her turn; and I tried to forget that I had ever had a sister. But it would n't do; and though I got over the first two years, and used to feel glad when I looked towards her grave and saw that it could n't be seen for the nettles that had grown up about it, I gave way at last. And so, one Sabbath evening, when I was sitting in my desolate cottage, I could contain myself no longer, but going to the little box, I brought it to the table, and pulling the candle closer, I read all the letters, leaving the thick one to the last. I never knew what torture was after that night, sir; all that I'd gone through before was nothing. Every one of

'em had been written with her heart's blood! And how she loved me, and how she prayed that she might die in my arms, that she might feel sure of pardon in the next world! But all this was nothing yet. I had read through all but one, for I spent the whole night over 'em, and read some of 'em two or three times over—them especially that made me feel what a wicked, unnatural wretch I'd been to her, and how I'd sinned against my mother's solemn bidding; and then, when all the rest laid open before me, I began upon the last. That was the real blow, sir! Out fell a marriage-certificate that would have cheated me, though I'd seen so many of 'em, all signed and dated, and the names of Richard Darcourt and Amy Saunders fairly written out. I thought my heart would have burst for joy, and I was obliged to lay it down to take a drink of water; but I was n't long before I took it up again, and after I'd satisfied myself that I was n't out of my senses, I picked up another letter that had dropped out along with it. I had n't seen the writing before; and no wonder, for it was a letter from Mr. Darcourt to tell her that their wedding had been a sham, and that parson and clerk were both friends of his that had joined him in the frolic—yes, sir, that was the word—the *frolic* that was to break a poor girl's heart, and to turn her only relation into a savage. But even this was n't all: no, no—there was more to come yet. He went on to tell her that when he warned her to keep the secret till his sister's grand husband was out of the country, as he would surely take offence and she would bring trouble into the family, and not even to tell me for fear I should make it known, and to let the governess go before a word was said; she might have been sure that he meant her no good, and so she'd only herself and her silly pride to blame, and not him, who could n't be expected to marry a girl whose father and brother had made their living by digging graves, but that he'd advise her to make the best of it and turn her learning to account; and he hoped she'd leave the village, which could n't be pleasant to neither of them, for he was going to London to be married in earnest, and should soon bring his wife down to the hall."

The old man's voice had sunk almost into a whisper before it ceased; but, after the silence of a moment, he clasped his hands convulsively together, and looking up eagerly in my face, gasped out,—

"Amy was innocent, was n't she, sir?"

"As innocent as an angel!" I replied solemnly, as I lifted my hat, in order to give force to my words.

One long sob of happiness gushed from the lips of the old man as he buried his face in his spread hands for an instant. "She was! she was!" he murmured beneath his breath. "The parson said so when he read the letters; and all the village said so, when he went round to their cottages and told 'em how happy they must be that had never insulted her in her sorrow. And now you, sir—you, a stranger, and, belike, as great a man as Squire Darcourt himself—you say so too; and I feel as if my old heart had grown young again on purpose to bless you!"

"But tell me, my good friend," I said, anxious to check this exultation, so dangerous to a man of his age, "what said Amy herself in that last letter?"

"Not a word, sir," replied the sexton, hoarsely, as his head again drooped under the weight of his

remorseful memories ; “ not a word ! What could she say, poor lamb, that she had n’t said in all the rest ! Do you know what I did when the first ray of light came through my window ? I ran like a madman to her grave and tore up the nettles by the roots, as I would have torn her pure body from the spot where I myself had laid it to carry it to the feet of our parents, that she might sleep near ’em as she should have done, had I dared to commit such a fearful sin as to disturb the dead. And then I began to dream of vengeance ; the big house and the proud squire did n’t frighten me at such a time as that ; and I can’t say into what wickedness I should have fell if the temptation had n’t been spared me. We were all expecting the squire and his London wife, and no one watched for ’em as I did, when instead of a marriage-feast we soon had a funeral sermon. He reaped what he had sowed, sir. When he got to London the lady quarrelled with him about some matter or another. I don’t rightly know what, for I did n’t hear ; but I’ve often thought that mayhap she’d heard of my poor Amy : and so the wedding was at an end. And the squire, as I’ve told you before, was proud and passionate, and he had n’t patience to bear with such a disappointment as this. And so he flew into a rage and said uncivil things, and got turned out of the house. Upon which he started from London with four horses to his coach, and a couple of young sparks as hot-headed as he was ; and a frightful life they led on the road all the way to the hall, if his own man’s to be believed, drinking and swearing, and kicking up rows in all the places where they stopped to change horses, till, within two posts of Thornhollow, there’s the squire three parts drunk, who swears he’ll mount the leaders and take ’em into the hall himself ; when, just as he comes to

the Witch’s Punch-Bowl, the horse he’s on shies, and as he was n’t steady enough to keep his seat, off he pitched over his head, and one of the wheels went over his body. They picked him up quick enough, as you may believe, but he was quite stunned ; and when he came to himself he insisted on coming on here, that he might have his spree out, as he said. And so he had, sir—so he had : for the wine and brandy that he’d drank had fevered his blood, and what with that and his hurt, and the jolting over the roads after his fall, it flew to his head, and he was mad four hours after. Then he began to talk as it was awful to hear, and to call for Amy, and, after a time, for me. They could n’t bring Amy to his bed, for she was lying in that he’d prepared for her himself ; but they sent for me, and I was glad of it. My work was done to my hands, and I wanted to see the end of him. I’ve told you how he died, sir ; and then came the funeral. And when the vault was opened, the parson wanted to lay him between his father and mother, where there was just room for him. But I settled that business with my pickaxe ; and though I worked like an ox I did n’t grudge my labor, for I hampered up the space till the coffin could n’t be forced in,” said the old man, with another of his wild smiles ; “ and so they were obliged to lay him at their feet where he ought to be, only that the place was too good for him.”

We were both silent for a few moments ; and then the old man said, with a serenity which only extreme age can so suddenly restore—“ May I make bold to ask, sir, what’s o’clock ?”

“ Half-past four, my friend.”

“ You don’t say so ! and my work little more than half done ! Good a’ternoon to you, sir.”

THE BACHELOR’S FAREWELL TO HIS SNUFF-BOX.

ON THE EVE OF HIS MARRIAGE.

ERE yet hath sounded celibacy’s knell,
Ere yet the marriage peal hath rung for me,
Long-cherish’d object, loved, alas ! too well ;
My snuff-box, let me sigh farewell to thee ;
Sigh, do I say ? perhaps it should be sneeze ;
But time, that dries the fountain of our tears,
Blunts too our nasal sensibilities :
Ah ! I have not sneez’d now these many years.
’T is hard for old companions but to part,
What must it be to cut them, then, for aye ?
As I must thee, thou snuff-box of my heart,
Because to-morrow is my wedding-day.
I’ve vow’d no more to use thee. Ask not why :
I’m told I must not do so ; that’s enough ;
For Mary Anne declares that she shall die,
If e’er she sees me take a pinch of snuff.
Then go, my box ; but, first, my thanks accept
For many a notion—now and then, a hit—
Which in this noddle would perchance have slept,
Hadst thou not put me up to snuff a bit.
And oh ! yet more for many a service when
Vex’d, disappointed, savage, thou for me
Philosophy hast strengthen’d with Etrenne,
And furnish’d consolation in Rappee.
Friend at a pinch—excuse the ancient pun—
Farewell ! my single life will soon be o’er :

With thee, forever, must I now have done ;
Ah ! may I never want thee any more !

Punch.

THE JEWS IN RUSSIA.—The Emperor of Russia has just published a ukase ordering all the Jews in Russia to place themselves, before January 1, 1850, in one of the four following classes : 1. Amongst the burghesses of a town, by the purchase of a piece of land or a house. 2. In one of the three corporations of traders. 3. In a corporation of artisans, after having given the proofs of ability required by law ; and 4. In the grand body of tillers of the earth, whether on their own property or under another owner. Such Jews as have not placed themselves by the appointed time in one of the four classes are to be subjected to such restrictive measures as the government may think fit to employ.

THE *Official Gazette of Wilna* publishes an article on the decrees of the Emperor of Russia respecting the Jews in his empire, which places the question in a different light from that in which it has been viewed by some of the German journals. It is asserted that the object of the Emperor is to introduce a spirit of industry into that class of his subjects, to devote themselves to commerce and agriculture, for which end he promises relief from the laws of exclusion and the taxation peculiar to them, and gives them until the year 1850 to embrace his views, after which those who refuse to obey his injunctions will be subjected to the measures of severity which he is now anxious to avoid.

THE LIFE AND ADVENTURES OF MISS ROBINSON CRUSOE.

CHAPTER I.

I was born in the year—(but no—I claim the privilege of an unmarried woman, and will not set down the date)—in the city of Westminster. My father was a foreigner of Heligoland, who settled first at Sheerness. He made a good estate by dealing in slops, which he profitably sold to the sailors; and leaving off his trade, lived afterwards in Westminster. Here it was he married my mother, whose name was Robinson, whose ancestor was the famous Jack Robinson, of whom is still retained a popular proverb, relating to rapidity of expression.

Being the third daughter, and, unlike my two sisters, single—and my father having impoverished himself by bestowing two large dowries, leaving nothing for me excepting at his death—I had little hopes of marrying in England, or, in other words, of bettering my fortune. I therefore resolved to cross the seas. I had read of several young ladies who, with no money, and very small trunks indeed—and with hardly beauty enough to make any man in England turn back to look at them—had married general officers and rajahs in India. I had heard, and with the easy confidence of youth believed the story, that such was the demand for young-lady-wives in the East Indies, that the black men's boats that brought off cocoa-nuts and yams to the ship, on her dropping anchor, also brought off gentlemen covered with diamonds, and provided with wedding-rings. In many instances, the ship carrying a parson, the ceremony was immediately performed in the captain's cabin; and the happy couple on landing, immediately started five hundred miles up the country to spend the honeymoon. With these thoughts haunting me all day, I dreamt of nothing at nights but palanquins and elephants, and a husband continually giving me diamonds and pearls as big as swan's eggs.

And when I recollected the education my parents had given me—with all the advantages of the Blackheath finishing-school—I had no cause for despair. I could play at least six tunes upon the grand piano: I had worked a melon in Berlin wool so naturally, that my dear aunt fainted, as she declared, at the smell of it. I could dance, sing, and speak the very best Italian for—India. My father, seeing me constantly poring over the ship advertisements in the *Times*, guessed my intentions. One day he was confined to his room, having dined the day before at Blackwall. He sent for me, and expostulated with me on what he foresaw was my determination.

"My child," he said, "do you not perceive that you are born in the happiest state—that is, in the middle state of life? Consider how much grief, either way, you escape, by such a fortune. I will suppose you an earl's daughter—in time, to be married to a duke. Reflect upon the drudgery that would then await you. Compelled to be always playing a part; obliged, on all state occasions, to go and mob it at court; to stand behind stalls at fancy fairs; to be trundled about in a carriage, leaving bits of pasteboard from house to house; and, worse than all, if your husband should be a cabinet minister, to be obliged, every other month, to be nothing more than a court lady's maid, with this difference—that you're allowed to wear your own diamonds, and now and then permitted to see a follower. On the other hand, you

might have made shirts at fivepence apiece, and bound shoes at a farthing a pair. Whereas, you hold the happy middle state of life; a state that peeresses would jump out of their ermine tippets to fall into."

After this he pressed me not to think of leaving home: and further, promised that he would look about him for a husband for me—a steady, respectable young man of my own condition. But I had my head too full of rajahs and elephants to put up with steadiness and respectability. My mother, too, often scolded me, and rated my father for sending me to that finishing-school. "I always said what would come of it," she cried, "when I heard that the girls, before they went to balls and concerts, always swallowed *eau-de-cologne* upon lump sugar to make their eyes twinkle—I always prophesied how she 'd turn out, and so it 's come to pass."

Thus rebuked, I suffered a year to pass away in silence. One day, however, being at Gravesend, eating shrimps upon the pier, six beautiful East Indiamen, in full sail, passed down the river. The tears came into my eyes, and my smothered resolution burst anew into a flame. I resolved, without loss of time, to take my passage for the East. I returned to London; but, instead of going straight home, I went to the Docks, where I accosted a Captain Biscuit, of the ship *Ramo Samee*, of I don't know how many tons. Observing that as he passed his tobacco over his tongue, he looked suspiciously at my youthful appearance, I assured him that I had been married at fifteen, in India, that the climate disagreeing with my only child, a lovely boy, I had brought him to England, to remain with his grandmother, and was now only too anxious to rejoin my beloved husband at Budherapore. When I spoke of my husband, the quick eye of the captain glanced at my left hand; happily, as I wore gloves, he could not observe that no ring was on my finger. Instructed, however, by this accident, on my way home I purchased a ring at a pawnbroker's in the Minories; purchased it with a fervent hope that, sooner or later, the ring would be found to be of more than money's value. I ought, however, to state that I took my passage with the captain, the number of my cabin, 20. For this I was to pay seventy pounds. I paid him—for I always managed to have money about me—twenty pounds in advance. "What name!" said he; "Mrs. Biggleswade," said I; and I saw him write down, "Mrs. Biggleswade, cabin 20," on the list.

As for three years past I had determined upon this step, I had saved nearly all the money allowed me by my dear father for pocket money and clothes. And as, moreover, I made it always a point of being lucky at cards, I found myself mistress of a hundred and fifty sovereign pieces. "Now," thought I, "if my outfit even costs me fifty pounds, I shall have, passage and all paid, thirty pounds left;" money, I thought, more than sufficient, even though a husband should not come off in the boat with the cocoa-nuts and yams, to marry me in the captain's cabin.

All my thoughts were now bent upon my outfit. With this purpose, I used to steal out morning after morning to make my purchases; having them all sent to the house of a good woman—she had been our cook, and had married a green-grocer—to keep for me for the appointed time. I laid in six dozen of double-scented lavender; a dozen of the finest milk of roses; twenty pounds of the best pearl powder; a gross of court-plaster; six ounces of

musk; a quart of oil of bergamotte; two boxes of rouge, and—not to weary the reader—a hundred of the like articles, indispensable to a young gentlewoman.

I next visited Madame Crinoline's, and entirely cleared the dear creature's window of her whole stock of petticoats, etcetera, of horsehair. I had heard that birds were caught with horse-hair; and why not—in the skittishness of my heart I thought—why not husbands? Besides this—as I had heard much of the effects of Indian fevers—I bought myself three sets of curls, brown, dark brown, and auburn. To capture in an engagement, I thought it was lawful to use any colors.

My outfit completed, I awaited, with beating heart, the 10th of May. On that day the *Ramo Samee* was to drop down to Gravesend. On that day I left home, telling my dear father that I was going with some fashionable acquaintances to the exhibition of a sweet little love of a child with two heads and twelve toes. I hurried with my faithful friend to Gravesend. She went on board the ship with me; and, before the captain, kissed me and bade me farewell, as her dear daughter.

We weighed anchor; the breeze freshened, and I went below, with some natural thoughts about my native land and my hand-boxes.—*Punch*.

A NEW NAVAL DRAMA.—THEATRE ROYAL,
WHITECHAPEL ROTUNDA.

"Smoking has been forbidden in Britain's navy.
Tars and Englishmen! up and rally round.
Fitz-Brick's new Drama.

THE SEAMAN'S PIPE! OR, THE BATTLE AND THE
BREEZE."

ACT I.—A SEAMAN'S LOYALTY.

The scene represents the village green, the village church in the midst; on the left, Dame Rosemary's cottage.

Enter Susan, Tom Clewline, and villagers from the church. Screw from opposite side.

Tom. Yes, lads, old Tom Clewline's spliced at last; hauled up high and dry, hey, Suky, my lass! Come into dock like an old sea-dog, after twenty years' battling with the ocean and the enemy; and laid up in ordinary in Susan's arms.

Screw. Fiends! Perdition! A thousand furies and demons! married! but I know of a revenge.

[Exit.]

Tom. And now, lads, what next, before the supper's ready!

All. The hornpipe; Tom's hornpipe!

Tom. Well, then, here goes.

[Tom dances the well-known truly British figure. While dancing the hornpipe, reënter Screw, with a press-gang, consisting of a young Midshipman (Miss Tibbits) and four sailors, with battle-swords in their girdles.

Screw. (After the encore of the hornpipe) There's your man!

[Press-gang draw cutlasses and advance.

Tom. What! on my wedding-day! After twenty years' service—after saving the lives of nine admirals, and scuttling four-and-twenty men-of-war! Dash! it is hard! is n't it, Susan! And for that snivelling traitor there (turning fiercely upon Screw)—but never mind; a British tar does n't trample upon worms; a British seaman knows his duty to his king. What ship, sir!

Mids. The *Blazes*, Captain Chainshot, with Admiral Chainshot's flag to the fore.

Tom. I know his honor well. I cut him out of a shark at Jamakay. Bless you, bless you, Susan, lass!

Susan. Farewell, dearest; here is your bundle. Here is the bacco-bag I worked for you, and here is your pipe.

Screw. Ha, ha! put it in your mouth and smoke it.

[General Tableau.—National Air.—Press-gang ware their cutlasses—Peasantry in groups—Tom tears himself from Susan—Susan faints.]

ACT II.—The Breeze.

SCENE I.—The Quarter-deck of the "*Blazes*" off Tobago. The American ship "*Gouger*" lies N. N. E. by S. W. in the offing.

1 American officer. A tarnation neat frigate this!

2 American officer. And a pretty crew; and yet I calculate the old *Gouger* would chaw her up in twenty minutes if she were placed alongside of her.

Captain Bowie. Silence, gents! we are hurting the feelings of yonder honest seaman at the wheel.

Tom. Belay, belay, there, noble captain; jaw away and never mind me. Chaw up the *Blazes*, indeed!

[He hitches up his pantaloons.]

Captain. (To Tom, mysteriously, having given a signal to his officers, who retire up the mizen mast.) You seem a gallant fellow, and, by the cut of your foretop, an old sea-dog.

Tom. Twenty-five years man and boy. Twenty-nine general hactions, fourteen shipwrecks, ninety-six wounds in the service of my country—that's all, your honor.

Captain. Ha! Try this cigar, my gallant fellow. —(They smoke on the quarter-deck; the American captain expectorates a great deal.)—So much bravery, and a seaman still! Some few faults, I suppose! a little fond of the can, hey! There's a power of rum on board the *Gouger*.

Tom. No, no, Captain, I don't care for rum, and the bos'n's cat and my shoulders was never acquainted. 'Tis the fortune of war, look you.

Captain. Look at me! Thomas Clewline. I'm a Commodore of the United States navy; I've a swab on each shoulder, a seat in the senate, and twenty thousand dollars a year. I'm an Englishman like you, and twenty years ago was a common seaman like you. Hark ye—but ho! the British Admiral.

[Walks away.]

Admiral Chainshot. Captain Chainshot, you must read out the order about smoking, to the ship's crew.

Captain Chainshot. Ay, ay, sir.

Adm. To begin with Tom Clewline, at the helm there. Tom! you saved my life fourteen times, and have received ninety-four wounds in the service of—

Tom. Ninety-six, your honor. Does your honor remember my cutting you out of the shark, in Jamakay harbor!

Adm. I was swimming—

Tom. Up comes a great shark—

Adm. Open goes his jaws, with ninety-nine rows of double teeth—

Tom. My gallant captain sucked in like a horse—

Adm. But Tom Clewline, seeing him from the main-top gallant—

Tom. Jumps into the sea, cutlass in hand—

Adm. Cuts open the shark's jaws just as they were closing—

Tom. And lets out his captain

Adm. My friend!

Tom. My Admiral! [*They dance the hornpipe. Sailors gather round, smoking; the American officers look on with envious countenances.*]

Adm. But Tom, I've bad news for you, my boy. The admiralty has forbidden smoking on board—all smoking, except in the galley.

Tom. What! tell that to the marines, your honor—forbid a sailor his pipe. Why, my pipe was given me by my Syousan. When I'm smoking that pipe, on the lonely watch, I think of my Syousan; and her blessed blue eyes shine out from the backy—

(The British seaman may be accommodated to any length in this style.)

Only smoke in the galley! Why, your honor, the black cook's so fat that there's scarce room for more than two seamen at a time—and that the only place for a whole ship's crew!

Crew. Hum! hum! wo-wo-wo-wo. [*They make the usual strange noise indicative of dissent.*]

Capt. A mutiny! a mutiny!

Adm. Silence, men! Respect your queen and country. Each man sling down his pipe!

[*They dash them down to a man.—National Anthem.—Grand Tableau.*]

Adm. My heart bleeds for my brave fellows! Now, Captain Bowie, your gig's alongside, and I wish you a good day. You will tell your government that a British seaman knows his duty.

[*Exeunt.*]

SCENE II.—Sunset—Moonlight—Six bells—Midnight.—Tom still at the wheel.

Tom. No—no, but I would n't, I could n't break Syousan's pipe—my pretty little pipe—my pretty Syousan's last gift! part with you! No, not if I were to die for it. (*He puts it in his mouth.*)

Captain (*coming unperceived out of the binacle.*) Ha! smoking!—You shall have five hundred lashes, as sure as my name's Chainshot. Ho, bos'n! pipe all hands for punishment.

[*Exit Captain.*]

Tom. What! flog me? flog Tom Clewline! No, dash it, never. Farewell, admiral! Farewell, my country! Syousan, Syousan!

[*Jumps overboard.*]

Cries of "A man overboard! He's swimming to the American frigate; she's standing out to sea!" &c.

[*This is a beautiful scene. The "Gouger" with all her canvass set, her bowlines gaffed, and her maintop-halyards reefed N. S. by S. N., stands out of the harbor, and passes under the bores of the "Blazes." Distant music of "Yankee-doodle." Tom is seen coming up the side of the ship.*]

ACT III.

SCENE I.—The main-deck, U. S. line-of-battle ship "Virginia," Commodore ——. In the offing, the "Blazes" is seen in full chase, with her dead-eyes reefed, her caboose set, and her trysail scuppers clewed fore and aft.

Susan. But, my love, would you fight against your country!

Commodore. Syousan! go below to the gun-room. The deck is no place for woman, at an hour like this. (*Exit Susan.*) How's the wind, Master!

Master. North-south by east.

Commodore. Ease her head a little, Mr. Brace; and cluff her gib a point or so. How's the enemy, Mr. Brace?

Master. Gaining on us, sir; gaining on us, at ten knots an hour. I make her out to be the old *Blazes*, sir, in which we sailed.

Commodore. Hush! The *Blazes*, ha! And I must meet my countrymen face to face, sword in hand, stern to stern, and poop to poop! Who would ever have thought that I—I should fight against my country!

Master. My country's where I can get backy.

Commodore. You are right, Brace; you are right. Why did they cut off our backy, and make mutineers of our men? We'll do our duty by the stars and stripes; eh, gentlemen! and will show Britons how Britons can fight. Are the men at their guns, Lieutenant Bang!

Lieut. Ay, ay, sir; but I think there's something would give 'em courage.

Commodore. What! grog, is it?

Lieut. No, sir; the national hornpipe. (*Commodore dances the hornpipe.*) And now, all things being ready, let the action begin, and strike up "Yankee Doodle."

[*The "Blazes" luffs up with her head across the bows of the "Virginia." Boarders follow Chainshot. Terrific rush of the British, headed by the Captain, who clews the main-deck and lee-scuppers of the enemy. Yankee Rally. Combat between the Commodore and the Captain. Chainshot falls: the British crew fling down their arms.*]

Adm. My son! My son! Ah, this would not have happened if Tom Clewline had been by my side.

Commodore. HE IS HERE! (*Opening his cloak and showing the American star and epaulettes.*) Tom Clewline, whom your savage laws made a deserter—Tom Clewline, to whom his native country grudged even his backy—is now Commodore Clewline, of the American Navy. (*Takes off his hat.*)

Adm. Commodore—I am your prisoner. Take the old man's sword.

Commodore. Wear it, sir; but remember this: Drive not loyal souls to desperation. GIVE THE SEAMAN BACK HIS BACKY, or, if you refuse, you will have thousands deserting from your navy, like Tom Clewline.

Susan. And if our kynd friends will give us their approval, we will endeavor to show, that as long as the British navy endures, and the boat-swain has his pipe, 't is eryduel, 't is unjust, unkynd to deny his to the seaman!

Punch.] [*Curtain drops.*]

BENTICK'S "SUDDEN THOUGHT."—Lord George Bentick has accused Sir Robert of "hunting Canning to death;" this accusation was made, too, after nineteen years' cordial intimacy between the lord and the homicidal baronet. Lord George surely meant to parody Canning's speech in *The Rovers*:—"A sudden thought strikes me; let us swear eternal hatred."

From the Spectator.

COLONEL KING'S TWENTY-FOUR YEARS IN THE ARGENTINE REPUBLIC.

THE author of this volume is a native of New York; who "foolishly" ran away from home at fourteen years of age, and, after trying without success to get a living, allowed his landlord to ship him on board the brig Wycoona, in the year 1817. The disclosure of concealed arms at sea, and the system of training and exercise on board, terrified young King with the notion that he had fallen into the hands of pirates: but the vessel was designed for the "Patriot" service of South America; and on reaching Buenos Ayres, he was sent ashore as unfit for the service, and left to shift for himself. By the kindness of an Irishman and a Frenchman, young King got a situation in the Frenchman's store; but, becoming tired of the perfumery and fancy business, he resolved to fight in defence of freedom; and, through the acquaintance of his patron's family with an officer of the Patriot army, and the moral influence of United States citizenship, he procured a commission as ensign. For a dozen years he was knocked about in the Spanish and civil wars which distracted the Argentine Republic and Peru; and rose to the rank of colonel; which unsubstantial honor seems to have been his chief reward. In 1829 he withdrew from the service, declining any further command; and soon afterwards, marrying a lady of some property, he embarked in business as a merchant; till the death of his wife and the horrible atrocities of Rosas induced him, in 1841, to withdraw from the country and return to the United States. He has now published the results of his experience, in order to disseminate more correct views of the state of the Argentine Republic, and to moderate American indignation touching the interference of France and England with Rosas.

Though not formally divided, the *Twenty-four Years in the Argentine Republic* really consists of two parts; one embracing the personal narrative of Colonel King, the other, a general description of the state of parties in the country, and an account of some of the most remarkable cruelties of Rosas. The personal narrative chiefly deals with the dangers, privations, battles, imprisonments, and escapes, in which Colonel King was engaged during his military career; involving many sketches of the principal men with whom he was brought into contact, and a pretty full picture of South American warfare. The story is somewhat deficient in chronological congruity—passing with so much rapidity from one leading incident to another, that when an allusion to time occurs, the reader is surprised to find years instead of months have elapsed. With these deductions, it is a very interesting narrative, full of hairbreadth escapes and battle dangerous, and furnishing a striking picture of the dangers and privations of South American war, as well as of the ruthless cruelty with which it is carried on. "Taken prisoner and shot" would seem to be a standing epitaph for the officers engaged.

The general history of Rosas and the Federalist

faction is of less interest than the personal narrative. This is partly owing to the writer's want of a comprehensive mind. The incongruity which is shown in the account of his personal adventures is still more visible in the history of larger events, where conclusions have to be drawn as well as a mere story to be told, and the reader ought to see cause and consequence, though he does not trace them very clearly in Colonel King's account. A further diminution of interest arises from the dramatic form in which the writer thinks proper to present some of the more atrocious examples of the cruelty of Rosas. We have scenes and dialogues at large; a thing which not only mars the impression of accuracy, since it is not likely and sometimes it is impossible that a report of the victim's conversation should have reached the world; but, what is of more importance, Colonel King wants the dramatic qualities requisite to sustain this artificial kind of composition. The incident consequently becomes tedious from being overlaid with unessential matter of a poor kind. The author's own story is occasionally flattened by the introduction of dialogues; but these may possibly be accurate, as they occurred in his presence, and he is himself often a speaker.

No very definite idea of the state of society, or of the causes of the anarchy which reigns throughout the New World that poor Canning "called into existence," can be gleaned from Colonel King's pages. So far as we comprehend the subject, the whole cause of failure may be found in the total deprivation of the means of self-government under which the colonists labored, and the imitative character of their revolt. That they had grievances enough to justify rebellion, is probably true; but the mere grievances would never have made them rebels. They were goaded into revolt by ambitious or patriotic schemers, incited by the examples of the United States and by the mere name of republic. The terrible wars they underwent in throwing off the yoke of the mother-country, hardened their hearts, corrupted their political morals, and broke up such social power as really existed, till, at the close, a strong government, or any government in an European sense, was impossible, save in the hands of a despot, who could only rule by means of an army, or a rabble organized after the fashion of the Parisian Jacobins. This last seems to be the mode of Rosas; many of his atrocities being, apparently, forced upon him in order to find means through confiscation to gratify his followers. At present the moral condition of the Argentine Republic seems to bear a strong resemblance, though upon a small scale, to the state of society during the decline of the Roman Empire. The victims are sufficiently refined to feel their miseries acutely; yet they have not power publicly to resist, or personal courage to compel respect by the use of the *ultima ratio* of the oppressed, the blow of the assassin. The fear of assassination—one of the modes by which Nature punishes tyrants—is indeed ever present to Rosas; but no one appears to have resolved to rid his country of this or any other oppressor, either from motives of vengeance or patriotism. Every one crawls on,

hoping to escape, till he is overtaken by the fear or avarice of the tyrant.

The style of Colonel King, at once rhetorical and gossipy, is not well adapted to quotation, from its looseness; but we will take a few of the more separable passages.

TREATMENT OF PRISONERS BY ROSAS.

"Near his encampment were two or three country mansions; one of which, not more than three hundred yards from the scene, was occupied by Don —, whose lady chanced to be on the assote when three prisoners were brought into the camp. The natural sympathies of a woman's heart were at once excited in their behalf, and she watched with great anxiety the course pursued toward them. Each having been divested of his coat, vest, and hat, was brought out upon the plain and placed in what is called *stac*; that is to say, they were placed upon their backs on the ground, their arms extended and secured in that position by thongs tied about the wrists, and fastened to stakes driven in the ground for that purpose, with their feet in the same manner; and the poor fellows were thus left in the sun, with their faces upward. When the lady saw this, she hastened to inform her husband, and entreated of him to intercede for their liberation; but he answered, that to interfere with a decree of Rosas, would be to endanger his own life without the possibility of saving the victims. The lady's anxiety increased. Again and again during the day would she go to the house-top in hopes of finding that they had been removed; but as often did she see them in their helpless position broiling in the sun! As the shades of night came on and found them still there, she became almost frantic: in vain had her husband urged and entreated her to remain below—there was a horrible infatuation that drew her, spite of her will, to look upon the scene until it had unfitted her for every other thought. At night she could not sleep; the vision of those miserable men was constantly before her eyes, and at the earliest dawn she was again at the house-top. They were still in view, stretched out as she had last seen them, and where they had now remained during the space of at least twenty hours.

"At last they were unbound; and the lady, clapping her hands, with joy exclaimed, 'They have taken them up! they have taken them up!' But her joy was of short duration; the poor fellows, blinded, and scarcely able to stand, were staggering about on their feet as Rosas came from his tent; and in a few minutes after, a volley of six muskets brought them to the ground, and put an end to their mortal agony."

QUIROGA IN ACTION.

"For a long time Paz's reserve remained immovable, but at last we saw them dash into the conflict. It was a moment of intense excitement with us all; shouts and cheers ascended from the house-tops in every quarter, as though our fighting friends could hear their encouraging tones. None could form the slightest opinion upon the chances of success; and, unable at last to bear the excitement and suspense, about twenty of us determined to go to the scene of action, yet without any direct object, except it was to quell the burning fever of anxiety. Passing hastily from the town, we ran towards the *tablada*; the roar of the battle growing louder and louder as we approached. Both armies had broken into detachments; and the men were fighting on all hands like bloodhounds. We saw Quiroga: he had thrown off every vestige of his clothing

save his drawers, which were rolled up, and fastened about his thighs. Both he and his horse were covered with blood; and altogether they presented an appearance that could be compared to nothing human. Goaded with the prospect of defeat, he dashed from place to place, cutting down with his own sword such of his troops as quailed or turned for their lives, and leading detachments into the hottest of the fight. Naked as he was, and streaming with the gore that had spirted from his victims upon him, he seemed a very devil presiding over carnage. His troops had already commenced their flight, and were rushing in small bands from the battle in every direction; some halting, and at an auspicious moment dashing again into the fray; some resting, and others again flying for their lives. In this manner our little party of neutrals became entangled in the mass of moving detachments; and at one time we were compelled to fight our own way out. But at sunset the battle was decided: Paz was victorious; and Quiroga, at length finding all efforts hopeless, turned, and, without a signal for retreat, fled from the spot."

NATURAL CHASM.

"On the following morning, accompanied by two soldiers as attendants or servants, I crossed the river Jujuy, and commenced my journey; which, after a ride of about six leagues, lay through the wonderful ravine known as the *Cavrado de Humaguaca*. This *cavrado* or chasm, which was formed by a convulsion of the earth, extends a distance of about ten leagues, varying in width from a space of one hundred yards to that of a quarter of a mile, and presenting one of the most wild and singular curiosities of nature. The opening of the earth has left a ravine walled on either side with immense and lofty palisades of jagged rock, broken here and there with gaping chasms, through which the mountain-streams dash and foam, on their downward course, into what might be aptly termed the regions of Erebus, since all below is impenetrable darkness; and how far into the bowels of the earth these streams may dash and fret in their downward passage, is beyond the estimate of man.

"Strange as it may seem, man has set his foot and built his habitation within this pass of gloom; and the occasional spots of earth, occupied and cultivated by Peruvian mametas and tatetas, formed a singular contrast to the natural wildness of everything about them."

CAMP EQUIPAGE.

"At this place we were visited by Lieutenant-Colonel Roues, who owned and occupied a farm not far from us. He was a native of the province, and a sincere patriot at heart, but at that time living in retirement. Perceiving that we were in a suffering condition, this gentleman immediately sent us provisions of sheep, &c., from his own farm; which our people paid their respects to without ceremony. Dishes were unknown in our camp, knives and forks we were not encumbered with, and camp-kettles were a thing unknown. Our mode of cooking our mutton was by forcing lengthwise through the whole side of a sheep, a stick about four feet long, of which we made a skewer, and driving the end of it into the ground near the fire. As the meat was turned and gradually roasted, each man helped himself, by cutting, with his sword or clasp-knife, a long slice from the part most cooked, eating it from his hand; and thus the process was continued until the meat was all gone. In this way, washing down our meat with water from the bold and clear stream beside

us, we fared sumptuously. Roues cheered us too in mind as well as body.

"The company of wretches that he had found in the morning—dejected, hungered, and worn down with toil and sickness—he now left in a perfect *alegre*; for a more happy, comfortable, and jovial set of fellows, never were met together."

From the *Spectator*.

PEEL LYRICS.

A CURIOUS flood of Peel poetry pours in upon us. As the gods have not made the *Spectator* poetical, we grudge room for more than a couple of specimens; but the fact that the versifiers, who, as a body, reflect prevalent notions and feelings, should have adopted the late premier, so warmly, is not without its value as a proof of the juster estimate to which the public opinion has arrived. It is remarkable that another lyrical correspondent, from Dublin, has taken for his text the same drama with the writer of the ballad below—the part of Shylock being allotted to the minister's "Hebrew Caucasian" assailant.

TO SIR ROBERT PEEL, ON HIS RESIGNATION.

Great statesman! greatest in thy fall—for now
The crew that hated thee because they felt
Thou wert the first, the herd who erewhile knelt,
Shall in their helmless bark thy loss avow.
Where now the venal shouts, the false acclaim
Of parasites, of things without a name?
Scum of the ocean, hurled away before
The Inaccessible: so calm wert thou!
What is thy guerdon? we cannot repay:
We offer but the homage of a day.
Thou claim'st from us, and from posterity,
Undying laurels: yet high poetry
Tells what they are—the poor man's blessing
thine!

Thou like a light before his path dost shine,
Sole watcher over his humanities;
Thou laidst thy hand on aristocracy,
Staying its grasp; beside the laborer's door
Thy voice of law o'er tyranny doth rise—
"Bread shall be watered by his tears no more!"

JOHN EDMUND READE.

THE LEADER OF THE MILLIONS.

"The best conditioned and unwearied spirit
In doing courtesies, and one in whom
The ancient Roman honor more appears
Than any that draws breath."—*Merchant of Venice*.

The leader of the millions,
The leader of the free,
The honest, the industrious,
My brothers, who is he?

What say ye to a noble lord,
The rider in the van
Of the gallant self-protectionists,
Dutch George, the stable man?

No! he may be the slanging cad
Of an opposition 'bus;
But as leader of the millions
He will not do for us.

What to the flashy novelist,
The orator, the wit,

Who raked up bygone grievances,
And was the bitter bit?

We say that *when* we buy our coats
Of puffing Moses, *then*
Will we entrust the government
'To Israelitish Ben.

But there are those who deem us all
A race of Canaan's brats,
To be the selfish heritage
Of whig aristocrats;

And that although, with bully Polk,
We rouse a war, to show
The poor vicarious manliness
Of a selfish battered beau;

Still we must take them as our lords,
And let them round the throne
Entwine our sacred interests
Forever with their own.

No! we who knew the goodly tree
Will not endure the stump
Of barren self-sufficiency,
The greedy Melbourne rump.

Then who shall be, we ask again,
My brothers, who shall be
The leader of the millions,
The leader of the free?

Oh we have not forgotten him,
The one, the only one,
No scion of our Norman lords,
But a princely merchant's son;

Who legislates for future years;
Who, conscience-led, in spite
Of enemy or partisan,
Does simply what is right;

Who spares not mighty interests
Which grind the helpless down;
Who treats mankind all equally,
The noble and the clown;

He to whose suasive accents
The crowded senate bends,
Who turns it from each selfish plan
To his more glorious ends;

Who, listening to his own good heart,
Amid the cares of state,
And venom'd maledictions
Of disappointed hate,

Can find the time and find the will
To do a kindly deed,
To help the artist in despair,
The widow in her need;

Yes, he who ever nobly acts,
Who all unflinching bears
The burdens of our fatherland,
Its glory and its cares;

Who high above all selfish ends
Consults the public weal,
Is the leader of the millions,
The noble-hearted Peel.

King's College, Cambridge.

WHIG TREMORS ON RETURN TO OFFICE.

THE expectant whig ministers and their friends appear to be in a curious state of mind; they are eagerly anticipating the return to office, yet they behave as if they dreaded it; they do their best to make Sir Robert Peel's further occupancy impossible, yet disclaim the notion that they are striving to oust him, and seem to be really afraid of their own success. Their leading organ in the press especially deprecates our presumption that the object is to unseat the premier, and avers that there is no such wish or intent. Why, then, that great meeting at Lord John Russell's house, to concert with Mr. O'Connell measures of opposition? Why that ostentatious advertisement of whig movement, as if to invite consentaneous protectionist movement in the same direction? Says the *Morning Chronicle*, a totally new view of coercion in Ireland has sprung up since the coercion bill was so readily passed by the Lords; people have learned to see that the causes of Irish agrarian crime must be explored; and no other course was possible to the whig leaders but that which they have taken. It may be so; we will not dispute the possibility of sudden conversions, though not brought about by any change of circumstances, but simply by the internal working of the convert's mind; we will not insist on the remarkable coincidence that Lord John Russell should first conceive this bright idea, not when he was himself considering the occasion and structure of a coercion bill, but when Sir Robert Peel is engaged upon it.

Say, then, that the coercion bill was a subject which could not be avoided; but what pressing necessity was there for taking up the sugar dispute, before its time? Could not the national tea-cup wait another year, that Lord John must interpose the sugar duties before Sir Robert Peel has done dealing with the loaf?

Granting the possibility of that pressing necessity also, there is something in the demeanor of the whigs that can scarcely be reconciled to the notion that they would willingly leave Sir Robert Peel undisturbed. They industriously seize opportunities for attacking him and his ministry on old scores—the long past and the irretrievable. No matter what the occasion, what the subject in hand, no opportunity goes by without their raking up past misdoings. Lord John Russell, in particular, never makes a speech without insinuating or directly asserting disparagement. In his speech on Monday, the subject being coercion, he had something to say about Sir Robert Peel's borrowing measures—a most gratuitous pertinacity of taunting, after Sir Robert's ample acknowledgments on that score: and some old indiscretions of Sir James Graham on the subject of education were dragged out right gleefully. Those ancient conservative offences may have been very bad; the whigs may feel conscientiously bound to expose them; but their selecting the present time for it is not quite reconcilable with the idea that they do not wish to promote the premier's ejectionment.

Still less so is their encouragement of protectionist attacks on their great rival. They talk of political "consistency," while they applaud the bitter enemies of the policy which they profess to advocate, in assailing its ablest and heartiest promoter. It is not in the countenance of the Tory party that the sporting Lord George has found his chief support; it is not the shout of the rustic country party that has supplied the stimulus for

the malignant oratory of the literary Disraeli; but the approving smiles and unexpressed chuckle of whig statesmen and liberal Edinburgh Reviewers, and the exulting halloo of the whole opposition herd.

Yet we believe the more intelligent whigs, when they say that accession to office just now, quite apart from the corn question, is not for the interest of their party. Men often desire to eat their cake and have it; the whigs wish Sir Robert Peel out, and they wish him in; they long for their own readmission to power, and they fear it: and there are reasons both for the wish and the fear. Hint the possible event, that after all "Peel may not go out," and watch their looks of dismay! "Oh!" they cry, "he *must* go out." Very true. "But you cannot say that *we* did it." Then why not leave him alone? "Oh! *we must* be in." Well, go in, then, and do your best. "Ah! it is easy to say do your best; but it is not our interest to be in." Why, that is true again; so stay out. "Oh, shocking! you are growing factious."

Natural that they should wish to be in, of course it is; natural also that they should fear it. They know that their success is doubtful. Their friends know it better. They have put forth no sign of enlarged purpose or renovated vigor. What have they done in opposition? Nothing to entitle them to office. They are about to enter, not by their own force, but because place is vacant and usage invites them to walk in. Sir Robert Peel goes out, because he cannot work with the means at his command: he is no more turned out by the whigs than he is by the Tories. They do their utmost, indeed, to spoil his tenancy, on the principle that every little helps; but, truly, we cannot reproach them for having done it. They are not "big with glorious great intent"—some mighty policy which it is their vocation to carry out, and on the strength of which they are borne to power. Their antagonist retreats, but they do not drive him. They have the march of victory without the exploits: those awkward tests of triumph are to come *afterwards*—they gain the citadel, and *then* they will have to fight for it: is it surprising that with the victory their profounder anxieties begin?

What are their resources, to sustain the angry siege which is to follow their triumph? What measures have they in store? Who knows? They have ventured on few boasts, and those not large ones; old measures all, and not first-rate. The *Morning Chronicle* tries to show that it is against the interest of the whigs to come in on an Irish question. Why so? Is not Ireland their favorite ground? Are they not sure even there? It seems that Lord John has some Irish measures in view, such as they are: he will have no coercion bill—for that is not "constitutional," as it is called, not "ameliorating"—but he prefers military occupation of disturbed districts: the state of Ireland should be altered by something better than the landlord and tenant bills; he will not, however, have a real poor-law—he is afraid of that; but he will have "that great measure the reclamation of waste lands"! Moreover, he will conciliate.

What are his English measures, to reconcile this country to whig government? Modified sugar-duties are advertised; nothing else, that we remember.

Setting aside special measures, what is to be the whig policy, in Ireland or England? In Ireland,

it may be inferred that they will soothe by words and nuzzle at minor remedies; in England, their policy is to be to supply omissions in Sir Robert Peel's tariff—"no further harm."

What is to be their foreign policy? Irritation, after the old fashion! reciprocity, their old haggling! or imitation of Sir Robert Peel—setting the example in commercial freedom, and trusting to that example, for its beneficial and peaceful results!

What man is to lead them? Let us know that, because even from his character we may guess whether they will strike out a new policy, vindicate their unearned position, and make their government worthy of the country. Will it be Lord Grey, prepared to act on large principles? Lord Clarendon, preferring national to party interests? Lord Morpeth, able to act on a sentiment and a faith? Lord Palmerston even, an active and efficient statesman? No; it seems that Lord John Russell is to keep his old post. Is he a man to outrun expectation? Will he forget his self-references—his fear of being morally answerable for contingencies—his punctilious dread of doing anything beneath "the house of Bedford" by vulgar heartiness of liberalism—his growing alarm lest he should be convicted in any way of "playing second fiddle" to Sir Robert? We have no hostility to Lord John; we shall be pleased if he surpass expectations founded on experience of the past: but as it is, we augur little advancement for the liberal party, because he is not liberal enough to lead that party; we anticipate little success for a ministry that must depend on progressive reform, because he cannot unseat those things which betrayed his doctrine of "finality." With all respect for 1831, we have no wish to restore that year fifteen stages after its legitimate position in the calendar.

The whigs claim credit for supporting Sir Robert Peel, and the *Chronicle* quotes a testimonial from the premier to that effect. No doubt, they are investing as much support as they can, consistently with their party views, in the expectation that it will be repaid in kind. Will their measures deserve support on other grounds; will they compel it by the greatness and boldness of their demeanor? That is what some of their best friends doubt, wishing that they were not put to trial just yet; and the timorous doubt evidently infects the whig leaders.—*Spectator*, 20th June.

From the *Spectator*.

ROWLAND HILL.

THE formal presentation of the National Testimonial to Mr. Rowland Hill, the postage reformer, took place at a public dinner on 17th June.

The gross amount of subscriptions was 15,725*l.* 4*s.* 8*d.*, and the expenses 2,364*l.* 5*s.* 3*d.*; leaving a net balance of 13,360*l.* 10*s.* 5*d.*

This amount would have been larger had not the maximum rate of subscription been restricted to 10*l.* 10*s.* Regret was expressed by some of the subscribers that the execution of Mr. Hill's plan, instead of being intrusted to himself, had been transferred to the post-office authorities, the undisguised and constant opponents of that plan. Others expressed a hope that Mr. Hill may soon be afforded an opportunity of perfecting his plans; and in that hope the committee sympathize. Had Mr. Hill's services been retained by the govern-

ment, the committee believe that the surplus revenue would by this time have been nearly brought up to the old level, and that the administration of the post-office would have been in much greater repute with the public.

Mr. Warburton, in proposing the health of "Mr. Rowland Hill, the author of Penny Postage," made some interesting statements—

The public subscription had been a liberal one, but it was a most inadequate expression of the admiration which Mr. Hill's services had excited in the public mind. Sir Robert Peel's government had unwisely determined to dismiss Mr. Hill from his employment at the treasury in organizing the new methods; but it must not be forgotten that among the subscribers to the testimonial was Sir Robert Peel himself. Mr. Warburton trusted that, under the present or some future government, Mr. Hill would be installed in office, not in a subordinate capacity, but in a commanding position, from which he could superintend the details of post-office administration.

Mr. Rowland Hill made his speech of thanks the medium of fresh instruction as well as of gratifying retrospect. One of his prominent topics was a generous recognition of the services of others; among whom he enumerated—

Mr. Wallace, the indefatigable chairman of the parliamentary committee of 1833; Mr. Warburton, who drew up the report, the ablest document of its kind ever issued; Mr. Ashurst, the agent of the London Mercantile Committee. In the house of peers the cause found able advocates in Lord Ashburton, Lord Brougham, Lord Radsior, and the Duke of Richmond. An acknowledgment was also due to Mr. Baring, late Chancellor of the Exchequer, for the manner in which he exercised the powers conferred by the act of parliament. Personally, Mr. Rowland Hill felt indebted to that gentleman, for the confidence and friendship with which he was honored during the two years he acted under him.

He contrasted the anomalies which existed under the old system with the results of the new. In considering these results, it should be borne in mind that the execution of the plan, in some of its essential parts, is still very incomplete. On the subject of revenue he made the following statement. The year 1837, which was adopted by the parliamentary committee as the standard of comparison, gave a gross revenue of 2,340,000*l.*, and a net revenue of 1,641,000*l.* He had estimated that under the new system the same gross revenue would be obtained, but that the net revenue would be reduced by about 300,000*l.* Last year, the gross revenue actually obtained was 1,902,000*l.*, or full four fifths of the estimated amount; and the net revenue was 776,000*l.*, or nearly three fifths of the estimated amount. The return, however, which showed this result had scarcely been issued before it was followed by another, stating that the "real net receipt of post-office revenue" is 47,582*l.* On which discrepancy Mr. Hill observed—"As I am very desirous of avoiding all points of controversy on this happy occasion, I shall not notice the return further than to state that it is a repetition of the fallacy the attempt to establish which so notably failed three years ago, and that any calculation of net revenue which shall accurately adjust both sides of the account, by charging on the one hand a fair share of the packet-service, and by giving credit on the other hand for the cost of distributing newspapers, will show a net revenue

larger even than that exhibited by the accounts made out in the ordinary manner. In short, the real net revenue, instead of being under 50,000*l.*, is above 800,000*l.*

"The number of chargeable letters delivered in the United Kingdom, in 1838, was ascertained to be about 75,000,000; the number in 1845 was 271,000,000. And in January of the present year, the latest period to which the returns apply, the number was at the rate of 303,000,000 per annum, or four times the number in 1838. The increase of letters necessary to sustain the gross revenue, I estimated at fivefold. This estimate was attacked at the time as much too low; but it is now indisputable that the gross revenue will be made up when the increase of letters amounts to four-and-a-half fold. In the London District Post, (the old Twopenny Post,) the increase has been from thirteen millions in 1838 to thirty-one millions in 1845, or much more than twofold. The gross revenue of this department is larger now than at any former period. This fact appears to be conclusive as against a general twopenny rate. As to the increase of letters generally, it may be stated thus—there are now as many letters delivered in the London District, that is to say within twelve miles of the post-office in St. Martin's-le-Grand, as there were under the old system in the whole United Kingdom." But this increase, vast as it is, amounts to less for every man, woman, and child in the United Kingdom, than a letter per month.

He quoted the opinion of the chancellor of the exchequer as expressed in his last budget speech, to show the good hopes of increased revenue which that gentleman entertains from the post-office.

He should not go into the question of deficiencies in post-office management. A long list of them, with the remedies, appears in the report of the committee of 1843; and he was sorry to say that the last three years had done but little to reduce the number. He would mention one or two instances of improvement. Two years ago, the post-office very reluctantly made an approach towards the hourly deliveries in the London district, which formed part of his original plan; and although only three deliveries were added, instead of six, the effect was immediately to advance the annual rate of increase in the London district post-letters from 1,800,000 to nearly 2,700,000, or 50 per cent. By the adoption of two other suggestions, which at the time he proposed them were deemed impracticable, 11,000*l.* a year had been saved. He was justified in assuming, that but for the interruption in the progress of the measure which took place on the retirement of the late government, all his expectations would have been realized. Other countries had participated in the advantage: reductions in the rates of postage had taken place in Russia, Prussia, Austria, Spain, and the United States of America, in consequence of the good example set by the English parliament.

He had been more fortunate than many other reformers; for he had seen his plan brought into practice, imperfectly as it might be. There was, however, one period of his course to which he could not allude without pain. It was that when, with health impaired, after six years of incessant labor and anxiety, he was dismissed from the Treasury, and left to seek afresh the means of supporting his family. He had expressed his thanks on a former occasion to Sir Robert Peel for the manner in which he had spoken of his labors; he now thanked him for contributing to the national testi-

monial; but had Sir Robert yielded to his entreaties, and allowed him, at any pecuniary sacrifice, to work out his plan—as he did offer to work it without cost to the public—his gratitude would have been unbounded. Still, even at that moment of disappointment, he could say that he felt no regret at having embarked in the great work of post-office improvement. By the aid of Sir Thomas Wilde, Mr. Baring, and some other friends, he was enabled to fulfil the only duty which remained, and that was to place the facts on record. The National Testimonial was then proposed; and the progress it made was such that all anxiety on his part as to pecuniary resources for the future was soon at an end. Nearly the whole fund has been safely and advantageously invested; and this investment, added to his own small property, is, with his frugal habits, amply sufficient to relieve his mind from anxiety with regard to a permanent provision for his family.

POST-OFFICE REFORM: THE NATIONAL TESTIMONIAL.

THE tribute paid to Mr. Rowland Hill this week might be made, and ought to be made, the fulcrum of a new effort to remodel our post-office system thoroughly. The penny postage—the money orders—the increased frequency of mails—all these are important parts of Mr. Hill's system, but they are only parts of it. Their entire efficacy presupposes an extensive reconstruction of the internal machinery of the office. Until this be effected, they are inadequately worked, and do not produce their full amount of benefit; the expectations of the public are constantly suffering disappointment—business combinations frustrated, which would not have been attempted but for reliance upon them, or would have been attempted by some other means.

Under all the disadvantages of having been worked by inadequate machinery and hostile workmen, Mr. Hill's system, as far as it has been tried, has been successful beyond what the most sanguine had reason to expect in so short a time. In 1838 the number of chargeable letters delivered in the United Kingdom was seventy-five millions; in 1845 it was two hundred and seventy-one millions. Mr. Hill estimated that the former gross revenue would be sustained when the letters delivered had increased fivefold: it is now obvious that it will be sustained as soon as their number becomes four and a half times what it was; and already it is about three and a half times the sum. Mr. Dillon stated that the correspondence of his firm had increased since the cheap postage was adopted to four times its former amount, but that the private correspondence of persons employed by them had increased tenfold. Parties who enjoy opportunities of narrowly observing the habits of the poorer classes state, that the communication by letter among friends and families, has increased among them in a still more encouraging ratio. The money-orders, too, have materially economized the circulating medium in the case of extensive traders, who receive large amounts in many small payments; and—what is of far more consequence—have done much to facilitate the acquirement of habits of forethought and economy, and the maintenance of a kindly family feeling, among the poor. Morally and economically, the cheap postage has already placed society in this country in advance of what it was seven years ago; and when the machinery is

made adequate to the task it has to perform, the effects cannot easily be exaggerated by hope. Nor are these advantages confined within the limits of our islands: to no inconsiderable extent they are already participated in by our dependencies; and foreign nations are rapidly following the example. The inventive genius of Mr. Rowland Hill, by a skillful combination of the natural postal system and the infant capabilities of steam locomotion by sea and land, has set the wits of men to sharpen each other; by converse, at an accelerated rate of speed; and has materially strengthened the influence of pure and enlightened public opinion.

There is yet vast room for extension. Much remains to be effected towards the economizing of the post-office—"not," as Mr. Hill remarked on Wednesday evening, "by reducing the salaries or increasing the labors of the men; but by simplifying the mechanism of the office." This having been accomplished, the unnecessary procrastination of deliveries which still prevails may be prevented; the system made to embrace every part of the empire; and restrictions as to weight in a great measure done away with. But to accomplish these objects, the conducting of the experiment must be intrusted to one who sees clearly what he aims at, and whose heart is in the business. That Mr. Hill possesses the talent of routine administration combined with his inventive genius, has been placed beyond dispute by the success with which he acted as chairman of the London and Brighton Railway. That his heart is in the cause of post-office reform, was obvious from his entreaties to Sir Robert Peel, to be allowed, at any pecuniary sacrifice to himself, to work out his own plan.—*Spectator*, 20th June.

From the Spectator.

MRS. JAMESON'S MEMOIRS AND ESSAYS.*

THIS agreeable volume contains six papers. 1. "The House of Titian:" a miscellaneous article, which certainly tells the legal story of the great painter's domicile, and describes a pilgrimage made to it by Mrs. Jameson, but which also diverges into a great many other subjects connected with art, more especially in relation to the Venetian school of coloring, and to nature as observed in the atmosphere and concomitants of Venice. 2. A sketch of the public career and character of Adelaide Kemble: which is a fair critical estimate, in a large and genial spirit, of the youngest of the Kemble family; but, being written to accompany "a series of drawings executed for the Marquis of Titchfield, representing Miss Kemble in all the characters in which she appeared," it is perhaps a fully favorable picture, as if Mrs. Jameson had borrowed something from the flattering limning of the pictorial art. 3. "The Xanthian marbles:" a not very striking account of the antiquities brought from Asia Minor by Sir Charles Fellows; the general falling into common-place references to the departed greatness of the country, the particular exhibiting too much of the catalogue. 4. Is a brief notice of the life of the American painter Washington Allston, with a criticism on his genius and a list of his works. It is pleasantly written, and informing; but has this defect—it leaves us with the general impression of a great genius, without acquainting us with his exact school, or his grade in reference to other artists; a fault, by

the by, characteristic of the panegyrical school of criticism, more especially in reference to art. 5. "Woman's Mission and Woman's Position" is a severe but measured and feminine attack upon the world on account of woman's position in society and the difficulty she has in supporting herself: but it is mere attack; nothing practical is suggested, still less any specific mode of remedy pointed out, unless it be the following.

"Either let the man in all the relations of life be held the natural guardian of the woman—constrained to fulfil that trust—responsible to society for her well-being and her maintenance; or, if she be liable to be thrust from the sanctuary of home to provide for herself through the exercise of such faculties as God has given her, let her at least have fair play; let it not be avowed, in the same breath, that protection is necessary to her and that it is refused to her; and while we send her forth into the desert, and bind the burden on her back, and put the staff into her hand—let not her steps be hebet, her limbs fettered, and her eyes blindfolded."

6. "On the relative Social Position of Mothers and Governesses," in a practical point of view is the ablest paper of the whole; searching and sensible both in its particular advice and its general suggestions, and although going deeply into the subject, yet having nothing too remote for common use.

These essays are characterized by a refined and discriminating intellect, enriched, not spoiled, by German studies; and a style inclined to the diffuse, and sometimes falling from reflection into reverie, but never degenerating into mere verbiage. The judgments are generally just, though with a conventional inclination to the favorable, which personal knowledge or mixing much in "society" generally produces. It is partly this circumstance not operating in so remote a subject, partly the greatness of the subject itself, that render the paper on Titian the most interesting in the book. The brief comparison between Titian and Raphael is a piece of delicate criticism: the description of the principles of coloring as displayed at Venice by Nature herself, and transferred by Titian to his canvass, is entitled to the praise of true invention, and as a contribution or help to the important "art of seeing nature:" the remarks on modern imitation of ancient styles, especially by the modern German schools, are distinguished by a profounder because a still larger truth. We take a few extracts from these topics.

PERFECTION IN ART.

"I know that there are critics who look upon Raphael as having *secularized* and Titian as having *sensualized* art: I know it has become a fashion to prefer an old Florentine or Umbrian Madonna to Raphael's Galatea; and an old German, hard-visaged, wooden-limbed Saint, to Titian's Venus. Under one point of view, I quite agree with the critics alluded to. Such preference commands our approbation and our sympathy, if we look to the height of the aim proposed, rather than to the completeness of the performance, as such. But *here* I am not considering art with reference to its aims or its associations, religious or classic; nor with reference to individual tastes, whether they lean to piety or poetry, to the real or the ideal; nor as the reflection of any prevailing mode of belief or existence; but simply as ART—as the *Muta Poesis*, the interpreter between Nature and Man; giving

* Republished by Wiley & Putnam.

back to us her forms with the utmost truth of imitation, and at the same time clothing them with a high significance derived from the human purpose and the human intellect.

"If, for instance, we are to consider painting as purely religious, we must go back to the infancy of modern art, when the expression of sentiment was all in all, and the expression of life in action nothing—when, reversing the aim of Greek art, the limbs and form were defective, while character, as it is shown in physiognomy, was delicately felt and truly rendered. And if, on the other hand, we are to consider art merely as perfect imitation, we must go to the Dutchmen of the seventeenth century. Art is only perfection—when it fills us with the idea of perfection—when we are not called on to supply deficiencies, or to set limits to our demands; and this lifting up of the heart and soul, this fulness of satisfaction and delight, we find in the works of Raphael and Titian."

VENETIAN HAIR.

"Every one must remember in the Venetian pictures, not only the peculiar luxuriance, but the peculiar color of the hair, of every golden tint, from a rich full shade of auburn to a sort of yellow flaxen hue—or rather, not flaxen, but like raw silk, such as we have seen the peasants in Lombardy carrying over their arms, or on their heads, in great, shining, twisted heaps. I have sometimes heard it asked with wonder, whether those pale golden masses of hair, the true '*biondina*' tint, could have been always natural! On the contrary, it was oftener artificial—the color, not the hair. In the days of the elder Palma and Giorgione, yellow hair was the fashion, and the paler the tint the more admired. The women had a method of discharging the natural color by first washing their tresses in some chemical preparation, and then exposing them to the sun. I have seen a curious old Venetian print, perhaps satirical, which represents this process. A lady is seated on the roof or balcony of her house, wearing a sort of broad-brimmed hat without a crown: the long hair is drawn over these wide brims, and spread out in the sunshine, while the face is completely shaded. How they contrived to escape a brain fever or a *coup de soleil* is a wonder: and truly, of all the multifarious freaks of fashion and vanity, I know none more strange than this—unless it be the contrivance of the women of Antigua, to obtain a new *natural* complexion. I have been speaking here of the people; but any one who has looked up at a Venetian lady standing on her balcony, in the evening light, or peeping out from the window of her gondola, must be struck at once with the resemblance in color and countenance to the pictures he has just seen in churches and galleries."

VENETIAN ATMOSPHERE.

"I am acquainted with an English artist who, being struck by the vivid tints of some stuffs which he saw worn by the women, and which appeared to him precisely the same as those he admired in Titian and Paul Veronese, purchased some pieces of the same fabric, and brought them to England: but he soon found that for his purpose he ought to have brought the Venetian atmosphere with him. When unpacked in London, the reds seemed as dingy, and the yellows as dirty, and the blues as smoky, as our own."

Our last published particulars relating to the South American Expedition of Count Castelnau, left that enterprising traveller and his companions at Chuquisaca. A further report just addressed by him to the minister of public instruction, and dated at the end of January last, gives the following details of their further progress:—"From that town (Chuquisaca) we proceeded to Potosi, famed for its silver mines—so rich once, so fallen now. For five-and-twenty leagues from thence, our road lay through the most difficult passes of the Andes; inhabited only by the gigantic condor. The road afterwards improves; and, once on the great Bolivian table-land, is perfectly flat as far as La Paz—though traversing a barren region, where the rarefaction of the air, occasioned by the great elevation, causes the painful sensation known under the name of *sarrache*. These vast tracts of table-land abound in large herds of llamas and merinos—the latter wild. Passing by Oruro, we reached La Paz—where the ambulant government of Bolivia was established. The anniversary of the battle of Ingari was being here celebrated. On arriving at the shores of Lake Titicaca, we saw the celebrated ruins of the ancient palace of the Incas of Tiaguanaco. One of the gateways is an admirable piece of workmanship, and we made various drawings of it. We entered Peru by the bridge of Desaguadero. Having reached Puno amidst violent and incessant storms of snow and hail, I deemed it advisable to relinquish for the moment our intended route to Cuzco; preferring to proceed along the coast to Lima, with the intention of returning to Cuzco after the rainy season. I therefore took the direction of Arequipa—whence I proceeded to Lima. When we shall have taken the rest we so much need, we will turn our steps towards Cuzco: whence we will endeavor to rejoin the Amazon river, by embarking on the Apurimac. This will take us across the whole length of the Pampa del Sacramento—and presents many dangers. I take the liberty of sending you a list of the different objects forwarded for the Museum of Natural History."—We may add, here, that the committee appointed, by the Academy of Sciences, to examine into the results obtained by the Abyssinian expedition of M. Rocher d'Héricourt, has reported them to be of great interest, and recommended their publication. I recommend further that that gentleman's zeal, knowledge, and skill in the use of his astronomical, magnetical, and meteorological instruments, shall be employed in some new and distant expedition.—*Athenæum*.

THE great congress of temperance societies which we, some time since, announced, is now holding in the Swedish capital. One hundred and thirty-two national and foreign associations are there represented; and the king, as president of the Stockholm society, with his queen, was present at the opening meeting.—*Athenæum*.

We may again remind our readers that the fourteenth session of the scientific congress of France will be held, at Marseilles, on the 1st of September next; and the managing committee desire to attract the attention of foreign scientific men to the programme of their proceedings, which they have just published.—*Athenæum*.

From the Quarterly Review.

The Horse's Foot, and how to keep it sound; with Illustrations. By WILLIAM MILES, Esq. Exeter, 1846.

A LIVELY French artist, wishing to exhibit English character, drew a Milor and Miladi during their honeymoon: they have ridden out together; she is thrown, her horse having stumbled, to whose nose his master applies her smelling-bottle, while the victim of the *faux pas* lies fainting by herself. Passing these natural consequences of our selling wives like mares at Smithfield, Mr. Miles considers bad farriery as an important item in indifferent husbandry. "For the want of a nail, the shoe was lost; for the want of a shoe, the rider was lost;" and how this is to be prevented is shown in his book, which all good men, married or bachelors, who love sound horse-flesh, should purchase.

The author, after serving his country in the Life Guards, was wounded and taken prisoner by Hymen. Such is the fortune of war, from which neither Mars nor Majors are exempt. His occupation was not however gone, when, like Othello, he bade farewell to plumed troops: buried in happy retirement, near the cathedral of Exeter, he retained his love for neighing steeds, as Virgil's cavalry officers when ghosts in Elysium kept up their stable-duty—

"Quæ cura nitentes

Pascere equos, eadem sequitur tellure repostos."

Here our Miles emeritus, possessing a good stud of his own, and enjoying the confidence of his equestrian friends, never wanted four-footed subjects to practise on: not content with theory, he did not mould his sabre into a ploughshare or metaphor, but forged it into horseshoes himself, after the fashion of Mr. Borrow on the great northern road, or Portia's Neapolitan prince, who could "not only talk of his horse, but shoe him himself;" and his highness did well, for actual experiment alone conduces to sound conclusion and safe calculation, which latter, like cookery in the diplomat, constitutes the essence of the *Hippiatrist*—Heaven save the mark—as the *ferrier*, the iron-working farrier of yore, is called in new-fangled nomenclature. In vain may professors forge ponderous phraseology, eupodology, hippopathology, &c., &c., until ostlers speak Greek; to make horseshoes of iron is the sum of the modern veterinary craft; all the rest is leather and prunella. The shoe is their difficulty and the horse's weal or woe. The ancients never nailed to the feet of animals those coverings which they well knew the use of as occasional protections; and, we believe, fixtures made of unyielding metal were first fastened to the expanding hoof of English horses by William the Conqueror, whose death, a manifest judgment, was caused by the stumble of his foot-wounded steed. The name *De Ferrers* was assumed by his master of horseshoes, whose noble descendant, free from the false shame of Hippiatrists, still proudly charges his supporter with a horseshoe-argent, the *canting* badge of this chivalresque ancestor.

Mr. Miles, rightly considering the foot to be the important organ of a quadruped destined to go, and the shoe the thing which either makes or mars the foot, has limited his investigations (for the present only, we trust) to these two prominent points,

which he has completely mastered, and is indeed a Flavius Vegetius *Renatus*—for so was named the Roman soldier and gentleman who, some 1500 years ago, wrote the first amateur treatise on veterinary art. Our author combines a clear head with a kind heart and a vein of quiet humor; he handles with equal dexterity hammer and scalpel, pen and pencil, paint-brush and engraver's tools: working and writing with a firm hand, his language is so plain that those even who ride, may read and understand. As there is no charlatanerie in his system, there is no technical jargon in his explanations: nay, he publishes so purely for the "information of the uninformed," that his treatise may be safely laid on any dragoon mess-table. Although scarlet is not our color, yet pleasant is a gentle canter on breezy elastic downs, and salutary the constitutional jog in shady lanes, where goose-quill and Albemarle-street are forgotten, and we owe to the horrors of a sudden stumble the comfort of "Miles on the Horse's Foot."

This portion of the quadruped, because it outwardly seems to be one solid block, thicker than a tandem-driver's head, and made, therefore, to be battered without mercy on roads as hard, contains a mechanism inside that is no less exquisite than those mainsprings of grace which are enclosed in the Cinderella slipper of Taglioni.

The horny case is lined with thin plates, that are at once elastic and devoid of sensation; thus concussion is broken, and blows are not felt. By this admirable combination of solidity and elasticity, the given and most difficult mechanical problem, to wit, the moving a heavy body with great velocity, is solved. The exterior defensive casing is called the "*crust*" in England, and the "*wall*" in France, where men are unrivalled in making phrases, fortifications, and puffs. This crust is thickest at the fronts of the fore-feet, where the first and greatest shocks are received; and is thinnest—for Nature does nothing in vain—at the heels, where expansion, not resistance, is required. The ground-surface of the foot is composed of the sensitive sole, which is endowed with a power of descent and ascent, according to the pressure on it from above, and of the *frog*, a spongy but less finely organized substance, which swells at the back part; bulby and well defined in the unshod colt, "it is converted," says Mr. Miles, "by the mischievous interference of art—i. e., repeated bad shoeing—into a mere apology for a frog." He descants on the varieties with the gusto of a French epicure. The subject is important: how indeed can a horse be expected to jump if his frog be inactive? This obvious reflection induced Mr. Coleman of the "College" to devise a "patent artificial frog," and a "patent grasshopper shoe," with which hunters were to clear six-barred gates; but both inventions unfortunately broke down, amid grins broader than those provoked by the professor's rhyming namesake.

The exact use of the frog, an open question among professional authors, is left so by our amateur: who shall decide when horse-doctors disagree? All, however, are of accord that its functions are most important, although none can tell what they are. The name frog is a corruption from *frush*—i. e. the *fourche* (furca) of the French, for which the German equivalent is *gabel*, not *frash*, their *bonâ fide* frog; the ancient term *zaidon* had also reference to the fork-like form of the swallow's tail; our unmeaning frog, and its disease, the running-thrush, (*frush*), when translated into

grenouille, and *merle courante*, occasion doubtful mirth to the parfait marechal of France.

Be the names and uses of the frog what they may, the horny wall of the hoof protects three bones in its interior—the coffin, coronet, and navicular: the former is let down to the point of the hoof, and represents the first bone of the great toe of the human foot; more correctly speaking, the whole foot of the horse is one toe; the action will be understood by comparing it to that of the forefinger of our hand, the knee doing the functions of the wrist; a nail driven into this coffin renders a horse dead lame. Nature has placed the second bone, the coronet, on the top of this coffin, as is done at august funerals. The third bone, the navicular, is placed midway behind the two others: although very small, “being only 2½ inches long in a horse of 16 hands high,” it often bears his whole weight, and from doing all the hard work is the “navie” of the locomotive concern; it rests on a cushion that is interposed between it and the frog, and which is softer than those eider-down pillows on which Cornish miners dream of the reduction of duties on feathers; a tendon passes under the navicular, whose pulley action is facilitated by the secretion of a natural grease. The slightest injury causes inflammation; and “a speck in the bone no larger than a pin’s head produces a lameness that defies human art.” Neptune therefore, veterinarily speaking, was right, when in creating the horse marine, he substituted a tail for the hind legs, by which a pair of these ticklish naviculars were avoided.

Julius Cæsar, if Pliny and Suetonius write truth, rejoiced in a steed who had human fore-feet, which probably were booted like his grooms. Another Augustan horse-fancier buskined the feet of his favorite nag with plates of silver; while Poppea, the extravagant wife of Nero, used gold for her mules. Caligula made a consul of his horse—a job, beyond doubt, since modern authorities find asses to answer equally for such onerous employment. Be that as it may, classical farriery, when the agricultural mind was instructed in hexameters, is a trifle too poetical for practical men of this prosaic age of iron; and an ordinary quadruped naturally requires double attention, since the greater the number of feet, the greater the chances of risk from accident or ignorance. A four-footed beast that has not one leg to stand upon is not likely to lead to much breaking of the tenth commandment.

“There is, however,” says our author, “perhaps no word in the English language which in its true signification implies *so much*, and in its usual one means *so little*, as the epithet “sound” when applied to horses’ feet. The *great latitude extended to the meaning of words in horse-dealing transactions* has shorn it of every attribute which gave it value, until it conveys no other guaranty than this, that the horse is not palpably lame in one foot only; for if he chance to be lame in both fore-feet, the pain of allowing the weight to rest upon either will cause him to pass it as quickly as possible from one to the other, and not only save him from condemnation, but most probably gain for him the reputation of being a quick stepper.” —p. 42.

Beware nevertheless of hinting, however delicately, that a gentleman’s horse’s feet are unsound, since the indignation of the owner is almost as sure to be aroused thereby as if you suspected his wife; yet, although the fact need not be men-

tioned, whenever there is inflammation in the foot, no horse will stand on it; and “*pointing*,” in all its varieties, is a sure indication of an attempt to relieve the navicular joint, and to shift the seat of pain. It is not a “trick,” as the dealer will say; for a horse is too sensible a beast to inconvenience his whole frame—he never plays any tricks on himself, not even a frolicsome bit of “bishopsing” or exhilarating “figging.”

The progress of disease in the foot is almost imperceptible, and the development of lameness gradual; the spur of a brutal rider and the natural courage of a generous animal will cause much pain to be borne without flinching, but endurance has its limits: first the step is shortened, then the ground is struck less forcibly—yet yield at last he must in the unequal struggle of nature against iron; and after sinking his head and neck to remove their weight from the feet, down he comes, decidedly lame, to the surprise of his master, who, from never suspecting the growing evil, overlooks the real cause, and attributes the casualty to some recent accident, “my stupid groom,” &c. Mr. Miles considers warranties, certificates, &c., to be excellent papers wherewith to light cigars: his earnest advice to a gentleman who has just bought a horse is, to set perseveringly to work by good shoeing, a loose box, and plenty of exercise, to endeavor to *make him sound*; and those who follow his suggestions will at least have the best chance of attaining this consummation devoutly to be wished for.

In shoeing a horse properly, which requires two good hours, and is very seldom done, three points require consideration: the previous preparation of the feet, the form of the shoe, and the manner of fastening it on. As a general rule, a horse should never be shod in his own stable, but always taken to the forge, where, if the shoe does not fit, it can be altered, which cannot be done at home, where the foot must be fitted to the shoe. Many foolish farriers put the foot in order, as they call it, by rounding it, which they fancy looks pretty. This they effect by cutting away the hoof of young colts, and pinching their feet like those of Chinese ladies, until they can scarcely walk. Where nature perseveres in one form, man, whether making shoes of iron or satin, cannot easily amend the shape. If the horse’s foot be fettered, its expansion is circumscribed, by which elasticity is lost and unsoundness originated. The first step before putting on a new shoe is the taking off the old one; the nails must be gently drawn out, which requires as much tact as in managing those of the foot human; all wrenching off, all dragging them violently through the crust, distresses the patient, who struggles to get free as a man does from a rough chiropodist. Forceful extraction injures the laminae of the hoof, which, if once separated, never reunite, but form “shaky places,” at which good farriers quake. The shoe once off, the edges of the hoof are to be rasped, and the sole pared out, as a thick one impedes the descent of the coffin bone. An operator errs oftener by removing too little than too much—the frog excepted, although from its being cut as easily as Gruyere cheese, and its then looking so smooth and clean, “it requires more philosophy than falls to the share of most smiths to resist the temptation to slice away.” Mr. Miles, after defining country farrier experience to be an “untiring perseverance for years in one unvaried plan,” and that generally a mistaken one, observes that when gentlemen are contented to re-

main without knowledge, smiths who shoe by rote may be excused—for, after all, they neither wear the shoes nor ride the horse. The wonder is truly that the owner, however learned and dainty as regards his own calceolation, on which the comfort of walking depends, remains indifferent to that of the animal by which he is carried. A good master ought to be able to direct what should be done, and to know if it be well done, which he never will accomplish without some inkling of farriery. The "far-spread prejudice of opening out the heels, and carving the frog into shape at every shoeing," horrifies our kind author, who never would allow the knife to approach it; for what is sport to the farrier is death to the frog. This elastic organ, when bared of its thin covering texture, cannot stand the dry hard road, but shrivels up and cracks, while the edges wear into exfoliations called "rags," which a tidy smith cuts away because unsightly. Their separation should be left to nature, for the frog casts off these worn-out teguments as a snake does his old skin, or a child its first tooth, when a new one formed behind is ready to take its place.

The form of the shoe is a question of great consequence to the horse, and of not less difference of opinion among men: it has perplexed the mind of a veterinarian from Solleysæl, the father of the art, down to the "college;" nor can any general rule be laid down, or any standard pattern given, since every horse has his own particular foot, just as every farrier has his own pet conundrum. A wise smith will be governed by the circumstances of every individual case, and will endeavor to make his artificial protection conform as nearly as possible to the model set before him by nature—that guide who never leads astray. The varieties of horseshoes in the "book," the "panton," the "expanding," the "paratrite," &c., exceed those in the shops of Hoby and Melnotte. Mr. Miles has carefully considered the works of his predecessors, and being a thorough master of the anatomy of the horse's foot, has produced, by a judicious selection of the best points of each, coupled with his own original invention, a result which leaves nothing to be desired. His shoes, however, will be better understood by one glance at his engraved specimens than by pages of letter-press; suffice it therefore to say that the prevalent notion, that shoes cannot be too light, is an error. Horses, except at Astley's, are not required to dance; and an ounce more or less, which makes too little difference in weight either to strain or weary the back sinews, prevents a shoe bending, and affords greater protection to the sole and frog. The shoes should be of equal thickness throughout, with a flat ground surface, as those with high heels, which asinine smiths make in imitation of their own, are dangerously absurd. The toe, which ought to be raised, is thus lowered, and Nature's plan reversed, who elevates the point in order to avoid obstructions. The web should be wide, and of the same width throughout, instead of being pinched in, because the Vulcan operator "likes to see the shoe well set off at the heels." This is both unphilosophical and detrimental; it deceives the eye of man and injures the foot of the horse. "The outer edge of the foot rests on the inner edge of the shoe, and the remaining width of the web projects beyond the hoof;" so that a master who thinks his horse has a good open foot, only has to be proud of a bad open shoe, which both conceals deformities underneath and "invites with open arms a bad road to come and do its worst." The

heels are made bare just where the navicular joint is the most exposed; and if that be inflamed, what must the agony be when the unprotected foot treads on a sharp flint? The horse "falls suddenly lame," or "drops as if he had been shot"—"phrases in much too common use to require explanation;" and small is the pity which the suffering animal meets with from man; who, having first destroyed the use of his victim's feet, abuses him because he cannot go; and imputes "grogginess" to him as a crime, as if he were in liquor like a groom, and not in agony.

The errors of a vicious shoe, and the merits of a good one, are set forth by Mr. Miles in several drawings which he has lithographed himself. By placing the two specimens in odious comparison, the *reductio ad absurdum* is complete. He was enabled to offer this treat to the public by having most fortunately purchased a horse in Devonshire with four genuine Damnonian shoes, in which all possible defects were concentrated. The originals are nailed over his stable door, to the terror of every witch, farrier, and old woman in the west of England. A *propos de bottles*, when a shoe is properly forged, there is no danger in applying it so hot to the hoof as to burn the crust, since irregularities of the surface are thus discovered and easily removed. In fixing, or putting on the shoe, it should rest only on the horny rim of the hoof: it must not press on the sole, and thus cramp its springy operation; or encumber the heels, where the crust is the thinnest and the power of expansion the greatest. As to the very important manner of fastening it on, and number of nails to be used, Mr. Miles, wishing to ascertain with *how few* this could be effected, began with seven for the fore-feet and eight for the hind ones, which he gradually reduced to five and six. This limited number has been found to answer perfectly, and our author's views were entirely corroborated by an intelligent and practical bagsman whose life is spent on horseback, and by the veterinary surgeon of a dragoon regiment accustomed to escort the queen at tip-top pace. Thin small nails are the best, as making the smallest holes in the crust; they should be driven into the outer quarter, where the crust is the thickest, and not forced in too high, but with the points brought out as soon as possible, and clenched down broadly, and then not too neatly rasped away, which weakens their hold. The heels and inside quarters are to be left free. The misery and destruction entailed on horses by nailing their shoes on both sides of the feet are entirely obviated by this simple system of one-sided nailing, which is unquestionably the discovery that does most honor to modern farriery; accordingly its adoption is pressed upon all owners and lovers of the noble animal, by Mr. Miles, with arguments that must carry conviction to all who have heads. This grand specific diminishes at once the continual struggle between the expansion of the foot and the contraction of the iron. Thus fitted on, the shoe becomes a real comfort and protection to the wearer, instead of being a torment and incumbrance, and the foot is left nearly in a state of nature. From the ease which this gives the animal, one-sided nailing will often cure the habit of "cutting," or of spoiling his silk stockings, as old Solleysæl terms this uncomfortable trick.

It is also the surest method of preventing corns, which are the curse of the stable, and, if Mr. Eisenberg's testimonials be not mere puffs, of the

house of lords. These corns, white in the feet of noblemen, are, it may be remarked, red in those of horses, being the result of lacerated inflamed blood-vessels; for what is called a "corn," being in fact a bruise, is produced by pressure from the heels of the coffin-bone, which itself suffers from loss of expansive power in the hoof, since Nature, who abhors sinecures worse than Joseph Hume, never continues the same measure of effective reparation to structures which are not employed, that she does to those constantly occupied in their allotted tasks.

The corn in the horse as well as his master arises from tight shoes, and the crying evil is best remedied by taking them off, and letting the patient stand all day on wet sawdust in a loose box; this answers every purpose of turning him out to grass, without any exposure to colds, accidents, or the organic injuries which arise from over-distension of the stomach and bowels. Under all circumstances, the shoes should be removed every two or three weeks, according to the work done on them; when the heads of the nails are worn away the shoe gets insecure, and will rattle whenever a screw is loose: quiet is the test of efficient machinery in nations as well as in individuals, whatever Messieurs Polk and Thiers may predicate to the contrary.

Mr. Miles condemns the mode in which the plates or shoes of racers are fastened on, in which eight and nine nails are frequently used for fear of "casting." No foot, human or equine, can expand in a tight shoe; and the horse declines, and very properly, throwing his whole weight with all his heart into his feet. The Derby course is a mile and a half in length; to accomplish which requires 330 good race-strides, of 24 feet each; the loss of one inch on each stride gives 9 yards and 6 inches:
